Dimensions: Length of face 1,047 ft.; South side 175 ft.; North side 100 ft.; depth alongside at MLLW 32 ft. - 50 ft.

Richmond Terminal No. 5:
Owner: City of Richmond.
Use: Available for tug, barge and vessel lay-ups.
Dimensions: Two finger piers, each 550 ft. long; Pier No. 1, East side-depth 13 ft. and West side-depth 30 ft. Pier No. 2 East side-depth 16 ft. and West side-depth 12 ft.

Pt. Potrero Marine Terminal – Terminal No. 7:
Owner: City of Richmond.
Operated by: Pasha Maritime Services.
Use: Import service and delivery of foreign automobiles.
Dimensions: Length of face 700 ft.; depth alongside at MLLW 35 ft.; usable berthing space with dolphin 900 ft.
Mechanical handling facilities: Mobile handling equipment available.

Richmond Terminal No. 6:
Owner: City of Richmond.
Operated by: Various Lessees.
Use: Five shipyard basins available for lay-berthing, fleet mooring, lay-up and project consideration.
Dimensions: No. 1, 4 and 5: 575 ft.×100 ft., 84 ft. gate. – Depth 15 ft. MLLW.
No. 2: 748 ft.×100 ft., 84 ft. gate. – Depth 26 ft. MLLW.
No. 3: 587 ft.×100 ft., 84 ft. gate. – Depth 26 ft. MLLW.

TANKERS: *Atlantic Richfield Tanker Dock:*
Owned and operated by: Atlantic Richfield Co.
Use: Receipt and occasional shipment of petroleum products; bunkering vessels.
Dimensions: Length of face approx. 250 ft.; lower and upper sides 40 ft. each; depth alongside at MLLW 35 ft.

Atlantic Richfield Barge Dock:
Owned and operated by: Atlantic Richfield Co.
Use: Receipt and shipment of petroleum products by barge; bunkering vessels.
Dimensions: Length of face 150 ft.; depth alongside at MLLW 34 ft.

Richmond Terminal No. 1 Wharf:
Owners: City of Richmond.
Operated by: Petromark Inc.
Use: Receipt and shipment of petroleum products, chemicals and petrochemicals.
Dimensions: Length of face 557 ft.; depth alongside at MLLW 35 ft.

Richmond Terminal No. 2 Liquid Cargo Wharf:
Owners: City of Richmond.
Operated by: Richmond Terminal Agency.
Use: Receipt and shipment of vegetable oils, chemicals and petrochemicals.
Dimensions: Berthing length 720 ft.; depth alongside at MLLW 35 ft.

Texaco Wharf:
Owners: Texaco Inc.
Operated by: Texaco Inc.
Use: Receipt and shipment of petroleum products.
Number of Berths: 1.
Water Depth: 35 ft.
Dimensions: Length of face 600 ft.

Time Oil Company Wharf:
Owned and operated by: Time Oil Co.
Use: Receipt and shipment of petroleum products.
Number of Berths: 1.
Water Depth: 35 ft.
Special Remarks: 3×10 in. pipe-lines extend to 25 steel storage tanks in rear; total capacity of 618,000 barrels.

Union Oil Co. Tanker Dock:
Owned and operated by: Union Oil Co. of California (also services Unitank).
Use: Receipt and occasional shipment of petroleum products; bunkering vessels.
Dimensions: Length of face 225 ft.; lower end 45 ft.; upper end 45 ft.; depth alongside at MLLW 35 ft.
Mechanical Handling Facilities: Hose handling at wharf is by ship's gear and small tractor crane.

Union Oil Co. Barge Dock:
Owned and operated by: Union Oil Company of California.
Use: Shipment and occasional receipt of petroleum products; bunkering vessels.
Dimensions: Length of face 150 ft. (approx.); lower end 45 ft.; depth alongside at MLLW 35 ft.
Mechanical Handling Facilities: Hose handling at wharf is by ship's gear and small tractor crane.
Remarks: Wharf and Tanker Docks are spaced about 230 ft. apart; together they provide 1 large tanker berth.

BANKS:
Bank of America, Richmond Main Office, 261 Harbour Way South, Richmond, California. Tel: 415-231-1729. Telex: TWX (San Francisco) 910 372 7720.
Central Bank, Civic Center Office, 2705 Macdonald Avenue, Richmond, California. Tel: 415-233-5710. Telex: TWX (Oakland) TLX 17-1329.

EMERGENCY CO-ORDINATION CENTRE: The Emergency Co-ordination Center for the Port of Richmond is the U.S. Coast Guard, San Francisco, California. CA. Tel: (415) 556-2103.
SURVEYORS: Surveyors are available from various San Francisco Bay Area companies and organisations.
STORING: See "Prelims".
1. Yes.
2. Yes.
3. Yes.
4. Yes.
5. Normal U.S. Customs Regulations apply.
6. Yes.
AUTHORITY: City of Richmond, Port of Richmond, City Hall – Room 301, 27th Street and Barrett, Richmond, California 94804. *Tel:* (415) 620-6784. *Contact:* Michael R. Powers, Port Director.
AGENT: See "San Francisco".

RICHMOND, Virginia: 37.32 N. 77.25 W. (See Plan)

LOCATION: On the James River, 90 miles from Chesapeake Bay.
DOCUMENTS: See "Hampton Roads".
PILOTAGE: Entrance through Hampton Roads. Virginia Pilots Assn. original contact same as for Norfolk, Virginia. Pilots will arrange for change of Pilots to proceed up the James River.
ANCHORAGE: Hampton Roads Anchorage, also river anchorage approximately 40 miles up river, shown as "Upper Brandon" on charts.
RESTRICTIONS: Navigation of river above Upper Brandon recommended in daylight hours, except vessels under 250 ft. length.
MAX. SIZE: Max. length recommended by Pilots 559 ft., draft 21 ft. 6 in. on any tide, depth of channel 25 ft. MLW tide, change 3 ft. 5 in.
HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: See "Hampton Roads".
TUGS: Not needed for berthing unless vessel is to be turned around. Tug available from Blaha Towing, Inc. on reasonable notice.
BERTHING: Vessels berth alongside wharf 1,200 ft. long. Depth 25 ft. at MLW.
Turning Basin: 585 ft. at widest point, 1,600 ft. length.
CRANES: 2 Manitowic 4100W Series Two 230 ton capacity cranes.
BRIDGES: 2 bridges across river between Hampton Roads and Richmond. No specific time or notice required. Air draft 145 ft.
STEVEDORES: Arrangements to be made through Agents. 48 hours notice requested.
MEDICAL: Vessels cleared by U.S. Health Officials at Hampton Roads before proceeding up river.
DENSITY: 1000.
FRESH WATER: Available at pier.
FUEL: Bunkers available from Ocean Shipping Services, Richmond.
GANGWAY/DECK WATCHMEN: None required, unless crew detained by U.S. Immigration.
OPENING/CLOSING HATCHES: On bulk vessels, usually opened and closed by ship's crew, also steel hatches handled by ship's crew, sometimes determined by terms of Charter.
CERTIFICATES:
Ship's Register.
Load-line Certificate.
Safety Certificate.
Tonnage tax receipts.
Certificate of nationality.
Passenger Certificate.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes (1 carton for 2/3 days) if further allowance is needed Customs Officer will return on request of Master. Wine and Spirit, 1 bottle per officer, Customs Officer will return on request of Master.
IDENTIFICATION CARDS: Immigration landing permit required.
CONSULS: No consuls in Richmond, handled through Hampton Roads or Washington, D.C. if needed.
REPAIRS: Only minor repairs, no shipyards.
REPATRIATION: Handled through Norfolk, Virginia.
AIRPORT: Approximately 10 miles from port, regular airline service.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time from first Sunday in April to last Sunday in October.
HOLIDAYS: January 1st, January 15th (Martin Luther King Day), Good Friday, May 30th, July 4th, Labour Day (1st Monday in September), Thanksgiving Day, Christmas Day.
POLICE/AMBULANCE/FIRE: Police Tel: 780-9461; Ambulance Tel: 780-9404; Fire Tel: 780-9191.
TELEPHONES: No arrangements for placing aboard vessels.
SHORE LEAVE: Allowed. Proper papers should be available.
AUTHORITY: Port of Richmond.
Operator: Meehan Overseas Terminal Inc., 5000 Deepwater Terminal Road, Richmond, Virginia 23234. *Tel:* (804) 743-7678, 275-9248.

RIVERHEAD, Long Is., New York: 41.00 N. 72.39 W. (See Plan)

LOCATION: The fixed Offshore Tanker Berth is situated 1.2 miles offshore from the North shore of Long Island in Long Island Sound, 4 miles 257° True from the beacon on Mattituck Inlet Breakwater and 12.7 miles 178.5° True from Falkner Island Lighthouse. The geographical position of the centre point of the Operating Platform is in Lat. 41° 00′ 01″ N., Long. 72° 38′ 50″ W. The platform has 4 navigation lights situated on each corner of the structure flashing every second. A similar navigation light is also situated on each of the East and West mooring dolphins.

DOCUMENTS: See "New York".

Terminal will provide "Declaration of Inspection" Form which must be completed before cargo transfer begins.

PILOTAGE: Pilotage must be arranged by the vessel or vessel's Agent. Vessels arriving from sea with a draft of 40 ft. or less will pick up the pilot 2 miles South of Point Judith Buoy No. 2 (normally found at Lat. 41° 19.3′ N., Long. 71° 28.5′ W.).

Vessels proceeding to Riverhead from the New York Harbour will normally embark a Pilot at anchor or at a berth in New York.

The Pilot Associations serving the Riverhead area are:

Interport Pilots Associates, Inc.,
Post Office Box 312,
Atlantic Highlands.
New Jersey 07716.
Tel: 201-291-1310.
Cables: Port Pilots – Atlantic Highlands, New Jersey.

Northeast Marine Pilots, Inc.,
243 Spring Street,
Newport,
Rhode Island 02840.
Tel: 401-847-9050 (weekdays), 401-331-4824 (nights, weekends and holidays)
Cables: RIS Pilots Providence.

Sandy Hook Pilots
201 Edgewater Street,
Staten Island,
New York 10305.
Tel: 718-448-3900.

The Pilot will act as Docking Master when berthing vessels alongside the Northville Industries Corp. Platform.

The Pilot is required to remain aboard the vessel (for Northville's account), on standby, while the vessel is moored at the offshore platform.

ANCHORAGES: Vessels awaiting berth will normally anchor North of the Offshore Platform. Vessels drawing more than 50 ft. may wish to anchor in deeper water Northwest of the platform. Pilots are familiar with the best anchoring areas. Holding ground is good, and a scope of 90 fathoms (6 shackles) of chain is considered adequate.

RESTRICTIONS: Generally, vessels are moored on any stage of the tide and at night when weather conditions permit.

MAX. SIZE: The maximum size vessel which can be received in the North Berth is 250,000 d.w.t., 1,150 ft. LOA and 62 ft. draft.

The maximum vessel size which can be received in the South Berth is 42,000 d.w.t., 700 ft. LOA and 42 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

COMMUNICATIONS: Telephone at Riverhead, station to station: Dial (516) 727-5600. Cable Address "Northville Riverhead New York". Radio I.T.T. Amagansett. TWX No. 96-1415 Northville Melville and TWX No. 510-224-6443 or 510-226-7837 Northville Melville.

Use of the vessel's main radio equipment while at the platform is expressly prohibited. If a tanker's main radio telegraph must be tested following repairs, arrangements must be made to stop the transfer of cargo during the tests.

Wireless messages are most expeditiously received if transmitted via "RCA Chatham".

VHF: Communications with the Terminal may be conducted by VHF Channels No. 16 and 19A; with the platform on Channels No. 16 and 19A; and the utility boat on Channels No. 13, 16, 19A, 12, 6 and 22. Channel No. 16 is monitored by all stations when manned. A private frequency radio is provided to the Person-in-Charge of the vessel during oil transfer operations.

VHF Marine Operators use VHF Channels: Riverhead (N.Y.) Marine Operator 28; New London and New Bedford Marine Operators 26; Bridgeport Marine Operator 24; to place land calls.

TUGS: Tug assistance for docking is required, and will be arranged by the vessel's Agent. Normally, 2 or 3 tugs will be used for docking and one tug for undocking at the Riverhead Tanker Platform, subject to the agreement of the Pilot and Master. Tugs are usually arranged through Red Star Towing Co., based in New Haven, Connecticut (because of the shorter running time from that port).

Tugs normally based in New Haven are:

Newport (1,800 s.h.p., 20 ton B.P.)	Single Screw
New Haven (1,800 s.h.p. 17 ton B.P.)	Twin Screw

Call Red Star Towing Co. on (212) 536-3800.

Tugs must be ordered at least 24 hours in advance of the scheduled docking time.

Red Star has additional horsepower available, if given adequate notice, including:

Stanford (3,000 s.h.p., 32 L.T. B.P.)
Crusader (4,000 s.h.p., 47 L.T. B.P.)

Other tugs are available from New York Harbour, or from the Providence Steamboat Co., Providence, Rhode Island, on (401) 331-1930, which has 3,000 h.p. tugs available.

BERTHING: Vessels calling at the Offshore Platform or pier are moored at any time. The tidal current periods are substantially the same as the Race. Strong winds from the North and Northwest are experienced during the Winter and Spring. Tidal currents during maximum ebb and flood may reach 3 knots. Both docking and undocking operations may be delayed due to adverse weather conditions.

The mean range of the tide is 5.4 ft.

A terminal working crew will board arriving vessels from a 60 ft. utility boat on approach to the mooring platform. This crew will provide assistance and information to the vessel's Master and the line handling crews. The crew carries private-frequency radios for communication with the platform in positioning and mooring the ship.

The designated Person-in-Charge for Northville Industries Corp. will receive and sign the Notice of Readiness and complete all paperwork necessary for the transfer of cargo. Two representatives of the terminal will board each tanker as it approaches the platform. They will provide radio communications with the platform and terminal, and advice and assistance while mooring the ship.

North Berth: Vessels berthed during flood tide will moor starboard side to and during the ebb tide current will moor port side to. Forward and stern spring lines are secured to breasting dolphins and bow and stern lines are made fast to mooring dolphins located to the East and to the West of the platform structure. Terminal Foreman boards vessel to provide communications and assistance during mooring operation.

South Berth: Vessels berthed during flood tide current will moor port side to and during the ebb tide current will moor starboard side to. Forward and stern spring lines are secured to the breasting dolphins in the South Berth. Bow and stern lines are made fast to the mooring dolphins located to the East and West of the platform structure. Breast lines are secured to the North breasting dolphins.

Two mooring buoys are situated South of the mooring facility which were formerly used for mooring vessels in the North Berth. Mooring buoys will be used at the discretion of the Docking Master (Pilot) and/or Northville's Marine Supervisor.

Masters will note that platform is situated in an open roadstead and that all mooring equipment must be in proper working order and in good condition. If, in the opinion of the Pilot (Docking Master) or Northville's Marine Supervisor, the vessel's mooring equipment is inadequate, the vessel will not be permitted to remain in the berth.

Vessels must be equipped with 12 manilla or better mooring lines of not less than 8 in. circumference and not less than 90 fathoms length.

Vessels having wire moorings secured on warping winches with brake are acceptable. Warping winches must be adequate to handle mooring lines under heavy strain. Efficient stopper lines must be readily available to "stop off" mooring lines for transfer from winch to bitts without loss of tension.

The Docking Master (Pilot) will assist the Master in the berthing of the vessel and supervise the mooring and unmooring operations.

No gangways are used at this terminal. Crew must use ship's ladder for launch service. Crew are forbidden to go on to the Platform, except on ship's business.

BERTHING FACILITIES: *North Berth:* The distance between the North Breasting Dolphins is 294 ft., centre to centre. The depth of water in the North Berth is 64 ft. at low tide. Spring lines from forward and aft are secured on to quick-release hooks situated on the North corners of each of the North Breasting Dolphins. Vessels moor heading either East or West and can normally be moored at any stage of the tide. Mooring dolphins located East and West approximately 350 ft. from the centre of the platform provide the mooring points for bow and stern lines from the vessel. The mooring dolphins have 4 quick-release hooks each for the North Berth, and 2 quick-release hooks each for the South Berth. These mooring hooks are provided with hydraulic releasing mechanisms which can be operated remotely from the mooring platform during vessel departure. Two mooring buoys are situated South of the mooring dolphins to provide securing points for extra bow and stern lines from very large vessels or in cases where anticipated severe weather conditions indicate the need for additional lines.

South Berth: The distance between the South Berth Breasting Dolphins is 160 ft., centre to centre. Spring lines from forward and aft are secured to bollards situated on the South Breasting Dolphins. Bow and stern lines are secured to the mooring dolphins described for the North Berth, breast lines to the South bollards or the mooring hooks on the lower decks of the North Breasting Dolphins. Depth of water 45 ft. at MLW.

Operating Platform: The Operating Platform is 100 ft. long by 45 ft. wide.

The East Building contains 2 diesel powered 100 KW. generators, either of which will supply sufficient power to drive the deepwell Fire Pump rated at 750 g.p.m. at 120 p.s.i. The other generator will supply power to the hydraulic system for the operation of the loading/unloading (L/U) arms, the electric mooring capstans and air compressor, as well as illumination of the structure, including floodlighting and other electrical devices. A diesel powered 15 KW. alternator is available for normal power requirements such as charging emergency lighting system batteries, navigation aid batteries and normal illumination.

The West building contains quarters for personnel, office space for recordkeeping, radio and telephone communication equipment, and emergency and other control equipment. The quarters and control room are situated in the North half of the building and South half of the building is available for storage of emergency equipment, i.e. sorbent boom, life jackets, etc.

There are 4 hydraulically operated L/U arms, 2×12 in. and 2×16 in. situated at the North end of the Operating Platform. At the South end of the platform 2×12 in. L/U arms are situated to accommodate the South Berth. Connections can be made to 8 in., 10 in., 12 in., 14 in. and 16 in. 150 p.s.i. A.N.S.I. manifold flanges. Connections cannot be made directly to valve flanges (spool pieces must be provided). Adjacent connections cannot be made to flanges less than 6 ft. apart. The L/U arms are connected to the platform manifold which is designed to handle all products to or from either berth and is connected to the 2×24 in. submarine pipelines leading to the shore facility.

Approximately 1,200 ft. of 6 in. oil containment boom is stored adjacent to the catwalks leading from the platform to the North Breasting Dolphins. The boom is stored in a manner so that it may be safely and effectively deployed in the event of an accidental discharge of petrolem into Long Island Sound.

Terminal Transfer Piping: Vessels discharging cargo at the offshore platform should understand that they are discharging to an oil storage terminal approximately 1.5 miles distant from the dock and at an elevation of 150 ft. above sea level. The pipeline is 24 in. in diameter. The static head pressure generated by this pipeline arrangement is about 56 p.s.i.

Booster Pump Operation: Booster pumps are available to assist with the discharge of vessel's cargo. However, the Person-in-Charge of the vessel must realise that it is necessary for the ship to generate sufficient discharge pressure (minimum of 75 p.s.i.) and volume (minimum of 7,000 bbls./hr.), at the booster pump inlet, to start moving the product in the pipeline and to permit the booster pump to be engaged. Each booster pump will normally move 10,000 barrels per hour. The normal start-up procedure when discharging at Northville Industries Corp. docks is as follows:

a) following agreement to begin transfer, the shore opens the platform manifold valves;
b) the vessel will start its cargo pumps and increase pump speed until a discharge pressure of about 60 p.s.i. is obtained at the top of the pump room;
c) the ship opens its manifold valves;
d) ship pump's speed is increased until a discharge pressure of 100 p.s.i. is obtained;
e) the pumpman on the ship is stationed at the pump controls and the shore is requested to start the booster pumps;
f) as the booster pumps are started, ship personnel adjust their pumps as necessary to prevent engaging the overspeed trip;
g) the ship adds pumps and increases pump speed as necessary to maintain desired discharge pressure.

Rapid fluctuations in the discharge pressure of the ship will cause the booster pumps to trip-out. To avoid this, speed adjustments to the ship's pumps should be made gradually. Booster pumps are set to trip-out at a low pressure of 75 p.s.i. and, therefore, can provide no assistance to the ship for stripping cargo ashore.

After all cargo tanks have drained and the pumps have lost suction, the discharge of cargo will be declared finished. With the agreement between the Ship's Officer and the Platform Operator, the oil transfer valves on the Operating Platform will be closed. All product remaining in the unloading arms will be drained back into the vessel. If the vessel's pipeline system does not allow the complete draining of the unloading arm, then arrangments must be made to drain the arm into a container or via a drain hose into a cargo tank. *No product will be permitted to drain out on to the open deck of the vessel.* After the arms have been completely drained, they may be disconnected and the ends blanked off to prevent any drippage of oil.

The discharge pressure at the rail shall be a minimum of 100 p.s.i. (maximum 125 p.s.i.) or the vessel's pumping rate shall be a minimum of 10,000 bbls./hr.

LOADING/DISCHARGING:

Discharging: Tankers are expected to achieve an unassisted discharge rate of 10,000 barrels per hour. Ships discharging at less than 10,000 barrels per hour will be subject to additional wharfage charges for the extra platform time used.

High Pour Petroleum: High pour petroleum must be discharged at 4,500 barrels per hour or more. If the discharge rate falls below 4,500 barrels per hour for more than 2 consecutive hours, the vessel will be instructed to stop discharge of cargo and leave the platform. If the submarine line must be displaced from shore to vessel due to low discharge rate, ship will be responsible for all expenses due to this procedure. Laytime will stop and wharfage will commence.

No. 6 oils, or other viscous products shall be heated, before discharge, to at least 120°F (49°C), or at least 30°F (17°C) above the pour point of the product, whichever temperature is higher. (For example: Oil with a pour point of 75°F must be heated to 120°F or higher. Oil with a pour point of 100°F must be heated to 130°F or higher).

A "viscous" oil is one which has a Saybolt Furol Reading greater than 25 seconds at 122° F. (This requirement is dependent, to a degree, on the pour point, discharge temperature, viscosity, and average discharge rate. The terminal reserves the right to order any vessel to stop discharging at any time terminal operations require.)

Loading: Tankers can be loaded at rates up to 30,000 barrels per hour at the request of the vessel and with the agreement of the terminal.

BALLAST: No ballast disposal facilities. Long Island Sound is inland water and United States Anti-Pollution Regulations rigidly enforced. No bilge water, oil-contaminated water, garbage or any waste matter which may pollute sea water is to be discharged overboard while vessel within Long Island Sound and approaches.

Ballast suction valves must be sealed with a numbered seal on arrival. Terminal personnel will inspect seals before and after cargo transfer.

STORES/FRESH WATER: No fresh water facilities. Stores should be ordered through the ship's Agent. For delivery of stores at anchor, or alongside the platform, Miller Launch, Tel: (516) 473-0132, or Whalen Launch, Tel: (516) 698-0036, provides transfer services.

FUEL: Bunkers *may* be available by special arrangement *if* pipelines are in black-oil service.

Ship's bunkers should be ordered through the Agent, from the regular supplier for delivery, by barge, at anchor. Bunkering of ships is not permitted while alongside Northville Industries Corp. Docks. Eckloff Marine (212) 442-1112 and Standard Marine Services, Inc. (212) 888-1818 will perform bunkering services.

QUARANTINE, CUSTOMS AND IMMIGRATION: New York City is the quarantine, customs, immigration and agricultural quarantine port of entry for Northville. Officials are stationed in New York City. Arrangements for inspections of vessels arriving from foreign ports must be made by ship's Agent in advance, not less than 24 hours before arrival on Monday through Friday, and 48 hours on Saturday or Sunday. Vessels arriving from foreign ports are reminded to provide 24 hours' pre-arrival notice to the U.S. Coast Guard, Captain of the Port, New Haven, Connecticut.

Officials will board vessels in the anchorage prior to arrival, within the vicinity of the offshore platform.

Customs Officers: Customs officers will board all vessels arriving from a foreign port, or U.S. flag vessels arriving with foreign cargo. The Customs Officer must be the first person aboard the ship (with the exception of the Pilot). He will require the close assistance of the ship's cargo officer and the public inspector, for the prompt completion of his duties. Agents are requested to order U.S. Customs Inspectors for a time *2 hours before* the vessel's ETA at the terminal.

For questions concerning Customs business, the Regional Office should be contacted on (212) 466-4407 during business hours, otherwise the Communications Office on (212) 466-5472 should be contacted.

Immigration: An Immigration Officer will normally board vessels arriving from foreign ports. Until clearance is obtained from the Immigration Officer, no crew members may leave the ship.

For questions concerning Immigration matters, contact the District Office on (212) 264-5886.

Coast Guard Inspections: Coast Guard Officers may board tankers or barges at any time for the purpose of making inspections necessary to enforce the laws of the United States.

The Riverhead Terminal is within the jurisdiction of the Captain of the Port, New Haven, Connecticut, on (203) 773-2464.

A Regional Office is maintained at 146 Beach Street, Port Jefferson, New York on (516) 473-3570.

MEDICAL: A full-service hospital is available in Riverhead for treatment of medical emergencies. This is Central Suffolk Hospital located at the traffic circle/intersection of Roanoke Avenue (Route 73) and Route 58, Riverhead, about 4 miles from the Northville Terminal.

Emergency transportation to this hospital can be obtained by dialling 911 and indicating to the dispatcher the location of the medical emergency, for instance: "on the ship at the Northville Industries Terminal on Sound Shore Road".

WEATHER AND TIDE: Strong winds from North and N.W. experienced during Winter and Spring. Tide during maximum ebb and flood often reaches 3.5 knots to 4 knots velocity.

DENSITY: Flood tide density 1025. Ebb tide density 1020.

CUSTOMS ALLOWANCES: Tobacco, wine and/or spirit allowance: Same as permitted in New York Harbour.

IDENTIFICATION CARDS: Issued by Immigration Officer.

CONSULS: All Consuls offices located in New York City.

REPAIRS: No repair facilities are available. Vessel must remain in sailing readiness at all times while moored at the platform facilities.

DRY DOCKS: At New York Harbour.

SURVEYORS: *Inspection Companies:*

Caleb Brett – New Jersey. Tel: (201) 925-8282.
Independent Petro. Insp. Tel: (201) 925-4960.
J. J. Mullins – New York City. Tel: (212) 338-4135.
S.G.S. Control Services. Tel: (201) 541-7200.
Saybolt. Tel: (201) 245-3100.

Surveyors:

American Bureau of Shipping, 65 Broadway, NY, NY 10006. Tel: (212) 440-0300.
Bureau Veritas, 17 Battery Pl. N., NY, NY 10004. Tel: (212) 442-2317.
Det Norske Veritas, 616 Palisade Avenue, Englewood Cliffs, NJ. Tel: (212) 868-6595.
Lloyd's Register of Shipping, 17 Battery Pl., NY, NY 10004. Tel: (212) 425-8050.
Panama Bureau of Shipping, 104 E. 40 St., NY, NY 10016. Tel: (212) 867-4760.

REPATRIATION: Crew members departing vessels from the Northville Terminal may obtain transportation to domestic or foreign destinations (i.e. to an from either of the major internacional airports: J.F. Kennedy International Airport or LaGuardia Airport), by one of several methods.

The Riverhead Station of the Long Island Rail Road is located 10 minutes from the terminal by taxi and has services for both railway and bus.

Another method is limousine service. The following are limousine companies serving this area:

Long Island Airport Limousine. Tel: (516) 582-4077.
Winston Limousine. Tel: (516) 563-1323.
Transport Limousine of L.I. Tel: (516) 567-5100

AIRPORT: New York Airports, 80 miles distant.

POLICE/AMBULANCE/FIRE: Terminal attends Police/Ambulance and Fire services.

State Police Tel: 727-2727, Police Tel: 911 (Emergencies only). Fire Tel: 0 (to report fire, otherwise 727-2750). Ambulance Tel: 911 or 298-4016.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard at New Haven, Connecticut. Tel: (203) 773-2464; and the United States Coast Guard National Response Centre. Tel: (800) 424-8802 (toll free number).

BANKS: European American Bank, located at 209 West Main Street, Riverhead, New York, NY 11901. Tel: (516) 727-7082.

STORING: Bunkers must be taken at anchor. Stores can be loaded during transfer.

Trucks cannot proceed alongside the berth, but by launch only.
Fork lift trucks cannot be used to handle stores.
Customs Regulations regarding storing are not known by this terminal.
Local Riggers can be employed to assist with storing.

TELEPHONES: A coin telephone is located in the platform office. Tel: (516) 727-9549.

SHORE LEAVE: Shore leave permissible by arrangement with local launch service.

SHIP SUPPLY SERVICE: James Miller Marine Services operate Coast Guard inspected crew boats on a charter service to vessels in the Long Island Sound area. They also have available LCMs with a 25 ton capacity for stores and equipment. These vessels are based in Port Jefferson, Long Island, New York and are on call 24 hours a day, 7 days a week. Tel: (516) 654-4900.

James Miller Marine Services also operates inspected crew boats for passenger service on a per head basis in New York Harbour. The operations centre is at Pier 13, Staten Island. They can be reached on Channel 16 VHF "Miller's Launch" or call (212) 727-7303 or (516) 654-4900. Also available at this location are similar LCMs with 25 ton capacity for stores and equipment.

AUTHORITY: Northville Industries Corp., P.O.Box 111, Riverhead, NY 11901. *Tel:* (516) 727-5600. *Telex:* 96-1415. *Cables:* Northville, Melville. *Contact:* Earl Espeland, General Manager. A. Golz, Marine Supervisor.

ROCHESTER, New York: 43.17 N. 77.36 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

See "General" below.

PILOTAGE: Not necessary.

ANCHORAGE: No anchorage available within harbour limits.

RESTRICTIONS: Permit for non-emergency docking must be obtained 2 weeks in advance by mail or telephone request.

MAX. SIZE: Channel depth 20 ft. (LW). All depths in channel or alongside wharves should be checked carefully against the latest recorded elevated or lake level. This may vary from month to month. Entrance width 300 ft., turning basin depth 20 ft., 600 ft. in width.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Rochester Coast Guard Station.

TUGS: Not available.

BERTHING: Entrance piers are parallel to each other, and about 450 ft. apart. The West Pier is 3,036 ft. long and the East Pier 2,699 ft. long. Fog horn and beacon on West Pier, East pierhead lighted. Radio beacon. Port Authority Terminal located on West bank of Genesee River at end of Lake Pier. Has a quay wall of about 1,400 ft. in length. Depth of water alongside quay wall uncertain, estimated at between 10 ft. and 16 ft. Charlotte Docks located about 2 miles upstream from mouth of river on West bank.

CRANES: Not available, except through private arrangements.

BRIDGES: New York Central Railroad swing bridge near mouth of the river and upstream from Port Authority Terminal. Traffic lift bridge about 0.25 mile upstream from railroad bridge.

STEVEDORES: Vessel to make own arrangements.

DENSITY: Fresh water.

FRESH WATER: Available at both docks.

FUEL: Vessel to make own arrangements.

IDENTIFICATION CARDS: Required.

CONSULS: None.

REPAIRS: Minor only.

REPATRIATION: Can be arranged.

AIRPORT: Approximately 10 miles from port.

POLICE/AMBULANCE/FIRE: Police, Ambulance and Fire Tel: 911.

SHORE LEAVE: Allowed.

GENERAL: Rochester, New York, no longer operates a commercial port. The facilities are available only for tour and cruise boats to take on and discharge passengers, and by commercial vessels in the case of an extreme emergency.

It should be stressed that emergency docking is completely the Master's responsibility. The City of Rochester and the Department of Recreation and Community Services assume no liability for any vessel docking under emergency conditions at the former Port of Rochester.

AUTHORITY: City of Rochester, Department of Parks, Recreation and Human Services, Office of the Director, Room 226B, City Hall, Rochester, New York 14614. *Tel:* (716) 428-6755.

SACRAMENTO, California: 38.32 N. 121.30 W. (See Plan)

DOCUMENTS: See "San Francisco".

PILOTAGE: Pilots board vessel in San Francisco Bay. (Also see "San Francisco").

RESTRICTIONS: *Ship Channel:* Distance Fort Point to Sacramento, 79 nautical miles (146 km.). Bottom width in river reach 300 ft. (91.4 m.). Bottom width in channel reach 200 ft. (61.0 m.). Min. depth at MLLW 30 ft. (9.1 m.).

Harbour: Area 60 acres (24.3 hectare). Min. depth at MLLW 30 ft. (9.1 m.). Tidal variation 5 ft. (1.5 m.) average.

MAX. SIZE: 800 ft. LOA and 106 ft. beam, 30 ft. deep at MLLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: KBA 386, 156.9 MHz (24 hours).

TUGS: Join vessel at Light 76 (turning basin).

BERTHING: Anchor – ships will have at least 1 anchor ready to let go in case of emergency, when docking or undocking. Anchor will be raised immediately upon ship being made fast to wharf.

Insurance lines are required on off-shore side, fore and aft, immediately after ship is made fast to wharf.

A cargo net shall be securely placed under gangways. Save-all nets shall be rigged abreast of holds at which general cargo is being handled.

Rat guards, at least 3 ft. in diameter, shall be placed on all mooring lines immediately after docking, and shall be maintained in place until ship's departure.

Pier 1:
Owned and operated by: Port of Sacramento.
Use: Bulk-loading rice facility.
Construction: Concrete with timber fender piles, length 600 ft. (182.9 m.).
Water depth: 32 ft. (9.8 m).
Storage capacity: 22,000 tons; 8 silos at 2,200 tons each; 6 silos at 470 tons each; 6 silos at 270 tons each.
Mechanical handling facilities: 3 loading spouts dockside, conveyor system to storage facility.
Loading rate: 600 t.p.h.

Wharf 2:
Owned and operated by: Port of Sacramento.
Use: General cargo.
Construction: Concrete with timber fender piles; apron width 60 ft. (18.3 m.); length 600 ft. (182.9 m.).
Water depth: 30 ft. (9.1 m.).
Transit sheds: One, 86,400 sq. ft.

Pier 5:
Owned by: Port of Sacramento.
Operated by: Cargill of California, Inc., as a public utility.
Use: Bulk-grain facility.
Construction: Concrete and steel silos; concrete with timber fender piles; length 600 ft. (182.9 m.).
Water depth: 32 ft. (9.8 m.).
Storage capacity; 1,250,000 bushels (30,000 tons); 17 concrete silos; total capacity 500,000 bushels; 6 steel silos; total capacity 750,000 bushels.
Mechanical handling facilities: Bulk ship loader (600 t.p.h.), conveyor belt system connects bulk storage/rail/truck.

Wharf 6:
Owned and operated by: Port of Sacramento.
Use: General cargo and containers.
Construction: Concrete with timber fender piles; length 600 ft. (182.9 m.); apron 60 ft. (18.3 m.).
Water depth: 30 ft. (9.1 m.).
Mechanical handling facilities: 2 gantry cranes, 45 tons each.
Remarks: 6 acres of open wharf; 70,000 sq. ft. off dock warehouse.

Wharves 7-8:
Owned and operated by : Port of Sacramento.
Use: Bulk material facility and general cargo.
Construction: Concrete with timber fender piles; apron 60 ft. (18.3 m.), length 600 ft. (182.9 m.).
Water depth: 30 ft. (9.1 m.).
Storage capacity: Covered 200,000 tons, open 750,000 tons.
Mechanical handling facilities: Conveyor-belt system from truck to storage, from ship to storage; from storage to ship, or from storage to truck; 2 gantry cranes, 45 tons each.
Loading rate: 600 t.p.h.
Transit shed: 86,400 sq. ft. Bagging facilities for bulk cargoes.

STEVEDORES: Same as San Francisco.

MEDICAL: All normal medical facilities available.

DENSITY: Full fresh.

FRESH WATER: Available at all berths.

FUEL: All grades available with 24 hours notice. Delivered by barge.

GANGWAY/DECK WATCHMEN: Each ship shall have a security detail in readiness on board at all times it is in port. The security detail shall perform tasks of an emergency nature and shall have information concerning cargoes aboard in case of need for fire fighting purposes.

OPENING/CLOSING HATCHES: Opening/closing hatches is stevedore work while docked in port.

IDENTIFICATION CARDS: A pass signed by the Master or his designated officer will be required for crew members, passengers and their personal property to leave the port's fenced area. Property may be subject to physical inspection before leaving the fenced area.

CONSULS: Nearest at San Francisco.

REPAIRS: Limited repair facilities available.

REPATRIATION: Can be arranged through local Agent.

AIRPORT: 16 miles from port and served by regular airlines.

TIME: GMT minus 8 hours.

HOLIDAYS: Only days not worked are 4th and 5th July, Labour Day, Christmas Eve and Day, New Year's Eve and Day.

POLICE/AMBULANCE/FIRE: Tel: 371-8000. Extensions 252 and 228.

TELEPHONES: Telephones are available.

SHORE LEAVE: Crew members allowed ashore subject to Immigration clearance.

REGULATIONS: Ships will not blow boiler tubes while in port. Bilge water or oil will not be discharged into harbour. Accidents will be reported immediately to the Terminal Superintendent. Splash boards will be placed over disposal vent-pipe openings on inboard side of vessel.

Garbage – United States and California State laws make it unlawful to dispose of ship's garbage except in approved ways. Garbage retained on board must be kept in tightly closed containers.

Smoking – Smoking prohibited in and around cargo compartments, and on open decks except that it may be permitted in marked areas under sheltered portion of weather decks on offshore side. Smoking prohibited on wharfs and piers except in marked areas. Smoking prohibited on or near ship while it is bunkering.

Welding/Burning – Welding or burning will not be done until written approval is obtained from the Terminal Superintendent and the Fire Marshal. All requirements of both the Superintendent and Marshal will be strictly adhered to.

Fire Signal – Upon detection of a fire, regardless of location or size, the alarm of fire will be sounded. The alarm shall be sounded by telephone and/or whistle or siren blasts. 5 each, 5 second blasts repeated as necessary.

AUTHORITY: Port of Sacramento, P.O.Box 815, World Trade Centre, West Sacramento, California 95691. *Tel:* (916) 371-8000. *Telex:* TWX 910-367-3581. *Contact:* Dennis Clarke, Director.
AGENT: See "San Francisco".

SALEM, Massachusetts: 42.31 N. 70.53 W. (See Plan)

SHIPMASTER'S REPORT: August 1986.
DOCUMENTS: See "Boston".
PILOTAGE: Cape Ann Pilots Association (serves Gloucester and Salem). Pilot on VHF Channels 16 and 12. Pilot boards about 1 mile South of Eastern Light Buoy No. 2.
ANCHORAGES: About 2 miles S.W. of Eastern Point.
RESTRICTIONS: Salem Channel 150 ft. in width only, therefore large vessels berth or unberth in daylight hours only.
MAX. SIZE: Length 700 ft. (approx.). Breadth 110 ft. (approx.) and draft 34 ft. (salt water).
TUGS: Available from Boston.
BERTHING: New England Power Company (NEPCO) operates Salem Terminal Wharf to supply Salem Harbour Station with coal and fuel oil.

No cranes available, coal is discharged from "self-unloading vessels" only.
TANKERS: 2 arms (Chicksan-type), 12 in. diameter. Discharging rate: 7,000 bbls. each. Length of wharf (incl. dolphin) 250 m. (approx.) dredged to 34 ft. at LW.
DENSITY: 1022 – 1025.
AIRPORT: See "Boston", about 45 minutes. Cost US$50.00 by van.
TELEPHONES: Not placed on board, however communication with Agents via VHF possible.
GENERAL: Port is served by 1 or 2 colliers a week, and about 3 tankers a month.

NEPCO Representative acts as Loading Master. Linesman are provided from the power station.

REPORT: From Tanker Operator:
Port Approaches: The RDF stations at Cape Cod, Boston Buoy 'B' and Eastern Point are useful navigation aids. The rocky shore lines provides a good target for position fixing by radar. Fathometer readings should not be relied on for position fixing purposes, since bottom contours are erratic. Fishing boat traffic in Massachusetts Bay is heavy especially near Gloucester. It should be noted that the small fishing vessels in this area sometimes display working and running lights that could be mistaken for reguar range lights. During the Summer months, the yacht traffic is considerable. Most yachts reportedly show up poorly on the radar screen.
Channel Transit and Berthing: Loaded tank vessels enter with a rising tide. The Pilot and Agent should be consulted with regard to the actual water depths available in the channel during the intended period of transit.

The transit from the pilot boarding area to the terminal is about 10 miles. Salem Sound is entered via the Salem Channel between Bakers Island and Little Misery Island, leading Westwards for 3 miles thence Southwestward through a dreged section to the turning basin off the berth. The channel is well marked with buoys and range lights.

Shallow vessels and tows crossing the channel may be met. During Summer months, Salem Sound is crowded with pleasure craft. Coast Guard patrol boats must sometimes be utlised to clear a path.

The tugs usually join the ship before entering the inner dredged channel Buoy No. 16. The ship is berth port side to, which requires a starboard turn of approximately 130° before landing.

During normal weather conditions, 10 mooring lines are considered to be the minimum acceptable.
Weather: Gales occur year round. The severest storms occur during the Winter months. Rain or snow associated with these storms, at times, reduce visibility to zero for extended periods. During the Winter months, freezing spray may be experienced.

Fog presents a problem year round, being heaviest during late Spring and early Summer. It is not advisable to enter or leave in thick weather.

SAN DIEGO, California: 32.41 N. 117.07 W. (See Plan)

PORT LIMITS: The seaward boundaries of the Port of San Diego at which a vessel is considered to be an "arrived vessel" is that time when the vessel is boarded by a Port Pilot at Sea Buoy No. 1 and (subject to charter party terms) lay time commences when Notification of Readiness is tendered at berth.
DOCUMENTS:
- Crew Lists.
- Passenger Lists.
- Customs Documents.
- Manifests.
- Stores Lists.
- Crew Curio Declaration List.

If the vessel arrives from foreign direct, 3 copies each of the above documents are required.

If the vessel movements are between U.S. ports, 2 copies each of the above documents are required.

Health Documents. Arrival from foreign direct, 1 copy only. All crew members should be in possession of valid vaccination certificates.

Manifests. Arrival from foreign direct, 1 copy of travellers manifest which remains with vessel, and 3 copies each of U.S. Customs inward foreign manifest. Bills of lading, ship's papers carried aboard vessel varies with steamship companies.
PILOTAGE: Compulsory. The San Diego Pilots do not maintain Pilots on station. Service is rendered according to ETA received from vessel. If any vessel's arrival or departure is delayed over 1 hour, an additional charge will be made. Telegraphic address of pilot station – radio ETA to "Pilots", San Diego. Advance notice of ETA required – 24 hours prior to arrival of vessel with amendments 2 hours prior to arrival. Pilot boat is 54 ft. in length, painted white. The exact area where Pilot boards the vessel is No. 1 sea buoy. Pilot on VHF Channels 16 and 12 (Tel: (619) 233-7814).
ANCHORAGE: 3 miles S.E. of Point Loma Light.
MAX. SIZE: Length, breadth – no restrictions. Max. draft alongside face of terminal, 36 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: All radio messages go through the Los Angeles station for relay.
VHF: The Port of San Diego Harbour Police maintains a listening watch on Channels 12 and 16. Channel 11 is available after initial call-up on Channel 16.
TUGS: Tugs normally join vessel approximately 1 mile before berth. 5 available ranging from 200 h.p. – 2,400 h.p. There is no charge for the use of tug's lines.
CONTAINER FACILITY: A new generation, high-speed, all-electric container crane capable of handling 20 ft. and 40 ft. units, or single hook lifts of 40 long tons at National City Marine Terminal. This 17.4 acre facility includes 32,500 sq. ft. for a container freight station, a container steam-cleaning facility, office, maintenance shop, truck scales, railroad spur, and paved storage for 2,280 containers including electrical outlets for 45 refrigerated containers. Depth 35 ft.
SPECIALISED CARGO HANDLING FACILITIES: High-speed bulk-loading facilities exist with 800 ft. of 35 ft. deep water berthing space and bulk storage, plus a bulk loader boom that travels 500 ft. laterally and can be extended or raised enough to load nearly any size or type of ship.

High-speed bagging of bulk commodities is available for bagging of bulk materials from powder to pellets at the rate of 1,000 tons per hour.
STEVEDORES: Advance notice of 24 hours desired in order to arrange gangs.
MEDICAL: Agents should receive notification of medical attention required 24 hours prior to ETA of vessel. Complete hospital facilities available.
TANKERS: Diameter of load/discharge line 6 in. to 8 in. Slop (residue) discharge facilities available upon request. 2 tanker berths – max. draft 35 ft. There are also 2 tanker berths at National City Marine Terminal with 12 in. discharge lines.
DENSITY: Salt water in bay.
FRESH WATER: Fresh water available, delivery via pipeline.
FUEL: Diesel and bunker fuel available.
GANGWAY/DECK WATCHMEN: Available if considered necessary.
OPENING/CLOSING HATCHES: Carried out by stevedores.
CERTIFICATES: Registered Load Line Certificate, Certificate of Inspection, Safety Certificate.
CUSTOMS ALLOWANCES: Tobacco: Per each crew member U.S. Customs allowed 2 cartons of cigarettes and 1 box of cigars. Wine and/or Spirits: Quantity allowed per each crew member – 1 quart.
CARGO GEAR: Up-to-date certification of all cargo gear required in order to comply with Pacific Coast Marine Safety Code.
IDENTIFICATION CARDS: U.S. Immigration requires completion of Form I-95, U.S. Coast Guard requires landing permits.

CONSULS:
- Chile
- Costa Rica
- Denmark
- Dominican Rep.
- Ecuador
- El Salvador
- Finland
- France
- Germany F.R.
- Honduras
- Italy
- Mexico
- Netherlands
- Norway
- Panama
- Peru
- Sweden

REPAIRS: All types of deck and engine repairs are available.
DRY DOCKS: Largest dry dock 700 ft. length, 104 ft. width. Capability can accommodate C – 2 Mariner type or San Diego type hulls (600 ft. length, 85 ft. width) and up to and including 28,000 displacement tons. 4 additional floating dry docks with capabilities up to and including 3,500 displacement tons.

New floating dock, length 800 ft.
SURVEYORS: A full complement of cargo inspectors and surveyors are available locally.
AIRPORT: Distance from marine terminal approximately 5 miles. Airport is serviced by major airlines.
TIME: Local time GMT minus 8 hours. Daylight Saving Time becomes effective the first Sunday in April and continues to the last Sunday in October.
HOLIDAYS: Recognised holidays are: New Year's Day; Lincoln's Birthday; Washington's Birthday; Memorial Day, Independence Day, Labour Day, Columbus Day, Veteran's Day, Thanksgiving Day, Statewide Election Day, Christmas Day, or any other legal holiday that may be proclaimed by State or National Authority; when a holiday falls on a Sunday, the following Monday shall be observed as a holiday.
POLICE/AMBULANCE/FIRE: Police Tel: 236 – 5911; Emergency Ambulance (Paramedic) Tel: 238 – 1212; Fire Tel: 238 – 1212.
EMERGENCY CO-ORDINATION CENTRE: Local maritime emergency co-ordination is handled by the U.S. Coast Guard, San Diego Region, 2710 North Harbor Drive, San Diego, CA 92101. Tel: (619) 293-5860.
TELEPHONES: Arrangements exist for placing telephones on board. No charge for hooking up.
SERVICES: Tank-cleaning equipment. Facilities for tank washings Compass and radar adjustments, etc.
SHORE LEAVE: Permitted.
BANKS: Full banking services for both domestic and international transactions are available locally.

STORING: Storing and provisioning may be accomplished at dockside or via barge by prior arrangement. Trucks and forklifts may be used alongside and riggers are available by arrangement with the representative Agent. U.S. Customs Agents will board on arrival and seal all bonded items. Otherwise, normal procedures concerning controlled items will be observed by the vendor.

DEVELOPMENTS: Broadway and 'B' Street Piers have been reconstructed for use as a passenger vessel facility, public park, for berthing of public visit Naval vessels, and for berthing and clearance of fishing vessels. U.S. Customs has an office at the end of Broadway Pier.

AUTHORITY: Port of San Diego, P.O. Box 488, 3165 Pacific Highway, San Diego, California 92112. *Tel:* (619) 291-3900. *Telex:* 695-456. *Cables:* Sun Harbor San Diego. *Contact:* Don L. Nay, Port Director.

SAN FRANCISCO, California: 37.48 N. 122.25 W. (See Plan)

DOCUMENTS:

General Declaration (arrival) on Customs Form 1301.

Cargo Manifest (Customs Form 1302). One original copy indicating all the cargo on board, used for making formal entry. One copy listing all cargo on board, to be used by the Customs Inspector. One copy indicating cargo for this port only.

2 copies of Crew's Effects Declaration on Customs Form 1304.

2 copies of Ship's Stores Declaration on Customs Form 1303.

2 copies Passenger List (Form I-418).

2 copies Crew List (Form I-418).

1 Copy "Oil Pollution Certificate", issued in Washington D.C.

Customs Boarding Officer will also examine Ship's Register and Load-Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from abroad, or 24 hours of arrival from a U.S. port:

(a) Health Pratique.

(b) Master's Oath (Customs Form 1300).

(c) U.S. Certificates of Payment of Tonnage Tax (Customs Form 1002).

(d) Certified Crew List (U.S. vessels only).

PILOTAGE: Pilotage in and around Golden Gate Region is performed by the San Francisco Bar Pilots who provide service from sea to all ports within the regions, including the Ports of Sacramento and Stockton.

The San Francisco Bar Pilots' Association, maintains a sea station 12 miles outside the Golden Gate, in the vicinity of the large navigation buoy for vessels arriving and leaving the area.

On station around-the-clock. Pilot boats are equipped with VHF radio-telephone, and maintain continuous watch for ship traffic and operate co-operatively with the Marine Exchange Communication Centre and lookout station. The Bar Pilots also carry portable VHF radios.

Some 8,500 ships are piloted annually into and out of the port complex, through the Golden Gate and the 2,000 ft. wide, 55 ft. deep main ship channel across the sand bar about 9 miles outside the Gate.

Considerable Summer fog is experienced on the pilot grounds. In Winter months radiation or tule fogs frequently occur. The tidal prism of hundreds of square miles of inland waters cause unusually swift and changing currents in the area. Pilotage for San Francisco Bar and entrance is compulsory and available 24 hours a day. The pilot boat is at a station 3 miles outside Main ship Bar Channel about 14 miles from San Francisco, VHF Channels 18A and 10 for radio contact. Vessels with a draft of 42 ft. or more are requested to arrive at the pilot station for the inward passage about one hour before high water at the Golden Gate Bridge.

ANCHORAGES: Several anchorages available in San Francisco Bay for any type of vessel up to 50 ft. draft.

The well-protected bay affords excellent shelter and anchorage in all weather. The Captain of the Port (Coast Guard) will assign an anchorage to a vessel upon request. In San Francisco and San Pablo Bays, there are a large number of anchorages available for naval, quarantine, general and explosives.

The specific anchorages available include:

1. *General Anchorage*

(a) No. 5 – found just South of the Richmond-San Rafael Bridge, has no limitations.

(b) No. 9 – found in the South Bay, also has no limitations.

2. *Temporary Anchorage*

(a) No. 7 – found off Treasure Island, has a 12 hour limit. A ship cannot lighter nor bunker at this mooring.

No. 8 – same as No. 7 but has a 6 hour limit.

3. *Explosive Anchorage*

No. 12 – is normally not activated.

No. 13 – found off Larkspur, this mooring is activated only as the need arises.

No. 14 – found in the South Bay, this mooring is always activated.

4. *Naval Anchorage*

No. 10 and No. 21 are the most frequently utilised.

RESTRICTIONS: The San Francisco Bay region is the first on the West Coast to have sea lanes established by the Coast Guard for greater safety in its ocean approaches. Use of the lanes is not mandatory, but is strongly recommended to reduce chance of ship collisions in congested approach and departure areas. The lanes are not intended to supersede or alter applicable rules of the road.

The lanes begin within 6 miles of the San Francisco Lightship, with each lane inbound and outbound separated by a buffer zone. The headings are: North lane outbound, 305°; North lane inbound 120°, main line outbound, 247°; main line inbound, 058.5°; Southern lane outbound, 169°; Southern lane inbound 343°.

The size of the bay and the narrowness of the Golden Gate cause tricky and sometimes difficult tidal and current conditions. The flood current sets into all parts of the bay and causes swirls as far East as Alcatraz and Angel Islands. At the San Francisco-Oakland Bay Bridge there are large current eddies near the foundation piers which may require care to maintain proper course.

The Bar Channel is dredged to 55 ft. MLLW by the U.S. Army Corps of Engineers. Entrance channels to the various ports are dredged to 35 ft., with the exceptions of Sacramento, Stockton and Redwood City, which are 30 ft. Stockton, however, is approved for a 6 ft. deepening, and study of similar deepening for Redwood City is being completed.

MAX. SIZE: The max. permissible draft for tankers at the oil installation is 35 ft., for regular freighters and passenger ships at the San Francisco piers is 40 ft. No restrictions on length or berth. The best time to dock with max. draft is at a rising tide.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tugs available and normally join the vessel when approaching their pier. Tug's lines are always used, with no extra charge.

BERTHING: No restriction on berthing other than draft limitation and preferable at slack water.

Alameda: (See Plan). (Not part of the Port of San Francisco). Alameda, an island and city across the Inner Harbour channel from Oakland, is the home of Encinal Terminals, the largest privately owned and operated steamship terminal in the United States. There are 6 berths for vessels at Encinal.

Berths 1, 2, 3 and 4: Used for general cargo and bulk liquids. Total berthing length 2,125 ft. Depth 31 ft. to 33 ft.

Berth 5: Used for general cargo. Length 750 ft. Depth 35 ft. Berth equipped with Paceco crane.

Berth 6: Used for receipt and shipment of bulk liquids. Depth 30 ft. Facility has tank storage of 12 million gallons.

Operator: Encinal Terminals, 1521 Buena Vista Avenue, P.O.Box 2453, Alameda, CA. 94501. Tel: (415) 523-8800. Telex: TWX (910) 366-7174.

RADIO: Radio station via RCA – Radio Corporation of America – Station KPH ITT – World Communications – Station KFS.

Safe and efficient navigation for all bay vessel traffic is maintained through a Ship Location and Reporting Service operated by the Marine Exchange. U.S. Coast Guard Vessel Traffic Service on Yerba Buena Island and at Port Bonita maintains 24 hour radar surveillance of all traffic from Golden Gate on the West (with 32 mile capacity beyond) to Oakland on the East, Dumbarton Bridge on the South and Port San Pablo on the North. Vessel Movement Reporting System (VMRS) extends beyond Port San Pablo all the way to the Ports of Stockton and Sacramento. Coast Guard urgently requests that all vessels as specified below, moving anywhere within the VMRS (including all area under radar surveillance), tune to Channel 13 (156.65 MHz., VHF FM): All ships of 300 gross tons and over, passenger ferries for hire over 100 gross tons, and tugs with tows of barges or dredging rigs of over 26 ft. length.

Coast Guard Regulations: Foreign tankers should give 72 hours' advance notice of arrival to ensure that U.S.C.G. has enough time to check the vessel's records for compliance or outstanding violations and to arrange for any onboard inspections required. Failure to provide 72 hours' notice may delay the commencement of cargo transfer while awaiting the required U.S.C.G. inspections. Letter of Compliance inspections must still be arranged through Washington D.C. The statutory notification remains at 24 hours. This notice applies only to the San Francisco Bay area. Any vessel required to have an inert gas system must have its tanks inerted at all times unless they are gas free.

VHF: VTS in operation. Call sign "San Francisco Vessel Traffic Centre", operates on Channels 16, 13, 12 and 18A.

CONTAINER/BULK HANDLING FACILITIES: *San Francisco Container Terminal - (SFCT) South:*
(formerly Pier 94/96).
Container Ship Terminal.
Cargo Way.
Steamship Lines: Evergreen Line, Columbus Line, COSCO/Grancolombiana Line, United Yugoslav Line, Evergreen Line, Zim Container Service, Japan Line.
Assigned to: Stevedoring Services of America.
Dimensions: Total terminal area is 76 acres. Outer apron is 2,456 ft.
Number of berths: Three at 40 ft. MLLW alongside and a design load of 800 p.s.f.
Special Facilities: The ondock Intermodal Container Transfer Facility accommodates up to 20 rail cars on a single switch. Port packers used for yard operations. Elevated control tower with radio and PA communications systems. A maintenance and repair building of 24,000 sq. ft. is sprinklered and has a 5-ton capacity overhead bridge crane. Other buildings include an administration building (14,000 sq. ft.) and gate house/terminal office building (2,475 sq. ft.). 135×240 volt and 32×480 volt reefer outlets.
Lift equipment: 2×30 ton Paceco Cranes, and 2×30 ton Starporter cranes, rail mounted. The spreaders can be expanded in order to afford easy accommodation of both 20 ft. and 40 ft. containers. Each crane has a 50 ft. gauge with an outreach of 115 ft., backreach of 30 ft. and an 88 ft. clear hoist above HW (to be upgraded to 103.5 ft. clear hoist above HW). The Paceco can load and off-load containers thwartships. There is also 1×25 ton P&H mobile crane.
Connections: Trucks via Cargo Way; Southern Pacific Railroad tracks. San Francisco Belt RR.

San Francisco Container Terminal - (SFCT) North:
(formerly Pier 80)
Combination Terminal - Container/Ro-Ro/Unitized Break Bulk.
Foot of Army and Marin Streets.
Construction: Concrete pilings, concrete deck.
Steamship Lines: National Shipping Corporation of Philippines, Barber Blue Sea, ELMA, Lloyd Brasileiro, South Seas Steamship, Tranportacion Maritima Mexicana, Canadian Tropic Line, Navicana Line, Nedlloyd Lines, Shipping Corporation of India.
Assigned to: California Stevedore & Ballast Company and Lykes Lines.
Dimension: Total terminal area is 68.5 acres. The face measures 1,296 ft. North measures 1,138 ft. and South measures 2,657 ft.
Berths: Four at 40 ft. MLLW alongside.
Special facilities: 2 steel-framed transit sheds totaling 396,000 sq. ft., 273×220 volt and 36×480 volt reefer outlets and Container Freight Station accommodations. The van yard is fully lighted and completely fenced for security.
Lift equipment: 1×30 ton and 3×40 ton Paceco Cranes, and 1×30 ton Starporter Crane, rail mounted. All cranes can accommodate 20ft. and 40 ft. containers. Each crane has a 34 ft. gauge and an 88 ft. clear hoist above high water. (2 New Paceco cranes have a clear hoist of 95 ft. above HW). Cranes can load and off-load containers thwartship.
Connections: Via Army Street or Marin Street; UP System Railroad tracks.

Pier 70-72: Automobile Terminal.
Foot of 23rd Street.
Assigned to: Fred F. Noonan Company.
Construction: Timber pile, timber deck.
Steamship lines: Wallenius Line.
Dimensions: The total terminal area is 24.5 acres. The face measures 723 ft.
Berths: Two at 40 ft. MLLW alongside.
Special facilities: 22 acres of open storage for car-loading, unloading and processing.
Connections: Via Third Street, East on 20th Street.

Pier 50: Combination Terminal.
Container/Ro-Ro/Unitized Breakbulk.
Foot of Mission Rock Street.
Construction: Concrete piles, concrete deck.
Steamship Lines: Various.
Dimensions: Total terminal area is 20.8 acres. The face measures 1,000 ft. North measures 1,480 ft. and South measures 1,100 ft. and 582 ft.
Berths: Four at 35 ft. MLLW alongside.
Special facilities: This pier offers 8 acres of open storage, 4 transit sheds totaling 274,000 sq. ft. and reefer outlets.
Connections: Via Mission Rock Street; Santa Fe Railroad tracks.

Pier 27 – 29: Newsprint/General Cargo/Containers.
Foot of Lombard Street.
Assigned to: Marine Terminals Corp.
Construction: Concrete piles, concrete deck.
Steamship lines: B.C. Forest Products, Papua New Guinea Line, Sig. Bergesen, Star Bulk Shipping, Atlantic Cargo Services and Scann Scot.
Dimension: The face measures 206 ft., North measures 750 ft. and South measures 1,340 ft.
Berths: Three at 35 ft. MLLW alongside.
Special facilities: Piers 27-29 are integrated piers connected by a 117,000-sq. ft. bulkhead and 2.5 acres of open storage space. It also offers 601,700 sq. ft. of transit shed space.
Connections: Via Embarcadero; Belt Railroad tracks.

Pier 92: Automobile and Bulk Liquids Terminal
Cargo Way.
Assigned to: Baker Commodities (Bulk Liquids) and California Stevedore and Ballast (Fishmeal).
Construction: Concrete piles and deck, timber apron.
Dimensions: The face measures 702 ft. and 166 ft. This facility also has a transit shed measuring 57,270 sq. ft.
Special Facilities: 10 acres of open storage space for automobiles, automobile detailing and repair centre, bulk oil processing and storage equipment, and heated and cooled pipe-lines connecting pier with the storage tanks.
Berths: One with 38 ft. MLLW alongside.
Connections: Via Cargo Way from Third Street; Southern Pacific Railroad/S.F. Belt

STEVEDORES: Stevedores orders must be placed 1000 hrs. for night gangs and day gangs. 2×8 hour shifts 7 days a week. Sunday and Sunday night gangs must also be ordered on Saturday 1000 hrs.

MEDICAL: Medical, and all hospital facilities available. No advance notice required.

TANKERS: All major oil companies have their own oil discharging piers which are outside the jurisdiction of the Port Authority. Reducing pieces are available. The max. drafts are 35 ft. Tankers arriving with a greater draft are partly discharged in the bay before docking.
Davis Point: Union Oil Co. Oleum Refinery Wharf, depth up to 38 ft. MLW.
Martinez: Shell Oil Co. Wharf, depth alongside 30 ft. – 42 ft. MLW. Phillips Petroleum Co. Amorco Wharf, 2 berths, depth 30 ft. – 42 ft. MLW. Phillips Petroleum Co. Avon Wharf, depth alongside 35 ft. MLW. Urich Oil Co. depth alongside 35 ft.
Ozol: Oil Wharf, depth alongside 39 ft. MLW.
Hercules; Sequoia Ref. Corp. Terminals, depth 35 ft. MLW.

DENSITY: Average density in the bay is 1016.

FRESH WATER: Available at all piers rate between 25 t.p.h. and 50 t.p.h.

FUEL: Fuel available by barge or at the oil companies own pier. Special blends require some advance notice.

FIRE PRECAUTIONS: Any special instructions are given to the Master upon docking.

GANGWAY/DECK WATCHMEN: Not required but this service available at Master's request.

OPENING/CLOSING HATCHES: Normally done by stevedores. But crew may open and close before arrival at the dock or after departure.

CUSTOMS ALLOWANCES: Each crew member may land free of duty and/or taxes articles acquired abroad not exceeding $10 in value, plus 50 cigars or 300 cigarettes or 3 lb. of smoking tobacco, and not over 1 quart of alcoholic beverages.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

CONSULS: All Maritime countries represented at San Francisco.

REPAIRS: The major yards in the Golden Gate region have fully equipped machine-shop facilities capable of handling virtually any job; welding, heavy plate construction, turning, boring, facing, grinding, milling and rolling.

The larger yards also have facilities for pipe, sheet metal, electrical, carpentry, painting, rigging, machining and boiler work.

Southwest Marine, Westwinds, Service Engineering, SFW Corp., Todd and Triple "A" Repair are all located in San Francisco and provide berth space for all types of ship repairs at plant and at any location in the San Francisco Bay area.

DRY DOCKS: San Francisco shipyard has 3 floating dry docks, 1 with 22,000 tons capacity and 654 ft. long, 1 of 11,400 tons capacity and 542 ft. long, and 1 of 6,500 tons capacity and 450 ft. long. With a recently completed pier, its tie-up and outfitting space totals 4,271 ft.

Continental Maritime - New floating dock, carrying capacity 22,000 tons, LOA 664 ft., length over blocks 579 ft. clear draft over blocks 34.5 ft., clear width for docking 138 ft. Dock will accept vessels up to 70,000 d.w.t.

Williamette Iron and Steel Company's yard in Richmond has 5 concrete graving docks. 4 of these docks can each accommodate a vessel 600 ft. long with 83 ft. beam, and 1 dock can handle a vessel 750 ft. × 83 ft.

Tonnage capacity is limited only by the above dimensions. Williamette's facilities include 1,500 ft. of concrete outfitting pier for in-the-water repairs. The graving docks are served by 4 gantry cranes of 60 ton capacity and 2 of 45 ton capacity, and the outfitting pier by 3×45 ton cranes. Williamette has fully equipped shops for repair and conversion work, and mobile units for out-of-yard work at all Bay Area piers.

Hunters Point Naval Shipyard: (Triple A Machine Shop) Under lease from the U.S. Navy, graving docks and repair facilities available to all types of ships. Triple A operates 3 graving docks: (No. 4) 200 ft. beam×1,100 ft. length and 50 ft. depth; (No. 3) 150 ft.×1,000 ft. and 39 ft. depth; (No. 2) 100 ft.×800 ft. and 27 ft. depth, 17 repair berths can serve ships of any length. 12 gantry cranes of 50 ton capacity serve graving docks and repair berths. 50 ft. depth channel from Golden Gate to Hunters Point; unique to West side of San Francisco Bay.

REPATRIATION: All facilities available for crew changes by sea, air or land.

AIRPORT: Distance about 10 miles South of San Francisco and is served by most domestic and international passenger airlines plus 20 international air cargo carriers..

TIME: GMT minus 8 hours. Summertime from first Sunday in April till last Sunday in October – GMT minus 7 hours.

HOLIDAYS: New Year's Day; Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Good Friday (afternoon); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Admission Day (Calif. only Sept. 9th); Columbus Day (October 12th); Veteran's Day (November 11th); Election Day (1st Tuesday after the first Monday in November); Thanksgiving Day (last Thursday in November); Christmas Day.

When any of the holidays fall on Sunday, the hoiiday will be observed on Monday.

On a holiday the longshoremen are working at the overtime rate (time and a half) except on the following days when no work will be performed:

1. New Year's Day;
2. Bloody Thursday (July 5th, memory of 3 longshoremen killed during the 1936 strike);
3. Labour Day;
4. Thanksgiving Day;
5. Christmas Day.

POLICE/FIRE/AMBULANCE: Police, tel. 533-0123; Fire, tel. 861-8020; Ambulance, tel. 431-2800.

TELEPHONES: On some piers telephone connections to ships are available, no extra cost for this service.

SHORE LEAVE: Crew members are allowed to go ashore after passing U.S. Immigration at first U.S. Port.

GENERAL: Vessels arrival has to be reported to the U.S. Coast Guard 24 hours prior arrival by Agent.

DEVELOPMENTS: The channel over the bar has been deepened to 55 ft. A new channel will be cut 600 ft. wide and 45 ft. deep (at low water), through the upper bay and the channel through San Pablo and Suisun Bays will be deepened to 45 ft. Manoeuvring areas near Richmond and the refinery terminals will be widened. The Stockton Deep Water Channel will be deepened to 35 ft. and the channel alignment improved.

Improvements to Pier 35 – Passenger Terminal: Improvements to the passenger boarding and unloading facilities at Pier 35, including a new Customs area have been completed.

Pier 35 is the major steamship passenger facility in the Bay Area and the point of disembarkation for tens of thousands of cruise passengers who look forward to San Francisco as a port of call or destination. An improved passenger terminal will be beneficial to our city and its tourist industry.

The area involved contains a 200,000 square foot passenger processing facility on the first floor with a 10,000 square foot visitor waiting area on the second floor.

The cost of the initial phase of the improvement is estimated at $1 million.

Expansion of Rail Capabilities to Pier 94-96: New track construction, as well as reconstruction of existing track, from the Terminal to Southern Pacific's mainline track has been designed to allow unit train access onto the Container Terminal.

The Container Terminal is composed of Piers 94-96. This 65 acre three-berth facility is serviced by 4 rail-mounted cranes and represents a $45 million capital investment. An additional 75 acres of expansion area lies adjacent to the Pier.

Direct rail access to this terminal will position San Francisco as a competitive intermodal port offering direct land-bridge and mini-bridge services through Port facilities. By being able to move containers directly from ship to rail, carriers will have the advantages of reduced costs, better control of containers and less damage.

San Francisco will be the first port in California with this capability.

AUTHORITY: Port of San Francisco, Ferry Building, San Francisco, California 94111. *Tel:* (415) 391-8000. *Telex:* 275940 PSF UR. *FAX:* (415) 398-1269. *Cables:* Sfportcomm. *Contact:* Vello Kiisk, Acting Executive Director. Roger Peters, Intermodal Manager.

AGENT: Norton Lilly Intl., 100 Spear Street, Suite 680, San Francisco, CA 94105. Tel: (415) 882-3400. Telex: 6771454.

SAVANNAH, Georgia: 32.02 N. 81.07 W. (See Plan)

DOCUMENTS:

3 Crew Lists.
3 Stores Lists.
3 Curio Lists.
3 Manifests.
3 Passenger Lists.

These documents required in order to enter vessel at U.S. Customs.

Direct Foreign Arrival – Quarantine Pratique issued by Public Health Service representative; Cargo on Customs Form 1302, in duplicate with Abstract Manifest of Savannah only cargo; Crew List on Form I – 418, in triplicate; Passenger List on Form I – 418, or other acceptable form, in triplicate; Crew Curio List, in triplicate, with Crew Declaration on Customs Form 1304, or Crew List on Form I–418, in triplicate, with numbers of attached Forms 5129 endorsed thereon for American vessels, List of Sea Stores and Ship's stores Customs Form 1303, in triplicate; for American vessels, Repair Declaration on Customs Form 226; for American vessels, Certified Crew List; Clearance from Last Foreign Port, if one issued.

Coastwise arrival with Residue Foreign Cargo or Passengers – Form 1301, "Permit to Proceed", in duplicate; Travelling Manifest; Abstract Manifest, in duplicate, of cargo to be discharged in Savannah; Stores List, in duplicate; Crew List, in duplicate; Crew Purchase List, in duplicate, and any Crew Declarations on Customs form 5123 for Savannah for American vessels; Passenger List, in duplicate.

PILOTAGE: Savannah Pilots' Association, 550 E. York, Savannah, Georgia, 31401 (telegraphic); Pilot required all vessels; ETA 24 hours advance notice, change ETA 8 hours; VHF Channel 16 (monitored at all times), 18, 12, 13 – Radio telephone 2182 and 2738 kHz. Pilot boards vessel 1 mile outside fairway buoy.

SHIP CHANNEL: Project depth and widths are as follows: Sea buoy to jetties 40 ft. depth×600 ft. width; New Channel Range through Upper Flats Range 38 ft. depth×500 ft. width; The Bight Channel 38 ft. depth×600 ft. width; Fort Jackson Range to Wreck Channel 38 ft. depth×500 ft. width; City Front Channel to Kings Island Channel 38 ft. depth×400 ft. width; Whitehall Channel 35 ft. depth×400 ft. width.

ANCHORAGES: Outside Fairway Buoy, North and N.E. of Fairway Buoy; no anchorages in river.

RESTRICTIONS: 31 ft. at any time; over 31 ft. on incoming tide, no restrictions day or night.

MAX. SIZE: Abbreviation OT: Ocean Terminal. Vessels berthing at OT 14 – 15 – 16 – 17 (slip 1). Vessels 550 ft. to 600 ft. on slack water; vessels less than 550 ft. any time to Berths 14 and 17; vessels docking or undocking at OT 15 – 16, with vessels in OT Berths 14 and 17, can be docked or undocked during slack water.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels route ETA cables to Agents, etc., via Radio Lantana.

TUGS: Tugs join vessels at city front for berths above city; for berths below city, tugs usually meet vessels in vicinity of Fort Jackson or well below berth. Tugs' lines used at all times.

BERTHING: The Georgia Ports Authority operates 12 general cargo berths, 2 tanker berths, 5 container berths and 1 dry bulk cargo berth.

CRANES: *Ocean Terminal:* One 175 short ton gantry crane, one 100 short ton gantry crane, two 50 short ton gantry cranes, one 30 short ton gantry crane, one 100 ton mobile crane, one 30 ton mobile crane.

Garden City Terminal: Two 35 short ton gantry cranes, one 100 ton mobile crane, one 30 ton mobile crane. Garden City Terminal (container port) – 9×45 short ton container cranes, 9×45 short ton rubber tyred bridge cranes. Other cranes, floating and mobile, are available from various private contractors.

BULK CARGO FACILITIES: Located at the Georgia Ports Authority's Garden City Terminal are 1 dry bulk cargo berth (loading). This facility is suited for the handling of various ores, grains, peanuts, meals and fertiliser materials. The storage at this facility consists of silos for the storage of grain and grain type products as well as flat floor storage for these various other materials.

Colonial Terminals: Kaoline/mineral bulk terminal. Handling rate 800 t.p.h. 12×109 cu.ft. Silos for kaoline. Minerals stored in 8×73,000 cu.ft. storage bays.

SPECIALISED CARGO HANDLING FACILITIES: Located at Container Central, on the up-river end of Berth 60, is a stern Ro-Ro ramp which is situated as to allow a vessel to utilise the Ro-Ro ramp and container cranes at the same time. Accommodating side and quarter ramps also available. At the Garden City Terminal there is a modern cold storage facility. The refrigerated space consists of 3 rooms of approximately 68,000 sq. ft.

BRIDGES: *Eugene Talmadge Memorial Bridge:* 135 ft. vertical clearance for 400 ft. at MHW. Distance between fender uprights – 600 ft.

Also see "Developments".

MEDICAL: Agent should be advised as far in advance as practicable for required medical attention. U.S. Public Health Clinic in Savannah, also other extensive medical facilities. Standard information required as to inoculations, vaccinations, etc.

TANKERS: Standard requirements on diameters of load/discharge lines. No facilities for slop (residue) discharge facilities except American Oil Company. A.P.I. of local types of oil is 36 gravity marine diesel fuel. 8 tanker berths in port, max. drafts range from 32 ft. – 38 ft.

DENSITY: Average density of water at 20° Centigrade in channels of Savannah Harbour are:

	High Water	*Low Water*
Savannah River Entrance		
Surface	1.0196	1.0090
Bottom	1.0196	1.0181
Port Area		
Surface	1.0022	0.99915
Bottom	1.0120	1.0075

FRESH WATER: Available at all terminals.

FUEL: Marine gas oil (No. 2 Fuel). Marine diesel oil (No. 4 Fuel Oil). All Intermediate grades from Intermediate 30 (=30 centistokes at 50°C) to Intermediate 420 (=420 centistokes at 50°C) Bunker fuel oil (No. 6 Fuel). Advance notice of 24 hours required.

FIRE PRECAUTIONS: No special fire precautions. All tanker berths have water and fire extinguishers on dock. Fire fighting equipment on dock. Fire fighting equipment on tugs.

GANGWAY/DECK WATCHMEN: Garden City and Ocean Terminals of Georgia Ports Authority, East Coast Terminal Company and Georgia Kaolin International require that a watchman, or someone in authority will be aboard any vessel tied to their facilities at all times.

CERTIFICATES: See "Documents". Current Registry Papers, Load Line Certificates, Certificates of Inspection, etc., are required.

CUSTOMS ALLOWANCES: Tobacco, a crew member may take ashore 50 cigars, 300 cigarettes, or 2 kilos of smoking tobacco, or a proportionate amount of each. An appropriate amount of tobacco products may be held out of bond for use of passengers and crew members while aboard ship when in port. Wine and/or Spirit, a crew member may take ashore one litre of alcoholic beverages for his own use. Container should be opened, that is the seal should be broken. An appropriate amount of wine and/or spirits may be held out of bond for consumption by passengers and crew while aboard ship when in port.

CARGO GEAR: Certified in accordance with U.S. Department of Labor Regulations. Supplied by stevedores.

IDENTIFICATION CARDS: Identification required by crew members coming ashore. U.S. Immigration & Naturalisation Service issues landing permit, I-94, to any passenger; and I-95, to any crew member of a foreign vessel who is not considered a security risk. This form must be in man's possession any time he is ashore.

CONSULS:

DEVELOPMENTS: Ocean Terminal rehabilitation underway will provide one 1,000 ft. berth, 800,000 sq.ft. transit space, two 200,000 sq.ft. warehouses.

Container Berth No. 5 recently completed. Facilities include a 1,000 ft. berth, 60 acres of paved storage and 3×45 ton cranes.

New bridge under construction with clearance of 186 ft. at HW.

SHIPMASTER'S REPORT: August, 1980.

Pilotage: Because of difficulties with the port crane and large storing programme we elected to berth starboard side alongside this call.

The Pilot will only undertake this on the flood (since vessel is invariably deep, berthing will only be done on the flood in any case) but because of a delay we were off the berth very nearly at slack water. The Pilot carried out the manoeuvre in the most reassuringly competent manner and I would not hesistate to do the same again if necesary; only with a Pilot prepared to carry out the manoeuvre.

Vessel is swung downriver off the container berth, about 4 cables below the berth.

When landed on starboard side to, it is just possible to plumb the berth with the crane by making the connection to the after crossover.

Discharge: Straightforward; some slight initial delay. Capable of receiving cargo at over 1,000 t.p.h. Our rate 810 t.p.h. overall.

Connection 12 in. 150 ASA. No VRL.

Density 1000 this call.

Storage capacity about 50,000 cu.m. Storage plant only for filling road and rail tankers.

U.S.C.G.: Deck inspection before commencing. Vessel was congratulated on her 'very high standard of equipment and personnel'. Monitoring detail on board throughout. Scuppers unplugged, please.

They are aware of the draft problem at LW and boarded immediately on berthing.

General: Lloyd's Surveyor easily available.

Bunkered lube oils whilst discharging with U.S.C.G. approval.

Can touch up ship's side from quay.

Movements allowed at night, dependent on draft/tide.

Chandler: Southern Marine: Poor service this time despite our cables. This is in contrast to excellent service last time. These services are entirely at the mercy of ship representative.

SHIPMASTER'S REPORT: October, 1980 (updated 1984).

Approach: From East: The coast between Sandy Point to Isle of Palms near Charleston shows up at 40 miles and South of Hunting Island near Port Royal Sound at 35 miles, on radar. Port Royal Channel gives a good radar echo at 15 miles. Soundings give little indication of position until fairly close inshore. Savannah light was observed at 28 miles.

DF stations at Tybee and Charleston are useful if nothing else is available.

Anchorage: Pilots advise anchoring to N.E. of Savannah Light Beacon. Good holding ground without obstructing arriving and departing traffic.

Arrival Procedure: ETA through Agents.

For deep draft ships proceeding to Ammonia Berth No. 61 about 5 miles above town, Pilot will board between 3 hours to 1.5 hours before HW.

Under 31 ft. can berth/sail any state of tide day or night. Berthing day or night.

Can berth either side to, the generally accepted side to is port side. However, if taking stores try for starboard side as the crane plumbs better, plus the Chicksan arm is in the way of trucks.

For starboard side to, arrive well in time for earliest Pilot boarding time.

The problem is the berth has a reported 36 ft. at LW (actually by lead line we found (Oct. '80) a minimum of 33 ft. 9 in. reduced to datum along the dock face). Therefore before LW you have to pump out about 2,000 tonnes, any delay can be important.

Pilots: Board from large cutter between Savannah Light and Whistle Buoy.

Give plenty of notice as cutter might be lying up-river at pilot station. Based at Cockspur Island in the ship channel. Call "Savannah Pilots".

Pilot ladder must be 8 ft. above water. Side dependent on wind. Berthing Pilot joins from tug using own ladder at Kings Island.

On departure from berth, Pilot requires 1.5 hours notice.

VHF: "Alpha" Channels used frequently.

U.S.C.G. uses 22A, Pilots use 18A, tugs use 19A. Otherwise use 16, 12 and 13.

Channel: The maximum draft of vessels has been 39 ft. with a 6 ft. tide. Normal maximum 37 ft. This can only take place on the flood so as to be on the berth at slack water.

Channel is narrow, less than Houston Ship Canal. Constant dredging is required. From Whistle Buoy to berth is about 3 hours.

Vessel is swung in Argyll Turning Basin off the container quay. 24 hour navigation is undertaken.

From soundings from Savannah Light Beacon to Berth No. 61 proceeding inwards 3 hours before Savannah HW (2.5 m.) a minimum of 1.6 m. under keel was found with draft 11.15 m.

Berth: Depth: "See Plan". Minimum depth reduced to datum found to be 33 ft. 9 in. along jetty face.

Berth No. 61: Owned by G.P.A. and leased to Occidental.

Concrete jetty on piles with centre section connected by roadway to shore, and mooring dolphins either end connected to jetty by catwalk. Length of centre section 266 m. Good fendering.

The upriver dolphin is not used due to damage. Can turn gangway out before arrival.

Pilot with the aid of powerful tugs swings vessel in very competent manner at Argyll Turning Basin.

Density: 1001 to 1002.

Moorings: Basic 3, 2, 2, each end. Forward headlines (3) go to Ro-Ro dock and breastlines to dolphin with springs to main jetty. Due to damage the upriver dolphin cannot be used so all stern and breast lines go to Grain Berth No. 62.

Springs out first, last in. Mooring boat used. Port Authority mooring gang require 4 hours notice.

Tugs: Atlantic Towing Company and Crescent Towing and Salvage Company of Savannah, Inc. based along town water front. Several large and powerful tugs. Two used, one each end, American style, tie up with own lines alongside. One and a half hours notice required.

U.S.C.G.: Very co-operative. Although Agent will try to get them to board in river for pre-inspecton, they board at dock. Carry out check list and inspection before cargo allowed to be worked. Takes about 30 minutes.

One U.S.C.G. rating on board at all times (8 hour shifts). Strict on pollution.

The U.S.C.G. do not seem to mind which way round the ship is berthed. Scuppers to be plugged.

Discharge: Into mobile Chiksan (as berth only leased). After manifold if starboard side too. Maximum rate about 1,200 t.p.h. but generally nearer 900 t.p.h. to 1,000 t.p.h. Connection 12 in. 150 ASA. No vapour return line. Shore tank capacity 45,000 tonnes, which fills rail and road tankers. Takes about 45 minutes to connect/disconnect. Shore labour assist. Shore personnel always in attendance. Manager very helpful.

In light ship condition we had 18 m. air draft which did not create any difficulties.

General: Lloyds Surveyor easily obtainable from Jacksonville. Fresh water from jetty, require 6 hours notice, especially at weekends.

Lube oils whilst discharging with U.S.C.G. permission. Stores lorry able to get close alongside ship.

Ship's crane (if starboard side to) will just plumb after end of jetty.

Liferaft service (Beaufort) at Southern Ship Supply – 24 hour service.

Shoreline infested with rats, snakes and big spiders.

Chandler: Southern Ship Service, good fresh produce.

Town: About 5 miles away. Can telephone for taxi – free of charge local calls, from hut at grain berth about 100 yards from gangway.

Airport 6 miles South of town centre with regular flights to Atlanta International, etc.

AUTHORITY: Georgia Ports Authority and East Coast Terminal. Savannah Port Authority.

The Savannah Port Authority does not operate terminals; however, is engaged in port and industrial development for the City of Savannah and Chatham County, Georgia. Harbour Regulations, pier and bulkhead lines, etc., come under the jurisdiction of this organisation.

Georgia Ports Authority, P.O.Box 2406, Savannah, Georgia 31402. *Tel:* (912) 964-3811. *Telex:* 804782 and TWX 810-784-5634. *Cables:* Gaports. *Contact:* John J. Powers, Jr.

SEARSPORT, Maine: 44.28 N. 68.56 W. (See Plan)

LOCATION: The Port of Searsport is located on Penobscot Bay, approximately 112 road miles East of Portland, and 20 miles from Bangor.

DOCUMENTS:

Clearance from Last Port.
2 copies of Form 1300 (Master's Oath).
2 copies of Form 1301 (General Declaration).
3 copies of Form 1302 (Inward Foreign Cargo Manifest).
NOTE: Form 1302 will only be accepted.
2 copies of Form 1303 (Ship's Stores Declaration)
(Including Narcotic Medicines).
Form 1374 Outward Foreign Manifest.
2 copies of Form 1304 (Crew Effects Declaration).
2 copies of I-418 (Crew List).

Also available: Vessel Register, Safety Equipment Certificate, Load Line Certificate, Certificate of Financial Responsibility, (Oil Pollution), and U.S. Tonnage Tax Receipts.

PILOTAGE: Ship's agent notifies Pilot approximately 48 hours in advance of arrival, correcting at 24 hours. Pilot's boat called on Channel 16.

Vessels from South and West, Pilot boards at Monhegan Island (Buoy 14M). Vessels from East, Pilot boards at Matinicus (Buoy 2WB). The pilot station is located on Matinicus Rock Island. Pilot boards at Wooden Ball Light Bell Buoy "2WB." Lat. 43° 49′ N., Long. 68° 50′ W.

The pilot boat is a fishing boat with a white hull showing the international signals.

Pilot signal: 3 long and 2 short on ship's whistle.

Radio contact: VHF Channel 16 (156.8 MHz).

36 and 24 hours ETA requested, cable "Penbay – Belfast/Maine", via Chatham Radio.

ANCHORAGES: No restrictions on anchoring.

RESTRICTIONS: No restrictions at night. Deep draft vessels brought in only on high water. Draft in concurrence with docks, 32 ft. low water. 10 ft. rise in tide – approach to Searsport 35 ft. – Bay 60 ft. limit.

MAX. SIZE: Size of vessel restricted to 38 ft. draft in harbour area. No outside installations at the port yet.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tugs in Searsport Harbour use Channels 16 and 13. Vessels arriving Searsport go through radio station at Chatham, Mass., RCA installation, SSB station or a VHF public correspondence station.

TUGS: Penobscot Bay Towing Co., Marshall Wharf, Belfast, Maine 04915. Tel. (207) 338-3000. 24-hour service. Requested that orders for tugboat service be given during normal business hours, 24 hours in advance.

Tugs: "Patrick McAllister", 1,200 h.p.
"Brian F", diesel 1,200 h.p.
"Roderick McAllister", diesel 1,200 h.p.
"Bronx", diesel 1,800 h.p.

Radio: Ship to ship, VHF Channels 16-13-10.

Sea Pilots dock ship with tug's assistance.

BERTHING: Draft conditions govern arrival and departures.

Bangor and Aroostock Pier: Length 800 ft., width 100 ft. Depth alongside (East side) 34 ft., (West side) 30 ft.

This pier handles a wide variety of cargoes including petroleum, forest and agricultural products, such as newsprint, tapioca, long logs, dimension lumber, potatoes, etc.

Cargoes can be off-loaded or loaded directly from or to railroad cars or trucks. There are 4 warehouses on the facility available for import or export cargoes.

C. H. Sprague Dock: Length 614 ft., depth alongside East side 33.6 ft.

This facility has and can handle many bulk cargoes, including salt, coal, gypsum, potash, bauxite, liquid chemicals, and Bunker C petroleum. There are 3 towers for discharge of bulk cargoes.

Turning basin off docks, depth 34.5 ft. and 1,200 ft. width.

STEVEDORES:

Weekdays:
Order gangs by 1700 hrs. for following day 0800 start.
Order gangs by 0900 hrs. for same day 1300 start.
Order gangs by 1300 hrs. for same day 1800 start.
Weekends:
Order gangs by Saturday 1200 hrs. for a Sunday 0800 start.
Order gangs by Saturday 1200 hrs. for a Monday 0800 start.

MEDICAL: No advance notice required by Agent. 1 hospital, Waldo County, which takes bed patients.

TANKERS: 2 berths at Searsport – 2 for No. 6 oil and 1 for light oil and gas. 2×8 in. hoses. 34 ft. LW.

DENSITY: Average density 1024.

FRESH WATER: Available by tug for boilers only at rate of tug hire at anchorage. Drinking water available at piers.

FUEL: No. 6 oil at C. H. Sprague Dock. Light oils delivered by tank truck at dock.
FIRE PRECAUTIONS: At certain oil piers information given to Shipmaster upon arrival at pier. Ample fire protection, salt-water lines, sprinkler system on pier, local fire department.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Ship's crew may open hatch after longshoremen boarded ship.
CERTIFICATES:

Load Line Certificate.
Certificate of Foreign Clearance.
Ship's Safety Certificate.
U.S. tonnage Tax Certificate of previous trip if have them.
Radio Operator Licence.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Wine and/or Spirit allowance 1 bottle per person.
CARGO GEAR: No additional cargo gear necessary.
IDENTIFICATION CARDS: Form I-95 must be filled out on arriving unless seamen has had a prior one made out for a previous arrival on same ship (on plastic card).
CONSULS:

French: Dr. Paul O. Proudian, 776 Main Street, Westbrook, Maine.
Finnish; Frank W. Bjorklund, 163 Main Street, Norway, Maine.
Italian: Dr. Domenica A. Santoro, 43 Deering Street, Portland, Maine.
Norwegian: Allan Kjos-Hansen, 30 Mayer Road, Portland, Maine, Vice-Consul.
Panamanian: Mary Navarro de Carrillo, Lafayette Town House, Portland, Maine.
Swedish: Martin Johnson, Vice Consul, 443 Congress St., Portland, Maine.

REPAIRS: All types of machinery repairs.
DRY DOCKS: None.
REPATRIATION: Arrangements must be made with Agent in advance by telegram.
AIRPORT: Bangor International Airport, 30 miles, Delta, United Airlines.
HOLIDAYS: New Year's Day; Washington's Birthday; Patriot's Day; Memorial Day; Independence Day; Labour Day; Thanksgiving Day; Christmas Day and Veteran's Day. Possible to get gangs to work all days except on Labor Day and Christmas.
POLICE/AMBULANCE/FIRE: Police Tel: 548-6372; Ambulance Tel: 548-2900; Fire Tel: 548-2900.
TELEPHONE: Arrangements can be made to have phone put on ship, but most docks have pay phones.
DEVELOPMENTS: Directly across from the Port of Searsport lies Sears Island. A major new cargo facility and industrial park will be constructed. Emphasis will be directed toward potential user groups, equipment assembly and manufacturing, plus a full spectrum of forest products storage and shipment.

This development will feature modern container-handling facilities and breakbulk handling capability.

AUTHORITY: Maine Department of Transportation, Division of Ports & Marine Transportation, State House Station No. 16, Child Street, Augusta, Maine 04333. *Tel:* (207) 289-2841. *FAX:* (207) 623-1109. *Contact:* R. D. Elder.

Town of Searsport, Maine, P.O.Box 499, Searsport, Maine 04974. *Contact:* Wayne Hamilton, Harbour Master. Tel: 548-2985.

SEATTLE, Washington: 47.36 N. 122.20 W. (See Plan)

PORT LIMITS: Port of Seattle limits are co-extensive with the boundaries of King County in which Seattle is situated. A vessel has "arrived" when it has tied-up to a berth.
DOCUMENTS (on arrival from foreign):

Clearance from Last Foreign Port.
2 Crew Lists on Form. I-418.
2 Passenger Lists on Form I-418 (if applicable).
Passenger Declarations if applicable.
2 Stores Lists.
2 Crew Purchase (curio) Lists.
2 Manifests of Cargo for discharge on CF1302.

If first arrival port on an inward voyage, must also have 2 sets of Manifests of complete cargo on 1302, one for Customs at this port and the other for use as a "Travelling Manifest" to go forward to other discharge ports.

A – For U.S. Public Health Quarantine Boarding Officer: "Quarantine Declaration" on Form PHS.43. (Only required if boarding on arrival is necessary) see "Health" before first U.S.A. port.
B – For U.S. Dept. of Agriculture Boarding Officer: "Shipmaster's Declaration and Warning Notice" on Form AIQ.43.
C – For U.S. Immigration Boarding Officer:

Crew List on Form I-418 visaed by U.S. Consul abroad.
Passenger List on Form I-418.
Attachment to Passenger List on Form I-92.
Form I-94 for each passenger.
Form I-95 or ID Card (Form 184) for each crewman. (These are re-usable for multiple entries, but for seamen on first trip to United States a new Form. I-95 must be ready for presentation on arrival.)

D – For U.S. Customs Boarding Officer and Agent or Broker:

3 copies Crew List (Form I-418).
3 copies Cargo Manifest on Form 1302.*
3 copies Stores List – Form 1303.*
3 copies Crew Purchases or Curio List (Form 1304).*
3 Passenger Lists on Form I-418.
For U.S. Ships – Declaration re foreign repairs on Form 3415.
For U.S. Ships – Certified Crew List from last U.S. port before going foreign.

*At subsequent U.S. ports of call 2 copies required of extracts Cargo Manifests of cargo for the port concerned, and 2 copies of lists of stores and curios remaining on board.

PILOTAGE: Compulsory for all vessels except those on coasting trade. Pilots may be obtained from Port Angeles Pilots' Association, Seattle, at short notice. Inward, Pilot boards vessel at pilot station off Port Angeles.
Port Angeles Pilots: Pilotage service furnished to any port or place on Puget Sound and its adjacent inland waters.

Pilot stations are located on Ediz Hook, Port Angeles and Seattle Washington.

Vessels desiring a Pilot should proceed to a position 0.25 miles East of Ediz Hook, where Pilot will board the vessel. If a Northwest wind, sea, or swell exists, vessels are requested to proceed to a position inside and South of Ediz Hook to obtain a lee and facilitate boarding.

In clear weather, vessels should indicate their desire for a Pilot by hoisting the International Code Flag "G" and by blowing the whistle signal of 1 long, 1 short and 1 long blast.

In fog or thick weather, the blowing of this whistle signal will attract the attention of the pilot station and repetition of this signal will assist the pilot boat to locate the vessel.

The pilot station is located 1,200 yards, 277° from Ediz Hook Light. At night, the station will show from a mast, 3 vertical lights, the highest and lowest being red and the middle one green, to indicate that the pilot boat is en route to the ship. The pilot station is equipped with radar to locate and track vessels. The pilot boats, 'Juan de Fuca' and 'Puget Sound' are equipped with radar.

Communications: Vessels may ensure prompt service by advising their ETA, Port Angeles, 24 hours in advance, via radio to station KLB, addressed to Port Angeles Pilots, Seattle, Washington. A vessel may also advise the pilot station, Port Angeles, Washington, addressed to "Pilots Port Angeles" of their ETA, and amended ETA, when subsequent conditions make it necessary. The message is transmitted immediately from KLB to Port Angeles via telephone. The pilot station, Port Angeles, monitors VHF Channels 14 and 16 continuously and transmits on Channel 13.

At the time of passing Cape Flattery, inbound vessels are requested to re-affirm their ETA by calling the pilot station directly, using VHF calling Channel 16 and transmitting on Channel 13.

Channel 14 is for Vessel Traffic System only.

Pilot Ladder Requirements:

1. Please contact pilot boat via voice radio (Channel 13) approximately 30 minutes prior to arrival for desired lee.
2. The ladder must be kept clean and used solely for embarking and disembarking Pilots.
3. Rigging of the ladder, along with embarking and disembarking Pilot, must be under supervision of a licensed officer.
4. The ladder must be made in 1 length and not consist of 2 lengths shackled or lashed together, and should be equipped with spreaders about 10 ft. apart to comply with SOLAS Regulation 17, Chapter 5.
5. The pilot boats have their own lights to illuminate the pilot ladder, but a standby light should be ready for an emergency.
6. The area of the deck where the Pilot boards and leaves must be well lighted and the area must be clear of all obstacles to ensure a safe passage for the Pilot.
7. *No tag lines, pull-up ropes, or trailing lines may be attached to the lower ends of the ladder.*
8. Ladders must be rigged well clear of discharge and water outlets and at a place near midship which affords the best lee for the Pilot. At no time should the ladder be rigged near the stern of the vessel.
9. Means must be provided to allow the Pilot to pass safely onto the ship's deck. Where portable stanchions and bulwark steps are used for this, the portable stanchions must be rigidly attached to the ship's structure and not the steps. The bulwark steps must also be securely fastened.
10. The ladder must be in good condition. the treads must remain horizontal when used and the upper surface must have a rough nonskid quality.
11. Manropes approximately 3 in. manila in circumference, a heaving line and a ring buoy with a self-igniting light must be provided.
12. If your vessel is to take a load of logs, make sure the Agent makes arrangements to have a cat-walk to provide safe passage to and from the ladder.

Accommodation Ladders for Embarking or Disembarking of Pilots:

1. All vessels where the distance from sea level to the point of access of the ship exceeds 9 m. (30 ft.) at any time, should carry on each side an accommodation ladder. The ladder is to be so sited that when in use the lower end of the ladder shall rest firmly against the ship's side under all conditions of roll and heel, clear of all discharges, and within the parallel length of the ship.
2. A conventional pilot ladder should be rigged just abaft the lower platform of the accommodation ladder. The pilot ladder should be secured firmly to the lower platform to allow access between the pilot ladder and accommodation ladder. The pilot ladder should extend at least 2 m. (6 ft.) above the lower platform of the accommodation ladder. Manropes to be provided and rigged alongside the pilot ladder.

ANCHORAGES: Extensive anchorage in Eliott Bay, depths of 90 ft.
RESTRICTIONS: Overhead power cables at Burlington Northern Railroad Bridge with a vertical clearance of 155 ft.

MAX. SIZE: Controlled by depth at berth.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available, 2nd tug normally used.

BERTHING: Over 46 berths for ocean-going vessels. Depths alongside, ~~30 ft. to 73 ft.~~ MLLW. 10·6 m. – 21 m./

Terminal No.	*Total Length (m.)*	*Depth (m.)*	*Remarks*
2	244	12.0	Leased to North Star Forwarding – barge berths.
5	537	13.5	3 container berths.
	166	—	Undeveloped berth (one).
18	1,844	12.0 – 15.0	Container, breakbulk, bulk, Ro-Ro, non-petroleum products. 352 reefer plugs.
25	482	15.0	2 container berths. 120 reefer plugs.
30	823	12.0	Container and breakbulk. 2 container berths and 2 general cargo berths.
37	270	15.2	1 container berth. 186 reefer plugs.
42	290	15.2	1 container berth
46	336	15.2	1 container berth. 217 reefer plugs.
48	585	10.6	State passenger and freight terminal (Alaska Marine Highways).
66	436	8.5 – 10.6	3 berths. Passenger ship terminal.
86	130	21.0	Export grain terminal operated by Cargill, Inc.
91	3,058	10.66	General cargo, auto import, fruit, frozen meats and seafood. Oil tank farm handles bunker fuel and waste oil products. Chill space 53,802 cu.m. Liquid storage 213,000 barrels.
115	366	12.0	Steel imports, fish and crab processing, general cargo.
	122	4.25	Barge berth.

SPECIALISED HANDLING FACILITIES: Terminals 18 and 20 combined and now designated as Terminal 18. Pipe-lines are available to carry molasses, tallow or other non-petroleum liquid cargo, and has a tank farm for storage.

Terminal 115 – 2 berths, capacity, import steel.

Terminal 115 – Jore Corporation Barges, has specialised finger piers, to handle container-to-barge operations.

Terminals 5, 18, 25, 37, 42 and 46 – Container Terminals, equipped with large container cranes and yards to handle van shipments. Depth alongside, Terminals 18 and 25 – 50 ft. Terminals 5, 37 and 46 – 40 ft.

Pier 86 – fully automated, deep water, Grain Terminal. 1 berth, length 600 ft. (Max. LOA 1,400 ft. using dolphins). Depth of water 70 ft. at MLLW. Grain Terminal: capacity 4.2 million bushels, loading rate 3,000 t.p.h. via twin conveyor belts.

CRANES: *Terminal 5:* 4×50 ton container cranes.
Terminal 18: 6×45 ton and 1×33 ton container cranes.
Terminal 20: 1×50 ton revolving crane.
Terminal 25: 2×45 ton and 1×33 ton container cranes.
Terminal 30: 1×50 ton gantry, 2×50 ton container cranes.
Terminals 37, 42 and 46: 6×45 ton container cranes.
Terminal 115: 1×50 ton gantry crane.

STEVEDORES: 40 local gangs available. Gang requirements must be made known to the contracting stevedore prior to 1100 hrs. on day before vessel plans to dock. Order before 1030 hrs. on Saturday for Saturday afternoon, Sunday, and Monday.

DENSITY: Salt water in Outer Port. Fresh water inside Canal Locks.

FRESH WATER: Available at all wharves.

FUEL: Available.

DOCUMENTS:

3 copies Cargo Manifest (Form 1302) the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Health Pratique.
Master's Oath (Form 1300).
All Foreign clearances.
U.S. Certificates of payment to tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Alaska Marine Pilot's Association, Box 273, Homer, Alaska 99603. 48 hours advance notice. 2182 calling frequency KC – KTE – 21. Anchorages as noted on chart. C. & G. S. 8529 Resurrection Bay. Pilot boards at Cains Heads in Resurrection Bay.

MAX. SIZE: Harbour depth 35 ft. MLLW.

ANCHORAGE: Suitable anchorage in 30 fathoms depth; available for deep draft vessels at the head of the Bay, South of marked buoy.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: KWA 346 (AM) Alaska Railroad Dock, frequency monitored 2182 kHz. KWA 364 (SSB) Alaska Railroad Dock frequency monitored 4-6-8-12 Megs.

TUGS: Tug service available. Anderson Tug & Barge (907) 224-5506.

BERTHING: *Alaska Railroad Corp.:* 24 hour berthing. Berthing permit required. Advance notice of 48 hours requested.

200 ft. by 735 ft. steel and concrete finger pier.

East Side — 450 ft. long with 35 ft. depth of water (10 ft. out from dock face).

West Side — 600 ft. long with 35 ft. depth of water.

South End — 200 ft. long with 35 ft. depth of water.

(East and West Berths serviced by railroad spurs).

Ro/Ro capability provided through a triple deck, articulating ramp along West Berth.

CRANES: East and West Dock Face – 2 gantry cranes. Maximum capacity – 45 short tons, maximum radius – 105 ft. Forklifts ranging up to 35 ton capacity.

Operator: The Alaska Railroad Corp., P.O.Box 95, Seward, Alaska 99664. Tel: (907) 224-5550.

BULK HANDLING FACILITIES: *Terminal Specifications:*

Unit Train Unloading	3,000 tonnes*/p.h.
Stacking	
Rail-mounted stacker/reclaimer	1
Stacking capacity per hour	3,000 tonnes
Reclaiming capacity per hour	1,000 tonnes
Shiploading	
Fixed position slewing shiploader	1
Loading capacity per hour	1,000 tonnes
Ship berth	1
Maximum d.w.t.	120,000
Maximum draft (MLLW)	58 ft.
Additional Data	
Seward Coal Terminal Area	33.91 acres
Total conveyor length	6,590 ft.
Stockpile capacity	120,000 tonnes
Annual throughput capacity	3,000,000 tonnes

*1 tonne is equivalent to approximately 2,204 lbs.

Operator: Suneel Alaska Corporation, P.O.Box 1789, Seward, Alaska 99664. Tel: (907) 224-3120. Telex: 25353 Suneel Swrd.

City Dock Facilities: City Dock: Located inside Small Boat Harbour. Up to 100 ft. vessels. Depth 15 ft. MLLW.

Fourth Avenue Dock: Up to 300 ft. vessels. Depth 35 ft. at MLLW. Power available. Mobile cranes to 100 tons.

Seward Marine Industrial Centre: Basin is 660 ft. × 1,200 ft. with depth of 21 ft. at MLLW.

Syncrolift shiplift 300 ft. × 80 ft. with 3,600 ton lift capacity.

Adjacent 100 acre industrial site.

Light cargo dock 300 ft. long with 21 ft. at MLLW.

STEVEDORES: Northern Stevedoring and Handling Corporation supply labour force.

MEDICAL: Fully staffed 30 bed hospital. All medical facilities available.

DENSITY: 1.0248 at Mean High Water.

FRESH WATER: Available at East and West berths. 4 in. water line; 67 lb. pressure.

FUEL: Marine Gas Oil available from pipe-line at South & West Berth. Marine Diesel Oil available from same pipe-line during Summer months only (Maritime Oil, Vancouver, B.C.).

OPENING/CLOSING HATCHES: Handled by crew, if done before berthing ship. By stevedores if tied to dock.

IDENTIFICATION CARDS: U.S.C.G. Port Security Card or Seaman's Card required.

REPAIRS: Radio, radar, welding, machining and light engine repairs can be effected.

DRY DOCKS: Syncrolift available. See "Berthing".

AIRPORT: 1 mile. 1 flight daily to Anchorage.

TIME: Alaska Standard Time.

HOLIDAYS: All holidays are time and one half. Cargo can be worked on all except Christmas, New Year's and Labour Day.

POLICE/FIRE/AMBULANCE: Tel: 911.

AUTHORITY: City of Seward, P.O.Box 167, Seward, Alaska 99664. *Tel:* (907) 224-3331. *FAX:* (907) 224-3248. *Contact:* Foster Singleton, Harbour Master.

SITKA, Alaska: 57.03 N. 135.20 W. (See Plan)

Located on the Western side of Sitka Sound, Baranof Island. Open all year.

APPROACHES: 3 natural channels: Western, Middle and Eastern.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Pilot pick-up point – close vicinity of Eckholm Light.

ANCHORAGE: Jamestown Bay.

MAX. SIZE: Harbour depth 22 ft. MLLW. Tides: diurnal range – 9.9 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, Immigration and Customs, local.

TUGS: 7 tugs 300 h.p. to 1,200 h.p.

BERTHING: 3 wharves.

1. Conway Dock: Berthing length 160 ft., depth 30 ft. MLLW. No cranes, 3 lift-trucks; 10,000 sq. ft. covered shed space; fresh water.
2. Japonski Dock: Government dock for limited commercial use only.
3. Alaska Lumber & Pulp Co.: (Private) Berthing length 700 ft., depth 35 ft. LW. Walking cranes only. Not less than 12 lift-trucks, 30,000 sq. ft. covered shed space; fresh water. (Located at Silver Bay, Sawmill Cove, 4 miles South of Sitka). 30,000 sq. ft. open storage.

STEVEDORES: 3 gangs.

DRY DOCKS: 1×400 ton floating dock at Jamestown Bay, approximately 3 miles East of Central Sitka.

REPAIRS: Light repairs only.

FRESH WATER: Available.

FUEL: Not available.

MEDICAL: Sitka Community Hospital and U.S. Public Health Service Hospital on Japonski Island.

TRANSPORTATION: Air and ferry.

AUTHORITY: City and Borough of Sitka, 304 Lake Street, Sitka, Alaska 99835. *Tel:* (907) 747-3439, 747-3294, 747-3245. *Contact:* Richard J. Guhl, Harbour Master.

SKAGWAY, Alaska: 59.27 N. 135.18 W. (See Plan)

Located at the Northern end of Lynn Canal, 14 miles North of Haines.

APPROACHES: Via Lynn Canal.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Pick-up point located in vicinity of Point Retreat.

MAX. SIZE: Harbour depth 30 ft. running out to 300 ft. Tides diurnal range 16.7 ft. Also see "Berthing".

ANCHORAGE: In Lutak Inlet, 14 miles South of Skagway.

HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, Customs and Immigration available in Skagway.

TUGS: 2 tugs available at Skagway.

BERTHING: 1. White Pass and Yukon Railroad Dock: Containerised cargo to Vancouver and Whitehorse is the principal use, also used for tankers and cruise ships. 1,240 ft. long, 100 ft. wide; depth at face varies from 20 ft. to 43 ft. No covered storage. Open storage 80,000 sq.ft. 1 fork-lift is available. Containers presently loaded and unloaded with ship's gear. 2 straddle cranes for containers on dock. Deck for 400 lbs. per sq. ft. loading.

2. Skagway Terminal Co.: Ore loading facility. 1,000 ft. berth, fender dolphins, and walkway. 42.5 ft. deep at face. Used for bulk cargo ships and cruise ships. Vehicle ramp available. Adjacent to the berth is a warehouse of 108,000 sq.ft. Also available are 50 acres for open storage. Loading equipment consists of 1 fixed loading spout with a capacity of 1,500 t.p.h.

3. State: City joint use ferry pier – barge off-loading facility. Upland storage of 120,000 sq.ft.

4. City of Skagway: Small boat harbour, approx. 100 stalls. Fuel available. Water available in temperate seasons.

STEVEDORES: 3 gangs.

REPAIRS: None.

SURVEYORS: Not available locally.

WATER: Available in temperate seasons only.

FUEL: Available at Chevron Dock and small boat harbour.

MEDICAL: Medical clinic and one nurse.

AIRPORT: One mile from harbour. Scheduled and charter flights available daily. 3,400 ft. paved runway.

TELEPHONE: Pay phone at top of small boat harbour ramp.

POLICE/AMBULANCE/FIRE: Police Tel: 983-2301. Ambulance Tel: 983-2300. Tel: Fire 983-2300.

BANKS: National Bank of Alaska, Skagway.

EMERGENCY CO-ORDINATON CENTRE: Skagway Fire Hall, Tel: 983-2300

STORING: See "Prelims".

Storing at White Pass Railroad Dock:

1. By truck.
2. No barge storing.
3. Trucks can proceed alongside, except south 400 ft. of dock.
4. Fork lift trucks can be used.
5. Customs perform supervision of loading/unloading of all bonded stores. Customs/Immigration Tel: 983-2325
6. Local riggers are available.

GENERAL: Highways: Klondike Highway open all year round.

AUTHORITY: City of Skagway, P.O.Box 415, Skagway, Alaska 99840. *Tel:* (907) 983-2297. *Contact:* Port Manager or Harbour Master.

SMITHS BLUFF, Texas: 30.00 N. 93.59 W. (See Plan)

DOCUMENTS, PILOTAGE, RADIO, etc.: Refer to "Port Arthur".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs required berthing/unberthing.

BERTHING:

Sun Oil Co.: Distance from sea 38 miles, depth at berth 40 ft.

Sun Marine Terminals:

Operators: Sun Marine Terminals, Incorporated, P.O. Box 758, Nederland, Telex: 77-9469. Tel: 409-727-2301.

Type of terminal: Handling crude oil & lub.

Density: Fresh water.

Controlling Depth: From channel to berth – 39 ft. – 40 ft. Actual depth alongside – 40 ft.

Vertical clearance at HW: 136 ft.

Max. length of berth facility: 150 ft.

Max. length of vessel to be moored safely: 900 ft.

Hoses: 4×12 in. (Crude). 6×6 in. (Lub).

Usual Discharge Pumping Capacity: 50,000 bbls.p.h. (Crude). 2,000 bbls.p.h. (Lub).

Usual Discharge Pumping Capacity: 50,000 bbls.p.h.

Ballast Facilities: Deballasting facilities available with prior notification.

Fresh Water: Available on 24 hour basis.

Fuel: Available ex-wharf.

Tugs: Per Pilot's requirements.

Anchorage: Max. draft 39 ft. (2 anchorages).

Report: Sun Marine Terminals is located on the Neches River 38 miles from the Sea Buoy. The terminal is owned, operated and used by Sun Company. The controlling depth of the channel and turning basin is 40 ft. The specific gravity of the water at this terminal is 1000. The maximum size vessel normally received at this terminal is approximately 76,000 d.w.t. at Berth No. 1 and 130,000 d.w.t. at Berths No. 2, 3, 4 and 5. Vessels are docked and undocked day or night. Vessels are cautioned to keep mooring lines tight and be on alert for passing traffic.

2 tugs are normally used while docking and 1 while undocking. Sabine Towing requests a 3 hour advance notice when ordering tugs.

Vessels are berthed head upstream port side to with a usual arrangement of mooring lines including 2 forward springs and 2 aft springs. Head and stern lines run by launch. Pilots require one-way traffic and daylight navigation for all vessels in excess of 85,000 d.w.tonnes (83,700 LT). 2 lay-berths are provided across the channel. These consist of trenches dredged into the entrances of an unused ox-bow in the river. There are mooring points but most vessels lie to an anchor in the trench.

Sun Marine Terminals provides a gangway.

Fuel and fresh water are available at the terminals.

The terminal is fenced and guarded.

Pollution Control: 3,400 ft. of spill boom launch.

Fire: There are foam nozzles and monitors on the dock.

MEDICAL: All facilities available.

DENSITY: Fresh water.

FRESH WATER: Available ex-wharf.

FUEL: Available ex-wharf.

GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.

CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine or spirits for each man.

IDENTIFICATION CARDS: Foreign crew only require Immigration Landing Permit.

CONSULS: Nearest at Houston.

REPAIRS/DRY DOCKS: See "Port Arthur".

AUTHORITY: *Operator:* Sun Marine Terminals, Inc., P.O.Box 758, Nederland, Texas 77627. *Tel:* (409) 727-2301. *Telex:* 77-9469 Sun NDLN.

STOCKTON, California: 37.57 N. 121.19 W. (See Plan)

DOCUMENTS: See "San Francisco".

PILOTAGE: Pilots commissioned by Stockton Port District. Pilots obtained by contacting Secretary of California Inland Pilots' Association, located at Marine Exchange, World Trade Center, San Francisco, California (KBP 386). Also see "San Francisco"

ANCHORAGE: Emergency anchorage only permitted in Turning Basin, 32 ft. depth.

RESTRICTIONS: Restrictions only in effect if water at flood stage. See "San Francisco".

MAX. SIZE: Draft restrictions of 35 ft. at low tide, 37 ft. at high tide (fresh water). (Also see "Developments").

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Ship to shore Radio (KBP 376 – Marine Channel 18A) enables constant contact with Pilots who therefore aware of any problem that may develop up or down river. Arrangements also may be made for readiness of ordered gangs within 15 minutes of ship's arrival.

TUGS: 2×1,000 h.p. tugs available. Tugs join vessel 0.5 miles up river from Main Channel; generally, ship's lines used, however, tug lines may also be utilised. 2 companies – Stockton Tugboat, Tel: (209) 462-6471. Delta Tugboat, Tel: (209) 462-5534.

BERTHING: *Port Stockton Bulk Material Wharf, Berths 12-13:*

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Shipment of dry-bulk commodities, both systems handle the following: coal, petroleum coke, clay, copper concentrates, fertiliser, soda ash, sulphur, and other dry bulk commodities; receipt of molasses and petroleum products.

Dimensions: Length of face 566 ft.; lower side 13.5 ft., upper side 13.5 ft.; depth alongside at MLLW 35 ft.; usable berthing space 566 ft.

Mechanical handling facilities: Two bulk handling systems. *One:* Max. vessel loading rate 600 short tons/p.h. Equipped with shiploader, belt conveyor, 360 degree spout trimmer, bottom drop car dump (Max. 7.5 cars per hr.) and truck unloader hopper (Max. 24 trucks per hr.) *Two:* Max. vessel loading rate 4,000 short tons/p.h. Conveyor system equipped with a 54 in. belt, rotary car dump, loop railroad for unit train.

Port Stockton Wharf, Berths 10-11:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Container-handling dock; receipt of molasses, petroleum products, bulk dry cargo, container cargo and general cargo. Delivery of scrap steel, container cargo and general cargo.

Dimensions: Length of face 810.5 ft., lower side 102 ft.; depth alongside at MLLW 32 ft.; usable berthing space 810.5 ft.

Remarks: Face of wharf is in line and continuous with face of Berth 9 providing a total of 1,455.5 ft, of berthing. This dock has 5.5 acres of open marshalling area.

Port Stockton General cargo Wharf, Berth 9:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo and receipt of bulk cargo.

Dimensions: Length of face 645 ft., upper side 75 ft.; depth alongside at MLLW: Face 37-34 ft., upper side 35 ft.; usable berthing space: Face 645 ft. upper side 110 ft. with dolphin; width of apron: Face 41.25 ft.

Mechanical handling facilities: Forklift trucks and other types of cargo-handling equipment, owned by the Port District and by stevedoring companies, are available as needed.

Port Stockton Wharf No. 8:

Owned by: Stockton Port District.

Operated by : Stockton Port District.

Use: Receipt and shipment of general cargo; Liquid sugar facility and receipt of molasses. Anhydrous Ammonia also unloaded at this dock through refrigerated pipelines.

Dimensions: Length of 396 ft.×88 ft.; depth alongside MLLW 37-36 ft.; usable berthing space 484 ft. with trestle.

Port Stockton Wharf No. 7:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length 516 ft. depth alongside MLLW 37-36 ft.; usable berthing space 516 ft.; width of apron 31 ft. with trestle.

Port Stockton Wharf No. 6:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length 418 ft.; depth alongside MLLW 37-36 ft.; usable berthing space 329 ft.; width of apron 31 ft.

Port Stockton Wharf No. 5:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length of face 428 ft.; depth alongside MLLW 34-32 ft.; usable berthing space 429 ft.; width of apron 31 ft.

Port Stockton Grain Wharf No. 4:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo, receipt of bulk cargoes.

Dimensions: Length of face 461 ft.; depth alongside MLLW 32-35 ft.; usable space 462 ft.; width of apron 31 ft.

Port Stockton Wharf No. 3:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo and receipt of bulk cargoes.

Dimensions: Length of face 461 ft.; depth alongside MLLW 32-36 ft.; usable berthing space 461 ft.; width of apron 81 ft.

Dock has 30 ton bridge crane capable of handling general and bulk cargoes, as well as containers.

Port Stockton Open Wharf No. 2:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo; shipment of logs, and handling of heavy-lift cargo. Also receipt of bulk cargo.

Dimensions: Length of face 506 ft.; depth alongside MLLW 32-36 ft.; usable berthing space 506 ft.; width of apron: open.

Remarks: Wharf has 39,000 sq. ft. of open storage area and 5 bulk cone shaped buildings for handling inbound dry bulk cargo, 2 cone shaped buildings for handling inbound cement bulk cargo, with direct belt conveyor from dock to cone buildings, with a capacity of 70,000 short tons to the rear of the dock area. At the Industrial Park approx 104 acres of open storage area are located South of W. Washington Street; over 50 acres of this area can be used for storing logs awaiting shipment. An additional 56 acres of open storage are located North of W. Washington Street. There is a total of other warehousing with a capacity of 2.7 million sq. ft. of covered storage area comprised of 33 separate units.

Logs may be transferred to wharf by trucks and by tractors equipped with log clamps.

This dock also has two Whirley type gantry cranes with a 30 short tons capacity each at 36 ft. offshore reach. Equipped to handle bulk dry materials, containers, heavy lifts, etc. Cranes may be geared double to accommodate lifts up to 60 short tons.

Continental Elevators Grain Elevator Main Wharf No. 1:
Owned by: Continental Elevators Inc.
Operated by: Continental Grain Co.

Use: Shipment of grain by vessels and by ocean going and inland waterway barges; receipt of grain by self-unloading barges.

Dimensions: Length of face 564 ft., West side 20 ft., East side 20 ft.; depth alongside at MLLW 35-37 ft.; usable berthing space 564 ft.; width of apron, open end 20 ft.

Mechanical Handling Facilities: 2 towers on wharf, each with 13 in. diameter, telescopic, mechanically operated, grain-loading spout; loading rate, 900 short t.p.h. (29,877 bu.) at East tower; 800 (26,557 bu.) at West tower; combined rate, 900 short tons.

Remarks: Grain gallery connecting towers on wharf has a 30 in., electric-belt conveyor; and gallery extending from East tower to grain elevator has 2×30 in. belt conveyors. Grain elevator capacity 6,000,000 bushels.

BRIDGES: Fixed-span high-level toll bridge across Carquinez Strait, with minimum clearance of 134 ft. above MHHW. Southern Pacific Railroad lift span bridge crosses Suisun Bay 6.5 miles upstream from Carquinez Bridge, with minimum clearance above MHHW of 70 ft. when closed and 135 ft. when open. Horizontal clearance on lift span 291 ft. A third bridge, 22 miles above Southern Pacific bridge, is near Antioch. It has a fixed span bridge with minimum clearance above MHW 135 ft.

STEVEDORES: *General Cargo* – For gang start at 0800 hrs., orders must be placed at 1600 hrs. of previous day; night gangs must be ordered by 1100 hrs. These times pertain to week-day gangs. For weekend gangs, 1100 hrs. Saturday for Saturday night, Sunday morning, Sunday night and Monday morning. Day shifts from 0800 to 1700 hrs. Night shifts 1700 to 0300 hrs. Arrangements can be made for a special third shift from 0300 to 0800 hrs. Rates quoted on request.

Bulk Ore and Grain Cargoes – Orders for gangs must be placed at same time as for general cargo. This operation on 24 hour basis; day shift, 0800 to 1600 hrs., night shift 1600 hrs. to midnight, swing shift, midnight to 0800 hrs. Stop work meeting first Tuesday of each month.

Also see "Radio".

MEDICAL: Arrangements with San Joaquin Medical Society for physicians, surgeons and dentists. 5 hospitals within radius of 6 miles from port. Ambulance service readily available. Telephone number for this service is 466-9535 (day or night).

TANKERS: 2 berths, 32 ft. depth available.

FRESH WATER: Available through pipelines.

FUEL: All grades of fuel available with 1 day's advance notice.

GANGWAY/DECK WATCHMEN: Services of watchmen not necessary. Available if requested.

OPENING/CLOSING HATCHES: Hatches may be opened prior arrival and closed after ship sailed from port; any opening or closing of hatches at dockside must be performed by stevedores.

CERTIFICATES: See "San Francisco".

CUSTOMS ALLOWANCES: See "San Francisco".

CARGO GEAR: Safety regulations require strict adherence to max. loading or unloading weight capacity of ship's gear.

IDENTIFICATION CARDS: Not required.

CONSULS: See "San Francisco".

REPAIRS: Minor types of repairs carried out.

DRY DOCKS: Nearest dry docks, San Francisco.

REPATRIATION: No facilities in Stockton for effecting crew changes and arranging any necessary repatriations. Special arrangements may be made through Customs.

AIRPORT: Stockton Metropolitan Airport located approx. 6 miles from port. Serviced by Frontier, Air West and PSA.

TIME: Pacific Standard Time, GMT minus 8 hours; Pacific Daylight Time goes into effect on first Sunday of April until last Sunday in October, when clocks are advanced 1 hour.

HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Lincoln's Birthday; Washington's Birthday; Memorial Day; Independence Day; Harry Bridge's Birthday; Labour Day; Admission Day; Columbus Day; Veteran's Day; Thanksgiving Day; Christmas Eve Day; Christmas Day and New Year's Eve Day are all holidays. In addition to above, General Election Day, both State and National, as well as any day proclaimed by Governor of California or President of United States shall be observed as holiday. Work can be arranged for all holidays except New Year's Day, Labour Day, Thanksgiving Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Security Force on duty 24 hours a day and can be reached by dialling extension 228 for any emergency that might arise. Stockton Police Department's emergency telephone number 911, or (209) 943-9111. Stockton Fire Department 911, or (209) 464-4646. Ambulances may be secured by telephoning (209) 466-6869; 464-4846; 464-4611; 466-0223; 948-6056 and 948-5117.

TELEPHONES: Telephones placed aboard on request.

ELECTRIC CURRENT: At wharves where current available for ship's use, it is 110 volt, single phase, 60 cycle for lighting and 440 volt, 3 phase, 60 cycle for power.

SHORE LEAVE: Permitted.

REGULATIONS: Port of Stockton requests notice of ship's intent to come into port at least 7 days prior to arrival; vessels, who have made prior arrangements, will have precedence over vessels who sail into port without previous notice.

GENERAL: *Railroad Service:* Three transcontinental railroads serve the Port – Santa Fe, Southern Pacific, and Union Pacific (Western Pacific Division) with reciprocal switching privileges.

Truck Scales: Public truck scale available, operated by the Port.

AUTHORITY: Port of Stockton, 2201 West Washington Street, Stockton, California 95202. Postal address: P.O.Box 2089, Stockton, California 92501-2089. *Tel:* (209) 946-0246. Toll free outside State of California (800) 344-3213 or 344-3214. *Telex:* 35-9467 and TWX 510-765-6661. *Contact:* Alexander Krygsman, Port Director. M. Tollini, Marine Operations Manager.

TACOMA, Washington: 47.14 N. 122.28 W. (See Plan)

DOCUMENTS (on arrival from foreign port):
Ship's document.
Clearance from Last Foreign Port.
2 Crew Lists on Form I-418
2 Passenger Lists on Form I-418 (if applicable)
Passenger Declarations if applicable.
2 Stores Lists.
2 Crew Purchase (curio) Lists.
2 Manifests of Cargo for Discharge on C.F. 1302.

If first arrival port on an inward voyage, must also have 2 sets of Manifests of complete cargo on C.F. 1302, one for Customs at this port and other for use as a "Travelling Manifest" to go forward to other discharge ports.

A – For U.S. Public Health Quarantine Boarding Officer: "Quarantine Declaration" on Form PHS.43.
B – For U.S. Department of Agriculture Boarding Officer: "Shipmaster's Declaration and Warning Notice" on Form A1Q.43.
C – For U.S. Immigration Boarding Officer:
Crew List of Form I-418 visaed by U.S. Consul abroad.
Passenger List on Form I-418.
Attachment to Passenger List on Form I-92.
Form I-94 for each passenger.
Form I-95 of ID Card (Form 184) for each crewmen. (These are re-usable for multiple entries, but for seamen on first trip to United States a new Form. I-95 must be ready for presentation on arrival.)
D – For U.S. Customs Boarding Officer and Agent or Broker:
3 copies Crew List (Form I-418).
3 copies Cargo Manifest on Form 1302.
3 copies Stores List – Form 1303.
3 copies Crew Purchases or Curio List – Form 1304.
3 Passenger Lists on Form I-418.
For U.S. Ships – Declaration re foreign repairs on Form 3415.
For U.S. Ships – Certified Crew List for last U.S. port before going foreign.

* At subsequent U.S. ports of call 2 copies required of extracts Cargo Manifests of cargo for the port concerned, and 2 copies of lists of stores and curios remaining on board.

PILOTAGE: Compulsory for all vessels except those under coasting trade on West coast of the United States, including Alaska and British Columbia. Pilots board off Port Angeles Pilot Station.

ANCHORAGE: The depths as a rule are too great for convenient anchorage, but vessels occasionally anchor under the Northern shore about 1 mile Eastward of Brown's Point. Vessels may anchor in about 18.29 m., 450 yards N.N.W. of the outer end of Puyallup Waterway West Jetty.

City Regulations permit anchorage in any part of the bay outside harbour lines so as not to interfere with vessels arriving or departing from their docks.

MAX. SIZE: Length over 305 m. (centre to centre dimensions of mooring dolphins), draft subject to berth depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, join vessel in Commencement Bay, approx. half way between Brown's Point and the designated Dock. Tug's lines are used and there is a charge for tug's lines.

BERTHING: 32 deep water berths. Water depths: 9.15 m. to 21.34 m. below MLLW.

General Cargo: 161,000 sq.m. warehouse space, 91 hectares of open storage paved, lighted, fenced, serving all piers.

Logs are handled at the Port's Blair Terminal, where special shipments of heavy equipment are also handled. Total terminal area is 12 acres with 2 berths totalling 1,200 ft. (366 m.) and 32 acres of backup storage space.

Pierce County Terminal at 147 acres, is used for special cargoes and auto imports. It has 2 berths totalling 1,420 ft. (433 m.)

BULK HANDLING FACILITIES: 550 m. pier with 12 m. to 15 m. water depth. 5 heavy lift Whirley cranes and bulk unloading crane with 750 to 1,500 t.p.h. capacity; 150,000 tons capacity alumina storage structure with load-out facility; 12.14 hectare stockpile area including holding area for 300 rail cars.

Bulk Grain Elevator: Continental Grain: 3 million bushel capacity: loading rate: 2,400 t.p.h.; 137 m. dock with dolphins to 244 m.; 21.34 m. water depth.

Bulk Liquid Facility: 3.5 million gallon capacity; heated tanks and piping for both rail and truck shipping and receiving; serves vessels at Pier 1, 676 m., 10.67 m. water depth.

CONTAINER HANDLING FACILITIES: *Terminal 4:* Container handling and general cargo. Container handling capability – 10,000 units per month. 2 berths, total length 492 m., width 42.7 m., Depth 13.7 m. MLLW. 1 warehouse 14,536 sq.m., 2×40 ton IHI container cranes, 2×40 ton Sumitomo container cranes, 10.12 hectares paved, lighted, fenced, back-up storage. 200 Reefer container outlets (240-480 volts). Direct rail access to pier. Intermodal yard for containers loading to rail cars.

Terminal 7: Containers and General cargo. 4 berths, total length 823 m., width 41 m., depth 13.7 m. MLLW. 2 warehouses each 9,290 sq.m. 3×40 ton Whirley cranes, 1×40 ton IHI multi-purpose crane, 1×50 ton Peiner multi-purpose crane (Containers, dry bulk). 1×40 ton IHF container crane, 1×40 ton Sumitomo container crane, 17 hectares paved, lighted, fenced, back-up storage. 24 Reefer container hook-ups (240-480 volts). Direct rail access to pier.

Tacoma Terminals Inc: Leased to Sealand. 5 container cranes.

BRIDGES: The 11th Street Bridge: All ships are required to notify for opening 2 hours in advance. The Puyallup River Bridge on 11th Street has been deactivated. The Blair and Hylebos Bridges have no restrictions. Closed periods apply to the 11th Street Bridge and the hours are as follows: 0645 – 0745 hrs., 1530 – 1730 hrs.

STEVEDORES: Jones-Washington Stevedore Company and Eagle Marine Services Ltd., and Stevedoring Services of America (SS of A).

Gang requirements must be made known to contracting stevedore prior to 1100 hrs. on day before the vessel plans to dock. (1030 hrs. on Saturdays for gangs on Saturday p.m., Sunday and Monday.)

Stowage of cargo for discharge or load determines the gang size requirements. Sufficient information for intelligent gang orders is a necessity – i.e. advance cargo plans, unusual size and/or weight, etc.

TANKERS: Loading/discharge lines 8 in. and 10 in. 150 ASA flanged connections. Slop discharge facilities not available. Fresh water available. Coast Guard Regulations strictly enforced.

DENSITY: The average density in the port is 1016.8 at 15°C.

FRESH WATER: Available. Delivers to vessel through portable meter hose.

FUEL: Available. Advance notice required.

Grade	*Viscosity at 122°SSF*
Bunker "C"	165 – 175
PS – 400	112 – 116
Bunker Special	50 – 60
PS – 300	32 – 35

FIRE PRECAUTIONS: Very strict precautions in force.

GANGWAY/DECK WATCHMEN: Watchmen required if detainees are aboard.

OPENING/CLOSING HATCHES: Normally carried out by stevedores. In practice, however, the crew can perform this task while in transit.

CERTIFICATES:

Certificate of Registry.
Certificates for any previous U.S. tonnage tax payments within the past year.
International Load Line Certificate.
Safety Radio Certificate.
Derat Certificate.
Cargo Gear Inspection Certificate.
Certificate of Inspection (U.S. vessels).

CUSTOMS ALLOWANCES: Tobacco and Wine/Spirit: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

IDENTIFICATION CARDS: Required.

REPAIRS: The largest repair yard in Tacoma can haul out vessels up to 1,000 tons for all kinds of repairs, including electronics, welding, painting and machining; shafts up to 30 ft. in length are machined here. Another plant does shipbuilding exclusively, but will perform topside repairs if needed. Wreckage and salvage facilities are available. Larger vessels go to Seattle for dry-docking. Minor repairs and services for small craft are available at marinas on the City Waterway and the N.E. shore of Commencement Bay.

AIRPORT: Seattle – Tacoma International Airport is 16 miles North from Port and Tacoma Industrial Airport 8 miles West.

TIME: Local time reference is GMT minus 8 hours. In Summertime it is GMT minus 7, or Pacific Daylight Saving Time, starting the first week-end in April and finishing the last week-end in October.

HOLIDAYS: New Year's Day (January 1st) no work; Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Memorial Day (May 30th); Independence Day (July 4th) no work; Bloody Thursday (July 5th); no work; Labour Day (September 1st) no work; Columbus Day (Friday after Thanksgiving); Veterans' Day (November 11th); Thanksgiving Day (November 27th) no work; Christmas Day (December 25th) no work.

POLICE/AMBULANCE/FIRE: Emergency tel. numbers:
Police 593-4911; Fire MA 7-0151; Ambulance 473-1611.

TELEPHONES: Pay telephones available at Piers 1, 2, 4, 7, Blair Terminal, Pierce County Terminal, Grain Docks 23 and 24. There is no charge for this service.

SHIP SUPPLY SERVICE: Contact: Foss Launch and Tug, 225 East F Street, Tacoma, WA. 98421. Tel: (206) 272-0362.

SHORE LEAVE: Allowed.

DEVELOPMENTS: *Terminal 3:* Adjacent to Terminal 4, the Port's new $30 million state-of-the art container terminal will be completed in March, 1989. The new terminal creates an additional 25 acres of container storage yard and a 950 ft. long pier to accommodate the largest container ships afloat. Located next to the North Intermodal Yard, Terminal 3 can operate with less acreage while still being able to serve over-the-road carriers by use of chassis space.

AUTHORITY: Port of Tacoma, P.O.Box 1837, Tacoma, Washington 98401. *Tel:* (206) 383-5841 or Seattle (206) 838-0142. *Telex:* 32-7473 A/B Port of Tac, TWX: 910-441-2646. *Contact:* Rod Koon, Director – Port Relations.

TAMPA, Florida: 27.57 N. 82.28 W. (See Plan)

DOCUMENTS:

Passports and Seamen's Books.
Vaccination Certificate for each Seaman.
Certified Crew List: must be on American Form and certified by American Consular office at foreign country from which departed.
Crew List.
Ship's Register.
Load Line Certificate.
Certificate of Financial Responsibility (Oil Pollution Certificate).
U.S. Customs requires Inward Foreign Manifest (original and 3 copies). This must describe cargo which is to be discharged this port and/or any other port in vessel's itinerary. It must show:
  Vessel's name and flag.
  Master's name.
  Last foreign port of departure.
  Net registered tons of vessel.
  When and where vessel built.
  Consigned to Agent.
  Bill of Lading Number.
  Marks and numbers (on cargo).
  Complete description of merchandise.
  Weight in kilos or pounds.
  Port of loading.
  Port of discharge.
Stores Lists (original and 3 copies).
Crew Curio List (original and 3 copies).
Narcotics List (original and 3 copies).
*Dangerous Cargo List (original and 3 copies). This should be filled out even if nothing dangerous aboard.

Health officials will board vessel first. Bills of Lading not needed for Customs purposes.

PILOTAGE: Compulsory for all foreign vessels and U.S. vessels under register in the foreign trade. Pilotage is optional for U.S. coastwise vessels drawing over 7 ft. that have on board a Pilot licensed by the Federal government. Pilots board vessels day or night. Vessels entering by Egmont Channel are boarded between the Tampa Bay Lighted Whistle Buoy "T" (Lat. 27° 35.3′ N., Long. 83° 00.7′ W.) and Egmont Channel Lighted Bell Buoy No. 2 (Lat. 27° 35.4′ N., Long. 82° 59.0′ W.). Vessels entering by S.W. Channel are usually boarded between S.W. Channel Buoy No. 2 and Lighted Bell Buoy No. 3, or if desired, at the lighted bell buoy off the entrance to the channel.

Two pilot organisations, Tampa Bay Pilots and Tampa Tri-County Pilots (Trico Pilots), serve Tampa Bay. Tampa Bay Pilots have 2 launches, *"Manatee"* and *"Tampa Bay Pilot"*, each with a black hull and white deckhouse with the word "Pilot" on either side. Tampa Tri-County Pilots (Trico Pilots) have 2 launches, *"Trico Pilot"* and *"Trico Manatee"* each with a red hull and white deckhouse with the word "Pilot" on front of the deckhouse in red. Both Pilot Associations monitor VHF-FM Channels 10 (156.50 MHz), 12 (156.60 MHz), and 16 (156.80 MHz) continuously; call-signs, Tampa Bay Pilots and Tampa Trico Pilots. The Tampa Tri-County Pilots also monitor VHF-FM Channels 11 (156.55 MHz) and 13 (156.65 MHz). Both Pilot Associations' boats are equipped with VHF-FM Channels 10, 12 and 16 and use Channel 10, 12 and 11 as working frequency. All pilot boats fly the International Code flag "H". For boarding, Pilots request that vessels maintain a speed of 6 knots or less and have the pilot ladder rigged 6 ft. above the water. Vessels are requested to give a 24-hour and a 3-hour advance notice of their time of arrival. Length, beam and max. draft of the vessel should be provided with the first notification. Vessels are normally not moved in dense fog, and during strong North/South winds vessels are boarded inside Egmont Key. In February 1988, the deepest draft entering Tampa Bay was 33 ft. 6 in. Pilots can be obtained by radiotelegraph (cable address: "Tampilot" for Tampa Bay Pilots and "Trico Pilots" for Tampa Tri-County Pilots), by telephone (813-248 3732 for Tampa Bay Pilots and 813-221-3850 for Tampa Tri-County Pilots) through the Tampa Marine Operator, or through ships' Agents.

Pilots for St. Petersburg and Port Manatee can be obtained through the Tampa Bay Pilots or Tampa Tri-County Pilots (Trico Pilots).

ANCHORAGES: Vessels with good ground tackle can anchor anywhere outside Egmont Bar in depths of 35 ft. to 50 ft. Inside anchorages Southward of Mullet Key in depths of 30 ft. to 35 ft.; and S.W. of Gadsden Point in depths of 29 ft. to 36 ft.

Explosives and quarantine anchorages East of Mullet Key and South of Interbay Peninsula.

(1) Explosives Anchorage, East of Mullet Key. A rectangular area in Tampa Bay, approximately 4,459 yd. long and 1,419 yd. wide, beginning at Lat. 27° 38′ 30″ N., Long. 82° 39′ 09″ W., and extending N.E. to Lat. 27° 39′ 48″ N., Long. 82° 37′ 15″ W.; thence S.E. to Lat. 27° 39′ 17″ N., Long. 82° 36′ 46″ W.; thence S.E. to Lat. 27° 37′ 52″ N., Long. 82° 38′ 38″ W.; thence N.W. to point of beginning. Anchorage is used by vessels awaiting loading or unloading at Port Tampa where duration of anchorage will exceed 72 hours.

(2) Temporary Explosives Anchorage, South of Interbay Peninsula. Beginning at a point bearing 107°, 1,750 yd. from Cut F Range Front Light; thence to a point bearing 125°, 2,050 yd., from Cut F Range Front Light; thence to a point bearing 180°, 1,725 yd., from Cut F Range Front Light; thence to a point bearing 222°, 2,180 yd., from Cut F Range Front Light; thence to a point bearing 251°, 1,540 yd., from Cut F Range Front Light; and thence to the point of beginning. Anchorage is used for vessels engaged in loading explosives when duration of the anchorage is less than 72 hours.

(3) Temporary explosives anchorage off Port Tampa. A circular area with a radius of 200 yd. with the point at Lat. 27° 50′ 22″ N., Long. 82° 34′ 15″ W.

(4) Quarantine anchorage. S.E. of the temporary explosives anchorage, beginning at a point bearing 097° true, 4,370 yd., from Cut F Range Front Light; thence to a point bearing 113° 30′, 5,370 yd., from Cut F Range Front Light; thence to a point bearing 161° 30′, 3,770 yd., from Cut F Range Front Light; thence to a point bearing 163° 30′, 2,070 yd., from Cut F Range Front Light; thence to the point of beginning.

MAX. SIZE: Max. draft 33 ft. 6 in. MLW. No limit on length and breadth. Air draft 149 ft. MHW. Skyway Bridge clearance.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio station "WPD" should be used by vessel to route ETA cables to Agents, receivers, etc. Station KUZ 383 on Channel 25 VHF, available for public messages.

VESSEL TRAFFIC ADVISORY SYSTEM: The Tampa Port Authority provides a voluntary navigational aid to vessels transiting the bay. The VTAS can be reached by calling WHX362 on VHF Channel 9.

RESTRICTIONS: Draft recommendation is 33 ft. 6 in. No tidal restrictions with exception of loaded vessels into Port Tampa.

43 ft. harbour deepening project is completed, however no berth can accommodate over 33 ft. 06 in.

Existing Channels:

Name of Channel	*Width (ft.)*	*Length (naut. miles)*	*Depth MLW (ft.)*
Egmont Channel	700	3.9	45
Mullet Key Channel	600	2.9	43
Tampa Bay Channel Cuts A-F	500	13.6	43
Gadsden Point Cut	500	3.1	43
Hillsborough Bay Cut A & C	500	6.6	43
Hillsborough Bay Cut D	400	1.0	34

Port Sutton Channel	280	1.0	34
Alafia River Channel	200	3.4	32

TUGS: Positions are:

Main port area – right past Beacon No. 35
Port Sutton & East Bay – Beacon No. 29
Port Tampa – Cut "K"
East Tampa – Beacon No. 16

Tug's lines only.

BERTHING:

Container and Ro/Ro Facilities: Containers are handled at several general cargo terminals, but no specialised container facilities are currently in place. The Ro/Ro dock at Holland Terminal is capable of dual berthing.

Facilities available for smaller vessels.

Operator	*Depth*	*Berthing Space*	*Product Handled*
Morton Salt Co.	14 ft.	600 ft.	Salt
Paktank Florida, Inc.	12 ft.	500 ft.	Grain fertiliser, materials, potash, caustic soda, salt.

Also see "General Cargo Facilities", "Specialised General Cargo Facilities" and "Dry Bulk Facilities".

Also see "Developments".

TANKERS: Also see "Developments".

Company	*Pipelines*	*Berthing space*	*Depth*

Note that part of above terminals use same piers. Most terminals have residue discharge facilities.

BRIDGES: The Sunshine Skyway Bridge spans lower Tampa Bay. The older twin central cantilevered span has a navigation clearance of 800 ft. and a maximum vertical clearance of 151 ft. at MLW. The new bridge located to the East of the old bridge has been completed.

DRY BULK FACILITIES:

Operator	*Location*	*Depth*	*Berthing Space*	*Handling Equipment*	*Storage Area*	*Product Handled*
Cargill Inc. (Port Authority Berth No. 256)	North 19th St.	34 ft.	700 ft.	Marine leg for unloading 30,000 bushels/p.h., and spout loader-rate of 600 tons	Capacity of elevator is 1,000,000 bushels; 8,000 ton bulk warehouse; 4,800 ton bulk warehouse.	Grain and dry bulk agriculture products
Detsco Terminals, Inc.	14th St. and Harbor	32 ft.	540 ft.	None.	Storage area leased out.	Cement and caustic soda
Florida Portland Cement Division	Hookers Point	34 ft.	820 ft.	Belt material handling system capable of receiving 4,000 short t.p.h. of cement or 1,500 short t.p.h. of gypsum, 3 electric travelling bridge cranes equipped with 2.5 and 3 cu.yd. grab buckets.	800×100 gypsum storage shed; 215,000 barrel holding tanks for fuel storage (for plant consumption) 220,000 ton capacity open storage.	Gypsum rock, cement
Ideal Basic Industries, Inc.	Port Sutton	34 ft.	1,038 ft.	2×8 in. pipelines to storage. 4×12 in. pipelines to storage.	8 silos with 190,000 barrel capacity. 3 bins with 5,640 ton capacity.	Cement
Tampa Bulk Services	Port Tampa	34 ft.	700 ft.	Belt elevator from storage to loading spout. Rate of discharge 500 t.p.h. Direct transfer from rail cars to vessels at 200 net t.p.h.	Silo capacity of 10,000 net tons.	Citrus pellets and other dry bulk products.
National Gypsum Co.	Port Tampa	34 ft.	950 ft.	Receiving hopper and conveyor–unloading rate of 2,000 net t.p.h.	Open area approx. 10 acres.	Gypsum rock
Paktank Florida, Inc.	Pendola Pt., Port Sutton	34 ft.	700 ft.	Dock crane with 80 ft. boom with unloading rate of 400 t.p.h. Loading tower with rate of 1,200 t.p.h.	Building 125 ft.×700 ft. with storage capacity of 50,000 tons. 4 silos with 8,000 ton capacity.	Potash, phosphatic products.
Tampa Electric Co.	Big Bend	35 ft.	788 ft.	200 ft. high travelling tower-conveyors system with unloading rate of 4,000 t.p.h.	24 acres	Coal
Tampa Electric Co.	Port Sutton Electric Co.	30 ft.	450 ft.	2 electric travelling unloading towers equipped with straight-line boom, and receiving hopper-combined unloading capacity of 1,600 t.p.h.	Exact size unknown	Coal
Tampa Cement	Port Sutton	34 ft.	—			Cement
Gulf Portland	Port Sutton	34 ft.	—			Cement
Dravo Basic Metals (Port Authority No. 220)	Hookers Point	34 ft.	900 ft.	Conveyor. 2 radical stackers.		Building construction aggregates and materials.

GENERAL CARGO FACILITIES:

Operator	*Location*	*Length*	*Depth*	*Remarks and Equipment*
Eller & Co. Inc. (Port Authority Berth No. 209)	Verger Boulevard, Holland Terminal	600 ft. Marginal Wharf	34 ft.	Fork Lifts: 1×10 tons, 4×8 tons, 5×2.5 tons, 11×4 tons. Mobile shore cranes available 70 – 300 tons
Garrison Terminals Inc.	13th and Beatrice St.	1,200 ft. Marginal Wharf	30 ft.	Crawler Cranes: 4 ranging from 37 to 72 tons. Fork Lifts: ranging from 1,000 to 20,000 lb. capacity. Bulk handling: 5 hoppers, clamshell buckets, shipside conveyor.
Spessard L. Holland Terminal (Port Authority Berth No. 202)	Verger Boulevard	600 ft. Marginal	34 ft.	The 100 ft. apron on all berths is public. Cruise Ship Terminal location.
Kreher Terminal Berths No. 223, 224	Carbide Avenue, Hookers Point	1,120 ft. Marginal Wharf	34 ft. (for 800 ft.) 14/16 ft. (for 320 ft.)	Back land leased to South State Terminals and Standard Gypsum. Wharf apron and docking area is public and subject to preferential berthing rights of one tenant.
S.E.L. Maduro (Florida), Inc.	13th and York St.	1,200 ft. Marginal Wharf	30 ft.	All sizes fork lifts including specialised newsprint handling and 52,000 lb. capacity for handling of containers; mobile shore cranes. Modern banana unloading conveyor system.
Metroport Terminals Berths 263, 264, 265, 266.	601 N. 13th Street	700 ft. Marginal Wharf	30/27/25 ft.	Banana unloading conveyor system.
Southport Stevedores Inc. (Port Authority Berths Nos. 251, 252)	Foot of Grant St.	1,200 ft. Marginal Wharf	34 ft.	Cranes: 4×40 tons gantries. Fork Lifts: up to 20,000 lb., conveyor system
Harborside Refrigerated Services, Inc. (Port Authority Berths Nos. 210, 211)	Verger Boulevard	1,200 ft. Marginal Wharf	34 ft.	Fork Lifts. Mobile shore cranes available 70 – 300 tons.
Spessard L. Holland Ro/Ro	Verger Boulevard	—	34 ft.	Public facility.

SPECIALISED GENERAL CARGO FACILITIES:

Operator	*Location*	*Length*	*Depth*	*Remarks and Equipment*
Commercial Metals Transport Co.	West end of Port Sutton, East side of turning basin	530 ft. Marginal Wharf	30 ft.	Scrap metal loading facility. 4 diesel cranes 3×80 ft. boom, 1×70 ft. boom, each equipped with electric magnets.
Tampa Bay Terminal Inc.	Foot of Grant St.	700 ft. Marginal Wharf	34 ft.	Scrap metal loading facility. 2 diesel electric travelling, revolving, full-portal shipside cranes with 130 ft. boom and capacity of 40 tons. Equipped with electric magnets.
Hardaway	Port Tampa	330 ft.	6 ft.	Pre-stressed concrete products. 1×30 ton crane with 120 ft. boom.
Tampa Scrap	Maritime Boulevard	800 ft. Marginal Wharf	34 ft.	Scrap metal loading facility.

DRY BULK FACILITIES: (continued)

Operator	*Location*	*Depth*	*Max. L.O.A.*	*Max. Beam*	*Height of Vessel Waterline to bulwark*	*Chute Travel*	*Loading Rate (N)=Net (L)=Long t.p.h.*
Agrico Chemical Co.	Big Bend	34 ft.	1,500 ft.	120 ft.	47 ft.	1,500 ft.	3,000 (N)
CF Industries Inc. (Port Authority Berth No. 204)	Holland Terminal	34 ft.	600 ft.	85 ft.	47 ft.	Stationary	1,100 (N)

Rockport	22nd St. Causeway Boulevard	34 ft.	1,450 ft.*	120 ft.	53 ft.	1,450 ft.	3,000 (N)

*Can load longer vessels by shifting during operation.

Shipmaster's Report: Bulk phosphates are loaded in Port Sutton (one berth) and in the East Bay (two berths: Rockport owned by CSX and Eastern Associated Terminal).

Loading rates: about 1,000 t.p.h. at Port Sutton;
about 3,000 t.p.h. at the two berths in East Bay area.

Trimming: The loading elevators are not equipped with trimming devices. Most cargoes can be trimmed by bulldozers. The bulldoze weighs 5 long tons, and is placed on board with ship's gear. The IMC elevators at Port Sutton and the SCL elevator (Rockport) use shore gea to place the bulldozer on board. A minimum of 8 to 7.5 ft. headroom under the coaming is required for bulldozer trimming.

STEVEDORES: Stevedoring gangs must be ordered approximately 24 hours in advance (before 1700 hrs. on day before needed).

MEDICAL: Advance notice for medical attention not required, but is preferable.

DENSITY: Density is affected by local rains due to Hillsborough River. Seasonal variances too great to allow advance prediction.

FRESH WATER: Available all over port and delivered through ships hoses and meters. Rates of delivery various.

FUEL: All grades and types available, including all types of blended fuel and Bunker "C". 24 hour notice required. All types of lube-oil available with delivery in bulk or drums – 24 hours' notice is required. Major oil companies (i.e. Shell, Amoco Oil, Texaco, Gulf, Chevron, Western Fuels, etc.) represented in Tampa. Delivery ex-pipe-line, barge or truck.

FIRE PRECAUTIONS: No specific precautions other than usual.

GANGWAY/DECK WATCHMEN: Watchmen not necessary, but available when required.

OPENING/CLOSING HATCHES: Longshoremen open and close hatches.

CERTIFICATES:

Documentation Papers.
Load Line Certificate.
Certificate of Safety at Sea (when carrying passengers).
Certificate of Safety Equipment.

CUSTOMS ALLOWANCES: Tobacco, 2 packs of cigarettes per day per man; wine and/or Spirit, no set amount. Each boarding officer has different views (i.e. German and Scandinavian vessels allowed 2 bottles of beer per day per man). Allowances made within reasonable bounds at Master's discretion subject to boarding officer's approval.

CARGO GEAR: No local special safety requirements. Longshoremen and U.S. Department of Labor requirements are uniform over the U.S.

IDENTIFICATION CARDS: Passports required.

CONSULS: The following countries are represented in Tampa:

Colombia
Denmark
Finland
Germany F.R.
Honduras
Italy
Mexico
Norway
Panama
Sweden

REPAIRS: All types are possible.

DRY DOCKS: Graving dock: 900 ft. long × 150 ft. wide, 21 ft. from MLW to top of keel blocks; 525 ft. long on bottom × 80 ft. wide, and depth over keel blocks 16-18 ft. at MHW.

Dry dock: 200 ft. long × 65 ft. wide. There are 2 other dry docks besides those listed above.

Also see "Developments".

REPATRIATION: No foreign crew pools in Tampa (located in New Orleans, San Francisco and New York), but crew changes can be made when Master radios requirements to Agent who arranges with local Consul or through crew pool in nearest city named above for applicable country (if no Consul is available in Tampa). American crew pools for all unions in Tampa.

Repatriation available via Tampa International Airport and is handled by Consul or Master.

AIRPORT: Tampa International Airport served by regular airlines and located approximately 15 miles from main port area; 5 miles from Port Tampa and 16 miles from East Tampa.

TIME: Tampa normally on Eastern Standard Time (GMT minus 5 hours) with Daylight Saving Time in effect from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day, January 1st; Martin Luther King's Birthday, 3rd Monday in January; George Washington's Birthday, 3rd Monday in February; Good Friday; Memorial Day, Last Monday in May; Independence Day, July 4th; Labour Day, 1st Monday in September; Armistice Day, November 11th; Thanksgiving Day, 4th Thursday in November; Christmas Eve, December 24th; Christmas Day, December 25th; New Year's Eve, December 31st.

When any of above holidays fall on Sunday, they will be observed on Monday following. Work on these holidays is by special arrangement only.

POLICE/AMBULANCE/FIRE: Police Tel: 223-1112; Ambulance Tel: 681-4422; Fire Tel: 223-4211; Sheriff Tel: 224-9911.

TELEPHONES: Installation of telephone aboard can be arranged.

SERVICES: Compass adjustments available; radio direction finder; radar repairs; tank cleaning.

SHIP SUPPLY SERVICE: Captain Riley F. Bryan, Sea Taxi, P.O.Box 46618, Pass-A-Grille, Florida. Tel: (813) 381-3999.

Suncoast Helicopters, 4111 W. Columbus Drive, Tampa, Florida 33607. Tel: (813) 872-6625.

A. P. St. Philip, Inc., 1305 Shoreline Drive, Tampa, Florida 33605. Tel: (813) 248-1123.

SHORE LEAVE: Immigration Authorities grant Clearance after examination of passport or bona fide seaman's papers.

DELAYS: Delay can be expected in loading phosphate rock (1 or 2 days), and same delay applicable for berthing at elevators. Some delay possible in general cargo loading or unloading.

DEVELOPMENTS: Main harbour channel has been deepend to 43 ft. New general cargo berth is currently being constructed which will be structurally capable of accommodating container cranes. This new berth is part of an expansive general cargo complex, which includes Berth No. 202, a 70,000 sq. ft. warehouse, the Ro/Ro berth, and the recent addition of 52 reefer plugs and 6 acres of heavy paved area for containers. The Port has also recently constructed a dedicated liquid bulk terminal, primarily for the receipt of orange juice concentrate. The Port's huge dockside cold storage facility, Harborside Refrigerated Services, has undergone expansion that bring their total chill and freezer space to 176,000 sq. ft

In 1987, the Port constructed its second cruise terminal, a 17,000 sq. ft. facility designed to accommodate the port's growing cruise trade. Planning continues for the eventual development of a major downtown cruise terminal complex.

AUTHORITY: Tampa Port Authority, P.O.Box 2192, Tampa, Florida 33601. *Tel:* (813) 248-1924. *Telex:* 52441 – Port Auth Tpa. *FAX:* (813) 247-2352. *Contact:* Emmett C. Lee, Jr., Port Director.

TEXAS CITY, Texas: 29.22 N. 94.53 W. (See Plan)

DOCUMENTS, PILOTAGE, etc., refer to "Galveston".

RESTRICTIONS: Controlling depth in entrance channel 40 ft. Otherwise restricted by depth available at berth. Vessels enter day and night.

Industrial canal deepened from 34 ft. to 40 ft., in 1981.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available if required.

BERTHING:

Report: *AMOCO:*

General: The Amoco Terminal at Texas City consists of Berths No. 31, 32, 38, 40 and 41 (Berths No. 40 and 41 also used by T.C.T. and Marathon). Distance from the sea buoy to these berths is 15 miles.

Mooring and Berth: Pilot services for the Texas City port are provided by the Galveston Pilot Association.

Products handled at Berths No. 31 and 32 include gasoline, distillate, anhydrous ammonia, crude and also ballast and slops. Anyhdrous ammonia is handled through 1 stainless steel arm, 6 in. flanged connection and maximum pumping pressure of 35 p.s.i. All other products are handled through 8 in. lines with flanged connections. Maximum pumping pressure on all products is 100 p.s.i.

Berths No. 40 and 41 handle the discharge of crude only. Both berths have 2 loading arms. All lines are 12 in. and are quick disconnect-type connections. Maximum pumping pressure is 150 p.s.i. There are no facilities for handling ballast or slops at these berths.

A minimum of 2 tugs are required for docking and undocking. However, the Master of the vessel and the Docking Master may determine actual tug requirements for their vessel based on vessel manoeuvrability and weather conditions.

The normal mooring arrangement at Berths No. 31 and 32 is starboard side to. Port side mooring is done after turning the vessel in the turning basin. 2 head lines, 2 forward breast lines, 2 spring lines, 2 stern lines, 2 aft breast lines and 2 aft spring lines are sufficient for mooring most vessels. Line handlers are supplied by Texas City Boatman Co. This terminal does not furnish a gangway to vessels.

ARCO:

General: The ARCO facility is located toward the North end and on the West side of the Texas City Turning Basin. Berths No. 11 and 12 are the 2 berths at this terminal. The area around these berths is dredged to 40 ft.

The ship dock is a concrete and steel finger pier permitting vessels to moor on either side. 2 vessels are the maximum that may be discharged at one time. There is no provision to load vessels at the facility and no facilites for dry cargo handling.

Mooring and Berth: Water depth is the factor that limits the size of fully loaded vessels that call at the facility. Lightered or partially loaded vessels of greater size can be accommodated. Distance from the bow of a vessel to the centre of its manifold cannot exceed 468 ft. and from the centre of its manifold to the stern of the vessel cannot exceed 500 ft. Vessels will be docked bow in unless prior arrangement has been made with facility operators to permit bow out mooring. Should the vessel be moored bow out, the bow/manifold restrictions become 500 ft. and the stern/manifold distance 468 ft.

The pilotage of vessels to Texas City is performed by the Galveston/Texas City Pilots. This terminal does not make arrangements for Pilots.

9 mooring structures are installed at each berth and several lines can be secured on each. A boat is required to reach some structures. The ship's Agent will be responsible for arranging mooring and unmooring line handlers. The handlers will be under the orders of the Ship's Officer regarding the handling of each individual line and location of the shore end. The facility has Regulations concerning the minimum number of lines and the type of lines used.

They are:

Vessels less than 525 ft. LOA:
2 head lines
2 forward breast lines
2 forward spring lines
2 aft spring lines
2 aft breast lines
2 stern lines

Mixed moorings not encouraged or allowed.

Vessels greater than 525 ft. LOA:
3 head lines
3 forward breast lines
3 forward spring lines
3 aft spring lines
3 aft breast lines
3 stern lines

Vessel's mooring lines must be kept taut and secure at all times. If the vessel moves more than 4 ft. away from the dock or 4 ft. in either direction along the dock, all cargo transfer operations must be stopped immediately, and the proper manifold valves must be closed. Operations must not resume until the condition has been corrected.

Facility will provide gangway. Vessel's crew must attach gangway to the vessel and furnish/install safety net under gangway. If it is necessary to use vessel's gangway, facility's crew will help position gangway onto dock platform.

Aluminium gangways with rotating platforms and feathering treads are provided. The shipboard end is designed to attach to the vessel's gunwhale or over the ship's rail.

Crude is the only cargo handled at this berth. All lines are 16 in. and have hydraulic connections. Maximum pumping pressure is at 175 p.s.i. There are no facilities for ballast or slops at this terminal.

Municipal Docks No. 16, 18 and 20:

General: Municipal Docks No. 16, 18 and 20 are located adjacent to the Texas City Harbour turning basin.

Dock No. 16 has a 140 ft. face, 283 ft. with dolphins; 40 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil and shipment of petroleum products, chemicals and petrochemicals.

Dock No. 18 has an 88 ft. face, 320 ft. with dolphins; 34 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil.

Dock No. 20 has a 98 ft. face, 284 ft. with dolphins; 32 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil and shipment of petroleum products.

Mooring and Berth: Tug requirements are determined according to vessel size, Master's requirements and recommendations of the Docking Master doing the docking.

The normal berthing manoeuvre into Dock No. 16 consists of a turn of 140° to port from the Texas City Turning Basin. The berth is on the starboard hand of the basin about 1,500 ft. from the turning basin entrance. Vessels tie up either port or starboard side to manila or polypropylene lines are normally used, but wire is permissible. No gangway is provided at this berth.

Vessels destined to Berth No. 18, enter the turning basin from the Texas City Channel. Berth No. 18 is at a right angle to the turning basin approximately 2,000 ft. from the entrance to the turning basin. Vessels normally turn in the turning basin in order to back into the berth. Normal side to dock is the port side. Berth No. 18 is the first berth on the North side of the municipal dock basin. No gangway is available at this dock.

Vessels destined to Berth No. 20 enter the turning basin from the Texas City Channel. Berth No. 20 is also at a right angle to the turning basin approximately 2,500 ft. from the entrance to the turning basin. Vessels turn bow first into this dock area from the turning basin for a port side docking. Manila or polypropylene lines are used. This is the poorest of the 3 docks. Adequacy of mooring facilities is marginal, physical condition of the dock is poor, but acceptable. Dock equipment is fair, but acceptable. No gangway is provided at this berth.

Products handled by Berth No. 16 are all handled through 8 in. lines with flanged connections at pumping pressures between 20 p.s.i. and 125 p.s.i. Ballast and slops are handled through 8 in. lines with a maximum pumping pressure of 100 p.s.i.

At Berth No. 18 crude oil is discharged through 2×8 in. lines with flanged connections. Maximum pumping pressure is 125 p.s.i. Facilities for ballast and slops are available.

Products handled by Berth No. 20 are all handled through 8 in. lines with flanged connections at pumping pressures between 30 p.s.i. and 125 p.s.i. Ballast and slops are handled through 8 in. lines with a maximum pumping pressure of 100 p.s.i.

MEDICAL: All medical assistance available.

DENSITY: Brackish.

FRESH WATER: Available at all wharves except Union Carbide Terminal.

FUEL: Bunker "C" available to tankers loading/discharging. All grades available by barge from Houston.

GANGWAY/DECK WATCHMEN: Required only if crewmen detained by Immigration.

CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigars or 1 lb. tobacco. 1 qt. wine/spirits.

CONSULS: See "Houston".

TIME: Central Standard Time GMT minus 6 hours. Daylight saving time effective from April to October.

SHORE LEAVE: No restrictions unless detained by Immigration.

SHIPMASTER'S REPORT: February, 1979.

Restrictions: Vessels on maximum draft must be clear of Texas City Channel before dark. There is no sailing or berthing during darkness for maximum draft vessels.

For large vessels it is necessary to ballast during discharge otherwise shore connections become too high.

VHF: Channel 13 from sea and Channel 14 for berthing.

Tugs: Usually 4-6 tugs for vessels on maximum draft.

Tankers: Large tankers dock at Docks 40 & 41 usually starboard side to. On either dock it is not easy loading stores from the dock. 2×12 in. connections.

Consuls: British Consul at Houston.

Customs Allowance: All souvenirs to be collected (items intended as presents) and sealed.

Repatriation: As with all U.S. ports must make out Form I-408 – application to pay off or discharge alien crewman.

Airport: At Houston.

Telephone: Pay telephone at bottom of gangway.

General: Will require ship's gangway abaft of manifold if bottom of gangway is more than 115.5 ft. (35.20 m.) abaft after manifold with a freeboard of 23 ft. or more.

AUTHORITY: Texas City Terminal Railway Co., P.O.Box 591, Texas City, Texas 77592. *Tel:* (409) 945-4461. *Contact:* K. L. De Maet, President and General Manager. J. Gilder, Harbour Master.

TOLEDO, Ohio: 41.42 N. 83.28 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: By Seaway Pilots.

RESTRICTIONS: Navigation season from mid-March to end-December, approx. The port is connected to Lake Erie by an entrance channel, depth 27 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft. Height restriction of 104 ft. above water-line which applies to grain berths only.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Master must give at least 24 hours' notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours' notice of ETA at first U.S. discharge port is required. Toledo Port can be contacted through Lorain, Ohio or Port Colborne, Ontario.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

BERTHING:

C & O Railway Dock: 2,000 ft. long, 26 ft. depth alongside.
Torco Dock: 1,200 ft. long, 26 ft. depth alongside.
Interlake Steel Corporation: 23 ft. depth alongside.
Mid States Terminals: 27 ft. depth alongside.
Cargill, Inc. Elevator: 27 ft. depth alongside.
Port Authority Facility: 4,100 ft. long, 27 ft. depth alongside.
Anderson Elevator: 27 ft. depth alongside.

CARGO HANDLING FACILITIES: 3 grain elevators at Toledo load vessels at 50,000 b.p.h. There are 3 coal-loading machines, each of which can dump 1×100-ton car per minute, also 1 machine which dumps 2 cars simultaneously, for a max. of 6,000 t.p.h.

Iron pellets are received at new Torco Dock from self-unloading lake vessels. Storage Capacity 800,000 tons.

Liquids handled include petroleum products, industrial molasses, trichlorethylene and perchlorethylene.

CRANES: Located at Port Authority Facility No. 1 – electric gantry cranes 72.5 and 110 tons. Four 25-ton gantry cranes.

BRIDGES:

Bridges crossing Maumee River:

(5) Clearance in centre in closed position, reducing to 17 ft. at sides of span.
(6) High-level.
(7) Upstream limit of deep-draft navigation.

STEVEDORES: Provided by Toledo World Terminal, Inc. and Consolidated Dock, Inc.

TANKERS:

Hocking Valley Pier: 22 ft. depth alongside.
Ashland Oil Company: 22 ft. depth alongside.
Standard Oil Company: 23 ft. depth alongside.

DENSITY: Fresh water.

MEDICAL: All facilities available.

FRESH WATER: Obtainable by pipe-line at all general cargo docks.

FUEL: All grades available at oil piers, and by harbour fuel barge.

REPAIRS: Major repair facilities available.

DRY DOCKS: No. 1: 510 ft.×72 ft. 6 in.; No. 2: 641 ft.×78 ft.

SURVEYORS: American Bureau of Shipping and Salvage Association.

Surveyors: Capt. Ray Fulshaw, Marine Surveyor & Consultant, 3445 Woodley Road, Toledo, Ohio 43606. Tel: 537-0053 (office), 531-8176 (residence). National Cargo Bureau, 7588 Seneca Trail, Temperance, MI 48182. Tel: (313) 847-1087.

2. Yes.
3. Yes.
4. Yes.
5. No special restrictions.
6. Yes.

DEVELOPMENTS: Major construction projects by the three riverfront grain operators has increased grain handling capacity from 10.2 million bushels to over 22 million bushels. A new 6 million gallon facility for storage of liquid fertiliser is planned and an additional ship loading dock is under construction.

AUTHORITY: Toledo – Lucas County Port Authority, One Maritime Plaza, Toledo, Ohio 43604-1866. *Tel:* (419) 243-8251. *FAX:* (419) 243-1835. *Cables:* Portol. *Contact:* G. L. Failor, Seaport Director. Norman A. Fox, Trade Development Director.

UNALASKA (Dutch Harbor), Alaska:
53.54 N. 166.30 W. **(See Plan)**

DOCUMENTS:

Customs:
- Masters Oath (1300).
- General Declaration (1301).
- Cargo Declaration (1302).
- Ship's Stores Declaration (1301).
- Crew Effects Declaration (1303).
- Clearance from Last Port.

Immigration:
- Immigration Documentation (I-418).
- Crew/Passenger List.
- Landing Permit (I-95).
- Visa Crew List for Shore Leave (Supplied by Immigration).
- Passport and (or) Seamens' Book.

PILOTAGE: Compulsory. To avoid a delay in obtaining a Pilot, the Owner, Master or Agent of a ship bound for Unalaska/Dutch Harbor must make prior arrangements at least 12 hours before entering port. The following information must be included:
1. Name/Call Sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot Boarding Station:
Lat. 53° 55′ 00″ N., Long. 166° 29′ 00″ W. 1 mile (1.61 km.) East of Ulakta Head. Pilots, tugboats, Harbour Master and shipping Agents standby on VHF Channel 16 (156.8 MHz).

Berthing:
(a) Pilot – Compulsory. Shifting of and EDT requires 1 hour advance notification.
(b) Berths arranged by Agent in advance.
(c) 1 small tug available annually. Circumstances may arise when other tugs are available for ship assistance.
(d) Lineman – Arranged through ship's Agent.
(e) Boatmen – Arranged through ship's Agent.

ANCHORAGE:
Outer Anchorage: Lat. 53° 54′ 00″ N. to Lat. 53° 55′ 00″ N. at Long. 166° 27′ 00″ W., Rocky, Depth 12 fathoms.
Inner Anchorages: Domestic and other vessels which have cleared customs.
1. Dutch Harbor: Lat. 53° 54′ 00″ N., Long. 166° 31′ 20″ W., mud, depth 18 fathoms.
2. Iliuliuk Bay: Lat. 53° 52′ 40″ N., Long. 166° 31′ 10″ W., mud, depth 14 fathoms.
3. Captians Bay: Lat. 53° 52′ 00″ N., Long. 166° 33′ 33″ W., mud, depth 15 fathoms.
4. Nateekin Bay: Lat. 53° 53′ 00″ N., Long. 166° 37′ 00″ W., mud, depth 17 fathoms.
5. Broad Bay:
   (a) Lat. 53° 55′ 05″ N., Long. 166° 36′ 30″ W.
   (b) Lat. 53° 56′ 05″ N., Long. 166° 36′ 30″ W.

Must check with the U.S. Coast Guard and the Alaska Department of Fish and Game prior to anchoring or placing an oil rig at these locations. More locations may be forthcoming.
Note: When anchoring in Dutch Harbor, no vessel may anchor in the glide path to the airport.

MAX. SIZE: No restrictions except draft at various facilities and through the East Channel 24 ft., Rocky Bottom at MLLW.

RADIO:
(a) Department of Public Safety, Harbour Master, Pilots, Tugs, Shipping Agents and National Marine Fisheries Observer Transfer Station standby on Marine VHF Channel 16. 4125 A kHz.
(b) Alaska Department of Fish and Game and the Alaska Department of Fish and Wildlife, (State Troopers) standby on Marine VHF Channels 6 and 16. 4125 A kHz.
(c) Marine Operator calls vessels on Marine VHF Channel 16 and receives all radio traffic on VHF Channel 28.
(d) All other traffic stands by on Marine VHF Channel 6.

TUGS: Unimac Pacific Towing – 55 ft., 800 h.p. vessel.
Boatmen:
Victory Services – VHF Channel 78.
Ballyhoo Services – VHF Channel 16.

CRANES: 100,000 lb container lift at American President Lines. Mobile cranes at the other facilities up to 150 tons at request through Shipping Agent.

BERTHING:

Berth No.	*Wharf Length* (ft.)	*Depth at MLLW* (ft.)	*Remarks*
1	420	30	City Dock and Petro Marine tankfarm – Warehouse available.
2	300	40	APL – 208, 3 ph., 60 cycle power. 100,000 lb. gantry crane.
3	360	50	Delta Western Fuel Pier.
4	160	30	Trident Seafoods Inc.
5	234	36	Petro Marine.
6	250	26	Petro Marine.
7	1000	26	Delta Western.
8	35	22	MarCenCo.
9	35	22	Icicle Seafoods Inc.
10	995	35	City Boat Harbor, Fishing Vessels.
11	505	24	Alyeska Fisheries North Dock.
12	300	36	Alyeska Fisheries West Dock.
13	460	30	East Point Seafoods.
14	250	30	Aleutian Processors barge.
15	250	36	Greatland Seafoods.
16	250	30	Universal Seafoods.
17	250	30	Universal Seafoods (barge Vita).
18	90	30	Universal Seafoods (Galaxy Dock).
19	40	30	Universal Seafoods (Viceroy Dock).
20	800	18 (var.)	City Small Boat Harbor, Fishing/ Pleasure.
21	78	20	Walashek Industries (Repair, 300 ton haulout).
22	160	31	Underwater Construction.
23	300	35	Crowley Maritime.
24	420	20	Off Shore Systems Inc.

FRESH WATER: Fresh water is available at most berths. Order through Agent or Dock Operator.

FUEL: Available at Delta Western Fuel Pier No. 3; Petro Marine Piers No. 1 and 6 and Crowley Maritime No. 23.

GANGWAY/DECK WATCHMEN: Usually ship's crew. Ship's gangway used.

OPENING/CLOSING HATCHES: Stevedores or ship's crew whichever to ship's advantage.

REPAIRS/SERVICES: Most deck, hull, engine, radar, RT, gyro, hydraulic, refrigeration and almost all types of marine electronic and electric repairs. Divers available for underwater surveys and repairs.

DRY DOCKS: Walashek Industries 300 ton haulout facility.

SURVEYORS:
1. Kodiak Marine Surveyors, P.O.Box 356, Kodiak, Alaska 99615. Tel: (907) 486-5616.
2. Rocky Point Enterprises, Inc., P.O.Box 1047, Homer, Alaska 99603. Tel: (907) 235-8967.
3. Alaska Marine Surveyors, SRA-2 Box 9312, Eagle River, Alaska 99577. Tel: (907) 694-3055.
4. Capt. Wolslenholm, P.O.Box 3313, Anchorage, Alaska 99510. Tel: (907) 277-5109.

REPATRIATION: Crew changes and repatriation can be carried out with little difficulty.

AIRPORT: Distance 4.5 miles from any facilities. Daily flights to Anchorage with domestic and international connections. Peninsular Airways, Mark Air and Aleutian Aire Ltd. Air charter service state wide.

TIME: GMT minus 9 hours in Winter, and GMT minus 8 hours in Summer. First Sunday in April clocks advanced 1 hour. Last Sunday in October clocks retarded 1 hour.

POLICE/FIRE/AMBULANCE: Tel: (907) 581-1233; Emergency Tel: 911; VHF Channel 16, 24 hours a day.

EMERGENCY CO-ORDINATION CENTER: U.S. Coast Guard. Dial 0 – Ask operator for Zenith 5555 or 2182 kHz.

GENERAL: Fishing vessel's wide lights and search lights must be turned out prior to vessel entering port.

HOLIDAYS: New Year's Day, Lincoln's Birthday, Washington's Birthday (3rd Monday in February), Seward's Day (last Monday in March), Memorial Day (last Monday in May), Independence Day, Labor Day, Alaska Day (18th day in October), Veteran's Day (November 11th), Thanksgiving Day and Christmas Day and every Sunday and every day designated by public proclamation by the President of the United States or the Governor of the state as a legal holiday.

AUTHORITY: City of Unalaska, P.O.Box 89, Unalaska, Alaska 99685. *Tel:* (907) 581-1251. *FAX:* (907) 581-1417. *Contact:* Gary K. Daily, Port Director.

VALDEZ, Alaska: 61.07 N. 146.21 W. (See Plan)

Also see "Valdez Marine Terminal".

D=

Located at head of Valdez Arm in Prince William Sound.
APPROACHES: Via Prince William Sound to the Valdez Pilot Station.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Pilots board approx. 2 miles North of Busby Light.
MAX. SIZE: Harbour depth over 300 ft. Tides: diurnal range 12 ft. Also see "Berthing" and also see "Valdez Marine Terminal".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
ANCHORAGE: Excellent, close by dock. Bay is too deep.
CUSTOMS: Quarantine, local. Immigration and Customs from Anchorage.
TUGS: Limited availability.
BERTHING: Valdez City Dock: 36 ft. MLLW. 600 ft. long by 40 ft. wide. 2 warehouses, 1 heated, 1 unheated. Stevedore provides equipment which includes fork-lifts and 2×100 ton mobile cranes and 1×150 ton mobile crane. Dock operated by North Star Stevedoring Co.
Floating Quay: Length 700 ft., width 100 ft. Mobile cranes available. Facilities for Lo/Lo and Ro/Ro.
STEVEDORES: 3 gangs.
TANKERS: *Valdez Dock Co., Petroleum Dock:* Length 200 ft., width 40 ft., depth 36 ft. at MLLW.
Also see "Valdez Marine Terminal".
REPAIRS: Minor repairs only.
FRESH WATER: Available in temperate seasons.
FUEL: Not available.
MEDICAL: 150-bed mental patient hospital; 15 beds for local use; 1 doctor, 1 dentist regularly from Anchorage.
TRANSPORTATION: Air; highway to Fairbanks and Anchorage.
AUTHORITY: City of Valdez, P.O.Box 307, Valdez, Alaska 99686.
Port of Valdez, 200 S.W. Market Street, Suite 985, Portland, Oregon 97201-5713. *Tel:* (503) 227-4567. *Telex:* 360718 Portvaldez Ptl. *FAX:* (503) 226-1023. *Contact:* Vernon W. Chase, Marketing Manager, Port of Valdez, Alaska.

VALDEZ MARINE TERMINAL, Alaska: 61.05 N. 146.24 W. (See Plan)

OPERATORS: Alyeska Pipeline Service Company.
The terminal does not provide any tug, launch or pilotage assistance for the berthing or unberthing of tankers calling at the terminal. These services, as well as any other tanker services, must be arranged separately by tanker owners.
LOCATION: The Trans-Alaska Pipeline Valdez Marine Terminal is situated on the Southern shore of Port Valdez.

Port Valdez is a natural deep-water fjord located at the N.E. part of Prince William Sound which provides access from the Gulf of Alaska. Port Valdez is about 12 miles long and 2.5 miles wide, is surrounded by steeply rising mountains, and remains ice free throughout the year. The approach to Port Valdez is by way of Valdez Arm, a deep-water channel with a minimum width of approximately 3,000 ft.

The overland approach to the site, which is close to the mouth of the Lowe river, is by road about 6 miles long connecting the terminal with the Richardson Highway. The town of Valdez is 14 miles from the terminal by this route. The distance by boat across to Port Valdez is approx. 2.5 miles.

The terminal operates 24 hours per day, 7 days per week, throughout the year.

The administrative offices will normally be open between 0800 and 1630 hrs., Monday through Friday. The office telephone number is (907) 835-2261.

DOCUMENTS:
Certificate of Financial Responsibility.
SOLAS Safety Equipment.
SOLAS Safety Construction, or for U.S. documented vessels: U.S. Coastguard Certificate of Inspection.
SOLAS Radiotelegraphy Certificate.
Crew Lists.
Derat Certificate.
Clearance from Last Port.

PILOTAGE: The Pilot boards off Rocky Point. Arrangements to be made by vessel's Agent.
ARRIVAL ADVICE: Masters of vessels bound for the terminal must advise the terminal as follows:
Last Port ETA: Tankers en route to the terminal, upon departure from their last port of call prior to Valdez, will send a telegram or telex to Alyeska Pipeline Service Company, Valdez, Alaska, Telex No. 090-26-564 (Answerback: Alyeska Valz) advising the estimated Alaskan local time and date of arrival.
72-hour ETA: Not less than 72 hours, unless transit time is less than 72 hours, prior to arrival at Cape Hinchinbrook, tankers will send a telex or telegram to Alyeska Pipeline Service Company providing the terminal with the following information:

a. ETA at Cape Hinchinbrook.
b. Quantity of ballast to be pumped ashore and grade of last cargo.
c. Quantity of oil to be loaded.
d. Distance from the bow to cargo manifolds.
e. Size, number and type of cargo connections.

} At first call to Terminal. Not necessary on subsequent voyages.

f. Amount of provisions and stores to be loaded.

Final ETA: Tankers will send a final ETA, 24 hours in advance of their arrival. This 24 hour ETA shall be as accurate as possible and tankers will notify the terminal whenever the arrival time changes by more than 3 hours.
Notice of Arrival: After entering the Coast Guard's Prince William Sound Vessel Traffic Service, vessels ready to commence loading or deballasting should give immediate notice to the terminal. This notice is extremely important as it can affect berthing priority.
Coastguard Notification: Terminal will advise USCG at Valdez of all ETAs received.
AMVER Participation: The notice of arrival requirement to be given to the U.S. Coast Guard Captain of the Port in Valdez, Alaska, can be met if vessels participate in the Automated Mutual-assistance Vessel Rescue System (AMVER). Participation in AMVER will also make the Coast Guard's Prince William Sound Vessel Traffic Service aware of the tankers that will be entering the service.
Initial Radio Contact: Ship-to-shore radio telephone calls can be made to the terminal, (907)-835-2261, 24 hours a day by normal commercial Channels.

RADIO: All times are GMT – following information produced as a "guide" and subject to change.

TUGS: 2×7,000 h.p. and 1×9,000 h.p. twin-screw tugs and 2×300 h.p. single-screw mooring launches are on standby at the terminal to provide oil spill containment, cleanup and contingency services and fire fighting services as required by the terminal. The tugs are equipped with telescoping fire monitors and will be capable of providing 3,500 g.p.m. of foam or fire water at 150 p.s.i.g. at an elevation 70 ft. above the tug's waterline. The tugs are equipped with VHF-FM radio-telephone communication equipment. Should tankers desire to contact the tugs, the tugs may be reached by calling on Channel 16 (156.80 mHz).

The tugs and mooring launches are available to provide berthing and unberthing services to tankers calling at the terminal.
VHF: The Alyeska Pipeline Service Company operates a VHF – FM base station in Valdez, Alaska under the call sign "WAB – 952". This base station is maintained for the purpose of transacting company business with either inbound or outbound vessels and is open 24 hours a day. (Transmit/receive range of this station is limited to Port Valdez.) The official language for all communications shall be English.

Channel	Frequency	Use	At
10	156.500 MHz	Intership and Ship to Coast Guard	A – B – C
16	156.800 MHz	Distress – Safety and Calling	A – B – C

A – Contingency Management Centre
B – Oil Contingency Warehouse
C – Operational Control Centre

The VHF – FM marine radio system utilised by the terminal is compatible with the Prince William Sound Vessel Traffic Service which is operated by the U.S. Coast Guard in Valdez, Alaska. The USCG Vessel Traffic Service will have VHF – FM radio-telephone coverage extending beyond Cape Hinchinbrook and including Prince William Sound, Valdez Arm, and Port Valdez. The tugs available at the terminal will also be equipped with VHF – FM transceivers.

TANKER REQUIREMENTS: *General:* Certain requirements of governmental agencies are in effect at the terminal in order to minimise the chances for a pollution incident. These requirements apply to all tankers calling at the terminal.

Operations at the terminal are primarily aimed toward the safe loading of tankers and the prevention of collisions and groundings of vessels that call at the terminal. These aims will be met by insisting upon and utilizing conventionally constructed tank vessels manned by skilled crews, use of positive vessel traffic control within Prince William Sound and Port Valdez, and use of all traffic advisory and communications services in West Coast ports. The purpose of the following requirements for tankers calling at the terminal is to materially enhance tanker loading and discharge operations and to increase the safety of navigation so that the danger of pollution from oil spills is substantially reduced.

Safe Navigation: Tankers will observe the rules and directions issued by the U.S. Coast Guard as operator of the Prince William Sound Vessel Traffic Service. These rules and directions will pertain to communications check points, ETAs, traffic lane separation, anchorages, one-way traffic, speed, etc.

In addition to the normal instruments used in celestial navigation and piloting (sextant, pelorus, etc.), the following electronic devices must be aboard and in good working order:

a. Fathometer/Depth Sounder.
b. Loran C Receiver.
c. Two Independent Radar Systems. (10 cm. and 3 cm.).
d. Radio Direction Finder.

All vessels must have a qualified Pilot aboard for the transit of Prince William Sound and Port Valdez.

Communications: Tankers calling at the terminal will be required to have the following communications equipment aboard and in good operating condition:

a. VHF – FM radio-telephone with sufficient Channels and speakers to comply with the Prince William Sound Vessel Traffic Service operating rules and the Bridge-to-Bridge Radiotelephone Act.
b. Radiotelegraph.
c. Portable UHF transceiver will be supplied by the terminal.
d. Single sideband radio.

The portable UHF transceiver shall have at least five Channels which are tuned to the berth frequencies listed.

Additional Equipment: Tankers calling at the terminal will be required to have the following additional equipment:

a. Tankers must carry standard 6 in. hose sufficient to make at least 50 ft. in length for emergency lightering purposes.

b. Accommodation ladders and Jacob's ladders must be of sufficient integrity and free from ice and snow to permit safe embarking and disembarking by the Pilot.

c. Mooring lines must be of sufficient size, strength, and quantity to permit safe mooring of the vessel.

d. Manifold reducers, connectors, and extensions must be made of steel. Cast iron reducers will not be permitted.

e. Tankers which call at the terminal will be required to retain all solid waste refuse aboard the vessel, or use a suitable sewage treatment plant before discharge.

f. All ullage caps will remain closed during loading except during gauging or sampling.

g. Prince William Sound emergency towing cable package.

(Continued on next page).

BERTHING FACILITIES: The major ship loading facilities include four independent loading berths, numbered 1, 3, 4 and 5. Berth No. 1 is a floating berth whereas Berth Nos. 3, 4 and 5 are fixed structures.

	Berth No. 1 See Note 1	*Berth No. 3* See Notes 1 and 2	*Berth No. 4* See Notes 1 and 2	*Berth No. 5* See Notes 1 and 2
Vessel Size (Design) d.w.t.	16,000 – 120,000	16,000 – 250,000	16,000 – 265,000	16,000 – 265,000
Type of Berth	Floating dock	Fixed loading platform	Fixed loading platform	Fixed loading platform
Deck Level of Berth above MLLW	32 ft. 8 in.	36 ft. 7 in.	36 ft. 7 in.	36 ft. 7 in.
Depth Alongside at MLLW (ft.)	125	85	85	80
Loading Arms (Number × Size)	4 × 12 in.	4 × 16 in.	4 × 16 in.	4 × 16 in.
Max. Rate Per Loading Arm (bbls.p.h.)	20,000	27,500	27,500	27,500
Max. Design Flow Rate (per berth) (bbls.p.h.)	80,000	110,000	110,000	110,000
Loading Arm Spacing on Operating Dock (ft.)	11	11	11	11
Maximum Ship Manifold Pressure	Pressure alarm points will be set, based upon information given by ship's officers.	See Berth No. 1	See Berth No. 1	See Berth No. 1
Emergency Shutdown	Can be initiated by berth operator or by OCC shutdown complete within 6.5 seconds after initiation.	See Berth No. 1	See Berth No. 1	See Berth No. 1
Access to Ship	42 ft. aluminium gangway	49 ft. 6 in. aluminium gangway	Telescopic Gantry	Telescopic Gantry
No. of Mooring Dolphins	4	4	6	6
No. of Berthing Dolphins	0	4	4	4
Mooring Hooks (One line per hook)	One triple hook per mooring dolphin Four double hooks on the operating dock	One triple hook per mooring dolphin One double hook per berthing dolphin	One triple hook per mooring dolphin One double hook per berthing dolphin	One triple hook per mooring dolphin One double hook per berthing dolphin
Potable Water	None	None	None	None
Bunker Facilities	None	None	None	None
Public Telephone	Available ashore in vicinity of berth	See Berth No. 1	See Berth No. 1	See Berth No. 1
Minimum Ship Manifold Spacing *1*	—	—	—	—
2	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
3	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
4	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
Quick Disconnect Coupling (QDC) Size (in.)	12	16	16	16
Manifold Size Range Acceptable to QDC (in.)	10 to 16	12 to 16	12 to 16	12 to 16

Note: (1) Although all berths are designed to handle vessels in the 16,000 d.w.t. size, loading arm size requires ship's manifolds to be a minimum of 10 in. in diameter. Normally, vessels less than 45,000 d.w.t. will be handled at Berth No. 1.

(2) Because of mooring dolphin limitations, vessels of more than 180,000 d.w.t. would be acceptable only if their deck machinery and mooring leads allowed an efficient bow and stern mooring line pattern. In addition to this requirement, distance from bow to manifold and prevailing weather conditions would have to be considered before berthing of such vessels would be authorised.

TANKER REQUIREMENTS: *(Continued):*
Operational Requirements: The following procedural and operational requirements are listed in order to make tanker Owners and Masters aware of some additional safety and anti-pollution measures in effect at the terminal. These requirements will be restated in the sections pertaining to the pre-loading inspection and cargo loading.

a. No repairs to radars shall be made while a vessel is moored to the loading berth unless authorised by the Terminal Marine Supervisor.

b. The tanker's main CW wireless set must be de-energized and switched off while alongside the loading berth.

c. Tank tops shall remain closed during loading operations. Petroleum vapours shall be vented through mast risers or stand pipes at an appropriate height above the main deck.

d. Ship's crew will assist with connecting and disconnecting loading arms to and from the vessel's cargo transfer manifold. Assurance that the arms are secured properly without damage shall be observed during pre-loading inspection. However, as a convenience the shore crew will aid the ship's crew in connecting loading arms to the ship's manifold as the shore crew will be more familiar with the shoreside facility connection.

e. All sea valves connected to the cargo piping system shall be sealed in the closed position prior to loading oil.

f. Prior to commencement of loading operations, a joint inspection of the vessel and a pre-transfer conference will be held by the Terminal Marine Supervisor and the tanker officer in charge.

g. No repairs that would result in immobilization of the vessel shall be carried out while alongside of the loading berths unless the Terminal Marine Supervisor specifically authorises such work.

BERTHING: *Berth Priority:* Berth priority and berthing order will be determined by the Terminal Marine Superintendent who will use the general guideline of assigning tankers and berths in the order by which tankers enter the Prince William Sound Vessel Traffic Service and are in all respects ready to discharge ballast or load.

Procedures: Tugs will be dispatched by the Marine Shift Supervisor to meet inbound tankers and to assist in berthing at the nominated berth. The Master shall remain solely reponsible, on behalf of his owners, for the safety and the proper navigation of his vessel. Manoeuvring power must be available on the main engines during berthing operations. The positioning of the tanker's loading manifold in relation to the metal loading arms has to be carried out to a proper alignment, as required by the berth operator.

Maximum Allowable Berthing Velocities: The following table gives the designed maximum allowable berthing velocities for Berths No. 1, 3, 4, and 5. The velocities are given in inches per second for the various size tankers in the 40% ballast condition:

	Berth No. 1	Berths No. 3, 4 and 5
85,000 d.w.t.	9 in./sec.	12 in./sec.
120,000 d.w.t.	8 in./sec.	11 in./sec.
265,000 d.w.t.	—	7 in./sec.

Note:
(a) 1 knot=20.2 in./sec.
(b) Velocities are given for a line normal (perpendicular) to the axis of the dock or the berthing dolphins.

Mooring Hooks and Mooring Capstans: Each berthing dolphin and each mooring dolphin will be equipped with a mooring capstan and either 2 or 3 quick-release mooring hooks. Berthing dolphins will have double quick-release hooks, and the mooring dolphins will have triple hooks.

The recommended mooring line arrangement diagrams included in the "Plans" show the location of these double and triple hooks. Since Berth No. 1 has no berthing dolphins, the 4 double quick-release hooks are located on the loading dock.

These mooring hooks are designed to service 1 mooring line per hook. Thus, no more than 3 lines should be led to any mooring dolphin nor should more than 2 lines be led to any berthing dolphin. These mooring hooks may be released locally.

Each mooring capstan will be mounted on, and form an integral part of, the associated double or triple quick-release mooring hook. This will provide a mooring capstan to assist in securing mooring lines at every berthing dolphin, mooring dolphin, and on the floating berth loading dock.

These mooring capstans are designed to give a minimum running pull of 2,000 kg. (4400 lb.) at a rate of 30 m. (98.4 ft.) per minute. The capstan will be positioned at a height sufficient to prevent mooring lines and messengers from becoming snarled on the quick-release hooks.

Mooring launches will be used to assist the tanker in running mooring lines to the mooring dolphins at each berth.

The terminal will provide suitable messengers for heaving in mooring lines from the launches.

Mooring Lines: Mooring arrangements shall be satisfactory to the Marine Superintendent. All critical moorings shall be of similar size and elasticity. Ropes of different material from those used to moor the ship may be used for positioning the vessel but shall not count as part of the final moorings. It is required that in ships of 90,000 d.w.t. and greater all final moorings shall be wire rope. Nylon tails may be used if fitted to all moorings. Ships should be outfitted with sufficient moorings of similar material for normal moorings. Ropes of different material may be used in emergency.

Moorings While Alongside Berth: Tankers must at all times remain adequately secured alongside the berth. Moorings must be kept at an even tension, avoiding a slack line or varying tensioning situation. Should such a situation arise and not be immediately rectified by the ship's crew after communication with the deck officer, the berth operator will suspend any transfer operation. All vessels fitted with tension winches should apply brakes once the tanker is moored and shall not leave winches in the self-tensioning position.

Emergency Towing Wires: While at a loading berth, tankers will provide emergency towing wires positioned at both the offshore bow and stern. The wires shall be in good condition, have an eye in each end, and be of adequate strength to move the vessel off the dock. The outboard eye shall be maintained at water level, and slack aboard ship shall be secured with small pieces of fibre line.

Mooring Line Arrangement Diagrams: (See "Plans"). The recommended mooring line arrangement diagrams are provided in the "Plans" as guidelines to acquaint the tanker Master with the general mooring line arrangement for the loading berths at the terminal. These arrangements are indicative of the minimum suggested number of lines and do not preclude the Master from using additional lines.

PRE-LOADING INSPECTION: *Pre-transfer conference and joint safety inspection:* Prior to the discharging of ballast from cargo tanks or loading of oil, a pre-transfer conference and a joint safety inspection will be conducted by the Terminal Marine Supervisor and a responsible deck officer aboard the tanker who will be in charge of bulk liquid transfers aboard the tanker.

The purpose of the pre-transfer conference and the joint safety inspection is to insure that both the terminal and the tanker are suitable and ready for safe loading and handling of oil.

The Check List is designed to meet the following requirements:

a. Section 4.4 of the International Oil Tanker and Terminal Safety Guide which relates to the agreed procedures and safety checks prior to the commencement of cargo loading.

b. Title 46, U.S. Code of Federal Regulations, Section 35.35-30 relating to a Declaration of Inspection for Tank Vessels.

c. Title 33, U.S. Code of Federal Regulations, Section 156.150, relating to a Declaration of Inspection prior to the transfer of bulk liquid cargo from a shore facility to a large vessel.

The Check List is to be taken aboard the tanker by the Terminal Marine Supervisor and shall be used during the pre-transfer conference and the joint safety inspection of the tank vessel to insure compliance with applicable regulations and safety standards. Columns are provided on the Check List for the Terminal Marine Supervisor and the tanker person-in-charge to initial, indicating that the requirements have been met. The original of the checklist shall remain aboard the tanker, and a copy shall be returned to the Terminal Marine Supervisor for subsequent delivery to the berth operator.

Terminal personnel are authorised to suspend oil transfer operations if any of the safety rules listed or on the checklist are not observed, or if any other danger is believed to exist.

The Master of the tanker or his representative has the right to shut down loading operations in the event he feels shore operations are unsafe.

During the pre-transfer conference, the Terminal Marine Supervisor shall provide the responsible ship's officer with a printed sheet detailing description and location of the fire-fighting system and the other emergency systems at the terminal in general and at the berth to which the tanker is moored in particular. The Terminal Marine Supervisor shall also advise the vessel if any unusual or dangerous weather conditions are forecast or expected.

As the shifts on the berth change, the relieving Terminal Marine Supervisor and berth operator shall assure themselves that all conditions pertinent to their responsibilities are as previously agreed to, and shall sign the copy of the Declaration of Inspection. The relieving officer aboard the tanker shall assure himself that the original conditions still exist and shall sign the original of the Declaration of Inspection aboard the tanker. These relieving personnel will then become the person-in-charge of the transfer operation for the terminal and the tanker respectively.

BALLAST: *Ballast Quantities:* The terminal is to be informed of the approximate quantities of segregated clean and dirty ballast in the Master's pre-arrival message. This message should also state where the ballast was shipped and the grade of last cargo.

Ballast Reception Facilities: The terminal facilities will include three 430,000-barrel ballast reception tanks. Discharge of dirty ballast will be by way of the four 12 in. loading arms (Chicksans) on Berth No. 1 and the four 16 in. loading arms on Berths No. 3, 4 and 5. These loading arms connect to 20 in. lines at the berths and lead into a 42 in. line connecting each berth to the ballast reception tanks. Although the shore lines are insulated, they are not heat traced and there are no booster pumps to assist in the discharge of dirty ballast.

No. 5 Berth is situated approx. 1.25 miles from the reception tanks and has a possible head of 150 ft. Max. pressure 40 p.s.i. (approx.).

In the event of any stripping problems, it is recommended that tanks containing unpumpable ballast be stripped internally to the slop tank and that the Load-on-top procedures be adopted.

Segregated Ballast: Only segregated ballast will be permitted to be discharged overboard. Segregated ballast is defined as ballast water that is introduced into a tank which is completely separated from the cargo oil and the oil fuel system and which is permanently allocated to the carriage of ballast. The deck log book must record all times of ballast discharge and when pumps are started or stopped. This log must also indicate whether or not the segregated ballast is being dropped in the initial stages to sea level. A close watch must be maintained on the overside discharge, with a deck floodlight or portable explosion-proof light being trained on the discharge during hours of darkness. If there are any indications of discolouration or sheen, discharge must be suspended and an investigation must be carried out. If there is any doubt as to the quality of the segregated ballast, all discharge will be made into the shore reception facilities.

Dirty Ballast: All ballast contained in any compartment or tank used for the carriage of oil will be classed as dirty no matter how clean the ballast may appear to be. No ballast carried in cargo tanks may be discharged at sea or in port.

After the connection of the loading arms has been completed and the suitable valves between the arms and the ballast reception have been opened, permission to commence discharge will be given to the responsible tanker officer by the berth operator who will have received approval from the Operations Control Centre (OCC).

Contact between the tanker and the terminal will be by means of the UHF radio that will be placed on board by the Supervisor. As during all transfer operations, there will be a continuous watch near the ship's manifold. In the event of an emergency on the berth, pressing of the emergency alarm will activate the valve closing mechanism.

On hearing this signal, the Crew member at the manifold must stop the ship's ballast pumps to avoid damage by pumping against a closed valve system ashore. (See "Emergency Procedures"). On commencing discharge of dirty ballast and at frequent intervals during the discharge, a watch will be kept on the area around the sea valves even though the sea valves have been inspected during the initial safety checks and a seal has been placed on them by the inspecting Terminal Marine Supervisor. Any indications of any oily sheen will necessitate a shutdown of the discharge pumps and an investigation to be carried out before any further ballast can be discharged. Thirty minutes before completion of discharge, the responsible tanker officer will inform the berth operator who will in turn advise the OCC and the duty Terminal Marine Supervisor.

On completion of the discharge and after pumps have been stopped, the loading arm(s) used for dirty ballast discharge must be drained back into the slop tank. On vessels with an inert gas system, gauging will be taken by way of the deck purge pipes to determine that tanks are empty. It is not intended that vessels will depressure cargo tanks for visual inspections, nor should tank lids be opened on any compartment that is not gas free.

All safety regulations applicable during the loading of oil will also apply during the discharge of ballast.

Governmental Ballast Discharge Requirements:

State of Alaska: The State of Alaska requires that the Master of a vessel scheduled to take on any petroleum product or cargo, complete and sign the State of Alaska Department of Environmental Conservation Ballast Water Discharge Certificate Affidavit. To support this affidavit, the Master must be prepared to produce both deck and engine room log books and a legible copy of that portion of the Oil Record Book relevant to the sea passage from last discharge port to the terminal.

Federal Requirements: Prior to loading oil on any vessel, the terminal is required by the United States Department of the Interior to obtain from the Master of the vessel a legible copy of that part of the Oil Record Book that pertains to the voyage of the vessel to the terminal from the vessel's last oil discharge port. This legible copy shall be certified under oath by the Master as being true and correct. If the vessel is not required to maintain an Oil Record Book or similar records, the Master of the vessel is required to provide the terminal with an affidavit, duly sworn to and signed, stating any and all facts bearing upon any discharge of oil or oily water from the vessel during its voyage to the terminal from its last oil discharge port.

Should the Master be unable to comply with the preceding requirement or if it appears from the Oil Record Book or other documentation that a vessel has discharged oil or oily water during its voyage to the terminal, the terminal is required to promptly notify the Department of the Interior's representative, the Authorised Officer. Tankers discharging ballast water or other oily mixtures may be subject to penalties.

OIL CHARACTERISTICS: The predominent oil to be available at the terminal is currently North Slope Crude Oil. The following preliminary characteristics of North Slope Crude Oil are given to acquaint the Master and the cargo officers of tankers that will call at the terminal with the general properties of the cargo they will load.

Specific Gravity: 0.8933 at 60°F.
API Gravity: 27.0° API.
Pour Point: + 15°F.
Viscosity: 73.5 SSU at 100°F., 169 SSU at 60°F.
Reid Vapour Pressure: 4.0-4.5 lbs.
Sulphur Content: 0.94 per cent by weight.
Waxing: 85-117°F. (begins to precipitate). 50-55°F. (bulk of wax begins to come out of solution).
Mercaptan Sulphur: approx. 14 parts per million.
Loading temperature: approx. 100°F.
Dissolved H_2S: less than 0.2 parts per million.

LOADING FACILITIES: *General:* All loading operations will be accomplished in accordance with the joint inspection pre-transfer conference. Loading operations cannot commence until the vessel has complied with all State of Alaska and Federal Requirements and all required documentation has been provided.

Crew Responsibilities: Ship's crews will be responsible for assisting with handling the loading arms on board the tanker, furnishing and making the adaptor connections, removing blind flanges, and guiding the loading arms (Chicksans) to the appropriate manifold connections. However, as a convenience, the shore crew will aid the ship's crew in connecting loading arms to the ship's manifold as the shore crew will be more familiar with the shoreside facility connection. The Chicksan loading arms and couplings are hydraulically controlled by the berth operator who will be in constant voice communication with the individual responsible for the connection by means of the UHF portable radio that will be supplied to all vessels by the Supervisor.

If required, the terminal will supply 10 in. – 16 in. reducers at Berth No. 1 and 12 in. – 16 in. at Berths No. 3, 4 and 5.

Check List Requirements: After the Terminal Marine Supervisor is satisfied that all the safety requirements have been complied with, permission will be given to commence loading. All operations in connection with starting of loading, switching of tanks, and topping off will be the responsibility of the responsible ship's officers.

Before the maximum pressure or loading rates agreed to at the pre-transfer conference are reached, slow loading will be started and the responsible ship's officer will ensure that the cargo is flowing to designated tanks, thus ensuring that all block valves separating lines are open. On completion of this check and after advising the berth operator, the pressure/rate will be increased to the maximum previously agreed by the Master, or the officer in charge.

A responsible member of the crew will remain near the manifold within sight of the berth operator. This is in addition to the officer on cargo watch who, at frequent intervals, will check the state of loading with the berth operator by means of the UHF radio. This officer will also advise the berth operator when changes in the loading rate are required.

The rate of flow into the tanker can be observed on the large digital readout situated by the berth operator's control position.

Loading Suspension: Terminal: Terminal personnel will suspend loading operations if any safety rules are not followed, or if terminal personnel supervising loading operations believe any other danger exists, providing adequate notice is given to the responsible ship's officer.

Tanker: The Master is required to shut down loading if he feels that shore operations are unsafe, provided adequate advance notice is given to berth personnel.

Emergency Shutdown: In the event of an emergency (See "Emergency Procedures") the following types of shutdown could occur:

(1) "Dangerous" shutdown.
  - (a) All berth block valves close.
  - (b) Metering upstream block valves close.
  - (c) Berth control valves close – one for each loading arm (in 5, 5.5, 6.0, and 6.5 seconds, respectively, to prevent surge to line).

(2) Fire shutdown
  - (a) The preceding valve closures plus fire alarm and start fire pumps.

(3) Emergency shutdown, one per arm, closes control valve only.

(4) Low vapour pressure on any crude tank – initiates (1) preceding.

Pushbuttons for (1) preceding are located in berth area plus one on berth operator's alarm panel.

Pushbuttons for (2) 1 on roadway; 1 on roadway at land; 1 in Power Distribution Cabinet (PDC); 1 in Berth Operator Control (BOC) alarm panel; 1 in loading arm area.

Pushbutton for (3) 1 local at each valve.

Topping Off: Near the end of loading when topping off, the responsible ship's officer will request the gradual reduction of loading rate for topping off operations. This reduction will be achieved by the berth operator slowly closing the berth loading valves. The berth operator will progressively reduce the opening of the berth control valves and will take loading arms out of service, until the point when all berth control valves and block valves are finally closed, when advised by the ship's officer "Shut Down" or "Finished Loading". The loading arms will then be drained into a ship's tank.

Disconnecting: On being satisfied that loading arms and ship's manifold are empty, the order will be given from the responsible ship's officer to the berth operator to uncouple the quick release couplings.

During the period of disconnecting, the USCG Vessel Traffic control Centre at Valdez will have been advised. Tugs will be on standby, and providing that there are no other ship movements that would interfere with sailing, the "Early Departure System" will be carried out. The actual Bill of Lading figures will be sent to the master by W/T or Telex after departure.

COMPLETION/DEPARTURE PROCEDURE: *Topping-Off:* As the tanker begins the topping off stage, the responsible ship's officer shall notify the berth operator who will in turn keep the OCC informed as the cargo loading rate is reduced. When the ship's officer estimates approximately one hour remains in the loading process, he shall notify the berth operator.

Tug Assistance: After being notified by the tanker that one hour remains in the loading sequence, the berth operator shall notify the OCC and the Terminal Marine Supervisor. The OCC shall continue to monitor the topping off process and the Terminal Marine Supervisor shall place the vessel's pre-arranged tugs on standby. The tugs shall be alongside the vessel after all loading arms have been disconnected and before any mooring lines are let go.

U.S. Coast Guard Vessel Traffic Service: The departure of tankers from the terminal shall be in accordance with the published standard operating procedures for the Prince William Sound Vessel Traffic Service. The Coast Guard Operations Centre located in Valdez shall be the directing authority for the operation of the vessel traffic service. The Terminal Marine Supervisor will notify the USCG-VTS one hour prior to the completion of loading and again when loading is complete. When the Terminal Marine Supervisor notifies the USCG-VTS that loading is complete, he will verify the tanker's status to enter the Vessel Traffic Service and will check on any inbound vessel traffic.

SAFETY: After the tanker is secured, the Terminal Marine Supervisor will board the tanker to contact the Master or his representative to:

– provide information on terminal safety regulations.
– agree on designated smoking areas
– advise ship's personnel on "Work Permit" and "Hot Work Permit" procedures.
– present ship/shore Safety Check List.
– present printed sheet describing terminal emergency procedures and fire fighting capabilities.

The following are **some** of the safety requirements.

Warning Signs, Lights, and Signals – Upon arrival at the terminal, a tanker shall display the following notice at the gangway:

WARNING
NO OPEN LIGHTS
NO SMOKING
NO VISITORS

During transfer of oil, and when in the non-gas free condition a red signal (flag by day and electric lantern at night) shall be displayed so that it is visible from all sides.

Blowing tubes – Funnel uptakes and boiler tubes will not be blown while a tanker is berthed at the terminal.

Use of Tools – No chipping or other operation likely to produce sparks will be allowed in any designated hazardous area. The Terminal Marine Supervisor and the responsible ship's officer shall both be satisfied that there is no such activity on the vessel or on the facility.

Flashlights, Hand Torches, Lanterns – Only self-contained battery powered flashlights, hand torches, lamps and lanterns, approved by USCG will be permitted to be used aboard the vessel or on the berths.

Main Engine – While berthed at the terminal, the tanker's main engines, steering machinery, and other essential manoeuvring equipment shall be maintained on standby status to permit the tanker to move from the berth on short notice.

Communications Equipment – A tanker's main transmitter shall be turned off and the main transmitting aerials shall be grounded whenever a tanker is alongside a loading berth at the terminal.

VHF-FM radiotelephone equipment, both portable and fixed, may be used as long as the equipment is permanently installed or intrinsically safe, conforms to FCC marine requirements, USCG requirements, and operates with a power and output of 1 watt or less.

The preceding requirements do not mean that essential servicing of ship's radio equipment cannot take place while alongside a berth. However, suitable arrangements for insuring safety during this work shall be made between the tanker and the terminal, including the securing of an appropriate work permit.

Operating and servicing of radar equipment aboard a tanker berthed at the terminal shall be agreed to by the Terminal Marine Superintendent or Marine Supervisor and shall be the subject of an appropriate work permit.

Vessels Alongside – Unauthorised craft shall be prohibited from securing to a berth at which a tanker is moored.

No craft shall come alongside a tanker while the tanker is handling crude oil or deballasting without the permission of the Terminal Marine Superintendent who shall instruct personnel aboard the craft that smoking, naked light, and galley fire regulations must be observed.

Designated Smoking Areas: Smoking shall be strictly prohibited within an area enclosing all tanker berths and loading docks and on board any tanker while at a berth, except.

- (a) in buildings or other shore locations specifically approved for smoking and with such approval notices posted.
- (b) on board a tanker in places specified by the Master, and agreed to by the Terminal Marine Supervisor.

Places designated for smoking shall not be outside of any of the accommodation areas. Special precautions shall be taken during conditions that may suggest danger; in particular, conditions of no wind or any indication of unusually high gas concentrations.

The Master is responsible for insuring that all on board are informed of the selected places for smoking and for posting suitable notices.

Only safety matches are permitted in approved smoking areas. The use of lighters is prohibited.

Galley Fires and Cooking Appliances – Galley burners are to be adjusted to insure efficient combustion and to prevent galley stack fires and sparks from incandescent soot. Flues are to be cleaned at regular intervals. When bottled gas equipment is used, the gas shall contain an additive which will give it a distinctive odour. Sufficient fire extinguishers shall always be provided near the galley. Oily rags and fat shall not be allowed to accumulate, and the exhaust fan ventilators shall be kept clean.

While a tanker is at a berth, the use of galley stoves and other cooking appliances with non-immersed elements such as electric hot-plates and toasters shall be permitted provided that the Terminal Marine Supervisor agrees that no hazard exists and that such use is in the galley, in the pantry, or in designated smoking areas.

Work Permits – If repairs are to be carried out on a tanker alongside a berth at the terminal, the responsible ship's officer must discuss and obtain agreement from the Terminal Marine Supervisor on the details of the work to be done. Certain types of repairs will be the subject of written work permits which shall be completed by the responsible ship's officer and authorised by the Terminal Marine Supervisor at the time of the pre-loading inspection Check List. These types of repairs include but are not limited to:

- (a) Repairs to main engine, steering machinery, or other manoeuvring equipment which might immobilise the tanker.
- (b) Repairs to tanker's radiotelephone or communications equipment.
- (c) Repairs to radar equipment.
- (d) Repairs to galley equipment and cooking appliances.

Hot Work Permits – Any hot work done at the terminal, either on the berth or aboard a tanker moored to a berth must be approved by the U.S. Coast Guard Captain of the Port, Western Alaska. This approval will be in the form of a signed Hot Work Permit, issued by the U.S. Coastguard.

EMERGENCY PROCEDURES: Fire: The signal for a fire aboard a tanker moored at the terminal shall be 5 prolonged blasts of the ship's whistle or siren supplemented by a continuous sounding of the ship's general alarm. In the event of a fire within the terminal, the tanker shall be notified by the berth operator and, in addition, the terminal fire alarm will also be sounded.

The initial action required of tankers in the event of a fire within the terminal is to prepare for a shutdown of all loading and ballast water discharge arms. This shutdown will be initiated by the terminal and not by the tanker. In case a shutdown does occur, loading and ballast discharge will not be commenced again until the all clear notification has been received from the Terminal Marine Supervisor.

In the event of a fire aboard the tanker or on the loading berth, the initial actions will consist of shutting down all transfer operations. The standby tug, followed by the other tugs, will be dispatched by the OCC to the appropriate berth and the fire water pump shall be started. If necessary, the tanker will be towed off the berth by tugs, using the emergency tow wires. Each berth is equipped with an independent fire water system which includes a 2,000-gallon-per-minute pump and a liquid foam system. Each berth is also equipped with the following fire-fighting equipment:

- (a) 2 fixed foam monitors.
- (b) 2 fixed firewater monitors.
- (c) 5 fire hydrants.
- (d) 3 hose reels.
- (e) 1 shore to ship firewater connection including 75 ft. of 2.5 in. hose.

Each berth also has the capability to be interconnected with the tugs or with fire trucks to provide increased fire-fighting capacity. The foam system is designed for coverage of fire on the berths only and is not normally interconnected for use by shipboard firefighters in the event of a fire.

Note: Regardless of any assistance the terminal may render, vessels at the berth are expected to put their own emergency procedures into effect whenever required.

Man Overboard: In the event of a man overboard from a tanker moored at the berth, rescue efforts will be implemented immediately, and the berth operator shall be advised by UHF radio. The Terminal Marine Supervisor shall also be notified by the berth operator. The standby tug and mooring boat shall be advised by the berth operator and shall get underway immediately to attempt the rescue.

Life rings will be in position around the loading berth and also on the berthing and mooring dolphins. In case of a man overboard, the medical authorities will also be alerted by the berth operator.

Oil Spills: The notification requirements for an oil spill are delineated by Federal Law. The Federal Water Pollution Control Act (FWPCA) requires persons in charge of vessels (among others) to notify the appropriate federal agency whenever an oil spill enters navigable waters or the adjoining shoreline. The appropriate agency designated to receive these reports is the U.S. Coastguard which can be contacted on Channel 16, VHF-FM.

Notification of an oil spill shall be passed by the tanker to the berth operator who in turn shall inform the Terminal Marine Supervisor.

The terminal will call other agencies that are required to be notified.

The terminal will provide any available containment and cleanup assistance for any oil spill at the terminal. The terminal will activate its oil spill response procedures upon notification of an oil spill and shall utilise all available personnel, equipment, and resources to limit and minimise pollution.

CHARTS/PUBLICATIONS: The following official charts and publications are recommended for study when planning a voyage to Valdez, Alaska and the Terminal:

(a) National Ocean Survey Charts:

Chart Number		Title
Old System	New System	
8500	531	Gulf of Alaska – Strait of Juan de Fuca to Kodiak Island
8502	16013	Cape St. Elias to Shumagain Islands
8551	16700	Prince William Sound
8520	16709	Prince William Sound – Eastern Entrance
8519	16708	Prince William Sound – Port Fidalgo & Valdez Arm, Valdez.

WEATHER: *Wind:* The mountains which surround Port Valdez tend to constrain the flow of air to either an Easterly or Westerly direction. At Valdez Narrows, the predominant directions are Northerly and Southerly.

Jackson Point experiences stronger winds than Valdez Airport; however, light winds (less than 13 m.p.h.) occur about 85 per cent of the time. The prevailing wind directions are S.W. from May through September and N.E. from October through April. The N.E. Winter winds reach gale force but usually do not prevail for long periods. The site is well protected from Southwesterly winds but is fully exposed to the Northeasterlies and to winds coming off Mineral Creek, directly North of the facility, approx. 2.5 miles away across Port Valdez.

The occurrence of winds with speed greater than 19 m.p.h. from any direction is less than 7 per cent throughout the year.

A wind chill factor chart is presented for use in conducting operations during Winter seasons. As indicated, combinations of low temperatures and high winds combine to provide extremely low equivalent temperatures. Outdoor operations under these conditions should be closely supervised to insure that personnel and crewmen do not suffer from exposure or frostbite.

Precipitation: Precipitation is abundant during all seasons with the majority falling during the months July through November. Valdez has an average annual precipitation of 62.37 in. with a mean total of 244.5 in. of snow per year. Greatest snowfall in a 24-hour period was 43 in. in February 1928. Precipitation of an amount in excess of 0.01 in. occurs an average of 170 days per year. Estimate 1 in. rain = 12-15 in. snow.

Temperature: The mean monthly annual temperature is 35.7°F. with recorded extremes of +87°F. (June 1953) and −28°F. (February 1947). The month of January is the coldest with a mean daily minimum of 11°F. and a mean daily maximum of 26°F. The month of July is the warmest with a mean daily minimum and maximum of 45.2°F. and 60.1°F., respectively.

Visibility: Snow or snow with fog are the major causes of reduced visibility during Winter months. At the Valdez Airport, visibilities of 1 mile or less occur 3.7 per cent of the time, annually. Visibilities greater than 5 miles occur 85 per cent of the time.

Tides: The tide at Port Valdez has a diurnal range of 12 ft. and a mean range of 9.7 ft.

Waves: The port is surrounded by mountains and is well protected from the open sea and the wave action within the port is limited to wind-generated waves which are constrained by the fetch available. The maximum calculated wave height is 9.4 ft. from the East with a period of 4.3 seconds. Waves in the order of 6 ft. could occur from the N.W. quarter. An important exception to this is a tsunami or seismically generated wave which can be far in excess of the heights quoted above. Investigations in 1968 showed mean wave heights 3 ft. to 6 ft. in Winter (independent occurence 0.7 per cent of time) and 2 ft. to 3 ft. in Summer (0.1 per cent of time). Berths at the terminal are designed to withstand waves of 12 ft. with a vessel alongside and 20 ft. when vacant.

Ice: Valdez is an ice-free port as far as tanker operation is concerned. Light ice forms along the banks and in the small boat harbour at Valdez, but this has not interfered with small-boat operations.

Currents: It appears that surface currents measured during calm wind conditions in Port Valdez often oscillate with the tide, moving generally in and out of the port with maximum speeds of 0.5 knot. The Easterly (flooding) surface current during a falling tide may or may not persist throughout the year. Although Volume 9 of the U.S. Coast Pilot for Alaskan waters describes the current in Port Valdez as "too weak and variable to be predicted", measurements of surface current speeds typically show maximums of 0.5 to 1.0 knot.

It is requested that inbound tankers keep the OCC advised of weather conditions in the Gulf of Alaska, Prince William Sound, Valdez Arm, and Valdez Narrows in order that accurate information may be passed to outbound tankers.

VISITORS: Access to the terminal is limited to terminal personnel, authorised governmental personnel and authorised visitors with valid reasons for entry onto the terminal site.

Visitors to the Valdez Marine Terminal are requested to make arrangements through the Administrative Office in advance of their arrival at the Terminal. Authorised visitors shall be met at the main gate, which provides the only land access to the Terminal and is located at the East end of the Terminal site, and shall be escorted through the Terminal area. All persons passing through the main gate shall sign in and out with the guard. Any visitor who arrives at the main gate outside normal working hours of the Administrative Office and who has not made prior arrangements shall be turned away and requested to contact the Administrative Office during normal working hours.

The guard at the main gate shall ask any visitor desiring to meet a tanker crewman to wait at the gate until the vessel is called and arrangements have been made to meet the visitor.

Small boats and other vessel traffic will not be permitted to dock at the terminal site without the approval of the Terminal Marine Supervisor. Only taxicabs with valid passes will be permitted to enter the Terminal site, and any private or commercial vehicles that are permitted in the terminal area will be subject to inspection on entering and departing the area.

SHORE LEAVE: If tanker personnel return to the Valdez Marine Terminal site in such a condition that they might require assistance to insure their safe return to the ship, they shall remain at the main gate until the guard grants them admittance. Should an escort be required, it will be provided by vessel personnel.

All tanker personnel transiting the Terminal area will be required to carry their United States Merchant Mariner's Document (USMMD) and company identification of tanker owner for identification. These documents shall be presented to the guard at the main gate whenever tanker personnel enter or leave the Terminal site. Should a crewman present himself without these documents, he will be detained and the Master will be called to resolve the matter.

TIME: Alaska Standard Time (150th West meridian) for a zone description of +9(ZD9). Local time is modified from the first Sunday in April to the last Sunday in October by the use of Daylight Saving Time for a zone description of +8 (ZD 8) for Alaska Daylight Saving Time. This time is 1 hour behind that in Seattle and California and 4 hours behind New York.

To avoid confusion, all communications regarding sailing times, sailing dates, arrival times, arrival dates, etc. are to be quoted in Alaska Local Time.

FRESH WATER: Only in cases of extreme emergency can potable water be supplied and in a very limited quantity.

FUEL: Not available.

POLLUTION: U.S. Federal Pollution Prevention Regulations and Federal Water Pollution Control Act to be strictly observed.

TELEPHONES: Pay telephones will be located in the vicinity of each loading berth for the use of ship's personnel.

Telephones will not be placed aboard tankships calling at the terminal.

AGENCY: Alyeska Pipeline Service Company will not act as Agent for tankers calling at the Valdez Marine Terminal. Any requirements for such services as ship chandler, etc. must be obtained through the Owner's appointed ship's Agent. For security, the Valdez Marine Terminal must be notified of the appointed Agent.

AUTHORITY: Alyeska Pipeline Service Company, Valdez Marine Terminal, P.O.Box 300, Valdez, Alaska 99686. *Tel:* (907) 835-2261. *Telex:* 090-26564.

Contact: Captain James K. Woodle, Marine Superintendent/Port Captain. *Tel:* (907) 835-6526 or after hours (907) 835-2606.

VANCOUVER, Washington: 45.36 N. 122.40 W.

(See Plan)

DOCUMENTS: 3 copies of following:
Cargo Manifest.
Stores List.
Crew Cargo List.
Crew List.
One copy of following:
Clearance from last Port.
Tonnage Tax Certificate.
Copy of Vessel register and itinerary of vessel port by port.

PILOTAGE: See "General-Pilotage" before first U.S.A. port (Albany).

ANCHORAGES: Only designated anchorages on U.S. Coast and Geodetic Charts are at Tongue Point (Astoria), Oreg. 2 in number and designated on Chart 6151 Columbia River, Pacific Ocean to Harrington Point, as 1 Lower Tongue Point and 2 Upper Tongue Point. Additional locations on Columbia and Willamette Rivers where safe anchorages can be made upon advice of Columbia River Pilots. Anchorage in Vancouver harbour by permission of Harbour Master.

RESTRICTIONS: No restrictions on night entry. State of tide and draft restrictions not applicable to vessels drawing less than 40 ft.

MAX. SIZE: No restrictions length and breadth. Depth at Columbia River entry 48 ft. River channel to Vancouver maintained at 45 ft. by 600 ft. Seasonal tidal effect up to 3 ft. at Vancouver.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Route ETA cables through KBLITT Seattle, Wash.

TUGS: Normally join vessel at designated berth. Tug lines used at no charge.

BERTHING: No special requirements for berthing and no special arrival times required except under particular circumstances.

7 berths. Total length 4,300 ft. Ro/Ro facilities available.

BULK HANDLING FACILITIES: The grain terminal, owned by the Port and operated by the United Grain Corporation, has about 1,000 ft. (305 m.) of dock available. The 7 vessel spouts load 1 vessel at a time at a combined loading rate of 40,000 bushels per hour. The grain terminal can off-load at 18,000 bushels per hour, and they have a storage capacity for 4,500,000 bushels.

EQUIPMENT: The Port of Vancouver has 3 Whirley cranes, 1 of which is rated at 50 short tons at 60 ft. (18 m.) and 15 short tons at 130 ft. (40 m.) the other 2 Whirley cranes have a capacity of 34 short tons at 60 ft. (18 m.) and 10 short tons at 130 ft. (40 m.). These 3 travelling gantry or Whirley cranes operate on parallel tracks on the face of the dock in conjunction with the double direct transfer tracks.

Bulk materials make up a sizeable portion of the Port's traffic, and consequently, large crane buckets are available for handling these cargoes. In addition, the Port has a special crane bucket for the successful handling of zirconium – a very fine sand material considered a "problem" commodity for efficient and waste-free handling.

The Port maintains a full complement of support equipment. They have 42 lift trucks with 2 – 3.5 ton capacities, 9 lift trucks with 7.5 – 15 ton capacities, 1 lift truck with a 26 ton capacity, along with various straddle-carriers, conveyors, front-end loaders, jitneys – and a range of special attachments and gear for all their equipment (such as prong-lifts for steel coils, grabs and squeezers for paper rolls, push-pull slip sheets for bag goods, cartons and boxes) to handle any special situations or problem with which they might be confronted.

STEVEDORES: Allocation for gangs Mondays through Saturday must be confirmed at 1100 hrs. to the longshore hiring hall. Allocation for gangs Sunday and Monday are made at 1100 hrs. Saturday for both day and night gangs. Same procedure applies to allocation of night gangs, but night gangs may be cancelled by 1400 hrs. afternoon of night gangs are to work.

MEDICAL: Any type of medical treatment can be provided and hospital facilities available.

TANKERS: 1 berth. 3 × 6 in. pipe-lines to 21 tanks. Storage capacity 85,800 bbls.

DENSITY: Fresh water at all times.

FRESH WATER: Available at all berths delivered through pier-side connections.

FUEL: Viscosity grades of B and lower. No advance notice required. Barging essential.

FIRE PRECAUTIONS: Port fire precautions respecting tankers are administered by U.S. Coast Guard, which enforces shipboard regulations under Code of Federal Regulations, Part 46, Sub-part D, Sections 20 to 40; Police Harbour Patrol, which controls port movements, boards vessels to warn Master regarding harbour regulations, including spilling of oil, etc.; and Fire Marshal, who exercises jurisdiction regarding fire regulations at shoreside facilities serving tankers.

GANGWAY/DECK WATCHMEN: Services at option of vessel Owner/Agent and available through private firms.

OPENING/CLOSING HATCHES: While ship is at dock, opening and closing hatches is work of longshoremen. Ship may open or close own hatches while under way.

CERTIFICATES: Registered tonnage certificate.

CONSULS:
Austria
Belgium
Costa Rica
Denmark
Dominican Republic
El Salvador
Finland
France
Federal Republic of Germany
Great Britain
Iceland
Italy
Japan
Lebanon
Mexico
The Netherlands
Norway
Republic of Panama
Peru
Sweden
Venezuela

CUSTOMS ALLOWANCES: Tobacco, reasonable quantity. Wine and/or Spirit, reasonable quantity.

CARGO GEAR: Valid cargo gear certificate required, acceptable to U.S. Bureau of Labor Standards.
IDENTIFICATION CARDS: Immigration Dept. requires Forms No. 595 and No. 31 (Repatriation). Changes can be effected at any U.S. Consulate and are honoured here.
REPAIRS: All types of deck and engine repairs possible.
DRY DOCKS: See "Portland, Oregon".
REPATRIATION: Any arrangements possible for crew changes or other repatriation.
AIRPORT: Airport 10 miles from town, served by 7 regularly scheduled airlines with direct service and/or connections domestically and worldwide.
TIME: GMT minus 8 hours. Daylight saving time becomes effective annually on first Sunday in April through last Saturday in October.
HOLIDAYS: Following holidays are recognised: *New Year's Day; Lincoln's Birthday (Feb. 12th); Washington's Birthday (Feb. 22nd); Memorial Day (May 30th); *Independence Day (July 4th); *Labour Day (1st Monday in September); Columbus Day (Oct. 12th); Veteran's Day (Nov. 11th); Thanksgiving Day; *Christmas Day (Dec. 25th); Statewide Election Days. Other legal holidays may be proclaimed by State or national authority. When holiday falls on Sunday, following Monday observed as holiday. Longshore work performed on any of above-listed days is at overtime, which is one-and-a-half time rate. Days marked(*) are stop-work days, viz., no ships will be worked. This also applies to July 5th, which observed locally on unilateral basis.
POLICE/AMBULANCE/FIRE: Police Tel: 693-2555; Fire Tel: 693-1441; Ambulance provided by several private firms, but can be obtained through police or fire number.
SERVICES: All services available such as compass adjusting, major or minor repairs either with work barges or at ship repair berths; lay berths available; charts available from private companies; all chandlery supplies available.
SHORE LEAVE: Crew members permitted ashore except where vessel has made first arrival from Communist-controlled port.
AUTHORITY: Port of Vancouver, P.O.Box 1180, 3103 Lower River Road, Vancouver, Washington 98666. *Tel:* (206) 693-3611. *Telex:* 152-566 and TWX 910-474-8673. *FAX:* (503) 285-6091. *Contact:* Byron H. Hanke, Executive Director.

WHITTIER, Alaska: 60.47 N. 148.40 W.

SHIPMASTER'S REPORT: October 1980. (Updated 1988).

GENERAL: Whittier is a small port in position Lat. 60° 47′ N., Long. 148° 40′ W. The population in October 1984 was 250. There are 2 hotels, 3 grocery stores, a school and a post office. The port was constructed between 1941 to 1943. It was developed as a main supply depot for the storage of oil for the Anchorage area and also as a transhipment port for produce from other areas in the United States. There is regular barge traffic from Seattle and other West coast ports with ammunition, food, merchandise and motor cars. All these are carried aboard flat top railway wagons which can be loaded or discharged at any state of the tide. The port is operated by the Alaska Railroad system and there is no shore gear of any kind. Whittier is surrounded by very high mountains and there is no road or footpath in or out. There is a very short landing strip suitable for small aircraft but the normal communication is by rail which goes under the mountains in two long tunnels. The journey takes about 1.5 hours and the timetable is frequent in the Summer when a lot of people visit Whittier for boating and fishing or to get the ferry to Valdez. During Winter however the service is about four times a week, weather permitting.
APPROACHES: *Recommended Route to Whittier Pilot:* British Charts BA. 3363 and 3364.

When Smith Island bears 256°×8 miles, vessels should leave the traffic zone and steer 277° passing 1.5 miles South of Naked Island and 1.2 miles North of Point Eleanor. Then alter course to 281° passing 1 mile South of Mears Point. After passing Mears Point, steer 350° through Ferry Passage and alter to 280° off Point Culrose Light to the pilot station. It is not locally recommended to pass North of Perry Island through the Dutch Group.
PILOTAGE: Pilotage is operated by the Southwest Alaska Pilots' Association who have an office in Valdez, telephone number (907) 835 – 2134. They also have an office in Homer, telephone (907) 235 – 8783. Both stations maintain a continuous watch on Channels 10 and 16.

In theory, Pilots embark at Hinchinbrook Entrance. This has not been the practice however, for the last year or so, due to the long sea passage for the small pilot boat and the severe weather sometimes encountered in this area. Pilots normally embark at Blight Reef near Glacier Island. The pilot boat is stationed at Rocky Point some 10 miles away. The normal pilot boat is "Bering" which is a 63 ft. long trawler, capable of 10 knots, with a blue hull and white house. A newer boat is also in attendance. This is a 43 ft. glass fibre boat called "Bernhof" capable of 20 knots. She has a white hull.

No vessel may enter Prince William Sound through the Hinchinbrook Entrance without permission from the Coast Guard at the Valdez Traffic Control Centre on Channel 13 or 16. Large vessels may only transit Prince William Sound in daylight hours.

If permission is obtained, vessels may proceed direct to the pilot station at Whittier, 1 mile South of Point Pigot. See "Approaches".
ANCHORAGE: Anchorage off Whittier may be obtained in 12 fathoms at Pigot Bay (Lat. 60° 50.4′ N., Long. 148° 22.0′ E.).
BERTHS/FACILITIES: The 2 railway berths are only for barges carrying flat top railway cars on which all cargo is carried. The Delong Pier is used for oil tankers. The length of the wharf is 140 m. and the maximum length of ship is about 170 m. The minimum depth alongside is 48 ft. at the West end and 80 ft. at the East end.

Tankers normally berth port side alongside. In October 1980 there was one tug "Avenger" in attendance being 2,000 h.p. A shore gangway is supplied. All manifold connections are 6 in. The ship must supply all reducers. 2 lines are used for kerosene. Jet fuel, Mogas and diesel are imported. The distance to the shore tanks is 1.5 miles. All products are pumped from the storage area to Anchorage. Bunkers are not available for large ships. Provisions and supplies can be purchased in Anchorage and shipped down by rail. There is a small clinic with a physician's assistant. The nearest doctor or dentist is in Anchorage. In an emergency there is an ambulance which can run on the road or rails.
GENERAL:
Weather: The winds are very strong and variable. It is very wet in Summer and has an extremely high snowfall in the Winter months. The port is completely ice free the whole year round.
Formalities: All the usual American forms apply. Customs, Immigration and Coast Guard all come from Anchorage as there are no officials at Whittier.
Joining/Leaving: Crew may sign on and off at all times. During Winter Whittier is often cut off by snow.
Accommodation: Pilot and Agent stayed aboard throughout our 36 hour stay which proved very convenient for clearance and paperwork.
Agent: North Star Terminal & Stevedoring Company, Anchorage, Alaska 95510. Cable: "Norstevco Anchorage". Telex: 26471.

AUTHORITY: Whittier Harbour, P.O.Box 608, Whittier, Alaska 99693. *Tel:* (907) 472-2330. *Contact:* Penny Mendenhall, Port Director/Harbour Master.

WILMINGTON, Delaware: 39.44 N. 75.32 W. (See Plan)

DOCUMENTS: Handled through local Agents.
PILOTAGE: See "Philadelphia".
ANCHORAGE: At Cherry Island.
MAX. SIZE: Length unlimited, breadth unlimited, draft 38 ft. MLW tide range 5.5 ft.
Chesapeake/Delaware Canal: Max. LOA 760 ft. Max. draft 35 ft. (FW). Height of mast 133 ft. Max. beam 170 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: U.S. Coast Guard, Gloucester, N.J.
TUGS: Available through Wilmington Launch Service Tel: 652-1666.
BERTHING: 3,260 ft. marginal wharf. 20 – 100 ton crane capacity. 400 – 600 t.p.h. bulk unloader. Covered bulk storage of 472,000 sq.ft. Dockside freezer capacity of 1,050,000 cu.ft. at present.

Two multi-purpose bulk/container cranes available, capacity 40 tons, outreach 115 ft.

Roll-on/Roll-off cargoes handled.
DENSITY: Fresh water port. Normal 12 hour tides.
FRESH WATER: Hose connection from dock.
FUEL: Available.
GANGWAY/DECK WATCHMEN: Required.
OPENING/CLOSING HATCHES: Optional.
IDENTIFICATION CARDS: See "New York".
CONSULS: All Consuls are located in Philadelphia, Pa.
REPAIRS: Possible.
DRY DOCKS: Major repairs and dry dock facilities – Penn Ship Yard, Chester, Pa.
REPATRIATION: Facilities are available and arranged by Agent.
AIRPORT: Philadelphia International Airport, regular service.
TIME: U.S. Eastern Standard (GMT minus 5 hours) and Daylight Time from first Sunday in April till last Sunday in October.
POLICE/AMBULANCE/FIRE: Police, Ambulance, Fire, Tel: 302-654 5151.
TELEPHONES: Dock-side pay phones.
SERVICES: All services available.
SHORE LEAVE: Allowed unless restricted by Immigration.
DEVELOPMENTS: Additional reefer warehouse space under construction.

AUTHORITY: Port of Wilmington, Delaware, P.O.Box 1191, Wilmington, Delaware 19899. *Tel:* (302) 571-4600. *Telex:* TWX 510-666-2181. *FAX:* (302) 571-4646. *Contact:* Kenneth H. Mack, Port Director. John B. O'Donnell, Director of Trade Development. John H. Doherty, Deputy Port Director.

WILMINGTON, N. Carolina: 34.14 N. 77.57 W. (See Plan)

PORT LIMITS: A ship is considered an "arrived vessel" upon arrival at Buoy 2CF.
PILOTAGE: Pilots board vessels at Buoy "2CF" off the mouth of the Cape Fear River. Masters should notify local Agents by radio of their ETA at Buoy "2CF" in order that the Pilots may be on station in advance of arrival. Additionally, Masters may communicate with Pilots by radio telephone on 2738 frequency and by VHF Channel 18A. Pilots remain on board until harbour limits of Wilmington, where docking Masters normally board vessels for purposes of docking.
APPROACHES: The port terminal at Wilmington is located on the East bank of Cape Fear River, approximately 26 miles from the sea buoy at the mouth of the river. Wilmington is 150 miles S.W. of Cape Hatteras and 26 miles North of Cape Fear.

DOCUMENTS:
3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
3 copies Crew Manifest (Curio List) (Customs Form 1304).
3 copies Stores List (Customs Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form. I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.
Oil Pollution Certificate.
General Declaration (Customs Form 1301).
Load Line Certificate.
Safety Equipment Certificate.

RESTRICTIONS: The approach channel and basins adjacent to the port are maintained at a depth of 38 ft. MLW.

ANCHORAGE: Vessels awaiting Pilots normally anchor in area off Buoy "2CF". There is no safe anchorage in the port of Wilmington for large vessels to be accommodated. Small vessels can be accommodated for brief periods in anchorage basin, although it is necessary to swing with the tide in order to avoid blocking channel.

MAX. SIZE: No limits on length, breadth, and draft limit is present channel project depth of 38 ft. Master should communicate with local Agent regarding stage of tide for passage of vessels drawing 34 ft. or above.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: 3 towing companies operate at Wilmington.

BERTHING: A continuous marginal wharf, 6,000 ft. long. Docking at any hour, day and night. Also see "Developments".

SPECIALISED CARGO HANDLING FACILITIES: State Port Terminal: Fully equipped to serve cellular type container ships, for bulk handling; equipped with 6 yard rehandler buckets, receiving hoppers, and paved open storage areas, 2×45 ton, 1×115 ton, 3×40 ton container cranes, 1×140 ton mobile crane and 1×225 ton gantry crane; 1 berth with tank farm for handling liquid chemicals. 49×480 volt electrical outlets for refrigerated containers (70 additional outlets planned).

Almont Shipping Company: 3 berths, open and covered bulk storage, 2×25 ton cranes and 1×85 ton derrick. No facilities for LPG carriers.

TANKERS: 10 tanker berths with drafts from 30 ft. to 40 ft. MLW. Night berthing at all berths. Fresh water available.

FRESH WATER: Available from shore connections at rates up to 50 t.p.h.

FUEL: Bunker "C" and diesel fuels available locally.

FIRE PRECAUTIONS: Normal precautions observed.

REPAIRS: Minor ship repairs available.

DRY DOCKS: 1×1,000 ton lift floating dry dock.

AIRPORT: New Hanover Country Airport, 7 miles from N.C. State Port Terminal. Served by Piedmont Airlines.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time from first Sunday in April till last Sunday in October.

DEVELOPMENTS: A 900 ft. extension to the South end of the wharf for an addition to the container terminal will be completed in January 1989.

AUTHORITY: North Carolina State Port Authority, 2202 Burnett Boulevard, P.O.Box 9002, Wilmington, North Carolina 28402. *Tel:* (919) 763-1621. *Telex:* 510-937-0330. *FAX:* (919) 763-6440. *Contact:* Ron S. DeVoe, Port Manager. W. T. Stover, Manager – Communications.

AGENT: Harrington Ship Agencies, Maritime Trade Center, 2128 Burnett Road, Suite 5, P.O.Box 308, Wilmington, NC 28402. Tel: (919) 762-0345. Telex: 6844926.

WRANGELL, Alaska: 56.28 N. 132.22 W. (See Plan)

Located on Wrangell Island. Open all year.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: (From sea via Dixon Entrance up Clarence Strait to Guard Island.) Under pilotage from Guard Island.

ANCHORAGE: Good anchorage N.E. of Woronofski Island in 22 fathoms of water.

MAX. SIZE: Harbour depth 32 ft. MLLW. Tides: mean range 13.7 ft., diurnal range 16.1 ft. Also see "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Immigration, Guard Island or local Customs Office. Quarantine and Customs, local.

TUGS: 9 tugs up to 1,800 h.p. available with sufficient notice.

BERTHING: 4 wharves.

1. Wrangell Lumber Co. Dock: Berthing length 320 ft., 150 ft. wide, depth South end 32 ft. North end 40 ft. LW. Height of pier from zero tide 23.5 ft. Crane – 1 mobile, 8 ton, 6 lift-trucks. No shed space. 3 acres open storage.

2. Alaska Wood Products: Berthing length 300 ft., 50 ft. wide. Depth at LW 32 ft. Height of pier from zero tide 23 ft. No shed space.

3. Port of Wrangell Wharf: 35 ft. depth at both ends. Fresh water available. Lift trucks on rental from local private firms. Dock face 400 ft. with additional mooring dolphins for a total overall length of 700 ft.

4. Barge: Transfer bridge facilities, 17 ft. wide, capable of up to 70 tons (140,000 lbs.).

STEVEDORES: 4 gangs available.

REPAIRS: None.

WATER: Available.

FUEL: Small quantities available.

MEDICAL: Small but new hospital.

TRANSPORTATION: Air and ferry.

AUTHORITY: City of Wrangell, P.O.Box 531, Wrangell, Alaska 99929. *Tel:* 907-874-3736. *Contact:* Ronald O. Phillips.

YORKTOWN, Virginia: 37.14 N. 76.30 W. (See Plan)

OPERATOR'S REPORT: 1981.

GENERAL: The American Oil Terminal at Yorktown, Virginia is located about 3 miles below the York River bridge on the South side of the river approximately 38 miles from the Chesapeake Bay Sea Buoy "CB". Coordinates of the terminal are Lat. 37° 13′ 37″ N., Long. 75° 26′ 23″ W. A 3,000 ft. finger pier ending with a marginal pier, reaches the deepwater channel in the river. Tankers supply the refinery with crude and intermediate feedstocks which are refined into gasolines, fuel oil, liquefied petroleum gas, coke, and liquid sulphur which is distributed by barges and tankers.

PILOTAGE: Pilots board 1.5 miles N.E. of Cape Henry Light. Vessels should use traffic lanes as outlined on Chart No. 12221 when approaching the pilot area.

U.S. flag should call the Chesapeake Federal pilot boat approximately 1 hour before arrival to arrange Pilot embarkation. Non-U.S. flag vessels should call the Virginia State pilot boat 1 hour before arrival.

APPROACHES: *Cautionary Advice:* RDF stations at Chesapeake Light and Cape Henry provide coverage for position fixing and numerous buoys mark the fairways, channels and obstructions. While proceeding to the pilot station one should be aware of the heavy traffic in this area and the ship should stay within the prescribed traffic lane. Careful consideration should be given to the current, which has a velocity of up to 3.0 knots and higher and which tends to set a vessel out of the channel.

ANCHORAGES: *Anchorage and Lightering:* Vessels requiring lightering proceed to Hampton Roads where all lightering operations are conducted. This channel is well marked and presents no difficulties. Upon completion of lightering, the vessel must return to Cape Henry before proceeding to the berth. The bottom of Hampton Roads consists of soft mud and provides good holding ground.

RADIO: ETA messages should be sent to Agent 72, 48 and 24 hours before arrival. Any change in ETA should also be transmitted, as the pilot vessel is not continually on station. Advise draft (brackish water) in first message.

VHF:

Pilots	Channels 6, 11, 13, 16, 19A
Tugs	Channels 9, 10, 12, 13, 16
U.S.C.G.	Channel 16
Marine Operators – Norfolk	Channels 16, 22, 27

BERTHING: The Docking Master boards the vessel from a tug 1 – 2 miles East of the Amoco Dock. 2 tugs are generally used for docking; vessels over 28,000 d.w.t. may require 3 tugs at the Docking Master's discretion. The vessel makes a normal marginal approach to No. 1 Dock with the tugs breasting the vessel alongside and holding it there until secured. Vessels generally dock port side to at No. 1 Berth. No. 2 Berth is of new construction and is located 1,122 ft. to the West of No. 1 Berth. When docking at No. 2 Berth, vessels approach No. 1 Dock on a Southwesterly heading to initially avoid a shoal area located N.N.W. of No. 2 Berth. When the vessel is within 550 ft. of No. 2 Berth, the approach is made parallel to the dock face until the vessel is off the dock when it is breasted into position port side to by the tugs. Extra caution must be exercised when approaching No. 2 Dock when there is a ship at No. 1 Dock. At No. 2 Dock, difficulties will be experienced in placing vessel's gangway due to the extremely limited dock space amidships.

The berth is equipped with 12 in. Chicksan arms for crude discharge and 10 in. hoses for product loading. Weather conditions are carefully monitored by terminal personnel, and vessels are shut down when conditions warrant such action.

FRESH WATER: Available.

FUEL: Available.

Uruguay

GENERAL:

REGULATIONS: Increased fines became effective in June 1973 in respect of infringements of the Uruguayan Marine Code. There are approximately 119 Articles to the Marine Code, and Owners and Masters of vessels proceeding to Uruguayan ports are recommended to obtain a copy of the Code (which lists port regulations and amounts of fines for infringements, maximum fine being 760 U.R.) prior to arrival. We understand that copies of the Code, entitled "Reglamento Preventivo y Represivo de Infracciones Maritimas, Fluviales y Portuarias", may be obtained from Centro Navegacion Transatlantica, Colon 1486 p. 3, Montevideo.

Freely translated, we give below some extracts of Port Regulations as specifically applicable to Montevideo, but also to all Uruguayan ports in general:

Articles 1 to 8 cover respectively the reasons for setting up this preventive set of regulations; the definition of what a vessel is in terms of the legislation; the establishment and amount of fines (they may be tripled in the event of repeated offences); the fact that very small vessels may only have imposed 10 per cent of the full fine; the jurisdiction for the regulations covering the whole of the Uruguayan coast and river frontage; the stipulation whereby the General Marine Prefecture must send to the Master of the vessel a statement of the offence immediately it is observed and this in triplicate and to the local Agent for the vessel.

The actual information which the form must contain is delineated. Notification of offences can be made after a vessel has sailed, this being to the local ship's Agent by phone and confirmed within 24 hours in writing. All Masters must give written consent to their local Agent, and the Agent must accept this in writing, empowering the Agent to act in the Master's name in all cases of fine payment. The Authorities may delay the sailing of a vessel if they see fit in connection with any offence. Finally, article 8 deals with the right to appeal to the General Marine Prefecture against any fine imposed, this having to be done within 10 days dating from day following personal notification of the offence.

Articles 9 to 119 cover the specific offences subject to fine and indicate individually the full fine imposable in local pesos.

An abridged summary of each of the articles is as follows: No anchoring within 900 m. of the illuminated buoy in the port access channel.

Vessels carrying hazardous cargo must hoist flags according to the International Code of Signals.

Vessels with anyone on board with contagious diseases must hoist appropriate flag (letters "QL").

Flag "Q" must be hoisted and maintained in position until Health Authority has given Free Pratique.

All vessels anchoring in the roads, bay or ante-port must take due precautions not to harm or cause damage to other vessels; the fine will be imposed notwithstanding claims for damages from third parties.

Agents of vessels which may wish to anchor in the Roads must obtain prior permission from the Marine Authority, specifying vessel's measurements and the reason. If authorised, the anchorage to be used will be notified.

No anchoring at the docks unless justified, and anchors must be raised immediately the reason for dropping them has gone. There must be no delay on the part of vessels in complying with the Marine Authorities instructions to change berth or anchorage.

No tying up to other vessels without Marine Authority permission; no attachment to berths which have not been allocated and no changing of berth without authorisation.

No anchoring in places not authorised by the Marine Authority, the maximum fine being applied should this have caused damage to third parties.

No small craft to be tied up obstructing gangway or quays. Where this is necessary for embarking crew members, passengers, provisions, etc., the small craft must be removed immediately the operation has been completed.

Small craft must not be tied up to buoys or beacons. Vessels must not tie up at buoys or beacons.

Maximum speed of vessels in docks is 4 knots.

Navigation in channels of access to ports is governed as follows:

Maximum speed 8 knots.

Vessels must always keep to starboard.

Vessels must not overtake each other, but where this is necessary they must conform to the International Colregs.

No anchorage in channels.

No fishing in channels.

Vessels navigating in channels must keep a distance of 1,000 m. from each other.

Vessels must not cross in front of each other in the fore-ports.

All vessels entering or leaving the ante-port or docks, changing berths or anchorages must be assisted by a Pilot and tug, unless specifically given exception to this rule by the Marine Authority.

No vessel must enter port with damage to hull, machinery or rudder unless prior inspected by the Technical Commission of the Mercantile Marine Directorate.

Any vessel springing a leak whilst navigating in the access channel, and which the bilge pumps cannot overcome, must go aground as quickly as possible outside the channel so as to leave the channel open.

In case of fire on board whilst navigating in the access channel, Masters must observe usual procedure and give signals accordingly.

The strict use of semaphore signals within port must be observed.

When vessels enter the docks or remain in them, Masters, owners or Agents must request permission from the Marine Traffic Office, and report to the Office of Pilotage, and proceed in whatever form they may instruct. On leaving the same procedure must be followed.

Masters and owners of vessels must see that their vessels do nc obstruct or cause harm to port works, beacons, buoys, or semaphore and once tied up they must not slacken ropes without permission of th Marine Authority except under conditions covered by items 1, 2 and of Article 64 of the Port of Montevideo Marine Regulations.

No vessel to have badly stowed cargo, excess weight, or evidence c lists due to bad trimming of cargo.

Only those lines necessary for tying up to be used. When 2 or mor vessels tie up alongside to load or discharge they are all obligated t ensure that the handling of their respective cargoes does not prejudic the working of the others.

Vessels must take proper precautions when loading or dischargin raw material, i.e. sand, bones, ash, coal, etc., by placing suitable plank of wood close together to prevent any such material falling into the wate

No vessel to enter docks with the gangway already rigged.

During unloading operations, no goods to be thrown on to the qua This must be done manually or mechanically.

During discharge operations, cargo must be so positioned on the qua as to leave adequate passage for vehicular traffic, i.e. Police, Fi Brigade, Health Authorities, Customs and Port Officials.

Planks of wood — when planks are used for any operation, they mu not be placed in contact with mooring bitts or cables. When work cease all pieces of wood, ladders, small trucks, etc, must be removed fro quay, and those belonging to the ship must be taken on board, this s as not to obstruct the public path along the quay.

When cleaning or washing ships tied up at quays, no rubbish, wate or cleaning material must be allowed to fall on the quay.

A very serious offence is the throwing into the water of any rubbis sewage or other material susceptible to polluting the water.

Very serious offences are the lightening of ships carrying petrol, cruc oil, or the like, likewise the washing-out of tanks, except in authorise zones. The fine is based on the area spoiled by the wrongful discharg

All ships should have local Agents, otherwise in the case of offence the Master is held responsible and vessels may be detained.

Vessels are responsible to ensure that no damage is made to qua installations by the cargo they load or discharge, and must always leav berths in a tidy and clean state.

Vessels' auxiliary small craft, launches and the like must not har over the side of the vessel in port, except during operations of launchir and reshipping on board, where such operations are conducted at poin indicated by the Marine Authority. Such small craft may only be use for the purpose and at the times authorised by the Marine Authority.

Usual regulations concerning carriage of passengers in vessels ar heavy fines are imposable for the carriage of passengers or cre members not listed.

Vessels exceeding their navigation limits shown in their Certificate Navigability are subject to fine.

All vessels must be cleared to sail by the Marine Authority.

Vessels must use their proper name and this must be painted on letters of minimum of 15 centimetres height and 8 centimetres wid Letters must be white on black or black on light colour.

Masters, Owners and Agents must report any crew offence irregularity on board to the Marine Authority.

Vessels in port must hoist the Uruguayan flag.

N.B. It is recommended that Masters correctly establish the prescribe times for raising and lowering the Uruguayan flag, in order to avo fines.

Vessels must have their gangway equipped with handrails, and th gangway must be clearly lit at night.

All lines to shore must have rat-guards fitted.

When there are hazardous goods on board or when such goods a being worked, the vessel must hoist the International Code Signal lett "B", and at night show a red light on the bow masthead, must alwa have engines in a state of readiness in case of danger, keep two-thir of the crew on board, keep watchmen and firemen available (the numb of whom will be determined by the number of holds containing th hazardous material), must only work with incandescent lights, and kee a Port Pilot on board if the Marine Authority so directs.

Vessels moored at quays must not move propellers, except under th direction of the Marine Authority.

Vessels must not moor in the port access channel. There must be r improper use of the International Code Signal. Signal flags must not b interspersed with flags of nationality.

If a vessel wishes to dress flags over all, or fly a flag at halfmast du to a bereavement on board, the Marine Authority's permission must b first obtained.

The use of whistles, sirens or any other audible signal within the are of the roads, bay, ante-port or docks, for any reason other than justifiab for navigation is prohibited.

Any vessel anchored, tied up to other vessels or to the shore or quay must show a white light from sunset to sunrise which can be seen at distance of 500 m.

In the access channel to Montevideo, no more than 4 vessels ma navigate at one time — 2 entering, 2 leaving.

Maximum speed in the Montevideo ante-port is 6 knots. There mu be no anchoring in the Free Zone, reserved for the manoeuvring vessels entering and leaving.

At Montevideo there must be no anchoring along the route leadir from the Free Zone to Channel "A", between the quay and the pier the same letter. Also on the route leading from Pier "A" along a line 100 m. to the North of the end of the West Jetty.

No anchoring in any area less than 200 m. from Pier "A" in a sem circular coverage, taking as middle point a position half way betwee Quay "A" and Pier "A".

All vessels must keep to the right or to the middle when there are r other vessels in the vicinity.

International Regulations for the Prevention of Collisions apply, plus the following:

Vessels navigating along the routes established in the anteport or which have to pass directly through the passage between Jetties "A" and "B", must keep to the right when another vessel is coming in the opposite direction.

Vessels which have to cross the North, the South route or directly between Jetties "A" and "B", must ensure that they pass any other vessel at a distance not less than 50 m.

Any vessel navigating under her own power must give way to a vessel under tow by a tug.

Vessels with tugs following routes which cross one another, thereby creating a collision risk, the one passing to the starboard of the other is the vessel which must take the precautionary measures to avoid collision. If, however, the risk persists, the vessel passing to port of the other must also take measures to increase the distance between the two vessels.

No vessels to pass in pairs or in opposite direction between Jetties "A" and "B"; the semaphore signals transmitted by Quay "A" must be observed. If the signal is "vessel entering from the ante-port to the docks", the vessel in the docks, ready to sail, must wait until the incoming vessel has entered.

If the signal is "vessel leaving the docks for the ante-port" the vessel in the foreport, moving towards Jetty "A" to enter the docks, must wait in the free zone, stop engines, keeping to the right, and drop anchor if necessary, until the outgoing vessel is outside and well clear of Jetty "A". The same regulation applies to vessels leaving the River Dock. In this case, the vessel leaving Jetty "A" has priority, coming from Docks I and II the first will wait for the second before starting engines.

All vessels navigating in the same direction in the ante-port must keep a distance of not less than 300 m. from each other stern to bow. They must not pass each other or navigate in pairs.

In the event of offences being incurred whilst an Uruguayan Pilot is on board, at the request of the local ship's Agent, the Marine Authority will determine whether the Pilot is responsible for the offence having occurred, and take measures accordingly.

Vessels which load beyond the appropriate load line will be subject to a fine of 1,000,000 pesos.

DOCUMENTS:

Consular Documents: The Consulate in a foreign port from which merchandise is to be shipped to a Uruguayan port must be presented with the following documents:

(a) Cargo Manifest, original and 3 copies.
(b) Crew List, original and 1 copy.
(c) Passenger List (or no-passenger declaration), original and 1 copy.
(d) Bills of Lading, original and 3 copies.
(e) Commercial Invoice, original and 3 copies.
(f) In the event that the vessel is cleared in-ballast, an in-ballast declaration, original and 1 copy.

One copy of each document is filed at the Consulate, and the following are returned, duly visaed:

1 original manifest, 1 copy of each bill of lading, and 1 copy of the commercial invoice, in an envelope addressed to the Customs Administrator of the port of destination.

1 copy of the manifest, and 1 copy of the bills of lading, in an envelope addressed to the National Ports Administration.

1 copy of the manifest, the original and 2 copies of the bills of lading, the original commercial invoice, the original crew list, and the original passenger list (or no-passenger declaration).

Prior to Arrival:

Notification of Arrival – by Ships' Agents.

(a) Container vessels (minimum load 30 FCL and minimum discharge 30 FCL stipulated) and passenger vessels have berthing priority. Agents must notify the arrival of the vessel 10 days in advance to the National Port Administration (ANP) and confirm ETA 2 days ahead of arrival.
(b) For arrival in Uruguayan ports of all other vessels, agents must notify the ANP 48 hours in advance.

All notifications must be made on special forms from the ANP on request for a berth, presenting original and 6 copies, accompanied by a complete set of cargo manifests in Spanish.

For container vessels, Agents must present lists with details of a complete nature covering the containers to be unloaded in Montevideo (prefix, number, contents, gross weight and tare), whether to be discharged to store or to quay, and final destination in the case of transit.

Request for Port Services:

As has been said in the previous section, the berthing request must be presented to the ANP and acts as advice of arrival.

Each morning at 1000 hrs. the ANP designates berthing crews for vessels for the next 24 hours. In the event of there being no berthing staff available, the ANP appoints a place for waiting berthing in turn in accordance with the order of arrival at the port of Montevideo.

On *Arrival:*

(a) Visaed by the Uruguayan Consulate.
(b) For the Postal Service.
(c) The Consulate returns 1 envelope to the Customs Administrator, another to the National Ports Administration (with a copy of Manifests and Bills of Lading), and a third to the agency, with the required visaed documents.

Other Requirements:

The agency must provide a cargo book (tally book) for each port to the National Ports Administration.

Prior to Departure:

24 hours prior to sailing, the vessel must notify the Maritime Prefecture and Migration. Representatives of these agencies must receive a crew list and check any changes. If the vessel carries passengers, the Inspector of the National Migration Administration must prepare a record of a sailing inspection, similar to that required upon the vessel's arrival.

The Maritime Prefecture authorises the clearance of the vessel.

PILOTAGE: Also see "Control". Pilotage is compulsory in all river and port zones, except for vessels coming from the East to ports between La Paloma and Montevideo Roads, or entering Montevideo Roads for no commercial reason. All coastal vessels either Uruguayan or foreign are also exempt.

Pilotage Zones:

1. RIVER PLATE – Comprises zone between imaginary lines in the East from Punta del Este (Uruguay) and Punta Rasa, on Cape San Antonio (Argentina) and on the West between Colonia and San Isidro (Argentina).
2. RIVER URUGUAY – From 56.5 km. of Farallon Channel to Uruguayan ports on the River Uruguay.
3. PORTS – Pilotage zones, comprises limits of each port including its Roads.
4. SBM at Jose Ignacio.

In the River Plate, Pilots presently board to the South of the wreck of the *Calpean Star*, approximately 4.5 km. South and lying 70 m. West of the dredged access channel.

Several of the pairs of buoys are missing, and only the Mid Channel Buoy indicating the entrance to the Access Channel, 5 miles South from the port, and the 2 pairs nearest to the breakwaters are operating.

When taking tankers, the port Pilot usually goes out to the 5-mile mark.

There is no more than 30 ft. in the Access Channel at the moment; dredging is being carried on, but there are only 2 dredgers operating between the channel and the port of Montevideo itself.

The current is across the channel, running at about 1 knot, and changes direction more with the wind than the tide.

Vessels awaiting Pilot should anchor on the West of the channel and South of the *Calpean Star;* there is 24 ft. up to 500 m. West of the channel. The zone to the East of the Access Channel has submarine cables and must therefore be avoided.

Pilots are ordered through the Agent, and have an up to date communications system installed in their office on the 11th floor of Custom Building.

Permanent watch is kept on Channel 16 VHF, and operator speaks English. It is possible to call "Practicos Montevideo" and ask to be connected by phone to the vessel's Agent's office for last minute instructions, etc.

Channel	Frequency	Channel	Frequency
9	156.45	11	156.55
16	156.80		

The port is closed when wind force exceeds 43 knots or, at night 37 knots, or if visibility is less than 1 km., but otherwise vessels can enter or sail at any time.

There is also a Telex machine with 24 hour watch, over which messages can be transmitted to Agents out of office hours, over a weekend, for example. Call sign is DGT 843 Pilot CX. This is particularly useful for vessels sailing late from Buenos Aires, and the Office will pass on the message to the corresponding Agency by phone.

All Pilots carry a "walkie-talkie" and can communicate either with their office, the Port Authority or the Semaphore Station, using Channel 9 for the Port Offices and 11 for the Pilot's Office, 16 being kept for use with vessels.

Ordering of River Pilots for Sailings from Uruguayan River Ports: Although Masters can apply directly for Pilots such applications must be made by telegram addressed to the Practico Mayor Montevideo, it is preferable for them to keep their Montevideo Agent fully informed and leave the latter to order the Pilot.

The opportunity of ordering Pilots at any hour having been discontinued makes it more essential than ever that Montevideo Agents are kept accurately informed regarding expected readiness to sail. Failure to do so will result in unnecessary demurrage being paid to Pilots or delay to the ship concerned.

Pilots for Vessels Proceeding from Sea to a Uruguayan Port on the River Uruguay: A Uruguayan Pilot must be employed to conduct ships from sea to a Uruguayan Port on the River Uruguay.

Vessels must call at Montevideo Roads to embark Pilot and pay the cost of tug to take out Pilot. They can also, alternatively, take an Argentine Pilot at Recalada who will take the vessel to Intersection, where in either case an Argentine River Pilot will board to take the vessel to the Roads of port of destination, where a Uruguayan Port Pilot will come aboard, this being a simpler procedure and all handled by Agents in Buenos Aires (one radio advice).

Vessels from an Argentine Port bound for Uruguayan River Port: Such vessels are normally taken to immediately off port of destination by an Argentine Pilot, but they must be berthed by a Uruguayan Pilot who has to be sent from Montevideo, thus Montevideo Agents must be kept promptly informed of vessel's position to enable them to order a Pilot to berth ship without delay.

Vessels leaving Uruguayan Port for Argentine Ports on the River Parana: Uruguayan River Pilot supplied from Montevideo must be employed for unberthing, and this Pilot takes vessel to the Bravo Channel off Nueva Palmira, where the Argentine River Parana Pilot, who is normally already aboard, takes over.

The Uruguayan Pilot is paid in accordance with tariff to Nueva Palmira plus an unberthing fee and travelling expenses.

HEALTH: In order to be able to enter port and berth without delay, the Authorities accept a radio, cable or telex request, couched in the following terms (messages must be sent in Spanish).

Vessels Arriving from Elsewhere:

Capitan . . . . solicita libre platica
(here the name of the vessel)
informando proceder de Buenos Aires, siendo su escala anterior
. . . .
(here a port in another previous country which could be Santos, Valparaiso, Capetown, etc.)
ondicion sanitaria buena . . . . Capitan
(here the name of the Master)

Vessels Arriving from Buenos Aires:

Capitan . . . . solicita libres platica
(here the name of the vessel)
informando proceder de. . . . .
(here a port of origin, say London – Liverpool – San Francisco – Rijeka – Kotka – Tokyo – Oslo, etc.)
siendo su ultimo puerto . . . .
(here say Santos – Valparaiso – Capetown, etc.)
condicion sanitaria buena . . . . Capitan
(here the name of the Master)

There have been cases of delay in delivery of radio messages, even though passed on by phone, but the original message must accompany Agent's request for Free Pratique, hence it is advisable to use cable or telex services if possible. Messages must be sent at least 24 hours ahead, and changes in ETA advised.

Although it is possible to take Pratique in Uruguayan River ports, there is frequently delay there, and since vessels must enter Montevideo to pick up the river port Pilot also, it is advisable in these cases to ask for Pratique at Montevideo as above, and the order from Sanitary Authorities granting Free Pratique will be handed to the Pilot to take on board with him.

In no case, however, does the granting of Pratique by radio modify the inspection in port, where the usual commission must be the first to go on board.

Illness On Board: Any private doctor attending a patient on board must immediately inform the Sanitary Inspector should the disease be contagious.

No patient can be landed without the consent of the doctor of the Health Department with the exception of accident cases that require immediate medical attention, and even in those cases the Health Department Doctor must be informed in order to issue a Sanitary Pass for the Hospital where the man was taken to.

If a Master does not report the existence of illness on board he is liable to fines which are double if patients land without the consent of the Sanitary Authorities.

RADIO:

Notice to Mariners:

Official Uruguayan Notices to Mariners are transmitted in Spanish only preceded by the signal TTT, the number of the Notice, letter R, then contents and are repeated for 15 days. Should there be no Notices to transmit, the wording "no hay avisos para navegantes" will be radioed.

Punta Carreta CWF 2768.5 kHz. A3 0.4 kW. at 0003, 1403 and 1903 hrs. (after the weather forecast).

Cerrito CWA on 4346, 8602,12750, 17208.8 kHz. A1 1.5 kW., also on 421.5 kHz. A1 and A2 5 kW. at 0000, 1400 and 1900 hrs. (after the weather forecast).

Montevideo CX 16850 kHz. A3 10 kW. at 1302 hrs. and 1602 hrs. on working days, at 1700 hrs. on Sundays.

Montevideo	CX 6	659 kHz	A3 2.5 kW.
	CX 26	1050	A3 all transmit Notices to Mariners at 1600 hrs.
	CX 38	1290	A3 5 kW.
	CXA 4	6125	A3 10 kW.
	CXA 6	9620	A3 20 kW.
	CXA10	11900	A3 20 kW.

Weather Forecast: A weather forecast is transmitted in Spanish to cover 3 zones. (See "Plans").

Reference AAA 830 is the Coastal area from Lat. 30° S., Long. 50° W. out to Lat. 30° S., Long. 46° W. and down to Lat. 33° 30′ S., Long. 53° W. and Lat. 35° S., Long. 49° W.

AAA 860, River Plate zone from Lat. 33° 30′ S., Long. 57° W. to Lat. 35° S., Long. 49° W. and down to Lat. 35° 30′ S., Long. 57° W. to Lat. 39° S., Long. 53° W.

AAA 870 Coast of Argentina from Lat. 35° 30′ S., Long. 57° W. to Lat. 39° S., Long. 53° W. and down to Lat. 41° S., Long. 62° W.

Details of all 3 zones are transmitted as follows, valid for 24 hours.

CWA on 421.5 kHz. A1 5 kW. at 0001, 1400 and 1900 hrs.

CWF on 2768.5 kHz. A3 0.4 kW. at 0005, 1405 and 1905 hrs. and in A1 over 4346 kHz, 8602 kHz, 12750 kHz and 17208 kHz.

Time Signals: Are transmitted from 2 stations in Montevideo at 1500 and 2000 hrs. The hour is indicated by 6 dots preceded by a 10 second dash and a 5 second silence. The last dot indicates the hour.

CX 6 on 650 kHz. A3 25 kW.
CXA 6 9620 kHz. A3 20 kW.

Standard time is GMT minus 3 hours.

Direction Finding: There are 2 radio beacons specially for maritime navigation. Both operating on circular sweep from the lighthouses at Cape Polonio and Isla de Lobos.

Cape Polonio: Lat. 34° 24′ 00″ S., Long. 53° 47′ 45″ W. frequency 295 kHz. A2 range 380 miles, and 500 kHz. A1 A2.

The signal is "P" repeated 3 times in 10 seconds followed by 18 dashes in 30 seconds, repeat "P" 3 times and 10 seconds silence total period 1 minute. This is repeated 4 times after 5 minutes silence, total 10 minutes.

In good weather transmission must be requested from CWM 21 on 500 kHz. A1 A2. In fog, there is continuous transmission from the hour.

Isla de Lobos: Lat. 35° 01′ 33″ S., Long. 54° 53′ 17″ W. frequency 300 kHz. A2 range 380 miles. The signal "L" is repeated 3 times in 10 seconds, followed by 18 dashes in 30 seconds, repeat "L" 3 times, silence 10 seconds. Total period 1 minute, repeated 4 times, then 5 minutes silence total period 10 minutes.

In good weather this transmission must be requested from CWM 26 on 500 kHz. A1 and A2.

In fog transmission is continuous from 05 minutes in each hour.

There are also the following airbeacons which can be used.

		S.	W.	kHz

GENERAL INFORMATION:

River Uruguay

Rises in Brazil, and later separates Argentina and Uruguay. Its right bank is generally low, wooded and swampy, the left bank high and hilly. Preparatory work has commenced on a large hydro-electric dam to be built at 332 km., above Concordia, which will take some years but will contribute to a regularisation of the river, which at present rises and falls twice every year, with the varying rainfall seasons in its basin, so that approximately half the year the water is low, usually from January to April and again in August. However, the wind also affects the depth of the water as in the River Plate, so that any seasonal forecast is impossible. A safe year round draft to Concepcion del Uruguay can be taken at 20 ft. 6 in., though vessels from time to time load to 22 ft. 6 in.

The Ministry of Marine publishes fortnightly a bulletin with all information on depths of water in the channels, as well as of changes in buoys, lights, etc.

Two new bridges communicating with Argentina now span the Uruguay River at Fray Bentos and Paysandu. The bridge at Fray Bentos has a clearance of 36 m. over zero, and a main span of 220 m.

CARGO

Movement of Cargo

Once stevedores have come aboard, no cargo, either for the port or in transit, may be handled by the crew, as otherwise the vessel will be called on for high extra wages to stevedores. This also affects the lashing of transit cargo on deck.

Stevedores will not work in the rain, except when loading meat, earning double wages while doing so. They can also be persuaded to handle baggage or mail.

When handling dusty cargo in general, or which gives off ammoniacal, nicotine, or organic emanations, masks must be provided for stevedores use.

Overcarried Cargo

Cargo for Montevideo is often overcarried to Buenos Aires with the consequent delays in delivery and expenses for the vessel. Holds should be carefully inspected as soon as discharge is said to have been finished to avoid possible overcarrying.

Clean Receipt

Agents will advise if they wish to receive any cargo for which a clean receipt cannot clearly be given, otherwise the cargo should be rejected. Mate's receipts cannot be claused to cover any damage from rain, wetting or other causes which might be sustained after the cargo is received on ship's tackle.

Bulk cargoes falling or drifting into water or on dock

When handling bulk cargoes vessels must place between the vessel and the dock side a wooden scaffolding, with lateral boards, or strong canvas to collect all material which is liable to fall into the water or on to the Dock during handling. There is a heavy fine for non-compliance.

This should be remembered when writing charter parties, especially under FIO conditions, as this should be for account of shippers or receivers.

Delivery of cargo from vessels

The cargo is discharged direct to Fiscal Warehouses, to lorries, lighters or wagons. When the cargo is delivered to Fiscal Warehouses, receipt for this is given to the vessel's Agents by the Custom House official in charge of the Warehouse. If discharged to lighters the lighterman obtains receipt from the Custom House official once the cargo is received in warehouse. When the cargo is delivered direct to Consignees' lorries, the receipt is given by special Custom House officials called "Cargo Receivers".

The goods are delivered by the Custom House officials to the Consignees against the presentation of the "transferencia" (transfer ticket) signed by the Agents of the vessel. The Agents sign the "transferencia", extended on stamped paper, against the Original Bill of

Lading, which must be legalised by the Uruguayan Consul at the port of loading.

The steamship Agents must keep a special register of all "transferencias", and are responsible to the Authorities for keeping this register. Agents must retain Original Bill of Lading for cargo discharged, as it must be shown to the Customs Authorities immediately if demanded.

When the Consignees have not received the original documents and they wish to take delivery of the goods from the Custom House they must present a Bank guarantee, drawn up in accordance with the form approved by the Shipagents Association.

Cargo manifested to this country in transit to other countries without documents for Uruguay may not be re-shipped to other countries without government permission.

Marks on goods imported to Uruguay

By a Decree dated 30th January 1939, the Uruguayan Government decided that:

"Packages entering Bonded Warehouse, excepting those containing provisions or beverages, and excepting also 'Barraca' articles, shall be marked with the gross weight, the nett weight and corresponding measurement, in a clear and legible manner. These marks may be either 'fire-branded or printed'.

"The 9th August 1939, the Customs Authorities requested that marks and numbers of cases entering Montevideo warehouses should be placed on the extreme ends".

The Customs Authorities have also made known that it is necessary for the packages entering the warehouse to show their weight and measurement in the decimal-metric system.

The inspection of potato cargoes can be effected on board the carrying vessel, and if found in good sanitary condition, can be discharged direct to shore.

Opening and Closing of Hatches

This can be carried out by either crew or stevedores, and hatches must be kept closed when not in use.

Shipments of Meat

These are controlled by the Ministry of Agriculture, whose inspectors check ships' holds before shipment can commence. Holds must be clean and disinfected and temperature controlled to minus 1° to a maximum of plus 1° Celsius for chilled meat, or minus 10° for frozen meat.

Chilled is to be hung on hooks adjustable for height and space and stow of frozen must give a uniform distribution of weight. Alternatively, special cuts are packed and shipped in cartons.

Containers

Use of containers is very limited, since these must be opened up and emptied on the dock alongside, or even on board the vessel. The container itself is considered as part of the vessel's gear, and must be re-shipped without delay.

On rare occasions the Armed Forces have had containers moved out to their barracks.

Consular Dues

All ships arriving at Montevideo must pay Consular dues, with the following exceptions:

Ships that due to a change en route, or by special call of their Agents in Uruguay, during passage, arrive at Montevideo with the sole purpose of receiving orders, as long as no commercial operations are effected.

Ships arriving in distress and which leave port without effecting operations.

Ships arriving for the sole purpose of landing or embarking Pilot.

The Ministry of Foreign Affairs consider bunkering as an operation, therefore ships calling at Montevideo for bunkers must pay Consular dues.

Consular value of the Uruguayan Peso – For the payment of fees abroad, the Executive Power will fix periodically the respective values of the peso, in accordance with exchange fluctuations.

Hours of Attendance at the Uruguayan Consulates – The Office hours of the Consulates will be those fixed by the Government in agreement with the Consuls in each country, endeavouring in each case to have the same working hours as those of the Custom House and other Public Offices of each City. Outside these hours, overtime is charged.

Consular dues on Bills of Lading – When vessels load cargo for Uruguay at ports where there is no Uruguayan Consulate, these dues are collected when the vessel arrives at Montevideo or at any other Uruguayan port. The Agent then recovers these charges from the Consignees.

CREW:

Deserters – Masters and/or Agents must report any deserters when the vessel sails. The Maritime Authorities give intervention to the Police Department, and if the men are located, the Agents must hand them over to the respective Consuls. However, the Agents continue to be responsible before the Authorities for the ultimate repatriation of the men, which must be done at first opportunity.

Vessels are subject to a fine per man. The Agents have also to pay repatriation expenses, in cases where the respective Consuls will not do so.

They must also deposit a guarantee which can be used for repatriation expenses in case the deserter stays in the country for more than 15 days.

Time limit for getting crew members left behind out of the country – According to law, Agents must arrange that such crew members leave the country within 15 days. This period of grace commences as from the date of vessel's departure in respect of deserters and for those disembarked for medical treatment as from date on which they are medically certified as fit for travel.

Upkeep of men left in hospital or temporarily disembarked and traced deserters – The Agents are responsible for the maintenance of men disembarked for medical treatment, or temporarily with a special Immigration permit, and for deserters, until they leave the Country.

Stowaways – Masters of vessels having stowaways on board must report them to the Authorities, stating their name and port of embarkation. The stowaways must be kept on board. If they escape and are found after the vessel sails, Agents will be responsible for their repatriation and upkeep charges until they leave the Country. As with deserters, vessels with stowaways on board are liable to a fine per man if this regulation is not complied with.

Agents must also deposit a guarantee per man, amount to be used for repatriating the stowaway or for conveyance to the port of embarkation.

Landing members of crew – Paying off crew for other than medical assistance is not permitted, but exceptions are granted in special cases. An application must be presented by the Agents to the Immigration Department, and if the permit is granted, a formal declaration is signed by the Master of the vessel, the Agents, the Immigration Inspector and the person wishing to disembark, setting forth length of time he is going to remain in the Country and conditions of departure. The personal documents of the person allowed to land, remain in charge of the Immigration Board.

If any member of the crew is landed for medical treatment or paid off without the corresponding permit, the vessel will be fined.

Gangways and Rat-Guards

A gangway must be placed and ready after a vessel comes alongside the quay, but this must not be presented before coming in to the quay. Authorities will only come aboard by the gangways.

Gangways must also have a lifebuoy with suitable line attached and handy, and a safety net must be placed under the gangway, otherwise shore labour will not board vessels, with consequent delay.

The gangway must also be brightly illuminated at night; an oil lamp is not sufficient.

As soon as vessel is securely moored, regulation size (not less than 80 cm.) rat-guards must be placed on all ropes, wires, fenders, lines and hoses.

Heavy fines are imposed for non-compliance with any of these or other regulations.

Overside Discharges

All overside discharges from latrines, bathrooms, gallery, scuppers, engine room, etc. must be screened or covered when vessel is alongside the quay, as vessels will be fined if the discharge falls on the dock or gangway.

Adjustment of Compasses

Vessels proceeding through Magellan Straits – The disposition issued by the Chilean Shipping Authorities on 13th April 1953, states:

"When a foreign ship arrives at the Magellan Straits and applies for a Pilot, official or private, for navigating the Channels, the Pilot must first check the compass for deviations of more than 5°, and if such deviation has been determined more than 6 months ago, especially in a place with great difference of latitude or different hemisphere, compensation of compass is obligatory when not in true order, and a written declaration to this effect will be made in the pilotage agreement. The Authorities will also send an officer to verify that the compass is in satisfactory condition before entering the Straits".

To avoid probable delays, ships heading for the Straits can make the necessary compensation in the Port of Montevideo or in the ante port whilst waiting for orders for departure. This port is most convenient for this class of compensation because at the present moment there is no magnetic variation and also because it is a quiet harbour with sufficient depth for turning. A compass adjuster may be obtained at any time.

200 Mile Limit and Fishing

Uruguay has declared sovereignty over 200 miles off shore, reserving all fishing and undersea exploitation rights. A number of foreign flag vessels fishing without permits have been seized and heavily fined, their catch and gear being confiscated.

Permits are obtainable, but in no case for vessels over 500 tons gross, to operate within 60 miles from shore, while all activity in territorial waters (200 miles) is forbidden in the months of May and June.

Garbage

Garbage is collected every morning by truck. There is a strict prohibition of dumping anything into the port, and oil tanks must not be cleaned within 30 miles of the coast, and on a falling tide.

Old dunnage should not be dumped or sold, without permission from the Authorities, through Agents.

Ships' Boats

Use of ship's boats is forbidden within the port, unless they are being lowered, with prior permission, for maintenance or exercises.

Fenders

All vessels must have at least 2 large fenders, to keep them 5 ft. or more off the quay. If the vessel has no fenders, or due to deck cargo cannot use them Agents should be warned in advance to rent the necessary equipment and have it ready on arrival.

Dropping Anchor when Berthing

If an anchor is dropped when approaching a dock to berth, to control the vessel as she moves in, it is essential that the anchor should be hove in again once the ship is moored. Port regulations require this and any damage to other craft, real or imaginary, through fouling anchor or chain, would cause considerable trouble.

SYSTEM OF CONTROL CENTRES AND MARITIME INFORMATION (COASTAL STATIONS FP-FT-FW, VHF-FM):

Legal Basis

(a) System of Control and Information of Movement of the Port of Montevideo and its zone of influence made operative on 9/4/75. (Maritime Regulation No. 1).

(b) Control Centre and Information of the Maritime Movement of the Port of Colonia and its zone of influence made operative on 23/9/76. (Maritime Regulation No. 3).

(c) Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira and its zone of influence made operative on 1/10/76. (Maritime Regulation No. 4).

(d) Control Centre and Information of the Maritime Movement of the Port of Punta del Este and its zone of influence made operative on 2/1/77. (Maritime Regulation No. 5).

(e) Control Centre and Information of the Maritime Movement of the Western Coast and its zone of influence made operative on 27/4/78. (Maritime Regulation No. 11).

(f) Control Centre and Information of the Maritime Movement of the Port of La Paloma and its zone of influence made operative on 1/11/78. (Maritime Regulation No. 12).
Note: In all the creations of the Control Centres, due account was taken of Programmes 1.09 and 3.08 corresponding to Law 14.106 and Sub-Programmes: "Maritime Police" and "Direction of Mercantile Marine".

(g) Control and surveillance of fishing vessels in the various fishing areas within the waters in the jurisdiction of the P.N.N. – Sources: Laws Nos. 14.145, 14.521 and 14.106 of the P.N.N. – Programme 1.09. (Maritime Regulation No. 2).

(h) Equipment which fishing vessels under the Uruguayan flag must possess when they operate in the common fishing zone between the Eastern Republic of Uruguay and in the Uruguayan fishing areas proper.
Sources: Maritime Regulation No. 2 of the 23/7/76. Decree of Co-ordination of Punta del Este of 27/1/76 (P.N.N. – P.N.A.). (Maritime Regulation No. 6).

(i) Equipment which vessels and/or craft in the coasting trade, pleasure craft, passenger vessels and working boats must carry where they operate in the Ports of the Republic and Navigate in the River Uruguay. (The zone between International Bridges and the Salto Grande).
Sources: Appendix 18 MAR 2 of the Radio communications regulation of the UIT and the Agreement arising from the meeting between Uruguay and Argentina (Buenos Aires 9/76) in respect of the use of VHF and FM channels and Maritime Regulations Nos. 1 to 6 of the P.N.N. – (Maritime Regulation No. 7).

(j) Law covering the control of pollution: Sources: Law No. 13.833 of the 29/12/69 and in particular articles 2 and 12 of the said Law. Chapter IX Pollution – (Articles 47 to 52) of the Treaty of the River Plate and its Maritime Frontage and Regulation of 28/10/74 of the Prefecture of the Port of Montevideo (Maritime Regulation No. 8).

(k) Zones for lightening ships and complement of cargo: Sources: Resolutions Nos. 2 and 4 of the Administrative Commission of the River Plate of dates 30/9/77 and 26/10/77 as laid down in Article 28 of the Treaty of the River Plate and its River Frontage and established transitorily in the Article 88 of the said treaty (Maritime Regulation No. 9).

(l) "LASH" – Type Operations: Sources: Resolution No. 1/2/78 of the Administrative Commission of the River Plate, Chapter IV. Articles 24 and 27 (Port Facilities, lightening operations and complements of cargo) of the Treaty of the River Plate and its maritime frontage (Maritime Regulation No. 10.).

(m) Agreement on the International Regulation for preventing unauthorised boarding.

(n) The Treaty of the River Plate and its Maritime Frontage.

(o) The Statutes of the River Uruguay.

(p) The International Agreement for the Safety of Human Life at Sea – 1974.

(q) Regulation of Radio-communications of the International Union of Telecommunications (UIT) and nomenclatures.

Particulars of the System

1. AIMS OF THE SYSTEM OF CONTROL CENTRES

(a) To effect positive sovereignty over the Area of the System:
  1. Territorial Sea
  2. River Plate
  3. River Uruguay
  4. Merin Lagoon

(b) To offer support to the National Mercantile Navigation and of third parties, complying with the objectives as propounded by the International Maritime Organisation (IMO) and by the International Telecommunications Union (UIT).

(c) To serve as a chain of Control Towers, effecting control and information of Movement of vessels and Port Operations.

(d) To co-ordinate with Public and Private Institutions who operate within the Ports of the Republic, to facilitate and activate port operations, avoiding delays and inconvenience.

2. GENERAL FUNCTIONS

The General functions of the Centre are:

(a) To maintain real and efficient control of the movement of vessels, in the area of application of the system in order:
  1. To prevent collisions between vessels.
  2. To alert the systems of Search and Rescue and/or Salvage in the event of vessels requiring assistance.
  3. To facilitate BYR operations.

(b) To maintain real and orderly control of the operations in the ports to:
  1. To prevent groundings and collisions with obstacles in port works:
  2. To have prepared emergency plans for cases of disasters and maritime accidents within the Ports and International Bridges (River Uruguay).

(c) To maintain up-to-date information concerning the state of the weather, lighting and all other matters contributing to the safety of navigation and operations in the area.

(d) To maintain up-to-date information for Maritime Agencies and/or Owners, providing such information to facilitate and activate port operations to be effected by vessels, obviating delays and inconvenience at all times.

(e) To serve Public and/or Private Institutions who operate in the Ports, collecting, classifying, analysing, evaluating and disseminating all the necessary information for the better fulfilment of port service.

(f) To comply with all other functions which are specified by the Mandate and to co-operate with Public Authorities and organisations in all matters relating to its functions.

3. CONTROL AND INFORMATION FROM THE CENTRES

The system belongs to the National Navy and is controlled by the National Navy Prefecture. It is directed from the Montevideo Control Centre.

(a) Control of Movement of Vessels – Control of vessels navigating within the Vessel Movement Areas.

(b) Control of Port Operations – Control of vessels manoeuvring within the ports of the Republic, including roads and access channels.

(c) Control of International Bridges – Control of vessels navigating in the International Bridges Zone – Gral. Jose Artigas Bridge at Paysandu, and Gral. San Martin Bridge at Fray Bentos.

(d) Vessel Movement Service – Maritime Mobile Safety Service, between coastal stations and vessels or between vessels, where the messages refer solely to vessel movement.

(e) Port Operation Service – Maritime Mobile Service in a port or in its district, between coastal stations and vessels, where the messages refer solely to vessel operations, movement and safety and, in the event of emergency, to safeguarding persons.

4. ZONES OF CONTROL AND INFORMATION OF THE CONTROL CENTRE SYSTEM

(a) Port of Montevideo (Deep Sea – Coasting – Fishing).
  1. "Alpha" – Control and information of vessel movement.
  2. "Bravo" – Control and information of port operations.

(b) Port of Buceo (Pleasure Craft).
  1. "Oscar" – Control and information of port operations.

(c) Port of Santiago Vazquez (Pleasure Craft – Coasting).
  1. "Papa" – Control and information of port operations.

(d) Port of La Paloma (Fishing Centre).
  1. "Kilo" – Control and information of movement of vessels.
  2. "Lima" – Control and information of port operations.

(e) Port of Punta del Este (Fishing – Pleasure Craft).
  1. "Golf" – Control and information of vessel movement.
  2. "Hotel" – Control and information of port operations.

(f) Port of Piriapolis.
  1. "Tango" – Control and information of port operations.

(g) Port of Colonia (Passage port to Buenos Aires).
  1. "Charlie" – Control and information of vessel movement.
  2. "Delta" – Control and information of port operations.

(h) Port of Sauce (Coasting).
  1. "Uniform" – Control and information of vessel movement and of port operations.

(i) Port of Nueva Palmira (Deep Sea).
  1. "Echo" – Control and information of movement of vessels.
  2. "Foxtrot" – Control and information of port operations.

(j) Port of Carmelo (Pleasure Craft – Coasting).
  1. "Quebec" – Control and information of port operations.

(k) Port of Fray Bentos (Overseas – Navigation – International Bridges).
  1. "India" – Control and information of the movement of vessels
  2. "Juliet" – Control and information of port operations.

(l) Puerto Paysandu (Overseas – Navigation – International Bridges).
  1. "Mike" – Control and information of the movement of vessels
  2. "November" – Control and information of port operations.

(m) Puerto Salto (Coasting – Pleasure Craft – Passages).
  1. "Romeo" – Control and information of the movement of vessels.
  2. "Sierra" – Control and information of port operations.

5. COMMUNICATIONS

All Centres maintain permanent listening on Channel 16 (VHF – FM).

(a) *Language:* The language used in communication is Spanish.
Vessels who have difficulty in communicating in Spanish may do so in English, and if there are problems in hearing properly they may use the groups of the International Code Signals, Tables of Spelling equivalents and Numbers, or "Q" Code.

(b) *Channels – Frequencies and Usages:* There will be those as defined by Appendix 18 Mar 2, of the Radiocommunications Regulations of the International Telecommunications Union, published by the General Secretary of the UIT in Geneva 1976 and the points agreed in the Uruguay – Argentina Meeting, carried out in the City of Buenos Aires 9/76, use of the VHF Channels (Band 156 – 174 MHz.).

Channel	*Frequencies*	*Usage*
6	156.300 MHz.	Bridge to Bridge.
8	156.400 MHz.	Port Operations.
9	156.450 MHz.	Port Operations.
11	156.550 MHz.	Transmission from the Centres in fulfilment of objectives.
13	156.650 MHz.	Transmission from the Centres in fulfilment of objectives.
15	156.750 MHz.	Meteorological Bulletins and Warnings to Navigators.
16	156.800 MHz.	Calling up and Security.
18	156.900 MHz. Reception	Jose Ignacio Oil Terminal.
	161.500 MHz. Transmission	Jose Ignacio Oil Terminal.

Should problems arise with VHF equipment on vessels (the range of same, out of service, etc.) communications should be effected on MF or on HF with the Safety Coastal Stations of the P.N.N.

The services and frequencies of the Coastal Stations are described in the tables at the end of "Uruguay General" Section.

Vessels who, for some reason or other cannot effect communications by radiotelephone (VHF, HF, MF), should do so by radiotelegraphy through the intermediary of the Coastal Station (open to public correspondence) Cerrito Radio CWA.

Radiotelegrams should be sent in time to the telegraphic address Comopre.

(c) *Listening Out by Vessels:*

1. *All vessels* in Uruguayan judicial waters must maintain permanent listening watch on Channel 16 (VHF – FM) except when they are moored in port. If there are problems on VHF they should listen out on 2182 or 4125 KHz.
2. When a vessel cannot, due to any fault of whatever nature, maintain listening watch on Channel 16, she should pass to Channel 11 or 13, but advise the Control Centre first.
3. In the various zones, the vessels must use as a working channel to communicate with the Zone Centre, the frequency which the Control Centre will indicate to them on Channel 16.
4. In all the ports of the Republic, vessels and/or craft in the coasting trade, pleasure craft (Categories A and B), passenger craft and traffic units (tugs, dredgers, launches, lighters, etc.) must be equipped with a VHF – FM transmitter and receiver for local communications with Port Controls, Appendix 18 Mar 2 of the Radiocommunications Regulations of the International Telecommunications Union.
5. *All vessels or craft* navigating or carrying out operations within 25 miles or more of the coast, must be equipped with a BLU transmitter and receiver (with corresponding frequencies) of 150 watts effective power and A3A and A3J type transmission.

(d) *Services and Frequencies of the FP, FC and FW Dependent on the P.N.N.*

Coastal Station (FC), Station for Port Operation (FP), Station for Service of Vessel Movement (FT), Station which is both for Port Operations and for Service of Vessel Movement (FW).

(e) If in fulfilment of the regulations set out by this System, vessels on calling up the Control Centre cannot obtain a reply, they should immediately make the communication in question to the Director of the System (telegraphic address: Comopre) by radiotelegraphy or radiotelephony via Cerrito Radio (CWA) or Punta Carretas Radio (CWF) respectively.

Communications to Centres:

1. From Vessels in the Zone.
   - (a) Position on entering and leaving each Zone of Vessel Movement (Flag, Name, International Call Sign, Where From, Where Bound, Latitude, Longitude, Course, Speed and Maximum Draft).
   - (b) ETA at next port.
   - (c) Problems with characteristic aspects during navigation.
   - (d) If anchoring or raising anchor at any point in the Control Zone of Vessel Movement, it is necessary to ask for authorisation when this is done within Port Operation Zones, and also whenever any manoeuvre is intended to be carried out, and this authorisation expiring within twenty (20) minutes from its request.
   - (e) Any damage suffered by the vessel.
   - (f) Assistance given to damaged vessels or those in difficulty.
   - (g) Any indications of dangerous obstacles to navigation which are not duly indicated by buoys and lights.
   - (h) Any serious reduction in visibility.

2. Pilotage:
   - (a) Whatever is specified in the General Pilotage Regulations.
   - (b) Time of embarkation and/or of disembarkation.
   - (c) Request of Master concerning change, mooring, etc.
   - (d) Difficulties in pilotage.

3. Concerning the Owner or Agent:
   - (a) Monthly list of expected vessels.
   - (b) Confirmation of arrival of vessels 24 hours in advance.
   - (c) News concerning vessels being delayed or arriving early.
   - (d) Information if the vessels are carrying hazardous cargo (explosives or inflammables) 24 hours in advance of arrival, including any such cargo in transit, mentioning:
     - (i) The amount and location of such cargo.
     - (ii) The correct technical name of the substance (the designation used for transportation purposes), the UNO number (if this is given), classification in the IMDG Code (if this is given), the flash point (if applicable) and quantity.
     - (iii) The presence or otherwise on board of a Certificate which is valid showing the ability of the vessel in respect of the cargo which it is carrying (only for hazardous substances carried in bulk);
     - (iv) The stowage of hazardous cargo on board, indicating those which have to be unloaded and those which have to remain on board;
     - (v) The condition in which the hazardous cargo is and any defect which is known in respect of packages or drums, together with the system of containing and handling of the cargo, of the equipment and instruments used (when hazardous bulk cargo is involved), which may engender excessive risk.
     - (vi) Any known defect which may effect considerably the safety of navigation.

(f) *Communications from the Centres:*

1. To vessels (navigating towards Uruguayan Ports).
   - (a) The quay at which they will berth.
   - (b) The Pilot who will assist the vessel.
   - (c) Any information from the Maritime Agent with regard to future operation.
2. To the Pilot:
   - (a) Tugs and cable launches who will assist him.
   - (b) Defences on the sea wall.
   - (c) Bitts which the vessel will use.
3. To the Owner or Agent:
   - (a) Position of their vessel.
   - (b) ETA.
   - (c) Conditions of cargo.
   - (d) Time at which the Pilot will go on board.
   - (e) Time of berthing.
4. To the Centre Director of the System (Control Centre and Information of the Maritime Movement of the Port of Montevideo) immediately any information is obtained with regard to:
   - (a) A BYR incident or any difficulty which is presented to a vessel.
   - (b) A deep sea or coasting vessel (data concerning Naval Messages in accordance with the Abbreviated Code).
   - (c) A fishing vessel, with the Naval Message data being as follows:
     - Where from, Flag, Name, International Call Sign, Month, Day and Hour of sailing, Position (for Customs Clearance), Month, Day and Hour of Position, Activity (fishing or bound for Port).
     - Arrival, Flag, Name, International Call Sign, Month, Day and Hour of Arrival, Port of Arrival.
     - Fishing or within the Zone, or the Port, Flag, Name, International Call Sign, Position, Month, Day and Hour of Position ETA (if it is within the Zone or the Port).

(5) To the adjacent Control Centre:

When a deep sea or coasting vessel sails from a port controlled by the Control Centre, or when this vessel effects a passage to the Vessel Movement Zone controlled by that Centre, this must be informed to the adjacent Control Centre (according to the course of the vessel) stating ETA and the Zone of Vessel Movement of this adjacent Centre.

Note: The Control Centres will effect communications by Naval Message. These Naval Messages must be sent immediately after receipt from vessels or when such information comes to hand from other sources.

(Naval Messages in this context will have Priority Precedence).

(6) Command of to the Naval Control of Maritime Traffic in Uruguay (Contramu). Immediately on receipt all information specified in item (f) – Number (4).

(g) *Communications from Coastal Stations (Vessel Movements – FT, MF-HF)*

1. To the Centre Director of the System (Control Centre and Information of the Maritime Movement of the Port of Montevideo). Immediately on receipt all information specified in Item (f) Number (4).
2. To the Control Centre with responsibility over the zone to which a message refers.

The same as those quoted in the preceding Number 1.

6. FISHING VESSELS:

(a) All fishing vessels clearing entry or departure from any national port towards the different Fishing Areas must communicate to the Maritime Authority the following:

1. On Sailing:
   - a. Flag (FL)
   - b. Name of Ship (SHP).
   - c. International Call Sign (IND).
   - d. Port of Departure (DEP)
   - e. Month, day and hour of departure (TOD).
   - f. Destination (Indicate Fishing Zone and Position) (DST).
   - g. Month, day and hour estimated at arriving at the Fishing Zone (ETA Z/P).
2. On Arrival:
   - a. Flag (FL).
   - b. Name of Ship (SHP).
   - c. International Call Sign (IND).
   - d. Port of Arrival (PORT).
   - e. Month, day and hour of arrival (ARR).

(b) All fishing vessels *navigating* must communicate every 6 hours with the Safety Coastal Station of the National Naval Prefecture of the Eastern Republic of Uruguay which is nearest to them (or to which they are listening) giving the following information:

1. International Call Sign (IND).
2. Position in Latitude and Longitude (POS).
3. Month, day and hour of the position (DHPOS).
4. Port of Destination (DET).
5. Activity: (Fishing – Coming to Port – Going to Zone) (ACT).

(c) *Normal Fishing Zones:*

1. High Seas Zone (Altamar): Zone which is outside the judical waters and within the Common Fishing Area.
2. Common Fishing Area (ZOCOPES): Art. 73 of the River Plate and Territorial Sea Treaty.
3. The Zone of the River Plate (RIPLATA).
4. The coastal Zone of the Atlantic Ocean (COSATLAN): Zone included between our coast on the Atlantic Ocean and a Line 12 miles out.
5. Zone of the River Uruguay (RIURU).
6. Zone of the Merin Lagoon (LAMERIN).

(d) Uruguayan Fishing Vessels which are *navigating* in the Common Fishing Area (Uruguay – Argentine) within the Sector of Argentine Jurisdiction are obliged to communicate its position to the Argentine Maritime Authority. Communications will be made on frequency 3860.6 kHz. to the Coastal Safety Station of the Prefecture of the Mar del Plata.

(e) *Note:* Information to be communicated: All the communications as specified in (b).
All fishing vessels must *listen out permanently* on Channel 16 (VHF – FM), except when they are moored in port. If they are at a distance from the coast which prevents a safe communication on VHF, listening must be effected on 2721.5 kHz. Those effecting operations 25 miles or more from the coast, must be equipped with a BLU transmitter and receiver (with the corresponding frequencies) with 150 watts effective power and type of transmission A3A and A3J, and also fishing vessels must be equipped with a receiver on 2721.5 kHz.

(f) Vessels, after prior request to the Control Centre covering them, may pass to Channel 6 or 8, and keep on those *only for the necessary time* for Fishing Manoeuvres, after which they must return to Channel 16, and advise the Centre accordingly.

7. HYDROCARBONS: It is prohibited to pour hydrocarbons or residual matter arising from the washing of tanks, clearing of bilges and ballast in general or any other action capable of having contaminary effects in waters within the territorial sea of Uruguay with the exception of the zone which is:
(a) Outside the limits of the River Plate.
(b) Outside 100 miles of the Uruguayan Territorial Waters, i.e. 100 miles out from the Atlantic Ocean coast.
(c) Outside the Prohibition area for contaminatory action (Article 78 of the River Plate Treaty).

8. ZONES OF OPERATION FOR LIGHTENING AND COMPLEMENT OF CARGO:
The zones of operation for lightening and complement of cargo are as follows:
Zone "A": Between the Parallels of Lat. South 35° 04′ and 35° 08′ and between the Meridians of Long. West 56° 00′ and 56° 02′.
Zone "B": Between the Parallels of Lat. South 35° 30′ and 35° 33′ and between the Meridians of Long. West 56° 30′ and 56° 38′.
Zone "C": Between the Parallels of Lat. South 35° 35′ and 36° 06′ and between the Meridians of Long. West 56° 30′ and 56° 38′.
Zone "D": Between the Parallels of Lat. South 35° 04′ and 35° 06′ and between the Meridians of Long. West 56° 11′ and 56° 16′.

9. OPERATIONS OF LOADING AND UNLOADING "LASH" TYPE VESSELS:
The operation of loading and unloading "LASH" type vessels for the national territory, on the one hand may be effected apart from within the lightening and complement of cargo areas in ports, also in the corresponding roads.

10. TRANSFER OF VESSELS:
The transfer of vessels between roads and lightening areas and for complement of cargo purposes, will be effected under pilotage and tug control using the Port Services from which the barges in question have come.

CONTROL CENTRES:

Control Centre and Information of Maritime Movement of the Port of Colonia.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Colonia, within the free zone of the Port, located in the main building of the free Port zone of Colonia (Latitude: 34° 28′ 28″ S., Longitude: 57° 57′ 38″ W.).

(b) The call sign of the Control Centre is CWC 23, and for calling up purposes it is possible to use CONTROL COLONIA PREFECTURE.

(c) The Control Centre of the Port of Colonia is located in the Prefecture of the Port of Colonia.
The Prefecture of the Port of Colonia is a dependency of the National Naval Prefecture (2nd Circumscription).
Telephone No. of the Control Centre – 688.
Address – Boulevard Espana 2054 (Department of Colonia).

AREAS OF CONTROL.

(a) The Control Centre and Information of Maritime Movement, covers:
1. Zone "CHARLIE". The area of the River Plate marked by the Meridians which pass through Martin Chico Point (Longitude: 58° 12′ 30″ W.) and Punta Rosario (Longitude: 57° 21′ W.) and the middle line equidistant from both coasts (Law 14.145/74 – "Treaty covering the Limits of the River Plate"), with the exception of the area of water included between the imaginary line which joins San Carlos Point; Lopez West Island; Farallon Island; the Green Buoy of Vienna, Parallel 34° 30′ S., the Meridian which passes through Riachuelo Point Longitude: 57° 43′ 18″ W., and the coast ("DELTA" AREA).
2. "DELTA" area. Area of the River Plate, limited by the imaginary line which joins San Carlos Point; Lopez West Island, Farallon Island; the Green Buoy of Vienna, Parallel 34° 30′ S., the Meridian which passes through Riachuelo Point Longitude: 57° 43′ 18″ W., and the coast.

(b) The Control Centre and Information of Maritime Movement of the Port of Sauce covers:
1. "UNIFORM" zone. The area of the River Plate included between Meridians 57° 25′ 48″ W. and 57° 33′ W., the coast and the parallel Latitude: 34° 29′ 18″ S.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels.
1. In zone "CHARLIE". The Control Centre must be informe when the following points have been passed:
Punta Rosario
Puerto Sauce
Roca Barriles
Puerto Colonia
Km. 56.5 (Farallon Island)
Km. 71.3 (San Pedro Bar)
Km. 101 (Martin Chico Point)
In both Zones of Control the communications as designated i following tables, must be effected.

(b) From the Director of Hydrographic Studies of the MTOP.
1. The place assigned for berthing or mooring.
2. Guard and order tugs (when these exist).

Control Centre and Information of the Maritime Movement of th Port of Fray Bentos

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Fra Bentos (Latitude: 30° 06′ 50″ S., Longitude 58° 18′ 27″ W.).

(b) The International Call Sign of the Control Centre and Informatio of the Maritime Movement of the Port of Fray Bentos is CWC 25 When calling up it is possible to use CONTROL FRAY BENTOS PREFECTURA.

(c) The Control Centre of the Port of Fray Bentos is located in th Prefecture of Fray Bentos (5th Circumscription P.N.N.).
Telephone No. of the Control Centre is 321.
Address: Luis A. de Herrera 1249 on the corner with 25 d Agosto, Fray Bentos Department of Rio Negro.

CONTROL AREAS.

(a) The Control Centre Information of the Maritime Movement of th Port of Fray Bentos covers:
1. Zone "INDIA" The area of the River Uruguay marked by th parallel 33° 30′ S. (Punta Amarilla Km. 46) and the paralle 32° 50′ S. (Roman Island) navigable areas of the Rio Negr and San Salvador and the middle line equidistant from bot coasts; with the exception of the Port of Fray Bentos and th area of water marked by the port and maritime construction (zone "JULIET").
2. Zone "JULIET". The port of Fray Bentos and the areas o water marked by the port and maritime constructions.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels:
1. In zone "INDIA". The Control Centre must be notified durin navigation when the following crossings are made:
Km. 46 (Punta Amarilla)
Km. 61 (Riacho Yaguari)
Km. 83 (Paso Barrizal)
Puerto Fray Bentos
International Bridge "General San Martin"
Km. 122 (Nuevo Berlin)
Km. 140 (Roman Island)
In both Areas of Control the designated frequencies are show in following tables.

THE BRIDGE ZONE

All vessels of 100 tons or more gross registered tonnage mus comply with the following instructions:

(a) Navigation day and night in both directions will be made unde the bridges by the marked channel, in the central arch, betwee piles 10 and 11 in the Bridge "Libertador General San Martin".

(b) It is prohibited to cross or overtake between Km. 100 an Km. 102.5 and for this purpose the following passage prioritie are established:
1. Those navigating downstream over those navigatin upstream.
2. Convoys with a tug either pulling or pushing have priority ove all vessels which include those that are navigatin downstream.

(c) The vessel or convoy which has to give way will wait outside th limits indicated in point (b). Between those limits it is prohibite to anchor for any cause, even though the channel is left free.

(d) Between the limits indicated in point (b), speed must be reduce to the minimum compatible with good steering and manoeuvrin

(e) In the zones included between the limits indicated in point (b), i is prohibited to effect any form of dredging operation across th whole width of the river.

Control Centre and Information of the Maritime Movement of th Port of La Paloma

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of L Paloma (Position: Latitude 34° 39′ 30″ S. and Longitude 54° 08 28″ W.).

(b) The International Call Sign of the Control Centre and Informatio of the Maritime Movement of the Port of La Paloma is CWC 30 For calling up purposes "CONTROL LA PALOM PREFECTURA" may be used.

(c) The Control Centre La Paloma is located in the Prefecture of th Port of La Paloma (8th Circumscription P.N.N.)
Telephone No. of the Control Centre – 16.
Address – Avenida del Navio (Puerto de La Paloma) – Rocha.

CONTROL ZONES.

(a) The Control Centre and Information of the Maritime Movement of the Port of La Paloma comprises:

(1) Zone "KILO". Zone of the Atlantic Ocean (Territorial Sea) situated between the meridians 50° 50′ and 54° 15′ W., limited by the straight line 128° of the Chuy Lighthouse (lateral maritime limit with the Federal Republic of Brazil – Law 14.163) and to the South by the lateral maritime Argentine–Uruguay limit (Law 14.145/974). – "Treaty of Limits of the River Plate". Art. 70), with exception of the Port of La Paloma, between the coast and an imaginary line which goes between the end of the breakwater towards the Eastern point of the Costa Azul (Zone "LIMA"). Zone "LIMA".

(2) Zone "LIMA". Port of La Paloma, zone situated between the coasts and an imaginary line which goes from the end of the breakwater to the Eastern point of Costa Azul.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels to:

(1) In Zone "KILO" – The Control Centre must be informed during navigation when the following points are crossed:

The Lighthouse Chuy
The Lighthouse Cabo Polonio
The Lighthouse Santa Maria

(2) In Zone "LIMA"

During navigation in the Access Channel and within the Port when the Port jetty small light is passed.

Also, in both control zones the communications shown in the following tables must be effected.

(b) From the Hydrographic MTOP Directorate:

(1) Place assigned for berthing or mooring.
(2) Guard or order tugs (when they exist).

Control Centre and Information of the Maritime Movement of the Port of Montevideo.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS

(a) The Centre is controlled from the National Naval Prefecture, located on the Floors 11, 12 and 13 of the General Command Tower of the Navy (Customs Building Lat. 34° 54′ 03″ S., Long. 56° 12′ 44″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Montevideo is CWC 39. In calling up it is possible to use "CONTROL MONTEVIDEO PREFECTURA".

(c) The Call Sign of the Control Centre of the Port of Buceo is "CONTROL BUCE PREFECTURA".

(d) The Call Sign of the Control Centre of the Port of Santiago Vazquez is CWC 38.
In calling up it is possible to use "CONTROL SANTIAGO VAZQUEZ PREFECTURA".

(e) The Control Centre of the Port of Montevideo is located in the building of the Navy General Command.
Telegraphic Address – "Comopre" (Control Montevideo Prefectura).
Telephones – 95.51.01 – 95.24.77 – 95.62.53.
Telex UY 929
Address – Rambla 25 de Agosto de 1825.

ZONES OF CONTROL.

(a) The Control Centre and Information of the Maritime Movement of the port of Montevideo covers:

(1) Zone "ALFA". Zone of the River Plate situated between the Uruguyan coast and the meridians 55° 30′ and 57° 21′ W., and to the South to the limit of the River Plate with the Argentine Republic (Law 14.145/74 "Treaty of Limits of the River Plate").
With the exception of the areas of water included:
(a) Between the meridians which pass through Punta Sayago and Punta Brava, the coast and the parallel of Latitude 35° 01′ S. (Zone "BRAVO").
(b) Between the meridians 56° 00′ and 56° 09′ W. and the parallel 34° 57′ S. (Zone "OSCAR").
(c) Between the meridians 56° 20′ and 56° 40′ W. and the parallel 34° 56′ S. and the coast (Zone "PAPA").

(2) Zone "BRAVO". Zone of the River Plate included between the meridians which pass through Punta Sayago and Punta Brava, the coast and the parallel of Latitude 35° 01′ S., including the Access Channel to the Port of Montevideo, Foreport, Docks, Channel or Inflammable Cargo Docks (ANCAP).

(b) The Control Centre and Information of the Port of Buceo includes:

(1) Zone "OSCAR". Zone included between the meridians 56° 00′ and 56° 09′ W. and the parallel 34° 57′ S.

(c) The Control Centre and Information of the Maritime Movement of the Port of Santiago Vazquez includes:

(1) Zone "PAPA". Zone included between the meridians 56° 20′ and 56° 40′ W. and the parallel 34° 56′ S. and the coast. It includes the Port, Anchorages and all areas of water.

COMMUNICATIONS FROM THE CENTRE

(a) To the National Administration of Ports (A.N.P.).

(1) Time of arrival of each vessel (ahead of time or delayed).
(2) Movement of tugs.
(3) Information from Masters of vessels on his cargo or changes in his berth.

(b) To the Argentine Naval Prefecture:

(1) ETA of vessels which are going to Argentine Ports or to Coastal Ports.

COMMUNICATIONS TO THE CENTRE.

(a) From the National Ports Administration (A.N.P.)

(1) Designation of berths prior to 1700 hrs. on the previous day.
(2) Tugs and launches for guard and order purposes.
(3) Departures for Deep Sea and Coasting vessels.

(b) From the vessels:

(1) In Zone "ALFA". The Control Centre must be informed during navigation when the following points are passed:

(a) To the West of the Access Channel to the Port of Montevideo.

1. By Middle Channel:
The *Graf Spee*
The Panela Lighthouse
The Uruguayan Banco Ortiz Buoy
The Argentinian Banco Ortiz Buoy

2. By North Channel:
The *Graf Spee*
The Panela Lighthouse
The Jesus Maria Buoy
The Arazati Point
The Puerto Rosario.

(b) To the East of the Access Channel to the Port of Montevideo.
Punta Brava
Isla de Flores

(2) In Zone "BRAVO".
During navigation in the Access Channel:
The Eje Buoy
The Jetty

In both areas of control the communications as designated on the following tables should be effected.

Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Control Centre is controlled from the Sub-Prefecture of Nueva Palmira (Position Lat. 33° 52.7′ S., Long. 58° 25.3′ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira is CWC 31 and when calling up it is permitted to use "CONTROL NUEVA PALMIRA PREFECTURA".

(c) The Control Centre of the Port of Nueva Palmira is located in the Sub-Prefecture of Nueva Palmira.
The Sub-Prefecture of Nueva Palmira is a dependency of the Prefecture of Colonia (2nd Circumscription P.N.N.).
Telephone No. of the Control Centre – 139.
Address – Port Area – Nueva Palmira – Department of Colonia.

AREAS OF CONTROL

(a) The Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira cover:

(1) Zone "ECHO". Zone of the River Plate and the River Uruguay is marked by the meridian 58° 12.5′ W., (Punta Martin Chico Km. 101) and the parallel 33° 30′ S., (Punta Amarillo Km. 46) and the middle line equidistant from both coasts with the exception of the Port of Nueva Palmira and the area of water limited by the port constructions (zone "FOX-TROT").

(2) Zone "FOX-TROT". The Port of Nueva Palmira and the areas of water limited by the port constructions (official quay, the Bed of the Company Navigen and the Higueritas Dock).

COMMUNICATIONS TO THE CENTRE:

(a) From Vessels:

(1) In zone "ECHO", the Control Centre must be informed during navigation of the following crossings:
Km. 101 (Punta Martin Chico),
Km. 121 (Sola Island).
Puerto Nueva Palmira.
Km. 22 (Punta Arenal Grande).
Km. 46 (Punta Amarilla).

In both Areas of Control, the communications as shown in following tables must be effected.

Control Centre and Information of the Maritime Movement of the Port of Paysandu.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS:

(a) The Centre is controlled from the Prefecture of the Port of Paysandu, located in the main Customs building (32° 18′ 06″ S., 58° 05′ 08″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Paysandu is CWC 32, and when calling up it is possible to use "CONTROL PAYSANDU PREFECTURA".

(c) The Control Centre and Information of the Maritime Movement of the Port of Paysandu is a dependency of the Prefecture of the Port of Paysandu (6th Circumscription P.N.N.).
Telephone No. of the Control Centre – 3099.
Address – Presidente Viera and Avenida Brasil – Paysandu (City).

CONTROL AREAS:

(a) The Control Centre and Information of the Maritime Movement of the Port of Paysandu covers:

(1) Zone "MIKE". The area of the river Uruguay marked by the parallel 32° 50′ S. (Roman Island) and parallel 31° 53′ S. (the mouth of the Malo Stream Km. 257 approximately) and the middle line equidistant from both sides with the exception of the zone included between the parallel 32° 20′ S. (the mouth of the Stream "Sacra") and the parallel 32° 14′ S. and the mouth of the Stream "San Francisco". (Zone "NOVEMBER").

(2) Zone "NOVEMBER". The area of the River Uruguay limited by the parallel 32° 20′ S. which passes through the mouth of the Stream "Sacra" up to parallel 32° 14′ S. which passes through the mouth of the Stream "San Francisco".

COMMUNICATIONS AT THE CENTRE:

(a) From vessels:

(1) In zone "MIKE" – The Control Centre must be notified during navigation when the following crossings are made:

Km. 140 (Roman Island)
Km. 160 (San Javier)
Km. 183 (Concepcion del Uruguay)
Punta "N" Almiron Island
Puerto Paysandu
International Bridge "General Artigas"
Punta Piedras
Arroyo Malo

In both Areas of Control the communications are shown in the following tables.

THE BRIDGE ZONE.

All vessels of 100 tons or more gross registered weight must comply with the following instructions:

(a) Navigation both by day and night in both directions will be made under the bridges by the marked channel, in the central arch, between piles 11 and 12 in the bridge "General Artigas".

(b) It is prohibited to cross or overtake between Kms. 208 and 211. For this purpose the following passage priorities are established:

(1) Those navigating downstream over those navigating upstream.

(2) Convoys with a tug either pulling or pushing have priority over all vessels which include those that are navigating downstream.

(c) The vessel or convoy which has to give way will wait outside the limits indicated in point (b). Between those limits it is prohibited to anchor for any cause, even though the channel is left free.

(d) Between the limits indicated in point (b) – speed must be reduced to the minimum compatible with good steering and manoeuvring.

(e) In the zones included between the limits indicated in point (b) – it is prohibited to effect any form of dredging operation across the whole width of the river.

Control Centre and Information of the Maritime Movement of the Port of Punta del Este and Piriapolis.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS:

(a) The Centre is controlled from the Prefecture of the Port of Punta del Este (Lat. 34° 57′ 48″ S., Long. 54° 57′ 06″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Punta del Este is CWC 34.

For calling up purposes it is possible to use "CONTROL PUNTA DEL ESTE PREFECTURA".

(c) The Call Sign of the Control Centre of the Port of Piriapolis CWC 33.

For calling up purposes it is possible to use "CONTRO PIRIAPOLIS PREFECTURA".

(d) The Control Centre of the Punta del Este is located in th Prefectura of the Port of Maldonado (3rd Circumscription P.N.N Telephone No. of the Control Centre – 4.18.84.

Address – Calle 8 and 13 (Department of Maldonado).

(e) The Control Centre of the Port of Piriapolis is located in Sub Prefecture of the Port of Piriapolis (3rd Circumscription P.N.N The Sub-Prefecture of Piriapolis is controlled by the Prefectur of Maldonado.

Telephone No. – 18.

Address – Avenida Piria and Calle Maipu (Piriapolis).

ZONES OF CONTROL

(a) The Control Centre and Information of the Maritime Movemer of the Port of Punta del Este covers:

(1) Zone "GOLF". Zone of the River Plate, Atlantic Ocea (Territorial Sea) situated between the meridians 55° 30′ an 54° 15′ Longitude West, the imaginary line which joins th Punta del Este with Punta Ballena and in the South by th continuation of the limit of the River Plate with the Argentin Republic and the Territorial Sea (Law 14.185/974 "Treaty c the Limits of the River Plate"), with the exception of the exter of water included between meridians which pass throug Punta Iman (55° 16′ 08″ W.) and Punta Raza (55° 14′ 00″ W and the meridian of 34° 56′ 30″ S. (Zone "TANGO") Piriapolis.

(2) Zone "HOTEL". The Bay of Maldonado and the Port of Punt del Este.

(a) The Bay of Maldonado: Zone situated between the coas and the imaginary line which joins Punta del Este wi Punta Ballena, includes also "Boca Grande" and "Boc Chica".

(b) The Port of Punta del Este: Zone situated between th coast and an imaginary line which goes from the end c the jetty to a point which limits to the North of the Mans Beach. It includes all the mooring areas.

(b) The Control Centre and Information of Maritime Movement of th Port of Piriapolis comprises:

(1) Zone "TANGO". Zone of the River Plate included betwee the parallels which pass through Punta Iman (55° 16′ 08″ W and Punta Raza (55° 14′ 00″ W.) and the meridia 34° 56′ 30″ S.

COMMUNICATIONS TO THE CENTRE

(a) From Vessels

(1) In zone "GOLF". The Control Centre must be informed durin navigation when the following points are passed:

The Isla de Lobos (Wolf Island)
The Punta del Este Lighthouse.

(2) In zone "HOTEL". During navigation in the Access Channe and within the Port:

When the Bajo del Monarco Buoy is passed, and
When the Isla de Gorriti Small Lighthouse is passed.

Also within both Control areas the communications indicate in the following tables must be effected.

(b) From the Hydrographic Directorate of MTOP.

(1) The place assigned for berthing or mooring.

(2) Guard and order tugs (when they are present).

KEY TO LITERAL AND NUMERICAL REFERENCES USED IN THE COASTAL STATION NOMENCLATURE

(a) To transmit meteorological bulletins in accordance with the requirements of List VI of RR of the UIT. Special services which are offered by the FC, FP, FT and FW of the P.N.N.
(b) To transmit Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services which are offered by the FC, FP, FT and FW of the P.N.N.
(c) To transmit medical advice on request of navigators.
(d) To transmit urgent messages to Mariners immediately on receipt and to repeat them 3 minutes past every hour and at the normal times of transmission of messages to navigators.
(e) To participate in operations of Search and Salvage.
(f) To alert the Centre's Co-ordinator of Search and Salvage.
(g) To direct the system of Control Centres and Information of Maritime Movement and Port Operations. (FP, FT and FW).
(h) Receive meteorological observations (SHIP) made on the high seas by Masters of vessels.
(i) To effect special transmissions relating to hydrographic and mareographic Information.
(m) To receive reports from fishing vessels (National, Argentine and third nations who are authorised to operate within the area) and to remit them to the Director of the Control Centre System (CONDI) obligatorily in accordance with Maritime Legislation No. 6 P.N.N.
(n) To effect control and facilitate information within the area, receiving reports from vessels navigating within it (obligatory for vessels in accordace with IMP Uruguay).
(o) Effect control and facilitate the supply of information from the port.
(p) Receive by telex or radio requests for pilotage service.
(q) Radiogoniometric Service on VHF (RG).

1. Call up and listening service on a permanent basis and for announcing in advance the intention to transmit.
2. Frequency used for the transmission of meteorological bulletins and Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services offered by FC, FP, FT and FW of the P.N.N. with prior announcement on frequency 156.800 MHz (Channel 16).
3. Frequency used for the transmission of meteorological bulletins and Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services offered by the FC, FP, FT and FW of the P.N.N. with prior announcement on frequency 2182 kHz (Simplex) and 4419.4 kHz (Duplex C.421).
4. Frequency used for the transmission of radiomedical advice on request.
5. Frequency used for operations of Search and Salvage.
6. Frequency used for reports from national fishing vessels.
7. Frequency for Coastal working purposes.
8. Frequency used in common with the Argentine Republic (Naval Prefecture) for the control of fishing vessels of both nations.
9. Provisional working frequency.
10. Working frequency for control and zonal information (Vessel Movement Service).
11. Working frequency for control and Port information (Port Operation Service).
12. Port operation frequency (tugs, traffic launches, tugs and control centres).
13. Duplex frequency Band from 4 to 23 MHz of the Mobile Maritime Service Section 17 REV. RR of the UIT.

CO – Station open exclusively to official correspondence.
CR – Station open to restricted public correspondence.
H24 – Continuous service, day and night.
HX – Intermittent service, day and night or station which has no fixed operating timetable.

SPECIAL SERVICES

Key:
Key to numerical references used in the nomenclature of radiodetermination stations and stations which offer special services.
METEOROLOGICAL BULLETIN
(Forecast of weather within the 4 Maritime Areas)

1. SYNOPSIS: Inform in clear Spanish text for the 4 Maritime Areas No. 1, 2, 3 and 4 stating:
   (a) General
      1. Name of Station
      2. Validity
      3. Significant Phenomena
      4. Weather Notices
      5. Synoptic Situation
   (b) By Area
      1. General Conditions (Phenomena or general character of the current weather)
      2. Winds (direction and speed)
      3. Sky
      4. Horizontal visibility
      5. Air temperature
      6. Strength of the sea
      7. Wave height
   (c) Reading of radio messages for Coastal Traffic and Radio Messages for local purposes (Notices to Mariners) per area.
2. Messages concerning water height.
3. Offer on request of a vessel, a weather forecast, height of water and local radio messages (Messages to Mariners).
4. The station transmits at any time meteorological safety messages preceded by the Safety signal (SECURITE) and repeat them after periods of silence and during normal transmission periods.
5. Meteorological bulletins, radio notices for coastal traffic (Notices to Mariners) and local Radio notices (Notices to Mariners), announcing the fact previously on frequency 2182 kHz, 4125 kHz Simplex and 4419.4 kHz (C.421) Duplex.
6. Meteorological bulletins, radio messages for coastal traffic (Notices to Mariners) and local Radio messages (Notices to Mariners) announcing the fact previously on Channel 16 (156.800 MHz).
7. For services being offered, listening and working frequencies see Nomenclature of Coastal Stations.
8. Radiogoniometric station on VHF.
   (Station of Radiodetermination which uses the receipt of radioelectric waves to determine the direction of a station or of an object).

COLONIA: 34.28 S. 57.51 W. (See Plan)

LOCATION: Lat. 34° 28′ 28″ S., Long. 57° 50′ 38″ W.
On the River Plate 92 miles from Montevideo and 27 miles in a straight line E.N.E. of the City of Buenos Aires.
DOCUMENTS: Vessels entering the port must provide the following: Machinery, Hull, Safety, Freeboard and Derat Certificates, Stores List, Crew List, List of Passengers or Negative, Cargo Manifest, Declaration of Transport of Inflammables or Explosives, or where not carried a certificate to that effect.
PILOTAGE: No port or river Pilot is required for coasting vessels.
ANCHORAGES: In the Roads with a depth of 10 ft.
In the foreport with a depth of 8 ft., for shallow draft vessels.
RESTRICTIONS: The port will be closed for all vessels when the wind intensity is 70 knots or more. Also all operations are prohibited in the port shelter area.
The port will be closed for vessels of all kinds when the visibility is 500 m. or less due to fog, squalls, etc. Under these conditions vessels are prohibited to carry out any kind of operation within the shelter area.
HEALTH: Inspection is by a Health Doctor, and is carried out jointly with Immigration, Police, Customs, and Naval Prefecture officials.
RADIO: VHF equipment. Operates permanently on Channel 16.
VHF: All communications are carried out by VHF, the call sign being CWC 23 and that for working Control Colonia Prefecture. Channels used are 6, 8, 9, 11, 12, 14, 15, 16, 25, 26, 68, 69.
The Control Centre listens out permanently on Channel 16, whose frequency is 156.800 MHz.
RADAR: Range 16 miles. Does not give service to vessels.
TUGS: There is no tug service.
BERTHING: Union Quay: Running East to West with a length of 178 m., equipped at its two ends with ramps for landing and shipment of cars and lorries.
Coastal Quay: Running North to South, with a length of 111 m.
Ultramar Quay: Running North to South, with a length of 142 m.
These quays are provided with water hydrants and electricity supply points, the Coastal Quay also having a fuel point for operation of tankers.
Warehouses: For general cargo, the National Port Administration has warehouses within the port area.
CRANES: On the Overseas Quay there are two mobile cranes on rails, with 3 tons and 5 tons capacity.
STEVEDORES: There is no permanent service of stevedores, and such requirements must be applied for in advance by the ships' agents at Nueva Palmira.
MEDICAL: 300 m. from the port is the local hospital with a First Aid room and ambulances.
FRESH WATER: Supplied by the National Port Administration.
FUEL: Supplied by road tankers.
FIRE PRECAUTIONS: There is a fire fighting pump with a pressure of 8 kg./sq.cm.
TANKERS: Operate at the Coasting Quay with a watchman and fireman on board.
CONSULS: Argentina and Italy.
REPAIRS: Not possible.
GANGWAY/DECK WATCHMEN: There is a watchmen servic administered by the Prefecture of Colonia.
CUSTOMS ALLOWANCES: Tourists from neighbouring countries ma bring in: 5 kilos of food, 1 carton of cigarettes, 1 litre of alcoholic drin
No products derived from meat can be brought into the country (col meats, sausages, etc.), nor any plants or seeds.
REPATRIATION: Only to Buenos Aires.
AIRPORT: Located on Highway 1 linking Colonia with Montevideo, 7 km from Colonia.
TIME: Local time is GMT minus 3 hours.
HOLIDAYS: 1st and 6th January, Carnival, Touriso, 19th April, 1st May 18th May, 19th June, 18th July, 25th August, 12th Octobe 2nd November, 25th December.
POLICE/AMBULANCE/FIRE: Police Tel: 2962; Hospital Tel: 2994; Fir Brigade Tel: 2577; Prefecture 2020.
TELEPHONES: No arrangements for connecting the telephones o board vessels, but there are telephone boxes for communications withi and outside the country.
SERVICES: Bureau de Change via a branch of the Banco Republica There is a bus service with international service, working in conjunctio with arriving and departing vessels, connecting Colonia with the rest o the country.
Post Office: 200 m. from the port.
Mooring Gangs: Provided at the request of the ships' Agents by th National Port Administration.
AUTHORITY: Prefectura del Puerto de Colonia.

FRAY BENTOS: 33.06 S. 58.18 W. (See Plan

LOCATION: Km. 95 River Uruguay. On the right bank of the Rive Uruguay from seaward 213 miles by river from Montevideo or 145 mile from Buenos Aires.
PORT LIMITS: A vessel is considered to have arrived when she leave the channel and goes to the berth.
DOCUMENTS: Same requirements as for the port of Montevideo.
PILOTAGE: Obligatory, except where bilateral national agreement exist concerning navigation of the River Uruguay, and the Pilot must b taken on board in Montevideo.
ANCHORAGE: Between the channel and the port.
RESTRICTIONS: When the port is closed due to bad weather, also th draft depends upon the depths of water in the "El Marques" and "Punt Caballo" passages.
MAX. SIZE: Controlled only by the draft of the vessel and the length o the berth. Max. draft 26 ft. (FW), water depends upon the river conditions
HEALTH: Same requirements as for Montevideo.
RADIO: The call sign is CWC 25 "Control Fray Bentos Prefectura".
VHF: Port works on the following frequencies:
a) Channel 16: frequency 156.800 MHz; Usage: Calling-up an safety.
b) Channel 9: frequency 156.450 MHz; Usage: Port operations.
c) Channel 11: frequency 156.550 MHz; Usage: Central Contro broadcasts on safety.
d) Channel 13: Frequency: 156.650 MHz; Usage: Same as Channe 11.
e) Channel 15: frequency: 156.750 MHz; Usage: Meteorologica bulletins and Notices to Mariners.
f) Channel 17: Usage: P.N.N.: Maritime Safety.
g) Channel 68: Usage: P.N.N.: Maritime Safety.

Furthermore, on entering the area between Km. 6 and Km. 165 of th River Uruguay, the vessel must communicate to the Fray Bento Prefecture Control:
a) flag.
b) name.
c) destination.
d) position.
e) course and speed.
f) max. draft.

And on leaving this area:
a) accident or fire occurred on board the vessel.
b) whether vessel has given assistance to another vessel which i damaged or in difficulties.
c) whether she has sighted any dangerous object to navigation an which is not marked.
d) any serious reduction in visibility.

RADAR: None.
TUGS: None.
BERTHING: There are two types, quays for deep-sea vessels and fo coasters, both being of cement and wood.

Type	Deep-sea	Coasting
Length	125 m.	250 m.
Direction	East – West	N.W. – S.E.
Average depth	7 m. – 8 m.	5 m. – 6 m.
Signalling lights	Green light – West side Red light – East side	
Fresh water	2 connections	3 connections
Electricity	1 point A.C., 3-phase 220 V. South side quay in shed 3 points 220 V. D.C. (cranes)	3 points 220 V. D.C (cranes)

Also there is the Anglo Quay with a maximum depth of 26 ft., normall used for meat.

CRANES: There are in the port 3 cranes of 3 tons each and 1 of 5 tons which can move about the port. It is possible to use ship's derricks and shore cranes at the same time.
BULK HANDLING FACILITIES: There is a silo with a conveyor belt, having a storage capacity currently of 14,500 tons, and the conveyor has a loading or discharge rate of 100 t.p.h. See "Developments".
SPECIALISED CARGO HANDLING FACILITIES: None.
BRIDGES: None.
STEVEDORES: Can be requested in advance or when the vessel arrives in port. The work is controlled by the following time table: order 0630 hrs., commence work 0700 hrs.; order 1230 hrs., commence work 1300 hrs.; order 1830 hrs., commence work 1900 hrs.
MEDICAL: Doctors and hospital facilities available.
DENSITY: 1000.
FRESH WATER: On the Deep Sea Berth there are 2 connections and on the Coasting Quay there are 3 connections controlled by the ANP. Cost of U.S. $1.20 per 1,000 litres.
FUEL: Not available.
FIRE PRECAUTIONS: Fire Brigade present.
CONSULS: Argentina, others at Montevideo.
REPAIRS: Only minor repairs can be carried out.
DRY DOCKS: None.
SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Same as for the port of Montevideo.
HATCHES: If steel, handled by vessel's crew. If wooden, handled by stevedores.
REPATRIATION: See "Montevideo".
AIRPORT: None, only Montevideo.
TIME: See "Montevideo".
HOLIDAYS: The following dates will be used as national holidays of a traditional character:

1st January; 6th January; Monday and Tuesday of Carnival Week; the 6th week following Carnival, which will be called Tourism Week; 1st May; 2nd November; 25th December.

The following dates will be celebrated as national holidays as they are linked with patriotic exaltation and commemoration.

19th April; 18th May; 19th June; 18th July; 25th August; 12th October.

With regard to the holidays of 1st May, 19th April, 18th May, and 12th October, these will follow the undermentioned plan:

(a) If they occur on Saturday, Sunday or Monday, they will be observed on those dates.

(b) If they occur on Tuesday or Wednesday they will be transferred to the immediately preceding Monday.

(c) If they fall on Thursday or Friday, they will be transferred to the Monday immediately following.

POLICE/AMBULANCE/FIRE: National Prefecture: Tel: 321. Police: Tel: 201. Fire Brigade: Tel. 35. Hospital: Tel: 533.
TELEPHONES: Not possible.
SERVICES: None.
SHORE LEAVE: See "Montevideo".
IDENTIFICATION: Seaman's Book sufficient.
DELAYS: Normally there is no delay.
DEVELOPMENTS: Increase in the storage capacity of the silos of the Ministry of Agriculture and Fisheries by 5,500 tons, and increase of the capacity of the conveyor belt to 400 t.p.h.
AUTHORITY: National Port Administration, Herrera and 25 de Mayo, Fray Bentos, Uruguay. *Tel:* 284.

JOSE IGNACIO: 34.54 S. 54.43 W.

SBM: Position Lat. 34° 53′ 43″ S., Long. 54° 42′ 45″ W.
PILOTAGE: Compulsory. Pilot boards at the Fairway Buoy in position Lat. 34° 57′ 14″ S., Long. 54° 40′ 06″ W.
RADIO/VHF: Call sign "Control Punta del Este", Continuous watch on VHF Channel 16. Intership working on Channel 6.
GENERAL: ANCAP have installed a Single Buoy Mooring, 3,600 m. from the shore in 16.8 m. (55 ft.) depth of water. Vessels of 150,000 d.w.t. can be handled and the average rate of discharge of crude oil is 5,000 cu.m./hr.

The shore terminal receives, stores and pumps the crude to the refinery at Montevideo.

A River Pilot must be ordered from Montevideo for securing to the buoy, and he remains aboard until the vessel sails.

Five days before arrival, Agents must request Free Pratique from the Health Authorities in Montevideo, and the Customs, Prefecture and Immigration Officials, from Punta del Este.

AUTHORITY: Prefectura del Puerto de Maldonado, Calle 8 y 13, Punta del Este (Maldonado), Uruguay. *Tel:* 41884, 41967. *Contact:* Port Captain.

MONTEVIDEO: 34.55 S. 56.13 W. (See Plan)

Also see "General" at beginning of Uruguay section.
APPROACHES: The Roads of Montevideo consist of the Outer Roads situated to the South of the bay and Inner Roads situated outside the Western breakwater.

Both anchorages are very exposed and vessels are recommended to enter the anteport.

The entrance channel has 36 ft.; the channel to Ancap's wharf (La Teja) 30 ft. 6 in. Basins 1 and 2 have a depth of 31 ft., and the River Traffic Basin, 15 ft. These depths depend on dredging being maintained, but even so vessels often "drag" when on the higher marks; the bottom is fine soft silt.

DOCUMENTS:
Health:
- Maritime Declaration of Health.
- 1 List of Passengers Disembarking.
- 1 List of Crew Members.
- 1 Derat Certificate.
- 1 List of Crew International Vaccinations.

Immigration:
- 1 Copy of Crew List.
- 1 Lists of Passengers Disembarking.
- 2 Copies of List of Passengers in Transit.

Police:
- 2 Copies of List of Passengers Disembarking.
- 1 Copy of Crew List.
- 2 Lists of Passengers in Transit.

Prefecture:
- 2 Lists of Passengers in Transit.
- 1 Visaed Copy of List of Passengers with Port of Origin.
- 2 Non-visaed Copies of List of Passengers.
- 1 Passenger List – or Negative – from all ports visited.
- 1 Non-visaed Crew List.
- 1 Cargo Manifest for Montevideo.
- 1 Manifest for Cargo in Transit.
- 1 List of Inflammable Cargo or Hazardous Goods – visaed or straight.
- 1 List of Vessel's Data.

Customs:
- 1 Visaed Manifest
- 1 Copy of Ballast loaded at each port.
- 1 Negative discharge statement for each port.
- If there is no Consul in previous ports, the last port where there was one.
- 2 Stores Lists.
- 2 Lists of Cigarettes and Whisky.
- 2 Lists of Personal Effects.
- 3 Lists of Bunkers on Arrival.
- 1 copy of Passenger List for those disembarking, or negative, and their baggage in the same list (drawn up and signed by the passengers themselves).

Agents:
- 2 Lists of Passengers Disembarking.
- 2 Lists of Passengers in Transit.
- 2 Crew Lists.
- 2 Stores Lists.
- 2 Manifests, including Inflammable Cargo.
- 2 Cargo Plans.

NOTE: The manifest must have a special section with all effects in transit or otherwise, for the free zones of Colonia and Nueva Palmira.

Crew Lists, amended Crew Lists and Inflammable Cargo Lists must be visaed at ports of sailing or loading.

ANTEPORT: The Anteport is to the North of the entrance, between the breakwaters, and has a depth of 33 ft. – 36 ft. Sufficient room for 10 vessels, depending on size.
PORT: The port is formed by the North side of the Montevideo Peninsula and the "Dique de Cintura", a breakwater running parallel to the coast, about 870 m. distant.

It consists of 3 basins, 2 of which are for ocean-going vessels and 1 for river traffic.

Basins 1 and 2 have a depth of 33 ft., and the basin for river traffic 15 ft.

PILOTAGE:

1. The Pilot must be requested via the Agent 24 hours in advance, giving ETA in the roads by W/T (Cerrito Radio – CWA on frequency of 500 kHz). It is not possible to elect a Pilot for the area of the port of Montevideo, except where the vessel exceeds 10,000 tons.

2. On entering into the system of the Control Centres, communication must be made with them, giving the information laid out in the "Basic Rules of the System of Control and Information of Maritime Movements". See "Control" in General Section before first Uruguay port.

3. By VHF on the Channels stipulated in "Basic Rules of the System of Control and Information of Maritime Movements".

4. Channel 11 must be used to communicate with the pilot vessel. The vessel is a powered craft painted reddish orange, with white deckhouse with the inscription "Practicos". During daylight hours, it flies the pilot flag, HOTEL (white and red), and at night it is necessary to have white and red lights indicating "I have a Pilot on board". Where a vessel does not have VHF, light signals must be used to communicate with the pilots' launch.

Should this launch be out of service, Pilots are transported by tugs of A.N.P. and/or BEYLA.

5. The Pilot will await the vessel near the Axis Buoy located at Lat. 35° 00′ S., Long. 56° 14′ W.

6. In the event of bad weather the vessel must anchor near the Axis Buoy.

7. To take the Pilot on board, the gangway must be positioned on the side which gives most advantage *vis-a-vis* wind and sea.

ANCHORAGE: Vessels may anchor near the Axis Buoy with a draft of 30 ft. at zero tide. The sheltered anchorage is located in the foreport inside the shelter of the breakwaters. To gain access to it, the Pilot must be on board and the permitted draft will be that specified previously.

RESTRICTIONS:

1. The port is closed when winds are up to 60 km.p.h. However, up to 80 km.p.h. the Prefecture may authorise manoeuvres. The port is also closed when there is fog, channel obstruction or any other problem which may make manoeuvring difficult.
2. Vessels will not be handled when there is serious damage to engines, hull or rudder.

MAX. SIZE:

1. The largest vessels operating in the port, are of the LASH type, with dimensions approx. as follows:
Overall length 272.22 m.; Beam 30.48 m.; Draft 28 ft.
2. Tankers which berth at the inflammable dock A.N.C.A.P.:
Overall length: 241.50 m.; Beam 32.33 m.; Draft 28 ft.

With regard to the dimensions of the vessel, the state of the tide and time will be considered, the Pilot will advise the Master of the best measures to adopt.

Report: March 1982.

Max. draft to reach Montevideo safely is 31 ft.

HEALTH: The procedure is as follows:

1. Request the Owner or Agent to obtain Free Pratique which will be done via Cerrito Radio Station – call sign CWA.

In the event of there being any suspected illness or fever on board, the vessel must anchor in the roads to await instructions, at the same time communicating this to her Agent/Owner.

RADIO: Cerrito Radio Station CWA operating on 500 kHz, 421.5 kHz, 4346 kHz, 6434.5 kHz, 8602 kHz, 12750 kHz, 17208.8 kHz and 22563 kHz.

Timetable for broadcasting information to Mariners:

	Frequency	*Times*
Cerrito	4,346 kHz	1100 hrs.
CWA	8,602 kHz	1600 hrs.
	12,750 kHz	2100 hrs.
	16,871 kHz	
Sodre (CX 6)	650 kHz	0900 hrs.
Coastal Station		
Punta Carreta	2,768 kHz	1103 hrs.
CWD		1603 hrs.
		2103 hrs.

RADAR: Port Radar Control available. Additional coastal radar stations to be installed.

VHF: The Control Centre has a range of 60 miles on VHF. It also effects communications by "Phone-Patch" between the vessel and or Agent or Owner; this, from their office or private address.

All the operations of the Centre of Control and Information of Marine Movement of the Port of Montevideo are set out in the booklet "Basic Rules of the System of Control and Information of Maritime Movements".

On entering waters of port jurisdiction, communication must be made with La Paloma Control, then Punta del Este Control and the Centre of Maritime Control of the National Naval Prefecture.

TUGS: 8 tugs owned by Port Authority, 1×4,000 h.p., 1×1,1950 h.p., 1×1,680 h.p., 1×1,100 h.p. and 4×500–700 h.p. Beyla S.A. (Private) operate 5 tugs of 250 h.p.–750 h.p. Tugs come alongside in the foreport. Lines are to be supplied by the vessel, and this is not optional. In the event that the vessel has no tug cable, this will be supplied by the tug at a cost of approx. U.S. $500 (as per tariff TM/6).

BERTHING: The berth will be allocated by A.N.P. and is to be requested by the Agent. Vessels may berth or unberth at any time of the day or night, except when the port is closed or due to lack of available berths. Generally, there are fenders placed along the berths. In the event that the vessel requires this service, it must be requested in advance via the Agent.

When berthing or unberthing, the gangway must not be in position due to the proximity of the cranes.

Anteport: 7 anchorage berths in 28 ft. depth. However in practice there is rarely room for more than 5 vessels to anchor. Basin No. 1: 7 berths, 28 ft. to 33 ft. depth alongside. Basin No. 2: 4 berths, 28 ft. to 33 ft. depth alongside. La Teja: Ancap basin with berths for 2 tankers 30 ft. depth in basin and entrance channel.

Berths are allotted by the Port Authorities in the order of arrival of the vessels and according to their category, as follows:

1. Mail vessels.
2. Regular Line vessels carrying immigrants.
3. Cargo vessels.
4. Sailing vessels.

The Authorities allocate the deposit at which vessel must discharge or load.

Port Authorities give preference at Deposit No. 10 to ships operating with refrigerated cargo from this Deposit; and at Deposit No. 11 (Florida Wharf) to tankers discharging to the pipe-line situated there. Conditional that they vacate the berth within 2 hours' notice, to permit berthing a preference vessel, other ships may operate at either berth.

Muelle de Escala: On the pier head, formed by the Southern side of the River Traffic Basin, and running Westwards, a quay has been built, known as "Muelle de Escala", 288 m. long, originally constructed for berthing passenger liners and war vessels, but now used as a container terminal. A fixed heavy lift boom capacity 200 tons is placed at the East end.

The berth is very exposed to wind and swell, and Masters are recommended to take every precaution to ensure their vessels are strongly moored and a lookout kept for changes of weather which, locally, are very sudden.

The depth of water alongside depends on dredging, but generally is over 33 ft.

1×40 tonne container gantry crane installed in 1986.

Also see "Developments".

River Traffic Basin: This basin is situated on the Western side of Pie "A". It is 400 m. long and has a passenger landing station on one side The opposite side of the basin is used by the Navy.

2 warehouses, called Warehouse "A" and Warehouse "B", have bee built on the East side of this basin and are serviced by 3 electric cranes In addition, there are on the quay a 1.5 and 6 ton steam crane, whic are employed when necessary.

These berths can only be used by light-drafted vessels, as depth o water is around 16 ft.

Basin No. 1: This basin is situated between piers "A" and "B". It entrance between the "Dique de Cintura" and the pier head "A" is abou 150 m. wide. It encircles a total mooring space of 1,093 linear metre and 7 vessels can comfortably berth along the quay walls.

Pier "A" is 382 m. long on the West side; 306 m. on the East side and 50 m. wide at the Northern pier-head.

On this pier 2 brick and concrete warehouses, Nos. 1 and 2, have been constructed, consisting of a ground floor, 3 storeys and a basement.

On the City side of Basin 1, length 493 m., there are 3 bric warehouses, numbered 3, 4 and 5, consisting of a ground floor o between 17,800 cu.m. and 19,600 cu.m. capacity.

On the Western side of Pier "B" facing Basin No. 1, there are 2 bric and concrete warehouses, Nos. 6 and 7, with a ground floor and 1 store having a capacity of 30,174 and 33,140 cu. m. respectively.

In Basin No. 1, Berths Nos. 1, 2, 3, 4 and 5 are generally used fo the discharge and/or loading of liners running to timetable.

Depths alongside vary, as it depends upon dredging.

Basin No. 2: This basin is situated between Pier "B" and the foot o Florida Street. The entrance to this basin is also about 150 m. wide. I has a total mooring space of 722 m. and it can accommodate 4 vessels

Pier "B" is 294 m. long on the Western side, 328 m. long on the Eastern side, 148 m. at the Northern pier-head and 13 m. wide on the bend at the Western corner of the pier-head.

At the Northern end of pier-head "B", livestock is embarked. This berth is also used for general cargo operations in times of congestion Moorings must be strong and carefully watched as the berth is very exposed to wash of passing vessels.

There are 2 warehouses on this pier, numbered 8 and 9, facing Basin No. 2, built of brick and concrete, with a ground floor and 1 storey and with a capacity of 33,320 cu.m. each. Warehouse 11 has 3 cold storage rooms with a total capacity of 26,000 cu.m. for storage of frozen meat chicken and fish products at −30°C.

Depths of water alongside vary, depending upon intensity of dredging but are generally 28 ft. to 30 ft.

Coasting Quay Wall: From Florida Street to Mole F, which is the end o the Port, and over a distance of 1,900 m., there is a quay used fo coastal craft, and on part of which a fish-receiving and industrialising plant is being opened; depth in this zone is 15 ft.

A floating dock is also anchored in the N.E. part of this section.

Basin For Inflammables "La Teja". (Also see "Tankers".)

On the North side of the Bay, the National Administration of Alcohol Cement and Fuels, known as A.N.C.A.P., has a basin with concrete walls for the discharge of tankers arriving with oil to their consignment This basin is known as the "Darsena de Inflamables", and has 1 bert for tankers on the North side in 30 ft. 6 in. and for liquid gas discharge on the Southern side, max. draft 22 ft., while on the West or land side there is a berth for coastal vessels. Width of the basin here is 147 m. which is the same as the entrance, while the South berth is 248.75 m long. On the North berth the jetty protrudes 34 m., and is 96 m. long.

Vessels berth bows to shore, and on leaving turn immediately outside the basin, if draft is less than 22 ft., otherwise they must reverse bac down the narrow access channel.

The North berth has separate lines for Crude, 10 in. and 12 in maximum pressure 105 lbs. Fuel oil, 8 in. and 10 in. with a pumping rate of 300 t.p.h. at temperatures between 40°C and 70°C. Diesel/Gas Oil/ Kerosene 6 in. connections and pumping rate of 300 t.p.h. Naptha 8 in. Lube oils 6 in. lines, 150 t.p.h. and a line for Alcohol 6 in. There is no line for Gas. There are 3×5 ton electric cranes and 1×12 ton diese crane. Coal and Cement are also discharged at this berth, the coal to Decauville cars and the Cement to trucks, handling 750 tons per 8 hou day, with 5 gangs.

At the South berth the oil lines are identical, and there is also a 6 in connection for loading or discharging Super Gas, at 200 t.p.h. There are no cranes at this berth.

The Western berth has the same installations except for Super Gas and Alcohol.

There are 3 in. water lines at each berth, and use of 2 tugs is essentia for berthing or unberthing. At the North berth, vessels fully loaded ofte lie up to 15 m. out from the quay, owing to accumulation of mud, and will gradually close in as the vessel lightens. Access gangways are placed by the Port.

Railway Connections: Basins 1 and 2, River Traffic Basin and also Deposits "A" and "B" have railway lines on all sides, belonging to the Port Administration, which are connected with the main lines of the Uruguayan State Railways.

The Port Administration has 2 electric locomotives used exclusively in the port.

Cranes: The Port Administration has 2 heavy-lift floating cranes o 80 tons and 200 tons capacity, a mobile crane of 20,000 kilos, also 46 movable electric cranes of 5,000 kilos each; 5 movable electric cranes of 1,500 kilos each; 1 fixed electric crane of 4,000 kilos; 33 o the aforementioned 5,000 kilos cranes, are placed alongside the quay walls for vessel's operations.

There are also 24 electric trolleys of 1,500 kilos, and one of 1,000 kilos There is a fixed crane for 200 tons on Muelle Escala.

Fiscal Lorries: The Port Administration has purchased special lorries and 12 auto cranes for receiving cargo, as the railway wagons available are not sufficient to carry all the cargo that is at present being handled at this port.

Loading Operations: Loading is effected from carts, lorries and/or wagons and the cargo is hoisted on board with the cranes. Cargo is also loaded from lighters.

Grain Loading: There are 2 mobile grain vacuvators, each of which can load bulk grain at around 60 t.p.h, also 10 smaller machines that can each load around 20 t.p.h.

Fumigation: Montevideo is the only port in Uruguay at which vessels can fumigate, using the cyanide method. The tariff is per cubic metre fumigated over a basic charge which varies according to n.r.t. There are surcharges for overtime.

Disinfection of Mail Bags: To avoid delay through disinfection mail bags can be fumigated on board in a 10% formalin solution and kept in a closed space for 4 hours before vessel gets into port. The closed space will be opened in the presence of a Health Officer who will verify the use of formalin. When in doubt, fumigation will be carried out again and exposed for 2 hours.

Height of Quay above Water: Tide being very small, the height of quay above water only varies from 8 ft. – 10 ft. at LW to 10 ft. – 12 ft. at HW. Wind influence is felt even in the bay, as a South wind will raise water as much as 5 ft., or a Northerly wind reduce it 2 ft. or 3 ft.

PORT EQUIPMENT: *Shore Cranes:*

Berth No.	*No. of Cranes*	*Capacity tons*	*Type*
Muelle de Escala	1	40	Portainer
	1	200	Derrick (fixed)
A – West	3	5	Demag
A – East (1/2)	7	5	Skoda
3-4-5	9	6	Duro Felguera
B – West (6/7)	2	40	Takraf
	4	12.5	Takraf
B – (Front)	4	5	Demag
B – East (8/9)	9	5	Demag
11 – 12	5	6	Duro Felguera

Mobile Cranes/Fork Lifts:

Type	*Capacity tons*	*No.*	*Type*
Fork Lift	2	56	Komatsu
Fork Lift	1	27	Komatsu
Fork Lift	3	10	Komatsu
Fork Lift	12	2	Komatsu
Fork Lift	2	16	Toyota
Fork Lift	1	10	Toyota
Fork Lift	4.5	2	Clark
Fork Lift	28	5	Kalmar (with spreader)
Fork Lift	12	3	Kalmar
Container Crane	60	4	Bellotti
Mobile Cranes	40	2	Poclain
Mobile Cranes	20	2	Poclain
Mobile Cranes	30	1	Bucyrus
Mobile Cranes	1.5/6	13	
Container Trucks	50	12	

STEVEDORES: Working hours: 1st shift, 0700 to 1300 hrs.; 2nd shift, 1300 to 1900 hrs.; 3rd shift, 1900 to 0100 hrs.; 4th shift, 0100 to 0700 hrs.

Normal capacity per gang per hour: *(a)* Rice – about 80/90 tons per gang/hour. *(b)* Meat – about 60/100 tons per gang/hour.

Overtime is compulsory if port is congested.

Lavatory Conveniences for Shore Labour: Each vessel must furnish conveniences for all shore labour employed on board. Work has been stopped until such conveniences are installed. It is advisable, therefore, for vessels calling at Montevideo to be equipped with 2 spare lavatories, 1 for tally clerks and 1 for stevedores, etc.

DENSITY: This varies according to wind and tide (1006 – 1002). The degree of salinity (max. 10 gm. per litre) is broadcast daily in the weather reports by radio, and varies from fresh to brackish to sea water. Steady South winds give the highest degree of salinity.

MEDICAL: Any urgent case must be advised in advance. In normal cases, the Health Service Doctor in the port will visit. For this purpose there are Clinics and Hospitals with optional assistance. Vaccination Certificates are issued by the Port Health Service. There are also private health and medical services which give on-board treatment.

FRESH WATER: Fresh water is supplied by the Port Authorities at all quay berths. Request must be made through the Agents, vessels supplying their own hoses where possible. It is important that the water meter should be read together with the Port official both at connecting and disconnecting to verify the exact quantity. Loading rate 20 cu.m./hr. Water also available by barge (capacity 170 tons) loading rate 18 t.p.h. – 20 t.p.h.

FUEL: This can be taken on board whilst anchored in the foreport via two barges, one of 595 tons delivering at the rate of 250 to 350 cu.m./hr., the other of 310 tons at the rate of 200 to 250 cu.m./hr.

Also available from the Uruguayan tanker "Valiente" (capacity 1,337 cu.m. of fuel, rate of 700 cu.m./hr.) or 196 tons of water at the rate of 70 cu.m./hr. This service can be effected outside the port.

A.N.C.A.P. Information: All grades subject to confirmation, the request being made via the Agent 15 days in advance.

TANKERS: Dirty ballast can be discharged depending on whether or not there is a berth at La Teja, Inflammable Materials Dock. A.N.C.A.P. have the necessary reducers for any type of operation.

Diameter of pipes: Crude – 12 in.
Fuel oil – 8 in.
Dirty ballast – 8 in.

Berth depths: North Quay – 29.6 ft.
South Quay – 22 ft.
West Quay – 14 ft.

GANGWAY/DECK WATCHMEN: Shore watchmen are compulsory. Arranged by Agents. 1 required on deck and 1 for each gangway. Vessels carrying dangerous cargo must also employ a guard of the Prefectura.

Vessels calling for supplies only, for orders, in distress or to land sick crew members or to enter dry dock, need not employ Watchmen. Repairs afloat require a watchman, if they do not carry out commercial operations.

Shifts are of 8 hours, commencing at 0700 hrs. Vessels under repair, and those at ANCAP moles may fix 12-hour shifts, paying a shift and a half.

If special watchmen are required for goods or working equipment, application must also be made to the Union.

If watchmen are needed in the holds, same applies.

Regulations also require a watchmen in the holds wherever the ship has a crew member, cadet or officer permanently on watch to prevent pilferage. However, where ship's personnel are in the hold to watch the stowage of the cargo, no extra watchman is required. Masters should therefore, advise Agents if they intend to place crew members permanently in the holds during discharge, so that Agents can advise the Association before they make their claims.

Care must also be taken on arrival, since the watchman is on duty from 0700 hrs. on, whereas it may be necessary to place the gangway safety net, etc., before that time, so that Pilot may disembark.

Only those involved in this operation should go ashore. The Receiving Commission may ask for the gangway to be opened before 0700 hrs., which is in order, but no one else should use the gangway to avoid claims from the Union.

Vessels lying in the anteport must provide launches for the transport of watchmen employed.

IDENTIFICATION CARDS: The prefecture issues identity cards. Crew not allowed ashore without card.

Maua	Length	79.25 m.
	Length on stocks	74.42 m.
	Depth of water	12 ft.
	Width of pontoon	15.25 m.
	Capacity of operation	2,000 tons

REPATRIATION: There are facilities for exchanging crews.

AIRPORT: Located 30 minutes away by car. There are various regular services to all parts of the world.

TIME: GMT minus 3 hours. (However changes are possible).

HOLIDAYS: 1st January (New Year); 6th January (Epiphany); 3 days in February (Carnival); 7 days in March or April (Tourist Week); 1st May (Labour Day); 18th May (Battle of the Stones); 19th June (Artigas' Birthday); 18th July (Swearing of the Constitution); 25th August (Declaration of Independence); 12th October (Day of the Race); 2nd November (All Souls'); 25th December (Christmas Day).

On these days, work will always proceed when the Agent or Owner requires it or also if the Port Authority requires it, should there be a number of vessels anchored in the Roads awaiting a berth.

POLICE/AMBULANCE/FIRE: Port Police (Immigration): 95.21.51; Fire Brigade: 91.51.51 to 56 – extensions 139/337. Ambulance: 91.51.51 – extensions 272/382.

Prefecture of the Port of Montevideo: 95.21.27 – 95.21.77, 95.54.05, 95.52.01, 95.22.27, 95.24.27 ext. 07, 91.51.51 ext. 199, 91.93.03, 91.53.71 ext. 199.

TELEPHONES: There are services on all quays. Telephones can be requested by the Agent from the Port Authority.

SHORE LEAVE: Allowed.

DEVELOPMENTS: A container park and fish quay have been built alongside the Eastern Quay and in the Mantaras Zone respectively.

A battery of silos will be constructed at C.M.B. (between Warehouses 7 and 8) which will facilitate the loading and unloading of grain.

Report: 1981.

The National Port Administration (Administracion Nacional de Puertos) is building a container terminal with an area of 7 ha. close to the Muelle de Escala.

This berth is at present dredged to 10 m. Its length will be increased from the present 288 m. to 400 m. and the draft increased to 12 m.

The storage capacity will be a maximum 5,000 containers.

The berth will be equipped with 2 container cranes of 40 – 45 tons. Also all necessary equipment ashore for handling containers will be available.

A fishing berth of 320 m. has also been built with 6 m. draft.

SHIPMASTER'S REPORT: July 1983.

Documents: As per "Guide to Port Entry".

Pilotage: Compulsory. Pilot boards at Sea Buoy. 24 hours' notice required.

Anchorages: As per B.A. Chart 2001.

Restrictions: Max. draft 28 ft. Possible to depart/enter 24 hours a day.

Max. Size: Largest vessels using the port are LASH vessels, length 272 m., beam 30 m. – 40 m., max. draft 28 ft.

Health: Inform Agents of vessel's state of health and request Free Pratique.

Radio: Cerrito Radio Station.

VHF: Vessels must abide by Uruguay Regulations as per Radio Signals Volume 6, Part 2 otherwise will be subject to very heavy fines.

As soon as vessel is inside Territorial Waters, i.e., S.W. of a line bearing 128° from Chui Lt. and West of 50° 50′ W., they must report to the appropriate station on VHF.

Pilots and Port operate on Channel 16.

Tugs: Available.

Berthing: Vessel berthed at Darsena/Muella A. Least depth in channel from sea to berth was 30 ft., distance between sea and berth being 6 miles. Mean tidal range at berth is 2 ft. Nature of bottom at berth – mud.

Cranes: Sufficient quay cranes of 4 tons capacity available. One floating crane of 80 tons capacity available.

Equipment and storage available for breakbulk/palletised cargoes.

Stevedores: Stevedores were very helpful.

Medical: Doctor and hospital available.

Density: 1002.

Fresh Water: Available.

Fuel: Bunker fuel and diesel oil available.

Repairs: Can be undertaken.

Dry Docks: Available.

Surveyors: Lloyds' Surveyor based at the port.

Airport: Available.

General: Fresh provisions, meats, groceries and laundry services available.

AUTHORITY: Administracion Nacional de Puertos, Rambla 25 de Agosto de 1825 No. 160, Montevideo, Uruguay. *Tel:* 95-12-54. *Telex:* Naveanp Uy 22351. *Contact:* Ing. Euclides Cotignola, General Manager.

NUEVA PALMIRA: 33.53 S. 58.25 W. (See Plan)

LOCATION: Situated on East bank of Uruguay River, 155 miles above Montevideo. Km. 0 on River Uruguay.

DOCUMENTS: The documentation required is as follows:

- Cargo or Ballast Manifest.
- Negative Passenger List or list of passengers visaed by the Consul.
- Crew List.
- Stores List.
- List of Personal Effects.
- Tonnage Register.
- Consular Clearance.
- Maritime Declaration of Health.

PILOTAGE: The information required from vessels navigating within the area of the Port Control are:

- Time of entry and leaving the area.
- International call sign.
- Name of vessel.
- Flag.
- Estimated course.
- Latitude.
- Longitude.
- Port of destination.
- Estimated time at port of destination or other point of call.

The area appointed for effecting change of Pilots is the Port Roads. The Pilots arrive at the vessel in a launch 5.53 m. overall length, with cabin, painted orange, owned by the Pilots' Corporation of Uruguay.

ANCHORAGE: The area designated for anchoring is located within the roads and fore-port, depth being between 20 ft. and 24 ft.

RESTRICTIONS: There are no restrictions for berthing in the port, except those imposed by weather conditions (winds, etc.). Vessels berth without the aid of tugs.

MAX. SIZE: With regard to length and capacity of vessels, there is no stipulated limit but due account should be taken of the fact that the depth of water in the port is 24 ft.

HEALTH: The Health Authorities will require a Crew List and Maritime Declaration of Health. In the event of disease being detected on board, the Health Official will proceed to inform the Aid Centre who will arrange for a doctor to attend on board, with the vessel placed in quarantine or the patient will be transferred to hospital, depending upon the illness discovered. To date, no such occurrence has arisen in the port.

RADIO: VHF equipment with permanent listening out on Channel 16.

RADAR: There is no radar equipment.

VHF: All communications are effected by means of VHF equipment. The call sign is CWC 31 – "Control Palmira Prefecture", and the following Channels are used: 6, 8, 9, 11, 12, 13, 14, 16, 25, 26, 68 and 69. The station operates permanently on Channel 16, the frequency being 156.800 mHz.

TUGS: The service of a tug is not necessary for berthing vessels.

BERTHING: The port has the Official Quay and the quay owned by Cia. Navigen.

Official Quay: Length 240 m., length of the head 80 m., width in the centre 40 m.

Navigen Co. Quay: Length 234 m. It has a conveyor belt system 500 m. long, running 15 m. above the level of the water. Electrical operating system with a loading and discharge capacity of between 300 t.p.h. and 700 t.p.h., dependent upon whether cereals or ore is being handled.

CRANES: The Official Quay is equipped with 3 cranes of the National Port Administration. They are mobile cranes on rails. Two are for 3,000 kg., and the third is for 5,000 kg.

STEVEDORES: As soon as the vessel communicates the ETA at the port, the Agent will make all necessary arrangements for stevedoring services to commence work as soon as the vessel has obtained Free Pratique. These services will be made available dependent upon the tasks required to be fulfilled.

MEDICAL: The local Public Health Aid Centre is entrusted with furnishing any medical aid which may be necessary on board.

BULK HANDLING FACILITIES: There are no tanks, but there are warehouses for storing grain and general cargo. These warehouses belong to the National Port Administration and to the Free Zone, and are located within the port area.

FRESH WATER: Fresh water is supplied by the National Port Administration.

FUEL: There is a fuel storage depot within the port area, and should it be necessary to supply bunkers to a vessel, application has to be made to ANCAP who will supply via tanker trucks.

FIRE PRECAUTIONS: There are none, other than those of a routine nature.

CONSULS: There are none at local level. In the town of Carmelo, 21 km. from Nueva Palmira, there is the Consulate of the Argentinian Republic.

REPAIRS: Minor repairs possible.

SURVEYORS: None available.

GANGWAY/DECK WATCHMEN: The service of watchmen is not necessary, unless the vessel is carrying flammable cargo.

HATCHES: Opening and closing of hatches is normally carried out by stevedores.

CUSTOMS ALLOWANCE: Each crew member is permitted to carry out of the bonded ship's store, 5 kg. tobacco, 2 cartons of cigarettes and 2 bottles of wine.

CARGO GEAR: Normally, loading and discharge are effected by means of land-based equipment.

REPATRIATION: There are facilities for changing crews, and to effect any repatriation necessary. In both cases, the arrangements are carried out with the participation of the Immigration Authorities and the Maritime Agency concerned.

AIRPORT: There is the airport of Zagarzazu located between Nueva Palmira and Carmelo, approximately 15 km. from this town.

TIME: Local time is GMT minus 2 hours.

HOLIDAYS: 1st January, 19th April, 1st May, 19th June, 18th July, 25th August, 12th October, 8th December, 25th December. Holidays do not interrupt operations on vessels.

POLICE/AMBULANCE/FIRE: Police: Tel. 42, Ambulance: Tel. 82. No fire brigade.

TELEPHONES: It is not possible to have telephones installed on board vessels.

SERVICES: There are stevedoring services, Maritime Agents and Customs Clearance Agents.

SHORE LEAVE: Once Free Pratique is granted, there are no prohibitions for crew members going ashore.

DEVELOPMENTS: The lengthening of the head of the Official Quay by 200 m. to the North is planned. Grain Silo with capacity of 25,000 tons to be built.

AUTHORITY: El Sub-Prefectura de Nueva Palmira.

PAYSANDU: 32.18 S. 58.06 W. (See Plan)

LOCATION: Situated on the East bank of Uruguay River, 380 km. above Montevideo. Km. 204 on River Uruguay.

DOCUMENTS/PILOTAGE/HEALTH/RADIO: See "General" at beginning of Uruguay section.

RESTRICTIONS: River navigation controlled by depth in the passes at Almiron, Vera and Urquiza. Since river conditions vary from season to season, Agents should be consulted beforehand regarding available draft at any particular time.

ANCHORAGE: Off Montevideo.

MAX. SIZE: Up to 15 ft. draft fresh water, depending on river conditions.

TUGS: Available.

BERTHING: Grain Elevator Berth: 20 ft. depth alongside at zero tide. Coastal Berth: Length 300 m. Depth 11 ft. at zero tide.

ANCAP Pier: 1 berth for tankers, 30 ft. depth at zero tide.

There is 1×5 ton crane on the grain quay and 3×3 ton cranes on the coastal berth. Loading on the ANCAP berth is by lorry.

STEVEDORES: Working hours: 0800 – 1200 and 1430 – 1800 hrs. Saturdays: 0800 – 1230 hrs.

MEDICAL: All assistance available.

FRESH WATER: Available at all berths.

FUEL: By negotiating through the intermediary of the Customs Clearance Agent the required quantity is delivered.

REPAIRS: Minor repairs can be effected.

CONSULS: Local representation for Argentina, Brazil, Italy and Paraguay. All other Consuls at Montevideo.

GENERAL: Refer to "Montevideo" for all general information.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Vanuatu

PORT VILA: 17.45 S. 168.18 E. (See Plan)

PORT LIMITS: A line drawn between Pango Point and Devil's Point.
DOCUMENTS:
Last Port Clearance.
2 Crew Lists.
2 Passenger Lists.
2 Cargo Manifests.
2 Stores Lists.
Log Book, Derat and usual Ship's Certificates to be available for inspection.

PILOTAGE: Compulsory for all vessels over 60 m. in length. Pilot boards 2 miles West of the Fairway Buoy, on the leading lights. Pilot launch displays the Pilot (H) flag by day; by night, a red flashing light.
24 hours' notice of ETA to be given.

Telegrams/Telex for Pilot should be addressed to Harbour Master, Vila, or advise through Agents. ETA messages for night arrivals, weekends and public holidays must arrive during office hours, Monday to Friday. VHF watch is kept on Channel 16 during working hours. Contact normally made 2 hours before arrival at pilot station.

ANCHORAGES: When a vessel has to await a berth or tide, the Master may anchor in the main bay North of the leading lights (1,200 m. from lower lead) and well clear of vessels leaving Pontoon Bay; or as directed by the Harbour Master.

RESTRICTIONS: No restrictions except that no services will be provided after 2300 hrs. and before 0500 hrs., unless in emergency or by prior arrangements.

MAX. SIZE: Governed by berth size and max. LOA 250 m.

HEALTH: Pratique messages should be addressed to Harbour Master. If vessel not healthy, medical advice should be requested through Agents.

Pratique messages will not normally be responded to if the vessel is healthy.

RADIO: Messages or communications possible via Port Vila Coastal Radio. Call sign YJM.

VHF: Port and radio station keep watch on Channel 16 during working hours.

RADAR: No radar services.

TUGS: One tug available for berthing/unberthing. 780 h.p., 14 tons bollard pull.

BERTHING:
Main Government Wharf: Steel pile and concrete decking construction; with bollards 30 m. from each end of the wharf. Length of wharf 212 m, width 9 m. and depth 10.7 m. alongside. Loading/discharging by ship's gear.

Transit storage 2,000 sq.m.; open storage 1,000 sq.m. Can take Ro/Ro traffic.

Arammadi Wharf: Privately owned. Length 55 m., depth 8.2 m. alongside. Vessels of 150 m. length can berth safely. Ample open storage, but no closed storage.

Town Wharves: 2 small wharves on town waterfront, depth 2.5 m. alongside. Also see "Tankers".

CRANES: None available.

STEVEDORES: *Working Hours:* Monday to Friday: 0700 – 1100, 1300 – 1700, 1800 – 2300. Saturday: 0700 – 1500. Sundays and Public Holidays: No cargo work. Gangs to be ordered previous day by Agent.

MEDICAL: Government hospital with full facilities. Private doctors and dentists available. Arrangements may be made in advance with Agent by telex or on arrival.

TANKERS: Tankers anchor using a "Mediterranean moor" with 2 lines to the shore. Due to bar at entrance to bay, entry is made at HW only with controlling draft of 7 ft. plus height of tide. Max. size 1,500 d.w.t.

There is an overhead power cable between Iririki Island and the mainland with a vertical clearance of 23 m.

DENSITY: 1025.

FRESH WATER: Available at main wharf at a filling rate of about 38 t.p.h. At the Star Wharf fresh water available at a filling rate of about 2 t.p.h. Water is good quality and potable.

FUEL: Fuel can be supplied by Shell, Mobil and B.P. by road tanker.

CONSULS: Australia, France, New Zealand and U.K. are represented.

REPAIRS: Small repairs can be undertaken.

DRY DOCKS: None.

SURVEYORS: Classification Societies' Surveyors can be brought from Fiji and New Caledonia at short notice.

GANGWAY/DECK WATCHMEN: Not available or necessary.

OPENING/CLOSING HATCHES: Hatches are normally opened and closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 100 cigarillos or 50 cigars or 250 grammes tobacco. 2 litres of wine and 1.5 litres of spirits.

CARGO GEAR: Ship's gear used for loading/discharging. 11 forklifts from 2 – 20 tons, 1×22 ton flat-bed truck, 1 flat-bed truck with 19 ton crane, 1×8 ton tipper truck, 1 prime mover, 1×20 ton semi-trailer, 1×10 ton tilt trailer, 3×3 ton trucks and 1×20 ton container top lift frame (20 ft. containers) available.

REPATRIATION: Arranged by Agent.

AIRPORT: Bauerfield International Airport in Vila about 5 km. from port. Daily services to Noumea. Regular services to Fiji, Auckland, Sydney, Brisbane, Honiara, Papua New Guinea and Naura.

TIME: GMT plus 11 hours. GMT plus 12 hours from late September to late March.

POLICE/AMBULANCE/FIRE: Police tel: 2222; Ambulance tel: 2100; Fire tel: 2333.

TELEPHONES: Available on board at Main Government Wharf through Agent.

SERVICES: Diver available. Tinned, frozen meat and vegetables available, also bonded stores.

BANKS: Available.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not required.

REGULATIONS: No special regulations.

DELAYS: Only when more than one ship in port.

DEVELOPMENTS: The privately owned 50 m. wharf to be extended b 40 m. and strengthened for container handling. No date yet fixed fo commencement of construction.

SHIP SUPPLY SERVICE: Tug "Roimata" and pilot boat "Tekoni II" ca be used in an emergency for transport of personnel/essential stores There are various charter boat operators who can be mobilised throug the Department for Emergency Operations.

GENERAL: *Charts:* BA 1493 and 1494 cover this port.

AUTHORITY: Ports and Marine Department, P.O.Box 198, Port Vila Vanuatu, S.W. Pacific. *Tel:* 2339. *Telex:* Vangov 1040 N.H. *Contac* Captain Leith Nosak, Principal Marine Officer/Pilot. Tel. 3646 (home).

SANTO: 15.31 S. 167.11 E.

The Port of Santo is sometimes referred to by the name of the old tow 'Luganville', but nowadays the port and the town are usually calle 'Santo'.

PORT LIMITS: The Port of Santo includes that area of the Segon Channel bounded in the East by a line running due North from Blac Rock Point on Aore Island (from the 'Black Rock' on Chart BA 1736 This is known as Pointe Chapuis on French charts. It is bounded in th West by a line running due East from the Renee River on the island c Espiritu Santo.

DOCUMENTS:
Last Port Clearance.
2 Cargo Manifests.
1 Crew Declaration.
2 Animals Lists (Nil if none aboard).
2 Prohibited and Restricted Goods (Arms and Ammunition).
2 Lists of Ship's Stores (Cigarettes, Tobacco, Alcohol, etc.).
6 Crew Lists.
All the above can be provided on ship's paper.
The following is a Vanuatu form which can be filled in on arrival:
Ship's Report and Arrival Declaration (Vessel's Details).

PILOTAGE: Telegrams for the Pilot should be addressed 'Harbou Master Santo' or advice passed through Agents. ETA messages fo night-time and week-ends must arrive during office hours Monday t Friday.

Ships calling at Port Vila first, may pass ETA Santo through th Harbour Master at Vila.

VHF watch is kept during office hours on Channel 16 and for 2 hour prior to all advised arrivals. Pilot boat also watches Channel 16.

The pilot boat is a 12 m. boat with white hull and superstructure She has 'Pilot' in black letters on the cabin and exhibits a pilot jac She carries a red flashing light with her pilot lights at night.

The pilot station is 1 mile East of Black Rock Point at the Easter entrance to the Segond Channel. By day and in good visibility the Pilo may board or disembark at the South-Western end of the Segon Channel South of Georges Philippar Pass, though this is not normal an should be by prior arrangement.

Pilot ladder should be rigged in accordance with the S.O.L.A.S convention.

ANCHORAGES: Vessels may anchor anywhere in the Segond Channe except in the 'Prohibited Anchorage' close off the Main Wharf (which i shown as 'Dock No. 3' on Chart BA 1736). There is a patch with a leas depth of 14 fathoms 1 mile S.S.W. of the main wharf which i recommended for anchoring, especially for smaller vessels seekin shelter from the S.E. trades. A strong tidal current, normally up to 3 knots, runs in the channel and vessels should give plenty of scope.

RESTRICTIONS: There are no restrictions on entry. However, a stevedores do not work from 2300 hrs. to 0700 hrs., vessels due to arriv between these times are *recommended* to slow down, save fuel an arrive at the pilot station at 0530 hrs. or 0600 hrs. to berth in daylight

MAX. SIZE: Governed by berth size only.

HEALTH: Pratique messages should be addressed to Harbour Maste with ETA message. If vessel is *not* healthy Harbour Master will advis action to take. Pratique messages will not normally be responded to vessel is healthy. Vessels arriving from Port Vila do not require Pratiqu

RADIO: Message should be sent via Port Vila radio, call sign YJM.

VHF: A port watch is kept on Channel 16 during office hours Monda to Friday and from 2 hours prior to advised ETAs. Call 'Harbour Maste Santo'. The pilot vessel also watches Channel 16 VHF when on pilotag duty.

RADAR: No radar service.

TUGS: None, but one may be obtained in emergency from Port Vila.

BERTHING: Salt water Berth 140 m. long with a depth of 10.5 m. a LWS, and this is the maximum draft. Vessels can, and usually do overhang the ends of the wharf with lines on dolphins or bollards on th shore. Dolphins are situated 22.5 m. East and 35 m. West of the Whar

Also see "General".

CRANES: None.

BULK CARGO FACILITIES: Stevedores are currently interested i experimenting with bulk loading of copra (rather than from bags) an various methods are used to suit different ships. All methods, howeve require lifting by ship's gear. There is interest in the construction of small coconut oil mill, storage tanks for which are already constructe

BRIDGES: None.

STEVEDORES: Stevedores work 0700 hrs. to 1100 hrs., 1300 hrs. t 1700 hrs. and 1800 hrs. to 2200 hrs. Advice given at least the previou day by Agents should be sufficient. Stevedores do not work on Sundays or if avoidable on public holidays.

MEDICAL: Medical attention can be arranged after arrival and there is a hospital in Santo. However, medical treatment that is not of an emergency nature should be sought elsewhere.
TANKERS: Tankers berth at the main cargo wharf. The discharge line is 8 in. and the rate of discharge is 150 tonnes per hour.
DENSITY: 1025.
FRESH WATER: Vessels can take up to 500 tonnes if 2 working days' notice are given. Otherwise the maximum amount may be as little as 50 tonnes. Water is good though a little hard.
FUEL: Small quantities can be arranged by truck. Large quantities can be delivered by the 8 in. tanker discharge line, but must be by prior arrangement with Shell or Mobil. Santo is not normally a bunkering port.
FIRE PRECAUTIONS: All normal precautions only.
CONSULS: None.
REPAIRS: No shore facilities suitable for larger vessels.
DRY DOCKS: None. Slipway for vessels up to 50 m. length.
SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Not considered necessary.
HATCHES: Hatches are opened and closed by either crew or stevedores. Recommended that crew carry out this operation on copra loading ships.
CUSTOMS ALLOWANCES: (Per crew member) 200 cigarettes or 100 cigarillos or 50 cigars or 250 grammes tobacco. 2 litres of wine and 1.5 litres spirits.
CARGO GEAR: Ship's gear only. Ashore: 5 forklifts (from 2.5 to 22 tonnes), 2×3 tonnes flat trucks, 1×6 tonnes dump truck, 8 tractors, 100×2 tonnes trailers and 1×22 tonnes container carrier are available. No lighters available.
STORAGE: General cargo sheds of 6,000 cu.m.; 9,000 cu.m. of copra storage. Container yard for 200 TEUs. There is a minimum of 1,600 cu.m. of open storage.
REPATRIATION: Possible from Santo Airport via Port Vila.
AIRPORT: Santo International Airport is about 6 km. from town.
TIME: GMT plus 11 hours. GMT plus 12 hours from 24th September to 24th March.
HOLIDAYS: Holidays vary from year to year. It is recommended to seek advice of local Agents. It is not normally possible to work cargo on public holidays or Sundays.
POLICE/AMBULANCE/FIRE: Police tel: 222; Fire tel: 316; Health Officer tel: 419.

Police station is close to the wharf. There is no ambulance service. The fire service consists of 1 fire tender operated by Public Works Department. The Harbour Master has some hoses and a small foam generating machine stationed on the wharf.
TELEPHONES: There is a public telephone in the Post Office near the wharf.
SERVICES: None.
SHORE LEAVE: No restrictions.
REGULATIONS: No special regulations.
IDENTIFICATION CARDS: Not required.
DELAYS: Only for stevedores non-working times or when there is more than 1 ship present in the port.
GENERAL: Tidal stream in the Segond Channel can reach as much as 4 knots, the Westerly flood stream being predominant and the East going ebb stream occasionally absent. The flood stream can set in a North-Westerly direction at the main wharf, thus setting a vessel down onto the wharf and making an apparently simple berthing manoeuvre a little difficult. It is recommended that when S.E. trades are blowing, and a vessel has to berth port side to in order to stem the tide, the starboard anchor should be laid off whilst berthing with about 5 or 6 shackles leading 2 points for'd of the beam. This is to heave the bow away from the wharf on departure.
DEVELOPMENTS: Construction of a 130 m. long wharf to commence mid-1988.
AUTHORITY: Department of Ports and Marine, Box 148, Santo, Vanuatu. *Tel:* 739 (office); 454 (home). *Contact:* Captain M. Toa, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Venezuela

GENERAL:

BERTHING PRIORITY: The Venezuelan Ministry of Communications has decreed, through the Directorate General for Transport and the Port Captaincies, the following new docking priority system:

1. Vessels owned by the C.A. Venezolana de Navegacion or chartered by that company.
2. Venezuelan vessels belonging to private companies.
3. Vessels of other countries.

Previously, vessels chartered by the C.A. Venezolana de Navegacion did not get priority treatment and it is understood that, with these new priorities, the number of vessels with docking privileges has been tripled, thus resulting in greater delays for vessels operated by foreign companies.

SHIPMASTER'S REPORT: July, 1982.

You may wish to caution all seafarers who may in the future trade to Caripito, and the other similar jungle areas. The problem in this area used to be mosquitoes, but although they are still around, the problem that we have recently experienced is a moth locally known as 'Palometas'. One doctor referred to it as an insect 'Hylesia Canitia'.

My information is limited, due to language difficulties, but the problem is very real, and I cannot caution the unaware strongly enough to take precautions. The vessel has traded to Caripito frequently over the past two years, and this would appear to be the first experience as I can find nothing about these moths in writing and our first warning was given when an Agent saw some of these moths onboard. This type of moth appears suddenly from the jungle with no regular cycle, and like other moths is attracted at night by lights, be they from vessels, homes or berth installations. They are about *one inch* in length, their bodies about pencil thickness and filled with eggs. They flutter in vast numbers around the lights, and it would appear that the dust, pollen, hair or whatever comes off them, falls onto the ship's structure or persons nearby. They do not bite and therefore I assume the dust, breathed in or landing on the skin causes a red pimply rash which gradually spreads over the whole body. It affects everyone differently, some crew were covered in a very heavy bumpy red rash within a few hours of exposure, others only in small patches on the arms which spread over the body taking several days, but in all cases causing extreme discomfort due to the itching and constant desire to scratch. At first it was only crew who were on deck that were affected, but as I assume the dust was brought into the accommodation by clothing, fans and the moths which got past the doors, the engine and catering crew were similarly affected.

Over two thirds of the crew were treated locally within 24 hours, with injections, tablets, lotions & creams but this only brought temporary relief. Rashes picked up 10 days ago with the first incident are now clearing up, but fresh rash areas appeared when we visited the Caripito area 3 days ago. We are on a weekly schedule, and one would hope we will build up a resistance to this problem. The local people also suffer from this rash, but the ones I met only had a very light rash on arms, neck and body. They cannot say how long the moths will be present, varied reports of two weeks to months. However, we are now adopting the following anti-moth measures:

1. Put the air conditioning on recirculation, ensure all openings are closed.
2. At night when underway, blackout the vessel as much as possible. During the San Juan River passage to Caripito, navigation lights only situation if possible.
3. When you anchor in San Juan River to wait for the tide or berth at Caripito, blackout the vessel and allow no one outside if possible at night, anchoring or picking up by torchlight. Having anchor lights on at night is debatable, the local dredger does not.
4. Wash the vessel down completely at daybreak, and sweep all dead moths off the deck.
5. For night mooring/deck operations, have as few lights on as safely possible, all exposed crew should cover themselves completely, particularly around the neck area.
6. After clearing the Maturin Bar (river entrance) wash down the whole ship. The dust off the moths is still active days after leaving the area. Wash all filters of air conditioning units.

Knowing about this problem could have reduced exposure to what is an extremely unpleasant experience, and I have urged the local installation to include a warning in their Port Information Guide.

DOCUMENTS: *Prior to Arrival:*

Arrival Notice: The Agent must submit 24 hours in advance of the vessel's arrival, a letter-notification indicating date and time of arrival, name and nationality, name of Master, length, gross and net registered tonnage of cargo for the port, origin, destination, shipper and agency, in 16 copies, with the following distribution:

Captain of the Port, Customs (2), The National Institute of Ports-INP (3), Armed Forces of Cooperation, National Guard, Police Intelligence Service Bureau-DISIP, National Bureau of Identification and Alien-Immigration, Interpol, Ministry of Health and Social Welfare-Public Health Unit, Ministry of Agriculture and Livestock-Animal and Plant Health, Post Office and Chamber of Commerce.

Information on Cargo and Passengers for the Port: The agency must receive by airmail, sufficiently in advance, the following documents to be submitted to the authorities at least 24 hours before the vessel's arrival:

Documents	*Captain of Port*	*Customs*	*INP*	*Agency*	*Total*
Cargo Manifests(a)	–	1	3	3	7
Correction Letter to Manifest	–	1	–	1	2
Bills of Lading	–	–	2	1	3
Stowage Plan(b)	–	–	1	2	3
Cargo List	–	–	10	–	10
Container List	–	–	12	–	12
Dangerous Cargo List	2	–	1	1	4
Passenger List	–	–	–	1	1
Mail List	–	–	1	–	1

(a) As of January 29, 1979, the Cargo Manifest may be submitted on LAFTA/OAS Form 2, instead of on the Venezuelan Freight List (Sobordo).

(b) The Venezuelan Shipping Association is negotiating to have the stowage plan submitted to the National Institute of Ports on the vessel's arrival, instead of 24 hours in advance.

Request for Port Services: 24 hours before the vessel's arrival, the agency must submit to the Captain of the Port the request for pilotage towage and berthing.

At the same time, it must request permission to disembark and embark passengers and cargo and unload merchandise, on a form addressed to the Customs Administrator, with copies to the INP and the National Guard.

Additional Requests: The agency must draw up and submit to the National Institute of Ports, 24 hours before the vessel's arrival, 12 copies of the cargo index, a document corresponding to tally books.

On Arrival:

Type of Document	*Number and distribution of documents*						
Basic forms	*Captain of Port*	*Customs*	*INP*	*National Guard*	*Public Health*	*Others*	*Total*
General Declaration	1	1	1	1	1	2(a)	7
Cargo Manifest	1	3	–	–	–	–	4
Crew List	2	2	–	2	–	5(b)	11
Passenger List	1	2	3	2	–	5(b)	13
Ship's Stores List(c)	–	–	–	–	–	–	–
Crew Effects Declaration(c)	–	–	–	–	–	–	–
Maritime Health Declaration	–	–	–	–	1	–	1
Mail List	–	–	–	–	–	1(d)	1

(a) DISIP and Identification.
(b) DISIP, Bureau of Military Intelligence, Interpol, Identification and Tourism.
(c) Eliminated by the new Organic Law of Customs, March 5, 1979.
(d) Postal Service.

Additional Documents							
Clearance from last port	1	–	–	–	–	–	1
List of in-transit passengers	1	2	3	2	–	5(e)	13
Freighted Bills of Lading	1	1	–	–	–	–	2
Return Cargo Manifest(f)	–	3	–	–	–	–	3
Cargo Indices	–	2	–	–	–	–	2
Baggage Declarations(g)	–	–	–	–	–	–	–
Vaccination List	–	–	–	–	1	–	1
Narcotics List	–	2	2	1	–	–	5
Firearms List	–	2	2	1	–	–	5

(e) DISIP, Bureau of Military Intelligence, Interpol, Identification and Tourism.
(f) When a vessel returns to the country goods missing in unloading other vessels, it shall submit, in addition to the cargo manifest a return cargo manifest containing the data required for the manifest and the name of the vessels on which the goods were originally manifested (Organic Law of Customs).
(g) Eliminated by the Organic Law of Customs.

Prior to Departure:

Clearance Documents: At least 6 hours in advance, the request for the clearance permit must be submitted to the Captain of the Port.

Request for Pilotage: Also 6 hours in advance, or more, the request for pilotage must be submitted to the Captain of the Port.

AMUAY BAY: 11.46 N. 70.15 W. (See Plan)

OPERATORS: Lagoven, S.A.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA at least 3 days before arrival at Amuay Bay. During hours of darkness all vessels must identify themselves on arrival either by radio-telephone or Aldis, preferably the former.
2. If a ship originally cleared for another port (including some other Venezuelan port) is diverted at sea to Amuay Bay, certain information must be radioed prior to arrival to avoid heavy fine and or delays. See "Radio".
3. No dirty ballast may be pumped overside in port or in Venezuelan coastal waters. Ballast disposal facilities are available at Amuay Terminal.
4. The use of Venezuelan Government Pilots is compulsory for docking and for movements inside the bay.
5. The Venezuelan flag should be displayed at the mast-head during daylight hours by ships anchored and berthed in Venezuelan waters.
6. In addition to other clearance documents, 2 copies of an itemised list of articles in the ship's chest must be presented to Authorities on arrival.
7. Emergency fire signal is 5 long blasts on ship's whistle or siren. No other signal is to be given in the case of emergency.
8. Ratguards must be in place on all mooring lines.

LOCATION: The port of Amuay Bay is located on the Gulf of Venezuela on the West Coast of the Paraguana Peninsula, Venezuela. The sea buoy marking the entrance to the bay is located in Lat. 11° 44′ 25″ N. Long. 70° 14′ 50″ W.

DOCUMENTS: Inward Clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department. It is necessary that the following documents be ready on arrival:

Clearance from Last Port.
Ballast Certificate from Last Port.
Crew Lists (5 copies).
Passenger Lists (5 copies).
Baggage List (3 copies).
Lists of Personnel Effects (3 copies).
Stores Lists (3 copies).
Lists of Slop Chest (3 copies).
Sailing Permit (Zarpe).

Vessels arriving with cargo to discharge, will also require:

Manifest (Sobordo) (1 original and 2 copies from each loading port).
Bills of Lading, 1 original and 5 copies from each loading port.
Tally Books (6 from each loading port).
Commercial Invoices (3 from each loading port).

Although vessels proceed directly to Amuay Bay, clearance documents should be prepared showing the port as Las Piedras, Paraguana (Amuay Bay). Failure to observe this requirement may result in penalties up to a maximum of Bs.2,000.

Admeasurement Certificate: All ships calling at a Venezuelan port for the first time must be measured for tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, or any other certificate with which Venezuela is in agreement, which is used as a basis for recalculating tonnage under the Venezuelan Regulations, and is returned before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the owners. A fee is charged for this certificate, which is payable only on the ship's first call. Vessels registered in the following countries are excluded from the above regulations: Denmark, France, Germany F.R., Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

Vessels that were originally cleared for another foreign port, or another Venezuelan port, and were subsequently diverted at sea, should radio the following information to "Lagomar-Judibana" prior to arrival:

Vessel's name	Last port of call
Master's name	Port for which originally cleared
Vessel's flag	
Number of crew	Grade and quantity of cargo to be lifted.
Estimated time of arrival.	

This information is required in order to make in advance special arrangements for Inward Clearance, to avoid payment of fine.

Outward Clearance and cargo documents are delivered on board by the Marine Dispatcher. However, in order to obtain the sailing permit, a special form, delivered on board on arrival, must be completed, not later than 2 hours before sailing time. This form gives cargo and freeboard information by the Captain of the Port.

In the event the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents.

PILOTAGE: Pilots are employees of the Venezuelan Government and pilotage is compulsory for vessels entering or leaving the harbour. The Marine Department will arrange for Pilots to board all vessels as necessary.

The Pilot acts in an advisory capacity; the Master retains responsibility for the ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must forward through the Marine Department a full written report of the circumstances, for delivery to the Captain of the Port.

ANCHORAGES: For vessels awaiting berth, there is a good anchorage about 1 mile N.W. of the sea buoy in 8 to 12 fathoms with a sand and mud bottom. Ship Masters are requested not to anchor at a distance greater than 3 miles from the sea buoy.

RESTRICTED AREA: A restricted fishing area has been established by the Venezuelan Government which is prohibited for mechanically propelled vessels drawing more than 5 ft. This zone lies within the area off the Paraguana Peninsula from Punta Macolla, Lat. 12° 5′ 32″ N., Long. 70° 12′ 55″ W., to Punta Estanques (Los Taques), Lat. 11° 48′ 45″ N., Long. 70° 16′ 45″ W., and a line connecting the positions below indicated: Lat. 12° 07′ 40″ N., Long. 70° 14′ 25″ W.; Lat. 12° 03′ 15″ N. Long. 70° 19′ 23″ W.; Lat. 11° 49′ 25″ N., Long. 70° 21′ 50″ W.

HEALTH: *Sanitary Inspections:* A close control of veneral diseases has been put into effect by the Government Sanitary Office.

Immediately after docking a Sanitary Inspector will board the vessel and all Crew members will be checked before going ashore.

Those persons found with infection must be sent to the Government Anti-venereal Clinic for proper medical attention and return to vessel before sailing. 20 Bolivares per ship.

Shore passes will be granted to all healthy persons.

Masters are required to co-operate in this campaign.

MAX. SIZE: Length 1,000 ft.; draft 43 ft. Also see "Berthing".

RADIO: The cable and telegraphic address for the Lagoven S.A. at Amuay is "Lagomar Judibana". Radio messages to and from ships at sea are routed through "Shipward 2 New York" for retransmittal through Aircon system to Judibana (Amuay Bay).

Radio Notice of Arrival should be sent 72 hours prior to arrival at Amuay.

Ship-to-shore telephone: Radio-telephone listening watches are maintained on a 24-hour basis in the Marine Office on the following frequencies: 2182 kHz.; 156.8 MHz.

International telephone: International telephone calls are routed through Caracas, Venezuela. Telephone number is Punto Fijo area 069-51557. (It is usually difficult if not impossible to complete a call.) Telex: 54193 Lagoven.

Also see "Documents".

TUGS: Tug assistance is considered essential and is afforded all vessels entering, leaving or shifting in the harbour by 2 × 1,600 h.p. tugs. Disposition and manoeuvres of tug-boat are directed by the Pilot, who uses a "walkie-talkie" to convey orders to the tugs.

BERTHING: 4 finger piers provide 8 berths, numbered 1 to 8, from South to North.

Berth	1	2	3	4	5	6	7	8
Max. Arrival d.w.t. (m.t.)	70	92	24	44	16	30	16	30
Max. departure d.w.t. (m.t.)	112	112	48	48	38	38	94	94
Max. Draft (S.W.)	43′	43′	*37.6′	*37.6′	*37.6′	*37.6′	*37.6′	43′
Max. Length Ship	1000′	1000′	650′	700′	700′	700′	856′	856′
Max. Beam	Unl.	Unl.	Unl.	†	†	†	†	Unl.
Bow to manifold distance	495′	495′	300′	320′	330′	330′	340′	340′

Ballast line, fresh water and all grades bunkers at all berths.

*The max. draft will be increased to 40 ft.

†Max. beam permissible varies dependent upon the beam of vessel berthed on other side of the slip.

The use of an anchor when docking is permitted at all berths. It is considered prudent to have the outboard anchor hove-out prior to entering the harbour in order to facilitate speedy release if necessary while docking. The Pilot will advise whether the ship is to be berthed port or starboard side to the dock.

Products handled:

Berths No. 1 & 2: F.O., heating, heavy distillates, TJ-102, topped crudes, all crudes.

Berths No. 3 & 4: Lubes, F.O., LCT asphalts (penetration).

Berths No. 5 & 6: Naphtha, jet fuel, crudes, F.O., heating, MC/RC asphalts, kerosene, TJ-102, topped crudes, LCT (pref.).

Berths No. 7 & 8: Naphtha, kerosene, heating, F.O., jet fuel, MC/RC asphalts, all crudes except TJ-102.

LOADING: Loading rates particulary for low-flash products loaded during the hours of darkness or when topping-off cargo tanks, will be reduced by the terminal to meet existing conditions.

All loading and discharging will be stopped during the passage of an electric storm, and ullage covers must be closed and dogged down. During periods of calm, loading of gasoline or other similar low-flash products may be loaded at reduced rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping-off, if requested by the ship's officer.

Some of the fuel cargoes are loaded from fuel reservoirs through certified positive displacement meters, and shipping documents are prepared on the metered figures. All reconstituted crudes are line blended with conditions recording of component rates and quantities. Actual loading rates of both this crude and metered fuel cargoes are available at any time upon request of the standby.

Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master on completion of Inward Clearance. Supplementary information including number and size of lines and hoses will be furnished to the Chief Officer before loading commences.

If vessel's loading orders from owners or charterers do not agree with the terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated; if the cargo to be lifted will be more or less than this 10% limitation it is necessary to cable New York for confirmation.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "stand-by" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

Vessels loading Liquid and Flaked Sulphur: *For vessels loading Liquid Sulphur, the following applies:*

Location: Pier 2, Berth 3 at Amuay Bay.

Draft – 40 ft., length overall – 700 ft., beam – no limitation.

Loading will be at the rate of 400 long tons per hour through a 6 in. line and rubber hose.

Maximum cargo size – 25,000 long tons.

Normal loading temperature is 275°F. (Minimum – 265°F. Maximum – 295°F.). Density at normal loading temperature is 112 pounds per cu. ft. Viscosity at same temperature is 8.5 centipoises.

Safety precautions/provisions: Molten sulphur classified as "Grade E Liquid" by U.S. Coast Guard. No naked light, open flames or sparks should be permitted near any tank openings. Molten sulphur is combustible but is handled at temperatures below its flash point (325-370° F) and ignition temperatures (476-502° F).

For vessels loading Flaked Sulphur, the following applies: Physical characteristics of the loading facilities:

(a) Location: Lat. 11° 44′ N., Long. 70° 14′ W. Anchorage approximately 2,000 ft. South Punta Adaro with a depth of 33 ft. 400 yards offshore and dropping off to 50 ft. 1,000 yards offshore. In the rare event that the wind is Westerly vessel would anchor further offshore.

(b) No draft, length or beam limitation. (Vessels loading up to 24 ft. draft may be anchored inside the bay).

(c) Loaded barges whose overall dimensions are 200 × 42 × 17 ft. will be brought alongside with the aid of tugs and removed when required, barges will be equipped with fenders. The hoppers are 160 × 37 × 14 ft. Loading from barges to ship will be done using ship's gear and clam shells of 1.25 ton capacity. Clam shells will be furnished by Lagoven free of charge. Personnel (stevedores) to carry out the loading operation will be supplied by Lagoven or the ship's crew can be used if this is set forth in the charter party. Loading rate 1,000 long tons per day.

(d) The anchorage is sheltered in the lee of the Adaro Peninsula. Wave heights vary between 1 ft. and 2 ft.

(e) Normal Maximum parcel size – 10,000 tons loaded at a rate of 1,000 tons per day, however, an additional 2,500 tons can be supplied at a loading rate of 500 tons per day.

(f) Flaked Sulphur when stored in large quantities varies in density from 55 to 90 pounds per cu.ft. Average density is anticipated to be 70 lbs./cu.ft. Individual flakes are of irregular shape and are less than 0.5 sq.in. in area and less than 0.0625 in. thick. This size data is not a specification nor guarantee and is provided only to indicate the order of magnitude dimensions.

General:

Fee of Bs. 200 will be charged for trips between the Terminal and the anchorage by launch or tug for delivering personnel.

Method of cargo quantity determination: Barge drafts are marked to the nearest inch and capacity tables prepared by Charles Martin. The draft prior to commencement of and upon completion of discharging are noted. The amount transferred is obtained by consulting the tables. The quantity arrived at by totalling the amounts from the barges used is compared to the ships figures and reconciliation reasoned.

BALLAST: Vessels should arrive with sufficient ballast to permit safe handling. The Pilots require a draft of minimum 8 ft. forward, 18 ft. aft, on a T-2 or similar size tanker, 11 ft. forward and 20 ft. aft on a 26,000 d.w.t. or larger vessel. Ballast should be carried in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

A relatively small amount of salt water remaining in ship's tanks or lines can contaminate crude and cause operating problems for the refiners. It is important therefore to strip tanks and lines as dry as possible.

Vessels provided with completely segregated ballast system are permitted to discharge ballast and load cargo simultaneously.

Absolutely oil-free ballast may be discharged overside. All dirty ballast must be pumped ashore. A 30 in. ballast line, 2×60,000 and 1×120,000 barrel slop tanks and separator system are available.

A considerable number of vessels are now participating in the programme to eliminate pollution of the seas. Under this programme, vessels may arrive carrying quantities of oil/water emulsion. If it is desired to follow the "load-on-top" procedure in such instances, it is requested that the Marine Representative be informed on arrival.

MEDICAL: Medical treatment and hospitalisation, if required, is provided at a hospital located in the Lagoven concession, operated by the Society of Catholic Medical Missionaries. Several dentists are located in the area.

Italian Crew members covered by Casa Maritime insurance receive medical attention from the appointed medical representative in Punto Fijo.

Authorisation forms for medical and dental treatment are provided, which require Master's signature. Transportation is available at the Marine Office. Please note that if the patient does not speak Spanish or English, an interpreter should accompany him.

FUEL: Ship's requirements specifying grade and quantity desired are to be given to the Marine Representative boarding the vessel on arrival. All grades of bunker fuel, intermediate fuels and Diesels are available except Esso diesel. Bunker delivery rates average 2,500/3,500 barrels per hour. Bunkers are loaded through meters which automatically register quantities on bunker receipts.

It is the responsibility of ship's engineer to give "standby" notice to the terminal employee and advise him when to shut down.

FRESH WATER: Fresh water can be supplied if necessary; however, supplies are limited to essential requirements. All fresh water is piped from distant sources. Loading rate is about 10 t.p.h.

CUSTOMS: Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port.

Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the stores list. Officers must not carry firearms while the ship is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore.

While the vessel is in port, Venezuelan National Guard Officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officials during regular meal hours. Masters are requested to give them the privilege of eating in the officers' mess-room, to avoid difficulties.

DENSITY: The usual density of sea water at the berth is 1025, temperature ranges from 78°F. to 85°F.

CONSULS: Brazil, Great Britain, Italy, the Netherlands, and Norway have consular representatives in the area.

TIME: GMT minus 4 hours.

SHORE LEAVE: Also see "Health". Shore passes will be granted to all healthy persons. A representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing and given to the Pilot undocking the vessel. Vessels are not permitted to sail until all Crew members are on board, unless hospitalised or prior arrangements made for disembarking. A letter to this effect is required from the Master.

REGULATIONS: (i) *Pollution:* The laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast, oil or bilge slops are to be pumped or allowed to escape overboard. All overboard discharge valves from cargo tanks and bilges are to be secured before loading or discharging commences. Loading is to be conducted with the greatest care and vigilance in order that errors or delays in handling cargo valve may not result in overflows. All deck scuppers should be plugged befo loading to avoid harbour contamination should an overflow occur. Th Authorities require that a written report be submitted by the ship involve in the event of an oil spill.

(ii) *Gangways:* All vessels using the port of Amuay must provide safe gangway. The use of rung ladders, pilot ladders, etc., is contra to Port Regulations, and Port Authorities will not board except by mean of a safe gangway or accommodation ladder.

(iii) *Passengers:* Passengers will not be permitted to disembark unles in possession of the required visa and documents. To facilita clearance, if passengers are carried, the Master should include advic to this effect in his radio ETA.

(iv) *Visitors:* All visitors to ships are prohibited except those compan employees, petroleum inspectors, etc., whose duties require the presence aboard.

(v) *Rats:* Rat guards required at all times.

GENERAL: *(a) Weather Conditions:* There is little rainfall at Amuay Ba annual precipitation averages 12 in. The so-called rainy season usual coincides with the Caribbean hurricane season, from August November, although Amuay lies South of the usual hurricane trac During these months calms are often experienced and winds from Westerly direction may be expected. Normal winds are steady from th N.E., average Force 4, Beaufort Scale, with a max. of Force Temperatures average about 85°F., with little variation from day to nig or season to season.

(b) Tides: The normal range of the tide is about 12 in.; however, 28 in. range has been observed during spring tides.

(c) Lubricating oil: Supplies of Essomarine lubricating oils a available. Requirements should be given in vessel's radio notice arrival.

(d) Bonded Stores: Cigarettes or other stores in bond are n obtainable in Amuay Bay.

(e) Cash Advances: The local currency is the Venezuelan Bolivar an cash advances are made only in this currency. It is requested that an requirement for cash advances be included in the vessel's ETA radi to permit delivery on board on arrival.

(f) Charts: No supplies of charts or sailing directions are available Amuay Bay.

(g) Laundry: A 6 hour laundry service is available throughout eac working day. Such service should be requested in the vessel's ET message.

(h) Mail: Itemised lists are required for ship's mail, to be signed b the Master. Unless other instructions are given, ship's mail receive after sailing, or for vessels on which no advice has been received, w be held for 30 days and then returned to Owners or Operators at ship expense.

(i) Inspection – Petroleum Products: Chas. Martin & Co. and E. W Saybolt, petroleum inspectors, are available if specified. Telephon numbers, Chas. Martin 44665, 44650 and 44211; Saybolt 44639, 4464 and 44227.

(j) Norwegian Government Seamen Service: A field representative the above service is stationed at Amuay providing Norwegian an Swedish film exchange and other usual services. His telephone numb is 51459.

(k) Personnel – Seamen Left Ashore: In the case of seamen left asho for hospitalisation, repatriation or other reason, all documents an personal effects are to be delivered to the Marine Office before sailin A letter is required from the Master advising the maximum advances be made to the seamen, if any, and instructions concerning h repatriation. All expenses incurred by seamen left ashore, including co of repatriation, are for ship's account.

It is important that Masters bear in mind that the Venezuelan law w at all times hold the vessel, her Master, Agent or owner, responsible f any seamen left behind in Venezuela.

(l) Provisions and Stores: Provisions and stores in limited quantitie are available, the prices and quality of some items, such as fresh fru fish, shrimps, vegetables, etc. are competitive; dry stores a considerably higher than in most ports. The Port Steward will assist filling requisitions.

(m) Radar and Radio: Radar and radio repairs can be effected Amuay. A service repair man is available, but spare parts are limited

(n) Repairs: Shore facilities are available only for emergency repai of a minor nature. The nearest dry docks are those at Puerto Cabel and Curacao, N.A. Several contractors in the area provide labour f hull painting and for tank cleaning. Contracts for these services are mad by the ship's Master directly with the contractor.

(o) Surveyors: There are no appointed surveyors to American Burea of Shipping or Lloyd's in the area. However, with sufficient advanc notice, arrangements can be made to have their nearest representative come to Amuay to attend surveys.

(p) Walport Film Exchange: Subscribers to the Walport Service ma exchange films at the Marine Office.

(q) Plimsoll Marks: The Captain of the port requires that the Plims Marks of all vessels using the port be clearly visible. Vessels will b checked on completion of loading, and if the Plimsoll Marks are n readily legible, permission to sail may be withheld.

(r) Landmarks: Three conspicuous radio towers, 350 ft., painte alternate red and white bands, with red flashing aircraft warning light are located in the refinery area, 1 mile East of the docks.

ATTENDANCE: Representatives of the Marine Department boa vessels immediately on arrival, and it is particularly requested th Masters indicate at that time all ship's requirements. The Marine Offic Building is located at the Pierhead Trestle and personnel are availab for assistance at all hours. Telephones are located on all docks and th Marine Shift Supervisor can be called on telephone No. 444475 444465.

CARIPITO: 10.09 N. 63.02 W.

Also see "General – Shipmaster's Report, July 1982".

OPERATOR: Lagoven, S.A.

LOCATION: Caripito is located on the West bank of the San Juan River in Lat. 10° 09′ 25″ N., Long. 63° 02′ 01″ W.

Also see "General" before first port.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send to Caripito their ETA Guiria at least 3 days in advance followed by confirmation 48 and 24 hours before arrival.
2. If a ship originally cleared for another port (including some other Venezuelan port) is diverted at sea to Caripito, certain information must be radioed to Caripito prior to arrival to avoid a heavy fine and/or delays. See "Radio".
3. No dirty ballast may be pumped overside in port or in Venezuelan coastal waters. Limited ballast facilities are available at Caripito Terminal.
4. Vessels calling at Caripito must obtain Government Pilots at Guiria.
5. The Venezuelan flag must be displayed during daylight hours while vessel is within port limits.
6. The emergency fire signal in Caripito dock area is 6 short blasts and 1 long blasts on ship's whistle or siren. No other signal is to be given in the case of emergency.

APPROACHES: The traffic in San Juan River is restricted to one-way from Marieta Point to Caripito. Therefore, instructions are issued at Guiria to incoming vessels relative to what action to take on arrival at Marieta Point. Outbound traffic is controlled so as not to conflict with these instructions.

1. Guiria: The town of Guiria is located on South coast of Paria Peninsula on N.W. shore of Gulf of Paria. When approaching from East a signal tower will be observed on a bluff slightly to North of town.
2. Maturin Bar: Buoy E-1, marks the entrance to Maturin Bar Channel and is located in position Lat. 10° 18′ 57″ N., Long. 62° 28′ 16″ W. (approx.) and displays a flashing white light every 5 secs.
3. Channel: Maturin Bar Channel is 14 miles in length and 400 ft. in width. The tidal range over the bar varies from 4.6 ft. to 5.7 ft. with currents up 3 knots. The average salinity of water is 1.009; however, this may vary considerably between wet and dry seasons and spring and neap tides dredging of channel to 32 ft. (MLWS) has recently been concluded. Maximum draft permitted by Venezuelan regulations is 34 ft. in fresh water. There is a restriction of 6 in. less for all motor tankers. On leaving Maturin Bar Channel the San Juan River narrows from approximately 1.25 miles in width to about 0.7 miles with slight variations in width up to Marieta Point where it narrows to about 1,200 ft. and varies between 800 ft. and 2,000 ft. up to Caripito. Marieta Point marks intersection of Cano Frances and the San Juan River. It is also at this point that course of San Juan River changes approximately 100° to starboard and it is the beginning of one-way traffic. Frequently, incoming vessels are requested to anchor below this point to await outbound traffic. There are 32 lights marking strategic points in San Juan River between Maturin Bar and Caripito Terminal. These light towers are painted aluminium and are easily visible during daylight hours.

DOCUMENTS: (Also see "Radio").

1. *Clearance (inward and outward).* Inward Clearance is effected at Caripito. The Sanitary Inspector boards vessel at anchor or at berth depending on tidal conditions and/or the availability of a berth. The Customs and other Government officials usually board at the berth. However, should there be a delay awaiting berth or tide, the entry will be granted while vessel is at anchor, in which case accommodation ladder must be rigged.

It is necessary that the following documents be ready on arrival:

Ballast List (1 original).
Passenger List (5 copies).
Baggage List (5 copies).
Crew List (7 copies).
Sailing Permit from Last Port (1 original).
Stores List (5 copies).
List of Personal Effects (3 copies).
List of Contents of Slop Chest (3 copies).
List of Passengers in Transit (5 copies).

Cargo documents. These are normally placed on board prior to departure, but in some cases when it is imperative to leave because of the tide, they are delivered at Marieta Pt. while vessel is at anchor awaiting tide to cross the Maturin Bar.

PILOTAGE: Pilots are employees of Venezuelan Government and act in an advisory capacity. The Master retains responsibility for ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must forward through the Marine Department a full written report of the circumstances, for delivery to the Captain of the Port.

Pilots are compulsory and are embarked and disembarked at port of Guiria through a sub-Agent. Vessels should proceed to the Guiria Sea Buoy (position Lat. 10° 33′ 25″ N., Long. 62° 15′ 05″ W., displaying a flashing white light every 5 secs.), and await instructions. If arriving during the hours of darkness, certain instructions are usually transmitted by light signals from the signal tower. Voice radio communications can be established at any time with Guiria or Lagoven Caripito on frequencies 2182 kHz, 2638 kHz and 2738 kHz. The launch which embarks the Pilot will also deliver instructions to the Master relative to the movements of his vessel en route to Caripito, port regulations, facilities, etc. The regular pilotage fees cover the area from the entrance to Maturin channel to and from Caripito. The Pilot is to be provided with sleeping quarters and food, equal to that provided for the officers aboard ship. (A representative from Port Services will assist as interpreter, whenever necessary.)

Note: Complaints or observations concerning the Pilot's handling of vessel should be noted on back of pilotage ticket.

TIDES: The normal range of tide in the dock area is about 12 ft. with currents up to 3 knots during the flood and 4 knots during the ebb in rainy season (May-December). The normal current is 2.5 knots during the flood and 3 knots during the ebb.

ANCHORAGE: For vessels awaiting berth, there is an anchorage about 1,000 m. up-stream from the Caripito Terminal. Vessels awaiting clear channel may at times be requested to anchor at Punta Marieta. Vessels awaiting high tide anchor at Punta Marieta or off Punta Gorda.

MAX. SIZE: Vessels up to 660 ft., 61,000 d.w.t. and max. draft *33 ft. (FW) at Berth No. 2 and LOA 775 ft., 61,000 d.w.t. and max. draft *33 ft. (FW) at Berth No. 3 when vessels are loaded. No restriction on vessel's beam at the berths.

*Safe draft per tide tables.

RADIO: The cable and telegraphic address for Lagoven at Caripito is "Lagomar – Caripito". Messages to and from ships at sea are routed through the Government Radio Station at Maiquetia (La Guaira), call letters "YVG". This station operates on a 24-hour continuous watch, on the following frequencies:

Listening Frequencies: Low frequency, 500 kHz; high frequency, 4178, 6267, 8356, 12534, 16712, 22225 kHz. Transmitting Frequencies: Low frequency, 500, 472, 464, 417 kHz; high frequency, 4322, 4352, 6505.5, 6519.5, 8722, 8730, 12817.5, 17141.6 kHz. Radio Notice of Arrival should be sent 72 hours prior to arrival at Guiria and corrected if weather or other conditions delay the vessel.

Radio telephone listening watches are maintained on a 24-hour basis at Guiria and at Caripito on 2182 kHz. The following frequencies are available for communications after contact: 2638 kHz and 2738 kHz.

All vessels en route to Caripito may also communicate with Amuay or La Salina Marine offices and request that message dealing with corrected ETAs, Pilots and other business be relayed to the Caripito Marine Office.

Vessels that were originally cleared for another foreign port, or another Venezuelan port, and were subsequently diverted at sea, should radio the following information to Lagomar Caripito prior to arrival:

Vessel's name
Master's name
Vessel's flag
Number of crew
Estimated time of arrival at Caripito
Last port of call
Port for which originally cleared
Grade and quantity of cargo to be lifted

This information is required in order to make in advance special arrangements for Inward Clearance, to avoid payment of a fine. It is necessary in such a case that the following documents be ready on arrival:

Crew List (original and 6 copies).
List of Personal Effects (original and 2 copies).
List of Contents of Slop Chest (3 copies).
Stores List (original and 1 copy).

Also required are the original and 2 copies of the radiogram instructing Master to proceed to Caripito. Outward Clearance documents are placed on board the vessel prior to departure from the Caripito terminal.

Masters should bear in mind that while vessels are within Venezuelan territorial waters, Government Authorities do not permit the use of ship's radio equipment. Cables and radiograms should be handed to the company representative for transmittal via shore radio communication system. Caripito has also radio telephone communication with North and South America and Europe. For further information contact Port Services Section in the terminal building, telephone 2335/2336.

BALLAST: Ballast is not required when mooring. Any ballast carried should be in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

A relatively small amount of salt water remaining in ship's tanks or lines can contaminate crude and cause operating problems for the refiners. It is important therefore to strip tanks and lines as dry as possible.

Vessels provided with completely segregated ballast system are permitted to discharge ballast and load cargo simultaneously. All ballast clean or dirty must be pumped ashore. Contaminated residues may be pumped ashore, where facilities are available for receiving up to a maximum of 20,000 barrels.

A considerable number of vessels are now participating in the programme to eliminate pollution of the seas. Under this programme, vessels may arrive carrying quantities of oil/water emulsion. If it is desired to follow the "load-on-top" procedure in such instances, it is requested that the Marine Representative be informed on arrival.

BERTHING: The Marine Office Building is located on the West bank of the San Juan River upstream from the berths. Representatives of the Marine Department board vessel immediately upon arrival and it is particularly requested that Masters indicate at that time all ship's requirements. Personnel are available for assistance at all hours.

Lagoven maintains a deep water terminal, consisting of 2 ocean tanker berths, Nos. 2 and 3. These are T-type piers with breasting dolphins located approximately 10 ft. off the face of each pier.

All terminal facilities are under the control of Lagoven, S.A. The port is open for navigation during day and night. All ocean tankers are moored at Berths No. 2 and 3 on the flood tide only. Vessels may sail from Berth No. 3 at any stage of the tide. Sailings from Berth No. 2 are restricted to flood tide only when Berth No. 3 is occupied.

A vessel entering or leaving port must be assisted by the same Government Pilot taken aboard at Guiria. A Custom guard will board at the same time and remain with the vessel. A Lagoven Representative will deliver to the Master his loading and docking instructions together with any other information pertinent to the vessel's call. He will also sign the Notice of Readiness if requested. The vessel will proceed to anchor to await flood tide to dock, to await berth, or will swing to the flood tide in the turning basin and proceed directly to the berth depending on circumstances.

LOADING: Loading rates, particularly for low-flash products loaded during the hours of darkness or when topping off cargo tanks, will be reduced by terminal to meet existing conditions.

All loading and discharging will be stopped during passage of an electric storm, and ullage covers must be closed and dogged down. During periods of calms, loading of gasoline or other similar low-flash products may be loaded at reduced rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazard from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping off, if requested by the ship's officer.

Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master. Supplementary information including number and size of lines and hoses will be furnished to the Chief Officer before loading commences.

If vessel's loading orders from Owners or charterers do not agree with terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated; if the cargo to be lifted will be more or less than 10% limitation consultation is necessary.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "standby" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

MEDICAL: Medical treatment and hospitalisation, if required, is provided at a hospital located in the concession. Several dentists are located in the town of Caripito. Authorisation forms for medical and dental treatment are provided, which require Master's signature. Transportation is available at the Marine Office. Please note that if the patient does not speak Spanish or English, an interpreter should accompany him.

FRESH WATER: Fresh water is available in any quantity. Delivery is made through 2.5 in. national standard fire hose thread hydrants. Ship's personnel must provide hoses and connect up.

FUEL: IFO-180, IFO-380, Marine Diesel and Gas Oil are available. It is the responsibility of ship's engineer to give "stand-by" notice to the terminal employee and advise him when to shut down.

CONSULS: There are no consular representatives in the area. Vessels bound for U.S.A. or British Caribbean ports will be provided with a letter stating this fact.

CERTIFICATES: All ships calling at a Venezuelan port for the first time must be measured for tonnage by Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and is returned before sailing. The Venezuelan Admeasurement Certificate, when later issued is forwarded to the Owners. A fee is charged for this certificate, which is payable only on ship's first call. Vessels registered in following countries are excluded from above regulations: Denmark, France, Germany F.R., Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

CUSTOMS: While the vessel is in port, Venezuelan National Guard officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officals during regular meal hours. Masters are requested to give them the privilege of eating in the officers' messroom, to avoid difficulties.

Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port.

Firearms on board any merchant vessel calling at Venezuelan ports must not exceed 1 per officer, nor can ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the stores list. Officers must not carry firearms while ship is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore.

REPAIRS: Only minor repairs of an emergency nature can be made. There are no electronic repair services available in the area.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing, and given to the Lagoven Despatcher undocking the vessel. Vessels are not permitted to sail until all crew members are on board, unless hospitalised or prior arrangements made for disembarking.

TIME: Local time is GMT minus 4 hours.

GENERAL:

Gangways: Gangways at Berths No. 2 and 3 are provided by the terminal.

Plimsoll Marks: The Captain of the Port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels will be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

Surveyors: There are no appointed surveyors to the American Bureau of Shipping or Lloyd's in the area. With 48 hours' notice, non-exclusive surveyors can be obtained from Caracas, or at times from Puerto La Cruz, or qualified Masters or chief engineers may be available for appointment as surveyors when required.

Bonded Stores: Cigarettes or other stores in bond are not obtainable at Caripito.

Cash Advances: The local currency is the Venezuelan Bolivar and cash advances are made only in this currency. It is requested that any requirement for cash advances be included in the vessel's radio ETA, to permit delivery on board on arrival. Cash returns can be accepted only during the normal working day – 0700 to 1600 hrs. Sundays and holidays excluded.

Provisions and Stores: Provisions and stores in extremely limite varieties and quantities are available at prices considerably higher tha in most other ports.

Charts: No supplies of charts or sailing directions are available Caripito.

Personnel – Seamen Left Ashore: In the case of seamen left ashore hospitalisation, repatriation or other reason all documents and person effects are to be delivered to the Marine Office before sailing. A lett is required from the Master advising the maximum advances to be mad to the seaman, if any, and instructions concerning his repatriation. expenses incurred by seamen left ashore, including cost of repatriatio are for ship's account. It is important that Masters bear in mind that Venezuelan law will at all times hold the vessel, her Master, Agent owner, responsible for any seamen left behind in Venezuela.

Laundry; Laundry service is available.

Lubricating Oil: Supplies of marine lubricating oils are available fro Puerto La Cruz. Quantities required should be included in the ETA cab

Mail: Any pending ship's mail will be delivered on board by the mari dispatcher on arrival at Caripito. At the same time he will receive a ship's mail to be dispatched. The marine dispatcher will accept person mail only if it carries the proper amount of Venezuelan postage, or Master authorises postage by signing 7 copies of the Company Po Transmittal form. Masters interested in knowing the individual posta amounts to be paid by each crew member, should provide a list, duplicate, of the senders, and number of letters sent by each o identified by a number written on each letter. Copy of this will be return aboard vessel when leaving this port outward bound. If not ready time, it will be air-mailed to the vessel's next port of call.

Inspection – Petroleum Products and Crude Oil: Inspecciones C. AIVEPET, C.A., Caleb-Brett, C.A. and SGS (Redwood), C.A. petroleu inspectors are available from Puerto La Cruz if specified.

Visitors: All visitors to ships are prohibited except those compa employees, petroleum inspectors, etc., whose duties require th presence aboard.

Passengers: Passengers will not be permitted to disembark unless possession of the required visa and documents. To facilitate clearanc if passengers are carried, the Master should include advice to this effe in his radio ETA.

Pollution of Harbour and Coastal Waters: The laws of Venezuela a strict in regard to pollution of harbour and coastal waters by oil, a heavy fines are imposed for violations. No dirty ballast, oil or bilge slo are to be pumped or allowed to escape overboard. All overboa discharge valves from cargo tanks and bilges are to be secured befo loading or discharging commences. Loading is to be conducted wi greatest care and vigilance in order that errors or delays in handli cargo valves may not result in overflows. All deck scuppers should plugged before loading to avoid harbour contamination should overflow occur. The authorities require that a written report be submitte by the ship involved in the event of an oil spill. Incidents of this natu should be reported immediately, either by VHF or telephone, to the P Services Section.

AUTHORITY: Petroleos de Venezuela, S.A., Apartado 169, Carac 1010-A, Venezuela. *Tel:* 708-4111. *Telex:* 21890, 23489, 244 PDVSA VE. *Contact:* Lermit Rosell, Marine Corporative Manager.

EL CHAURE: 10.15 N. 64.37 W. (See Pla

OPERATORS: Corpoven S.A.

LOCATION: El Chaure Marine Terminal is located on the South sho of the head of Bergantin Bay. 1.8 miles N.E. of Puerto La Cruz: L 10° 14′ 50″ N. Long. 64° 36′ 57″ W.

This terminal is also considered to be Berth No. 6 of 'Puerto La Cru which also see.

DOCUMENTS: To avoid penalties, ships clearing for Venezuelan Po must present certain papers herein set forth for arrival and clearan after docking. The Clearance is made by Government officia accompanied by a company representative.

The following documents must be presented:

1 copy of Ship's Register
Clearance from Last Port
1 copy of Ballast Certificate
6 copies of Crew List
5 copies of Passenger and Baggage List
2 copies of List of Passengers in Transit
4 copies of List of Personal Effects
4 copies of Stores List
2 copies of List of Slop Chest
Sailing permit issued by Marine Authority of last port of call.
Dispatch issued by Venezuelan Consul at last port.

PILOTAGE: Pilots are employees of the Venezuelan Government a pilotage is compulsory for vessels entering or leaving the harbour. T Company will arrange for Pilots to board all vessels as necessa Whenever it might be deemed necessary for the Master to disrega the Pilot's advice in order to ensure the safety of the vessel, a writt report must be submitted by the Master to the Venezuelan Port Capta explaining the reason for such action.

ANCHORAGE: The crossed line portion on the plan is the anchora zone for all ships after arrival at Pozuelos Bay. The Company w dispatch the Pilot, by launch, to all ships when they are ready to docked. On entering the Pilot Zone, the Venezuelan flag must be flo from the foremast; it must be flown at all times between sunrise a sunset.

MAX. SIZE: Max. draft 40 ft., max. LOA 750 ft. max. d.w.t. 60,000 to

RADIO: El Chaure Terminal Office may be contacted on radio-telephone SSB or AM frequencies of 2738, 2638, 2182 and 2120 KHz. Frequency 2182 kHz should be used for initial contact.

Arrival advice: Masters are required to advise by cable their ETA. Such notice should reach El Chaure at least 48 hours ahead of vessel. In cases of ships being diverted at sea to a Venezuelan Port, or to another Venezuelan Port, Venezuelan regulations require, by cable, prior to arrival, name of Master, number in crew, port of departure, port to which originally cleared, flag of ship and net registered tonnage.

VHF: Channel 16 can be used after arrival at Pozuelos Bay.

TUGS: Tug assistance to moor and unmoor is compulsory at El Chaure installations. Ships over 145 m. long must use 2 tugs having not less than 1,600 h.p. each for mooring and unmooring at El Chaure. 1 launch is required for handling the lines.

BERTHING: The wharf has a length of 100 ft. with dolphins established on each side. The dock accommodates vessels drawing up to 40 ft. Sea conditions are usually very good in the entire area. Waves are almost nil and out of the hurricane path. A chain of small islands makes El Chaure a natural port. Only 1 vessel at a time can be moored for loading or unloading. The normal range of the tide is 1 ft.

BALLAST: Vessels arriving in El Chaure must carry sufficient ballast to ensure safe handling. By Venezuelan Law, all dirty ballast must be pumped ashore into ballast pits. Vessels having separate clean tanks for ballast may pump overboard, after first being inspected and passed by Port Authorities. The Company Terminal facilities include a 16 in. ballast line, which empties into ballast pits about 3,500 ft. from the dock. These pits have an elevation of 32 ft. above the dock and will hold 50,000 bbls. The ballast line will stand a pressure of 100 p.s.i.g. The pressure is recorded at the dock. The vessel will be held responsible for damages to the shore ballast line and spills that maybe occur because of line rupture.

LOADING: Before tying up, blind flanges on the ship's manifold should be removed, hose derrick to be topped and rigged to lift shore hoses along with dock booms. All vessels must dock with starboard side to dock. The Company dock supervisor will inform the Master of the vessel as to characteristics of cargo to be loaded, loading rates and all other information necessary for safe and efficient loading operations. During the ship's stay at the dock, company employees are available at all hours to assist in any manner. After loading is completed, if the dock space is required for another vessel the ship must vacate the berth and wait at anchorage until cargo and sailing papers are completed.

FRESH WATER: Available, rate 10 t.p.h.

REPAIRS: Facilities are limited; any repair work must be requested by Master in writing.

CONSULS: The following are in Puerto La Cruz: Belgium, Brazil, Colombia, Denmark, France, Germany F.R., Italy, Norway, Panama, Spain, Sweden and United Kingdom.

SURVEYORS: Aivepet, Charles Martin & Company and E. W. Saybolt maintain offices in Puerto La Cruz for inspection of cargo if required.

TIME: Local time is 4 hours slow on GMT, year round.

POLLUTION: Pollution of coastal waters is strictly forbidden by Venezuelan Law. The escape of dirty ballast or of cargo either at the dock or in the harbour or in territorial waters will result in heavy fines by Venezuelan authorities. If oil is spilled an estimation of quantity should be made by the Master of the vessel, Venezuelan Authorities and Company personnel, acting jointly. Their joint report must be submitted to the Venezuelan Petroleum Inspector from the Energy and Mines Office, and also the National Guard Headquarters in Puerto La Cruz. The Ministry of Energy and Mines will assess a fine based on the quantity of oil that was spilled. Also the ship is held responsible for the spill and cleaning. Chemicals, equipment, boat and labour used for this purpose are for the ship Owner's and/or operator's account. Each ship must maintain strict supervision on discharging of ballast as well as loading cargo in order to avoid spillage.

CUSTOMS: Venezuelan laws are strict in regard to contraband and Masters are requested to instruct crews not to take cigarettes or other articles ashore.

GENERAL: *Crew:* Passes for shore leave for ship's crew will be given to Master by Company Representative on docking or at anchorage. These passes must be filled out for each Crew member prior to Venezuelan authorities' visit. Passes may be used during the ship's stay but must be returned to the National Guard at the dock prior to departure. Before ship's departure a report must be made to the Dock Master if any Crew member is missing. Crew members left behind will be placed in custody by Venezuelan authorities until deported at vessel's expense. A Crew member requiring medical or dental treatment must submit his request for such aid through the Master to the Dock Master. Arrangements for seamen arriving from other ports, transferring to other ships or being repatriated are handled by the vessel's Agency.

Under the Venezuelan law the vessel is responsible for all seamen in the country during their entire stay. Masters are requested to leave written instructions with the Dock Master for handling seamen left ashore. The Master of the ship must indicate his acceptance of the responsibility for all costs incurred in handling a seaman.

Seaman Left Ashore: A letter from the Master is required advising the amount of cash advance and any other instructions concerning the seaman's repatriation. All expenses incurred by the seaman, including the cost of repatriation are for the vessel's account. The documents and personal effects of seamen left ashore for hospitalisation, repatriation or any other reason, must be delivered to the Terminal Office before sailing. Venezuelan Law holds the Master, ship's representatives and Owners responsible for any seaman left behind in this country.

In Dock: Masters are requested to observe the following regulations while alongside the Company Terminal:

1. – Sufficient number of Crew members must be on board at all times, during discharge of ballast and loading of cargo to ensure proper handling of mooring lines.
2. – Rat guards are to be on all mooring lines during entire stay.
3. – Venezuelan authorities do not permit blowing of heavy smoke from vessel's funnel, while in port. Breaking of this rule may result in Government fine and/or removal of ship from the dock.
4. – Venezuelan National Guard personnel are assigned to guard duty for each ship while it is at the dock. Meals must be furnished for these guards in the Officers' Messroom.

Visitors: All visitors to vessels are prohibited, without written permission of the Port Authorities. Dock Master, Petroleum Inspectors, Dispatchers and Terminal employees handling hoses may board ship in performance of their duties.

Charts: Not available at El Chaure.

AGENCY: All incoming vessels must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all vessel disbursements.

EL GUAMACHE: 10.52 N. 64.04 W. (See Plan)

SHIPMASTER'S REPORT: October 1978.

LOCATION: The Port of El Guamache is a developing port, located about 1000 feet northward of Pta. Mangle on the Isla De Margarita (see B.A. Chart 230).

DOCUMENTS:

Clearance from Last Port.
Sealed envelope for Customs.
Visaed B/L and Sobordos.
Despatch from last Venezuelan port, if any.
6 Crew Lists.
Vaccination Certificates of Crew.
4 Stores Lists (Deck, Engine, Provisions, Bonded store).
4 Personal Effects Lists.
4 Arms & Ammunition Lists.
4 Passengers Lists.
4 Mail Lists.

ANCHORAGE: On the Western side of the Pta. Mangle in Bahia Guamache, depth 8–11 fathoms.

PILOTAGE: Pilotage is compulsory. Pilot boards on arrival or at anchorage. Vessels arriving at the anchorage must keep engines on stand-by and wait for shifting or berthing instructions.

Note: As at other Venezuelan ports, vessels must fly the Venezuelan flag at masthead and lower gangway for boarding party – Agents, Customs Officers, Quarantine Officers, Immigration Officers, Pilot and representative of Port Captain, etc.

RADIO: As a new developing port, no radio service at Margarita Island, all ETA wireless messages must be sent via ITT or YVG – 72, 48, and 24 hours prior to arrival

The port office is equipped with radio telephone installation, operating 0600-2000 hours, transmitting on VHF frequencies 156.8 MHz (Channel 16.) Vessels calling in Spanish language will be answered promptly; if calling in English will be answered by English speaking person when on duty.

TUGS: Not available.

BERTHING: Length 126 m. with 3 dolphins installed at each end with catwalk to dolphins. Depths of water, 36 ft. at LW and 42 ft. at HW.

STEVEDORES: Arranged by Agents, normal working hours 0700 – 2100, cargo discharged into warehouse.

GANGWAY/DECK WATCHMAN: Necessary, normally engaged by Customs or Police.

OPENING/CLOSING HATCHES: Normally by crew.

FRESH WATER: Not available.

FUEL: Not available.

TIME: Local time is GMT minus 4 hours.

AIRPORT: Distance about 15 km. from port. Connections to other cities.

MEDICAL: Available at Polamar City about 31 km. from the berth.

PROVISIONS: Fresh and dry provisions supplied through ship chandlers from Polamar City and delivered on board.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of wine or spirit.

REPAIRS: No repair facility available.

TELEPHONE: No telephone connection to vessel at present but provided inside warehouse and port office.

DENSITY: 1025

HOLIDAYS: As other Venezuela ports.

SHORE LEAVE: Shore leave permitted. Passes issued by representative of the "Direccion de Marina Mercante" on arrival. Shore passes to be collected prior to sailing and given to Agent.

DEVELOPMENTS: El Guamache has a development programme to construct new wharves Northward from present pier to accommodate 6 ocean-going vessels and expected to complete within 3 years.

All port facilities will be available. Margarita Island is the only free port in Venezuela. Tourism from the mainland and overseas is increasing day by day as Margarita Island has very good weather and beaches.

EL PALITO: 10.29 N. 68.07 W. (See Plan)

OPERATORS: Corpoven S.A.

LOCATION (of El Palito Terminal): The terminal facilities operated by Corpoven S.A. at the port of Puerto Cabello (Punta Chavez), are situated on the Venezuelan coast, 7 miles West of Puerto Cabello. The terminal has a 2,475 ft. pier, part causeway and part trestle, extending out from Punta Chavez along a shallow reef then angling into water 48 ft. deep. 2 tankers can tie up simultaneously at the berths.

WEATHER: Winds are normally from the N.E. with an average Beaufort Scale Force of 2-3. Average temperature about 85°F. The months of January, February and March have the roughest sea and swell, and vessels may not be able to dock due to the weather.

TIDE: The normal range of the tide is 1 ft.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA 72 hours before arrival at El Palito Terminal and another 24 hours before arrival advising any change of ETA.
2. If a vessel originally cleared for another port (including some other Venezuelan port) is diverted at sea to El Palito, certain information must be received prior to arrival, to avoid heavy fine and/or delays.
3. Provided Terminal permission is obtained, segregated clean ballast may be pumped overside in the port. Ballast disposal facilities are restricted at El Palito Terminal.
4. The use of Venezuelan Government Pilots is compulsory for docking and undocking.
5. The Venezuelan flag should be displayed at the mast-head during daylight hours by vessels anchored and berthed in Venezuelan waters.
6. In addition to other clearance documents, 2 copies of an itemised list of articles in the ship's slop chest must be presented to the authorities on arrival.
7. The emergency fire signal is 5 long blasts on the vessel's whistle or siren. No other signal is to be given in case of emergency.
8. Rat guards must be in place on all mooring lines.

APPROACHES: The terminal pier is marked by the following lights: One occulting red light at the top of No. 1 (N.W.) fire fighting monitor, 80 ft. above sea level. Lat. 10° 29′ 51″ N., Long. 68° 07′ 13″ W., and one green light, flashing every 3 seconds at the top of No. 2 (S.E.) fire fighting monitor, 80 ft. above sea level, located 275 ft. S.E. of No. 1 fire fighting monitor. A group of 5 crude storage tanks, painted white, visible 20 miles on a clear day, are located 1.25 miles 200° from the head of the pier.

Three large chimneys from a power plant located about 3 miles West of the Terminal, are very conspicuous in the area. They are painted with broad red and white bands.

When approaching, Refinery installations are clearly visible. On clear nights, tanks, Refinery lights and flares provide best landmarks.

White flashing lights are installed at the top of Refinery chimneys and towers for air traffic warning purposes, for the local airport in Puerto Cabello.

Masters approaching the coast should keep a sharp lookout for fishing boats, nets and small crafts.

DOCUMENTS:

A. Admeasurement Certificates. All vessels calling at Venezuelan ports for the first time must be measured for tonnage by the Captain of the Port. It is the usual practice to take the Ship's Panama Canal or Suez Canal Certificate, which is used as a basis of recalculating the tonnage under the Venezuelan Regulations and is returned before sailing. The Venezuelan Admeasurement Certificate is forwarded to the owners at a later date. A fee is charged for the certificate which is payable only on the vessel's first call. Vessels registered in the following countries are excluded from the above regulations: Denmark, France, Germany (F.R.), Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

B. Inward Clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department. It is necessary that the following documents be ready on arrival:

Clearance from Last Port (1 copy).
Ballast Manifest from last port (1 copy).
Crew List (9 copies).
Passenger and Baggage Lists (7 copies).
List of Personal Effects (5 copies).
Stores List (3 copies).
List of Slop Chest (3 copies).
Sailing Permit (issued by maritime authority of last port).

Vessels arriving with cargo to discharge, will also require:

Manifest (Sobordo), 1 original and 2 copies from each loading port.
Bills of Lading, 1 original and 5 copies from each loading port.
Tally books; 6 from each loading port.
Commercial invoices: 3 from each loading port.

Vessels originally cleared for another port, and diverted at sea to El Palito, should radio Corpoven Puerto Cabello the following information as soon as the change of sailing orders are received:

Advise diverted.
Name and class of vessel.
Number of crew.
Flag of vessel.
Last port of call.
Port from which originally cleared.
Estimated time of arrival at Pilot station.
Type and amount of cargo vessel will load.
Time required to discharge ballast.
Master's name in full as signature (John Jones, Master).

This information is required in order to make in advance special arrangements for inward clearance to avoid payment of fines.

Outward Clearance and cargo documents are delivered on board by the Marine Dispatcher. However, in order to obtain the sailing permit, a special form which is delivered on board on arrival must be completed, not later than 2 hours before sailing time. This form gives cargo and freeboard information required by the Captain of the Port. In additio one of the 9 copies of the Crew List specified above, corrected to sho any changes made while in port, should be attached to the form.

PILOTAGE: Service available 24 hours. The Pilot's normal workin hours are from 0600 hrs. to 1800 hrs. There are no special charges fo their assistance during those hours on workdays. On Sundays an holidays they charge overtime. There is also a charge when ship ha anchored in the bay as according to the pilotage law each movemen (and entering the bay is one movement) requires a Pilot. By speci agreement only Pilot's overtime will be charged for anchorage, a anchorage and docking is considered as one movement with respect t Government Pilotage Fee.

Pilotage is a compulsory government service. The governmen charges the Pilot's assistance according to ship's net tonnage. Vessel under flags of Panama and Liberia are required to have their Venezuela Tonnage Certificate. The government charges for docking and sailing

Pilots are employees of the Venezuelan Government and pilotage i compulsory for vessels entering or leaving the harbour. The terminal w arrange for Pilots to board all vessels as necessary. Pilots meet th vessel via launch provided by the terminal. The Pilot may decline t moor the vessel if it is not equipped with satisfactory mooring equipmen lines, gear, etc., or if it is not sufficiently ballasted. It is the responsibilit of the Master to notify the Pilot of any special conditions or peculiarities such as defective navigation equipment, mooring lines, tackle, gear o lack of necessary equipment, which might impose hazards in connectio with the handling, mooring, discharging or loading of vessels.

At the berths, vessels must be moored to the entire satisfaction of th Pilot and the terminal operators' Mooring Master.

The Pilot acts in an advisory capacity. The Master retain responsibility for the vessel at all times. In the event it become necessary to disregard the Pilot's advice in order to ensure the safet of the vessel, the Master must forward a full written report of th circumstances through the terminal for delivery to the Captain of th Port.

ANCHORAGE: Notice of Readiness can be tendered at anchorage. Th suggested anchorage for El Palito Terminal is located 0.5 to 1 mile Nort or West of the seaward end of the pier. The area to the East of the pie is not recommended as an anchorage.

RESTRICTIONS: None. Vessels enter day or night and at any state o tide.

MAX. SIZE: The loading facilities consist of 2 berths. Termin restrictions and safe drafts are as follows:

	Max. Draft	
	Arrival	*Sailing*
Berth No. 1 (West) (starboard side alongside)	40 ft.	40 ft.
Berth No. 2 (East) (port side alongside)	34 ft.	38 ft.
Maximum displacement	65,000 tonnes	
Maximum LOA	750 ft. (228 m.)	
Minimum LOA	328 ft. (100 m.)	

No limitation is placed on tankers beam.

BALLAST: Due to the exposed location of the oil piers, vessels ar required to be ballasted to the following minimum drafts for saf manoeuvring to and from the berths:

Overall Length of Vessel	*Minimum Draft Required*
400 ft. – 480 ft.	Forward 9 ft., Aft 17 ft.
481 ft. – 700 ft.	Forward 12 ft., Aft 20 ft.
701 ft. – 730 ft.	Forward 14 ft., Aft 23 ft.

A total capacity of 25,000 barrel tank and a 20 in. ballast line ar available to receive all ballast.

Vessels with separate ballast tanks, lines and pumps may discharg ballast overside. Ballast for entering the harbour should be carried i the minimum number of tanks, and all other tanks stripped dry so as t minimise the time required for discharging ballast alongside berths.

All ships in ballast from abroad are charged for Consular Balla Certificate.

HEALTH: No Radio Pratique. Health Officers board vessel at berth.

RADIO: Puerto Cabello, Venezuela, Coastal Station call sign YV makes radio contact with all vessels "CQ" on 8722 kHz at the followin hours: 1130, 1330, 1530, 1830, 2130, 0030, 0200 GMT. Also "CQ" o 17141 kHz at 1630 GMT and "CQ" on 4322 kHz at 0430 and 0630 GM

VHF: Master should call El Palito Marine Terminal 3 hours before arriv on Channel 16.

TUGS: Use of tugs compulsory. Usually 2 tugs, from 1,800 h.p. t 2,800 h.p. approximately, assist during docking and undocking.

The terminal will arrange for tugs, which are stationed at Puer Cabello. Service requested 1 hour prior to manoeuvre.

BERTHING: The use of both anchors is required for docking at bo berths. It is considered prudent to have both anchors hove-out prior t entering the harbour in order to facilitate speedy release while moorin The Terminal will advise whether the vessel is to be moored port o starboard side to the dock.

In the event the berth is required by another vessel, a vessel havin completed loading may be required to vacate the berth promptly an proceed to anchorage to await cargo documents.

East Berth: Approach at very dead slow speed along a line paral to a line formed by the East and the West berth at a distance from equal to the distance of the North buoy. Drop the starboard anchor a the point of intersection of the ship's fore with a line formed by the tw East shore range markers. Continue along same path at very dead slo speed until reaching with the ship's fore the East berth. Drop the po anchor. Allow the ship to drift into position alongside berth. This will b done by tying mooring lines as required by Pilot and with the help of th ship's engines and tugs under Pilot's instructions.

West Berth: Approach at very dead slow speed along a line paral to a line formed by the East and West berths and at a distance from equal to the distance of the North buoy. Drop the port anchor at th point of intersection of the ship's fore with a line formed by the two We shore range markers. Continue along same path at very dead slo speed until reaching with the ship's fore the West berth. Drop th starboard anchor. Allow the ship to drift into position alongside ber

This will be done by tying mooring lines as required by the Pilot and with the help of the ship's engines and tugs under Pilot's instructions.

General: Chicksan loading arms with 12 in. connections, 3 for Fuel oil, 1 for diesel products and 1 for leaded or unleaded gasolines. All dirty ballast to be pumped ashore through the fuel oil loading hoses.

LOADING:

Cargo: On completion of Inward Clearance, information regarding the number of hoses and loading rate will be given to the Master and Chief Officer. During ballast discharge supplementary information will be given to the Chief Officer. A 15 minute standby is required prior to finishing any grade.

Contamination of Crude: It has been established that one of the major causes of contamination of crude oil is the small amount of salt water remaining in the ship's tanks, pumps and ballast lines after discharging ballast. This small amount of salt water frequently results in costly damage and downtime to refining equipment and also presents many other problems. Therefore all tanks and lines must be pumped as dry as possible.

Draining of Arms: Arms are drained by gravity on all products and crude. Ship personnel must co-operate with terminal personnel in this operation to ensure complete draining of arms into ship tanks and adequate drip cans must be placed to catch the remaining oil in line. Sand or equivalent must be on standby to clean up any oil leaks.

Loading Rates:

Commodity	*Available at Berths* No.	*Line Size* (in.)	*Estimated Rate* bbls./hr.	*Line Displac.* (bbls.)	*Arms* No. 1 (in.)	No. 2 (in.)
Crude Oil	1-2	24	20,000	6,000	2×12	2×12
Fuel Oil	1-2	24	17,000	2,500	2×12	2×12
Diesel-Kerosene	1-2	16	8,000	1,200	1×12	1×12
Gasoline, Unleaded	1-2	16	8,000	1,300	1×12	1×12
Gasoline, Leaded	1-2	16	7,000	1,300	1×12	1×12
Gasoline, Leaded	1-2	8	2,000	350	1×12	1×12
Lube Oil (Disch.)	1-2	8	1,500	240	1×12	1×12
Fuel Oil (Bunkers)	1-2	8	2,000	300	1×12	1×12
Ballast (Disch.)	1-2	20	10,000	2,000	2×12	2×12
Isobutane (Disch.)	1-2	12	4,000	2,000	1×10	1×10
T.E.L.-CB (Disch.)	2	4	70 tons	27 tons	Ship's Hose	

Loading rates will be reduced by the terminal when topping off tanks at the vessel's request.

Scuppers: Loading will not be started till all deck scuppers are properly sealed to the satisfaction of the terminal.

Simultaneous Deballasting and Loading: Vessels equipped with separate and completely segregated ballast tanks, and lines and pumps never used for oil may be permitted to discharge ballast and load simultaneously providing approval has been obtained from the terminal.

MEDICAL: Medical treatment and hospitalisation, if required, are available at the Seguros Sociales in Puerto Cabello. Several dentists are located in Puerto Cabello. Authorisation for any medical and/or dental treatment must be made by the Master. Transportation is available at the Terminal Office. If the patient does not speak Spanish an interpreter should accompany him.

FRESH WATER: Not available.

FUEL: Bunkers are available only for vessels loading cargo. Disputes as to quantity should be registered by signing the bunker receipt under protest and noting the ship's quantities thereon.

CUSTOMS: While the vessel is in port, Venezuelan National Guard officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officials during regular meal hours.

Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore.

Cigarettes in cartons, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel), should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest which will be sealed for the duration of the vessel's stay in port.

CONSULS: French, Norwegian, Danish, Italian and Panama Consulates are represented in Puerto Cabello. There is no American Consulate. It is necessary for Masters of Panamanian flag vessels to visit the Panamanian Consulate at Puerto Cabello to present documents and receive dispatch as required by law. Regular office hours are from 0800 to 1200 hrs. and from 1400 to 1700 hrs. Mondays through Fridays; any dispatch issued outside of regular office hours is billed at double fees. Agent will arrange transportation to Puerto Cabello upon request.

REPAIRS: Facilities available. Advise Agent in advance of requirements.

REPATRIATION: The documents and personal effects of seamen left ashore for hospitalisation, repatriation or other reason, must be delivered to the Terminal Office before sailing. A letter from the Master is required advising the maximum amount of advances to the seaman and any other instructions concerning his repatriation. All expenses incurred by the seaman, including the cost of repatriation, are for the vessel's account. Venezuelan law at all times holds the Master, Agent or Owner responsible for any seaman left behind in Venezuela.

AIRPORT: Distant about 4 miles.

TIME: Local time is about GMT minus 4 hours.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing and given to the National Guard watchmen on board or the Agent.

Vessels are not permitted to sail until all crew members are on board, or special permission has been obtained to sail without a crew member.

REGULATIONS:

Engines: No engine repairs will be made while the ship is in dock. Engines are to be kept at standby at all times while the ship is in port.

Rat-guards: Vessels must use rat-guards on all mooring lines.

Visitors: All visitors to vessels are prohibited, without written permission in each case by the Terminal Authorities (Terminal Supervisor or his Assistants). Mooring Master, petroleum inspectors, dispatchers, and terminal employees may board ship in performance of their duties.

Pollution: The laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast or oil is to be pumped or allowed to escape over the side. No engine-room or pump-room bilges may be pumped overboard. All pump-room sea suctions and overboard discharge valves must be secured prior to loading or discharging cargo. Loading must be conducted with the utmost care and vigilance so that errors or delays may not result in spills. All deck scuppers must be plugged tight before loading so that in the event of a spill pollution of the harbour may not result.

Garbage: No garbage is to be thrown over the side while the vessel is in port.

Passengers: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include this information in his ETA.

Firearms: Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the store list. Officers must not carry firearms while the vessel is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody.

GENERAL:

Bonded Stores: No cigarettes or bonded stores are available at El Palito.

Cash Advances: Cash advances are available in Venezuelan Bolivares only and should be included in the vessel's radio ETA, to permit delivery on board on arrival.

Charts: No charts or sailing directions are available at El Palito.

U.S.S. Club: There is no U.S.S. Club available at El Palito or film exchange service.

Inspection of Cargoes: According to prior arrangements between Owners/Charterers/Suppliers.

Laundry: Laundry facilities are available at El Palito.

Lubricating Oil: Certain types of Corpoven luboils only are available. Requirements should be sent by radio with ETA to Agent.

Mail: Mail service posted from El Palito has been found to be fair.

Provisions: Provisions are available at El Palito.

Radio and Radar: Arrangements to be made with port Agents prior to arrival.

Gangways: Gangways are provided by El Palito Terminal.

SHIPMASTER'S REPORT: July 1988.

Two tugs are used for berthing, one astern on tug's line and the other to illuminate the forward buoy and push as required.

The aft buoy line is the first line sent away and is used to check the vessel's swing into the berth.

There is a constant swell running, and positioning vessel in the berth is very long and drawn out as the loading arms are restricted in vertical and horizontal movement.

The swell causes the ship to move out of position, all moorings need to be adjusted simultaneously and with the small numbers onboard this was very difficult.

Due to loading arm limits and swell, the ballast and loading have to be carried out together. The shore were very reluctant to accept dirty ballast ashore. There are reception facilities and they did take it, but a distinct impression was that they would prefer clean ballast and this to be pumped into the sea, which is against Venezuelen law, as stated in the "Guide".

Leaving the berth was fairly straightforward, with one tug on aft main deck to pull vessel off while recovering anchors.

Chart B.A. 1966 leaves a lot to be desired for approaching a port. El Palito Terminal can be identified by 3 towers, each with a high intensity light near the top and a flare. There is a mass of background lights and the navigational lights are completely obscured. Coming from the North, these lights are visible at 20 miles and with the flare make the pattern, light, flare, light, light from port to starboard. The berth is situated right below these lights.

The radar picture shows 2 similarly shaped jetties, so the lights are a good guide to the correct berth.

AUTHORITY: Corpoven, S.A., – Refineria El Palito, P.O.Box 102, Puerto Cabello 2023A, Edo Carabobo, Venezuela. *Tel:* (041) 422627, 421110, 421005, (042) 3111/3115. *Telex:* 28013, 23571. *Cables:* Corpoven-El Palito. *Contact:* Terminal Supervisor.

GUANTA: 10.15 N. 64.35 W. (See Plan)

SHIPMASTER'S REPORT: 1978.

LOCATION: Lat. 10° 15′ N., Long. 64° 35.5′ W. About 5 miles East of Puerto La Cruz.

DOCUMENTS:

- 6 Crew Lists.
- 6 Passenger Lists (or negative).
- 6 Ship's Stores Lists.
- 6 Crew Personal Effects Lists (well detailed).
- 1 Declaration of Health.
- Clearance from Last Port.
- Cargo Manifests.
- Full set of Manifests and B/Ls.

Entry Formalities: Normally carried out after docking unless there are no berths available; then vessel can be cleared at anchorage in Bahia Pozuelos, during daytime. At night only in case of emergency.

Accommodation ladder must be rigged.

Hours of entry: From 0700 – 1100 hrs. and from 1300 – 1700 hrs. Overtime outside these hours.

APPROACHES/PILOTAGE: A vessel bound for Guanta has to enter Bahia Pozuelos as she must first call at Puerto La Cruz to embark a Pilot. The anchorage area for waiting berth turn is also in Bahia Pozuelos. This anchorage is in depths of 48 ft. to 80 ft. and is well protected from swell by surrounding islands. No size limitation.

Bahia Pozuelos is the anchorage and Pilot embarking area for 3 ports: Puerto La Cruz, Guanta and Pertigalete.

The use of Government Pilot is compulsory for all vessels docking or undocking. ETA: 48 and 24 hours in advance via the vessel's Agent.

Pilot boarding hours: From 0530 – 1700 hrs. every day. Vessel cannot dock after sunset. Sailing may be arranged at any time.

HEALTH: All vessels boarded by Port Doctor. No automatic Pratique.

RADIO: Curacao Radio PJC. No local station.

VHF: All Agencies maintain radio watch on Channel 16 during office hours. Tugs and launches also equipped with VHF (call: "Ramrey").

TUGS: 3 tugs available: 1×1,700 h.p. and 2×1,200 h.p. All privately owned. Sometimes vessels bound for Guanta or Pertigalete have to wait for 2 or 3 hours as these private tugs have contracts with oil companies in Puerto La Cruz and are available only when no tanker is docking or undocking. Tug's lines used. Normally tugs join the vessel inside Guanta Bay.

BERTHING/MAX. SIZE: One concrete pier on piles, 763 ft. in length where vessels normally dock starboard side to. The apron is 20 ft. wide in centre, 42 ft. at ends.

One modern concrete pier on piles, 1,056 ft. in length where vessels normally dock port side to. The apron is 115 ft. wide in centre and 85 ft. at ends. The piers are well fendered with rubber hoses and used tyres.

Height of piers above HW: 10 ft. Mean tidal range: 1 ft. 6 in. Max. draft alongside small pier: 23 ft. 08 in. Minimum draft alongside long pier: 26 ft. 08 in. Depths varies from a minimum of 27 ft. to a max. of 34 ft. at the Western end of the long pier.

CARGO HANDLING FACILITIES: All cargo normally discharged by vessel's own gear, directly on to truck or trolleys. The piers are not connected to the railroad. No floating crane.

The following mobile cranes are available in the port area: 1 crane max. 120 tons; 1 crane max. 30 tons, with telescopic extension boom, max. 60 ft.; 2 small cranes max. 6 tons with a boom length of 30 ft.

Forklifts: 15 forklifts capacity 3.5 tons; weight 5.2 tons with fixed counterweight. To use these forklifts on board, the hoisting gear should lift over 6 tons.

2 forklifts capacity 5 tons, weight 12 tons; 1 forklift capacity 20 tons, weight 25 tons, specially for containers.

Flatbed trolleys: 30 trolleys capacity 8 tons; 1 trolley capacity 70 tons.

No lighters available.

All discharging gear normally supplied by Agency. For heavy lifts, it is recommended to have special slings on board.

BULK CARGO FACILITIES: On the Eastern side of the Guanta Bay, there is a berth for loading coal by means of a fixed chute. Depth alongside 30 ft.

Grain Cargo: Receivers supply suction machines. There are 2 machines available, capacity 1,000 tons per machine during 24 hours. Grain vessels work round the clock.

Liquid Cargo: Sometimes tallow and liquefied gas are handled. Discharged by vessel's pump into tank trucks. Hoses normally supplied by vessel.

CONTAINER HANDLING FACILITIES: No container berth. No crane. 1 forklift capacity 20 tons. There is a small container stacking area.

STEVEDORES: Normal working hours: 0700 – 1100 hrs. 1300 – 1700 hrs. (Monday to Friday); 0700 – 1100 hrs. (Saturdays).

Overtime: Monday to Friday, 1800 – 2300 hrs. (night shift); Saturday, 1300 – 1700 hrs.

Normally port does not work after 1700 hrs. on Saturdays or Sundays.

Ordering of gangs: For 0700 hrs. requested previous day before 1500 hrs. For 0900 hrs. requested same day at 0700 hrs.

Overtime rates: 50% for the night shift (Monday to Friday); 100% for Saturday afternoon shift.

The gangs consist of 12 longshoremen and 12 stevedores, including 2 winchmen, 1 signalman and 1 checker.

Capable supervision only available from Agency.

Rigging or cleaning gangs are available.

MEDICAL: Private hospitals at Puerto La Cruz. Private doctors generally do not visit ships. If medical attention is required on board, the Port Doctor will attend patient, unless he authorises another doctor to make the visit.

In case of emergency, when the vessel is anchored in Bahia Pozuelos, a launch can be arranged to pick up the sick crew member.

DENSITY: Salt water all the year round.

FRESH WATER: Available at 5 Bolivares per ton at the main pier only. Hoses supplied by ship. Rate: about 5 t.p.h.

Presently there is no water available at Berth No. 3 (Western end of pier).

FUEL: No Bunker "C".

Diesel: Delivered by trucks; arrangement must be made at least 24 hours in advance.

Gas Oil: Delivered by trucks under previous arrangement.

GARBAGE DISPOSAL: No facilities.

CONSULS: See "Puerto La Cruz".

REPAIRS: Only minor engine or electric motors can be repaired.

GANGWAY/DECK WATCHMEN: Not available. No shore gangway available.

DRY DOCK: Not available.

SURVEYORS: None.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 open bottle spirits.

REPATRIATION: Can be arranged. No special requirements.

IDENTIFICATION CARDS: Passes for shore leave are issued by officials of the Port Captain's Office, when boarding the vessel for clearance. These passes should be filled out on board. They are valid for the duration of the vessel's stay in port only and have to be returned before sailing.

In order to comply with Immigration Regulations, crew should b carefully checked before departure and any missing seaman reporte to the Agent. The same applies to passengers in transit.

AIRPORT: At Barcelona, about 15 miles by road. 3 flights daily Caracas.

TIME: 4 hours slow of GMT, all the year round.

HOLIDAYS: New Year's Day, Holy Thursday, Good Friday, Ho Saturday, April 19th, May 1st, June 24th, July 5th, July 24th, Octob 12th, November 24th, Christmas. No labour available on these days.

TELEPHONES: No facilities at Guanta. Private calls can be made fro the central office at Puerto La Cruz (5 miles) during the following hour 0700–2100. Long distance calls dispatched quicker from the Hotel Me at Puerto La Cruz.

SHORE LEAVE: From a ship anchored in Bahia Pozuelos: Allowed the vessel has been cleared and if every crew member has shore pas One private launch available but very expensive.

From Guanta berths: Allowed with shore passes.

DELAYS: Presently, Guanta is somewhat congested and the waitin time varies from a few days to 15 days, especially during the rai season.

GENERAL: Venezuelan regulations strictly prohibit the pumpi overboard of dirty ballast or throwing garbage or dunnage in territor waters. Heavy fines are imposed for pollution of waters and sometim fishermen are quick to report any infringement.

Berthing Turn: On the basis "first come, first served" but Venezuela vessels have some priority.

Supplies and Laundry: Several private firms based at Pto. La Cru Nearly all kinds of fresh provisions are available.

Laundry service available; may be completed in 8 to 10 hours.

General: Guanta is a natural harbour surrounded by mountains whi protect the bay completely in bad weather. The port has never bee closed for bad weather.

Venezuelan Flag: Upon arrival at Pozuelos Bay ship should display t flag from the foremast at all times. When anchored or docked, the fl should be displayed only between sunrise and sunset.

Warehouses and Cargo Sheds: No transit cargo shed. No refrigerate storage available.

There are 5 warehouses with a total floor space of 75,000 sq.ft.

Open Space: A total of 5.7 acres, mostly covered with asphalt concrete.

Weather: The rainy season starts in mid-May and ends in November December. During the rainy season it is usually calm in the early hou of the day followed before mid-day by light Westerly or variable breeze In the afternoon the breezes change to North-Easterly at about 12 kno until midnight. During the dry season the cycle is similar but the Nort Easterly wind may reach 25 knots. This can prevent all communicatio between anchored vessels and the shore.

AUTHORITY: "INP" Instituto Nacional de Puertos.

SHIPMASTER'S REPORT: 1975.

LOCATION: Lat. 10° 14.7′ N., Long. 64° 35.5′ W.

Guanta is located in the Bay of Guanta. It is a well protected p against currents and winds.

The port is entered between 2 well lighted islets.

DOCUMENTS:

Maritime Declaration of Health (together with inoculation list of cre
10 Passenger – (or non-passenger) Lists.
10 Transit passenger – (or non-transit passenger) Lists.
10 Crew Lists.
4 Personal Effects Lists. (new clothes, etc., to be mentioned).
4 Ship's Stores Manifests.
Clearance from Last Port.

PILOTAGE: Government pilotage is compulsory. Pilot is embarked a disembarked near the Sea Buoy of Puerto La Cruz, in position: L 10° 15.5′ N., Long. 64° 41′ W.

ANCHORAGE: On the Pto. La Cruz Roads.

RESTRICTIONS: Entering: In daylight hours only: 0600 – 1800 hrs.

Sailing: Day and night.

TUGS: One powerful tug available, compulsory to use when shi length more than 90 m.

BERTHING: New Pier: Length 322 m. Old Pier: Length 233 m.

Water Depth: According to Pilots information: Old Pier: 29 New Pier: 34 ft.

STEVEDORES: *Working Times:* Monday to Friday: 0700 – 1100 hr 1300 – 1700 hrs., 1800 – 2300 hrs. Saturday: 0700 – 1100 hrs., 1300 1700 hrs. Sunday: No work is done.

Gangs have to be ordered by 1500 hrs. the day before required.

FRESH WATER: Ships can replenish their fresh water tanks witho charge (Included in port charges). Own hoses to be used.

OPENING/CLOSING HATCHES: Opening/Closing hatches, setti derricks: Special Rigger gangs take care of this. It is absolutely forbidd for ship's crew to touch these kind of jobs.

GENERAL: *Waste Water:* Special care should be taken to prevent was water, from sanitary or engine-room systems fouling the jetty. Hea fines are made in case this happens and a special shore gang mig be ordered to clean same.

Customs: 2 Customs Officers have to be provided with food.

OPERATORS: Servicio Portuario de Guanta.

GUARANAO: 11.40 N. 70.13 W.

SHIPMASTER'S REPORT: January 1983.

LOCATION: The port of Guaranao is located on the Gulf of Venezuela on S.W. coast of the Peninsula de Paraguana, Venezuela. It lies between Amuay Bay to the North and Punta Cardon to the South.

DOCUMENTS: Inward Clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department.

The following documents must be ready on arrival:

- Clearance from Last Port.
- Crew Lists (7 copies).
- Passenger Lists if any (5 visaed copies).
- Baggage Lists if any (3 visaed copies).
- List of Personal Effects (4 copies).
- Stores Lists (2 copies).
- Sailing Permit (Zarpe).

PILOTAGE: Compulsory. Vessels have to wait for Pilot about 0.5 miles offshore at anchorage. Ship's can make contact with pilot station by VHF on Channel 16 or 12.

ANCHORAGE: Generally ships must anchor about 0.5 miles offshore to wait for Pilot. Good anchorage is obtained in depths of 28 ft. (8.5 m.), muddy bottom and depths of less than 18 ft. (5.5 m.) extend up to about 0.25 miles offshore in this bay, and depths of less than 36 ft. (11 m.) extend about 7 cables NNW from Punta Zarobon (Guaranao).

APPROACHES: Masters when approaching the coast should keep a sharp lookout for fishing boats, nets, small craft or sunken wrecks. From Punta Zarobon the coast, which is bordered by cliffs from 85 ft. to 65 ft. (25.9 m. to 19.8 m.) high, trends about 2 miles SSW to Punta Gorda.

RADIO: Arrival notices and radio messages to and from ships at sea are usually transmitted through Curacao (PJC) and routed through Agent's head offices at Caracas, Venezuela. The port radio control is Las Piedras Paranagua.

TUGS: One tug is available to assist with berthing/unberthing.

BERTHING: A pier extends about 3 cables Westward from shore at Salinas, Guaranao, and the Southern half of this pier is for Ro-Ro vessels stern to. A floating pier about 1 cable distance South of and parallel to the former, extends Westward from shore about 810 ft. (247 m.) and is 164 ft. (50 m.) wide.

CARGO HANDLING FACILITIES: There are fork lift trucks of all sizes, 6 mobile cranes at the floating pier, and some towing vehicles.

MEDICAL: Services available.

FRESH WATER: Not available.

FUEL: Available if advance notice is given. Fuel/diesel oil and lubricating oil can be obtained from either Amuay Bay or Punta Cardon.

FIRE PRECAUTIONS: This port is used for discharging general cargo, especially waste paper and timber. Waste paper is considered as dangerous cargo, therefore Masters are called to pay attention to their fire-fighting equipment and to have it ready during discharging waste paper.

WATCHMEN: Not available.

SHORE LEAVE: Permitted, but shore passes must be carried and passes returned before the vessel sails.

GENERAL: *Stores:* Provisions, deck and engine stores available but not bonded stores.

Garbage Disposal: No facilities.

AUTHORITY: Las Piedras-Guaranao Port Captaincy, P.O. Box No. 2, Codigo Postal 4102-A, Edo. Falcon, Venezuela. *Tel:* (069) 451921. *Telex:* 54119. *Cables:* Capipuerto Las Piedras. *Contact:* Captain Oscar Ibarra Lavado, Harbour Master.

JOSE TERMINAL: 10.06 N. 64.51 W.

OPERATOR: Corpoven S.A.

FLAG: Venezuelan flag must be displayed from the foremast when entering Pozuelos Bay and when manoeuvring or docking, regardless of the hour; however, while at anchor or while moored at berth, it needs to be displayed only between sunrise and sunset.

LOCATION: The Terminal of Jose is located West of Pozuelos Bay at: Lat. 10° 06′ 19″ N., Long. 64° 51′ 10″ W. on the N.E. coast of Venezuela. The usual hurricane path is several hundred miles to the North.

The lighthouse marking the entrance to Pozuelos Bay is located at: Lat. 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.

DOCUMENTS: Arrival Clearance is effected on board vessel shortly after docking by Government Officials and a representative of the Company. The following documents are required and should be prepared prior to arrival.

- Ship's Register.
- Ballast Manifest (1 copy).
- Crew List (6 copies).
- Passenger and Baggage List, if any (5 copies).
- List of Passengers in Transit, if any (5 copies).
- List of Personal Effects (4 copies).
- *Stores List (5 copies).
- List of Slop Chests (4 copies).
- Sailing Permit issued by Marine Authority at last port of call.

*Store List should indicate separately all deck, engine and cabin stores.

PILOTAGE: The use of Government pilots is compulsory for all vessels docking or undocking. This service will be arranged at all times. If it becomes mandatory for the Master of the vessel to disregard Pilot's order in order to ensure safety of the ship, a written report in Spanish shall be submitted promptly by the Master of the ship to the Government Port Captain.

APPROACHES: Puerto Jose is approached through a channel 150 m. wide, with a minimum depth of 13.6 m. There is a turning area 460 m. in diameter.

RESTRICTIONS: No restrictions are made on arrival/sailing time.

MAX. SIZE: The loading facilities consist of one Berth.

The docking characteristics are as follows:

Max. Deadweight	45,000 tons
Max. Ship Capacity	75,000 cu.m.
Min. Ship Capacity	11,000 cu.m.
Max. Draft	39 ft.
Max. LOA	800 ft.
Max. Lightship weight	22,000 tons

HEALTH: In theory the Government Port Doctor is to board each incoming vessel and board only outgoing vessels which carry passengers. In practice, however, the doctor boards at his discretion.

RADIO: Masters are requested to advise Corpoven Puerto La Cruz by radio 72 hours in advance of estimated arrival giving vessel's name, date and hour of arrival, bunkers, name of Master, port of departure, draft (arrival), Venezuelan gross tonnage, flag of ship and dates that ships' certificates expire. Vessels may contact the terminal of Puerto La Cruz by radio-telephone on 2182 kHz, SSB and VHF Channel 16. There is standby attention 24 hours a day. The terminal also has the frequencies 2080, 2120, 2638, 2738 and VHF Channels 6, 12, 13, 16, 17, 73 and 74.

Ship-to-shore radios are installed on the oil dock and on both tugs.

TUGS: There are 2 tugs at the port for mooring or unmooring and use is compulsory for all vessels. The tugs available are radio equipped and are 3,000 h.p. or more. Generally the Government Pilot will not begin manoeuvers until he is assured that the tugs are on stand-by.

BERTHING: *Arrival at Dock:* While alongside the berth the following rules must be observed:

(a) Master must ensure that mooring lines are properly tended, and that sufficient personnel are onboard at all times to handle lines. Loading will be temporarily suspended upon infringement of this regulation.

(b) Masters are requested to remove the blank flanges from their vessel's loading manifold before docking, so as to expedite the connecting of the shore loading arms by company personel. Vessels are requested to have their derrick and gangway ready for use.

NOTE: Vessels normally dock with starboard side to dock, unless advised otherwise.

(c) While docked, the discharge of sea water, hot water or steam on dockside of ship is prohibited. Hot water or steam may activate the automatic sprinkler system as well as damage piping located under the dock surface.

(d) Rat-guards must be placed on all ropes connected with the shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officer's messroom for Venezuelan National Guard personnel who may be assigned to the vessel during her stay in port.

(g) Masters are requested to display on top of mast a red flag in daytime and red light at night indicating that ship is handling dangerous cargo.

(h) Unregulated crafts should not be allowed to come alongside ship moored at Terminal without the permission of the Terminal Operator. It will be the responsibility of the ship's Master to ensure that this regulation is obeyed.

LOADING: *Products Handled:* Natural gas, propane, isobutane, normal butane and pentane.

Loading rates:

Propane	12,000 gallons p.m.
Butane	6,000 gallons p.m.
Gas/Pentane	4,150 gallons p.m.

Only one commodity handled at one time.

After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions with respect to the cargo.

During loading operations, company employees are on watch to administer to the needs of each vessel.

Upon termination of loading cargo, cargo lines are displaced at controlled rates prior to disconnecting.

Shortly after completion of loading, company personnel and an independent inspector, together with a vessel's officer, will take ship's ullages and later, deliver cargo and sailing papers to the Master of the vessel.

Ships must vacate berth upon completion of loading and await papers at anchorage in Pozuelos Bay.

For information regarding completion of loading, the dock supervisor can be contacted by telephone from telephone booth at berth.

BALLAST: There are no facilities for deballasting.

MEDICAL: All requests for medical or dental treatment must be accompanied by a written request from the Master to the vessel's Agent.

FRESH WATER: Not available locally.

Fresh chlorinated water is available in limited quantities at an average rate of approximately 2 tons per hour at the Puerto La Cruz Terminal.

FUEL: Bunkers are not available at this Terminal.

Bunker "C" and Heavy Diesel Fuel and a complete range of intermediate fuels are available in reasonable quantities at Puerto La Cruz Terminal, subject to safety and operational restrictions. Delivery rates to the ships are approximately as follows:

Bunker "C"	200 t.p.h.
Heavy Diesel	150 t.p.h.
Intermediate Fuels	100 t.p.h.

Meters are installed in all bunker systems and are calibrated in net barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines on the docks of Puerto La Cruz Terminal will only be opened and closed upon advice from the ship's personnel.

Lubricants and gasoil are available through the vessel's Agent.

CUSTOMS: Crew members should be warned against taking knives or other lethal weapons ashore, as this is strictly prohibited. All firearms and ammunition must be noted on Stores List. They cannot exceed 1 per officer and 18 cartridges per gun. No arms may be carried while ship is in Venezuelan waters or tied up at dock. Contraband of any description will be confiscated. Each man is allowed 1 package of cigarettes on his person and this package must be opened. No liquor is to be taken ashore. It is prohibited to carry liquor from shore to ship without authorisation from Master of vessel. It is further strictly prohibited to consume liquor in dock area.

It is normally forbidden to take photographic cameras ashore. However, upon written request to the National Guard contingent on the oil dock, special permission may be obtained. This is subject to 2 limitations: (1) that the camera is returned to the ship; (2) that no photographs are taken of the petroleum installations.

IDENTITY CARDS: Passes for shore leave are issued by the officials of the "Capitania de Puerto", who board with the Customs Authorities upon the vessel's arrival at dock. These passes are valid for the duration of the vessel's stay in port and must be returned before sailing to the guard assigned to the vessel.

In order to comply with Immigration Regulations, crews should be carefully checked before sailing, and any missing seamen reported to the vessel's Agent.

Crew members left behind when the vessel sails will be held in custody until deported at the vessel's expense.

CONSULS: The following foreign countries have consular offices in the vicinity of Puerto La Cruz:

Belgium	France	Norway
Brazil	Great Britain	Spain
Colombia	Italy	Sweden
Denmark	Netherlands	

Vessel's Agent should be appraised of vessel's consular requirements promptly upon docking.

REPATRIATION: Seamen discharged from hospital for transfer to another port, seamen arriving from another port or those being repatriated are handled by the vessel's Agent, who must comply with all Venezuelan Regulations.

In the case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances if any, and instructions for repatriation. Venezuelan regulations, at all times hold the vessel responsible for a seaman during his stay in the country. Close contact is maintained by radio with ship owners regarding disposition of their seamen.

TIME: GMT minus 4 hours all year round.

REGULATIONS: *Excessive Smoke:* It is absolutely prohibited to exhaust heavy smoke through a ship's funnel while tied up at the Company's dock. It is also prohibited to blow boiler tubes. Failure to comply with this regulation will result in any or all of the following actions:

1. The loading operation will be immediately shut down.
2. Vessel will be subject to fine.
3. Vessel may be removed from dock.
4. Ship's Agent will be advised of infractions of this regulation.
5. Fines, time lost, and other related expenses will be charged against the vessel.

Pollution: Venezuelan laws are very strict on this subject and local authorities quickly enforce existing statutes. For this reason each Master is handed a circular that emphasises the necessity of complying with federal and local laws and customs.

The spilling or discharge of dirty ballast, crude oil or petroleum products into coastal waters is defined as pollution, as is also the throwing overboard of garbage, trash or other unwanted objects while the vessel is at anchor or dockside. Prior to the start of loading operations all discharge valves, bilges and scuppers must be closed and strict vigilance exercised during deballasting and loading operations.

When a spill does occur, the Master, Government officials and a company representative evaluate the quantity and submit a report to the Government Petroleum Inspector. This report becomes the basis for a federal fine that is practically incontestable. An additional expense occurs when local authorities require assistance in cleaning beaches and shorelines after a major spill and can pinpoint the responsible vessel or source.

TONNAGE CERTIFICATE: Due to reciprocal agreements between Venezuela and the following countries, ships flying the flag of any of the below-named countries are exempted from Arqueo compliance and payment of fees: Denmark, Great Britain, France, Germany F.R., Netherlands, Norway, Portugal, Sweden, United States.

Ships bearing the flag of any other nation shall require a Venezuelan Arqueo Certificate. The cost of measuring is contingent on the size and tonnage of vessel. The certificate is usually issued after the ship sails from port. It is then sent to the marine department of the Owners of the vessel by airmail.

EMERGENCY CO-ORDINATION CENTRE: Seccion de Seguridad, Busqueda y Salvamento Maritimo. Telex: 31154. Tel: (02) 513395, 512156.

SURVEYORS: 1. Saybolt, Caleb Brett, Chas Martin, AIVEPET cargo inspectors available at Puerto La Cruz.

2. Lloyd's Register, American Bureau, Bureau Veritas, P & I available at Puerto La Cruz or from Caracas via the ship's agent.

TELEPHONES: There is a telephone booth on dock. The supervisor on duty may be contacted at any time.

GENERAL: *Dockmaster's Office:* Loading and marine personnel offices of Corpoven S.A. are located at the entrance of the dock. Any matter concerning loading and/or bunkering, is handled through this office, which is open 24 hours every day.

The Documentation Section is located at the Puerto La Cruz Terminal.

On the dock there is a telephone booth and the supervisor on duty can be contacted at any time.

Cash: The local currency is the "Bolivar". Foreign exchange may be secured from local banks. Local banks are open Monday to Friday 0830 – 1130 hrs. from 1400 – 1630 hrs. except holidays.

Ship's Requirements: All ship requirements such as chandlery supplies mail, cash advances, medical attention, dental care, consular services repair work, laundry service, bonded stores, transportation, etc., shoul be obtained through the vessel's Agent.

No charts or sailing books are available in the Terminal. These shoul be forwarded by airmail to the vessel's Agent for delivery to the ship.

Movement of Passengers: Inasmuch as the Company's Terminal is no a public port, only bona fide crew members and Corpoven employees are permitted to join or leave ship in Jose.

AGENCY: All incoming ships to lift cargoes at this Terminal must hav a local Agent to render all services required for a prompt and efficien tanker turnaround and to cancel all ships disbursements during the po stay.

Corpoven as operator of the Terminal charges a fixed fee for Genera Services such as:

Complete documentation service.
Preparation of disbursement accounts for the Agent of Vessel.
Dispatch of vessel.
Control over marine units which service vessel.
Assistance and supervision in docking of vessel. Supervision ove connecting of loading system and related cargo facilities.

Offices of Corpoven loading and marine personnel are located on th first floor of the building between Berths No. 1 and 2. Any matte concerning loading, bunkering, is handled through this office, which i open 24 hours of every day. On the ground floor of this same buildin is the Documentation Section.

LA GUAIRA: 10.36 N. 66.56 W. (See Plan

PORT LIMITS: Between the points 10° 37′ 40″ N., 66° 48′ 30″ W. an 10° 37′ 40″ N., 67° 07′ 07″ W. and the coast line.

DOCUMENTS:

Sealed envelopes for Customs.
Visaed B/L and Sobordos not in envelopes.
Despatch from last Venezuelan port, if any, or
Zarpe from last foreign port, if arriving directly from abroad.
Fumigation Certificate.
Bill of Health.
Vaccination Certificates of Crew.
4 Stores Lists (with arms and narcotics).
4 Lists of Personal Effects.
6 Crew Lists.
12 Lists of Passengers for La Guaira, or negative Passenger List.
8 Lists of Passengers in Transit.
2 Lists of Luggage (only for passenger luggage).
1 Master's Declaration.
1 List of Stowaways, if any.
8 Cargo Lists.

PILOTAGE: Compulsory and vessels have to wait for Pilot in the pilotag zone N.W. of the entrance. Ships can make contact with the pilot statio by VHF Channel 16 or 12.

ANCHORAGES: Generally ships must anchor in the N.E. area of th entrance, the depth varies from 8 to 20 fathoms. The bottom is san and occasionally rocks.

RESTRICTIONS: There are no restrictions imposed upon entry.

MAX. SIZE:

Berth	*Length* (m.)	*Depth* (m.)	*Remarks*
01-E	176	10.95	Roll-on/Roll-off
01-D	176	10.95	General Cargo
01-C	176	9.55	12 ton electrical cranes
01-B	176	8.55	12 ton electrical cranes
01-A	176	8.80	12 ton electrical cranes
01	155	9.15	12 ton electrical cranes
02	155	9.75	12 ton electrical cranes
03	160	9.45	Grain Berth
04	136	5.50	General Cargo
05	161	8.50	General Cargo
06	161	8.80	General Cargo
07	136	8.50	General Cargo
08	136	8.50	General Cargo
09	133	5.50	General Cargo
10	168	8.50	6 ton electrical cranes
11	144	8.80	6 ton electrical cranes
12	144	8.50	6 ton electrical cranes
13	144	9.45	6 ton electrical cranes
14	144	8.80	6 ton electrical cranes
15	168	8.80	6 ton electrical cranes
16	160	8.20	Passenger Berth
17	160	9.15	Passenger Berth
18	171	9.75	Passenger Berth
19	171	9.75	Passenger Berth
19-A	72	4.55	Passenger Berth
20	150	3.00	Fishing Berth
21	290	6.10	Warship Berth

HEALTH: Ships from Venezuelan ports obtain Free Pratique. Ships fro abroad must send a cable to Health Authorities requesting Free Pratiqu or advising illness.

RADIO: In order to enable Agents arrange for quick entry and berthing, Masters should give their ETA message at following intervals, via Curacao Radio (ITT): 72, 48 and 24 hours prior to arrival, indicating in the 48-hour message, the quantity of parcels (or tonnage if bulk cargo) per hatch. This is imperative for applying for the necessary personnel of the Instituto Nacional des Puertos (I.N.P.). Also, draft, passengers, requirements for bunkers, fresh water, provisions, repairs, medical assistance, etc. This telegram the Master to sign with his full name.

VHF: Communication with the Port Authorities and the pilot station are possible by VHF. Ship must make contact on Channel 16 and change after to some Channel between 1 and 70, Channel 12 is normally used for this manoeuvre.

TUGS: The use of tugboats within the port is compulsory, both for entering and leaving port, as well as for manoeuvres in the port area. Ships longer than 139 m. must be assisted by 2 tugboats.

Ship's lines are used in the manoeuvre. The Port of La Guaira has 2 tugboats of 1,800 h.p. each. Normally they join the vessel at the entrance of the port.

BERTHING: Normally a minimum of 24 ocean-going vessels can berth at one time. Berths No. 01-E, 01-D, 01-C, 01-B, 01-A, 01, 02 and 03 are along the Breakwater Pier East-West, parallel to the coast. At Piers No. 01-C, 01-B, 01-A, there are 12 electrical cranes of 12 tons. At Pier No. 03 ships discharge grain directly to a silo by 2 grain towers, average daily rate 2,000 tons. Silo capacity 12,000 tons.

Within the port is a finger pier, parallel to the Breakwater Pier, with 2 Customs warehouses alongside, with berths North and South, 2 each. The main pier is parallel to the coastline, East-West, with Berths No. 10, 11, 12, 13, 14 and 15,, along which piers there is ample Customs warehouse space, including outdoor space on the roofs as well as ample uncovered storage area. There are 15 × 6 ton electrical cranes at this pier.

The Passenger Terminal is on a finger pier, in direction North-East with its land end in the corner of Berth No. 15. There are 2 berths each side, namely Nos. 16 and 17 in the inner basin and Nos. 18 and 19 in the outer basin.

Passenger vessels have priority for berthing and they have to leave port within 24 hours.

BULK CARGO FACILITIES: Bulk carriers only discharge, at Piers 01-D, 01-C and 03. There are no facilities for cargo.

SPECIALISED CARGO HANDLING FACILITIES: The only berth specially equipped for Roll-on/Roll-off traffic is Pier 01-E but Pier Nos. 04, 09 and 16 are also used for this kind of cargo.

There is no fixed equipment for handling containers but the Instituto Nacional des Puertos has some mechanical equipment for handling containers.

This port does not have any other facilities for specialised cargo handling.

BRIDGES: There are no bridges.

STEVEDORES: Supplied exclusively by Instituto Nacional des Puertos at costs per weight of cargo in accordance with governmental decrees.

The Port Agent applies for the necessary number of gangs per ship. Each gang consists of 11 stevedoremen (estiba) and 11 longshoremen (caleta).

Switching of gangs from one hatch to another is not permitted.

There are no longshoremen costs for cargo handled during straight time, but only for that handled during overtime.

(a) *Straight time*
Monday – Friday 0700 – 1100 hrs.
1230 – 1630 hrs.
Saturday 0700 – 1200 hrs.

(b) *Overtime*
Monday – Friday 1800 – 2300 hrs.

(c) *Saturday afternoon* work is not permitted, but if a vessel could terminate operation and sail within a maximum of 3 additional working hours, a special permit would be granted by Customs and Port Authorities. In such a case, the additional working hours are considered as overtime.

(d) *Work on Sunday* is not permitted except for passenger vessels (officially those carrying 69 passengers, but exceptionally vessels with fewer passengers might occasionally obtain same consideration by authorities).

EQUIPMENT:

(a) *Electric Shore Cranes:* Berths 01-C to 01-A have 12 electrical cranes on rails of 12 tons capacity each. Berths 10 to 15 have 15 on rails of 6 tons capacity each. The Instituto Nacional des Puertos allow 2 × 12 tons cranes to lift pieces up to 20 tons or 9 tons weight. At Pier 10 the arms of the cranes reach the roofing of the warehouses.

Use of shore cranes is not compulsory, unless the Technical Board of the Instituto Nacional des Puertos rules to use them. Other piers have no shore cranes.

(b) *Diesel-Driven Rolling Cranes:* There are a considerable number of these cranes which can lift heavy pieces of about 17 tons.

(c) *Floating Cranes:* Not available.

(d) Special lumber carriers of about 20 tons capacity.

(e) Tow trucks, fork-lifts, trucks and trailers up to 10 tons capacity.

LOADING/DISCHARGING: Cargo is discharged on the pier, when free it is taken away by fork-lifts and/or other mechanical equipment supplied by Instituto Nacional des Puertos. The use of such equipment is included in the handling fee for weight.

There are 2 grain towers on Berth No. 3 leading via conveyor belts to storage silos of 12,000 tons capacity. Average daily discharge rate 2,000 tons approximately.

At Berths No. 10 to 15 discharge to the roof of the warehouse or on the pier is possible.

OPENING/CLOSING HATCHES: Not performed by the Instituto Nacional de Puertos but by either the ship's crew, or the assistance labour of the Agent.

FRESH WATER: Available through pipe-line on the pier, day or night, by water trucks of up to 10 tons capacity in day time only.

GANGWAY/DECK WATCHMEN: The watchmen service is not necessary. It is recommended to use a seaman as watchman.

MEDICAL: There are several hospitals in the town and all the medical attention necessary. Should medical assistance be needed on board, contact the Agent.

DENSITY: The average density of water in the port is 1025.

CONSULS: The following countries have consuls in La Guaira; Belgium, Germany F.R., Mexico, Norway, Panama and Sweden. The following countries have Vice-consulates; Denmark, Italy, Portugal and Spain.

REPAIRS: All kinds of deck and engine repairs are possible.

DRY DOCKS: There are no dry docks in this port. (The nearest is at Puerto Cabello).

SURVEYORS: All Classification Societies and P&I Clubs are represented in the port.

POLICE/AMBULANCE/FIRE: *Police:* 26148, 26347 and 27098. *Ambulance:* 22165. *Fire:* 22165 and 22587.

REPATRIATION: There are all kinds of facilities for making crew changes and arranging any necessary repatriation.

AIRPORT: The distance to the International Airport at Maiquetia is 10 km., this is served by different regular airlines.

TIME: GMT minus 4 hours. No change.

HOLIDAYS: January 1st, (New Year); February 18th/19th, (Carnival); April 3rd/4th (Easter); April 19th, (Independence Day); May 1st, (Labour Day); June 24th, (Carabobo Battle); July 5th, (Independence Day Declaration); July 24th, (Simon Bolivar's Birthday); September 4th, (Public Funcionary Day); October 12th, (America Discovery); December 25th, (Christmas).

TELEPHONES: It is not possible to place telephones on board, however calls can be made in the "CANTV" office.

SERVICES: There are no special services available. Radar repairs possible.

SHORE LEAVE: Crew members can go ashore with shore passes issued by the Port Authorities.

IDENTIFICATION: Shore passes are sufficient to go ashore.

REGULATIONS: *Dangerous Goods:*

1. Dangerous goods should be discharged directly to trucks.
2. When goods are grain or powder in bags, these should not exceed 50 kg.
3. Cargo with damaged packing will not be discharged and it should be repacked on board.
4. Cargo should be duly identified and with their dangerous goods labels.
5. Cleaning of the piers after loading or unloading should be done by the importer or exporter, otherwise they should cover the expenses if the INP has to do this cleaning.

OFFICIALS: Once the vessel is anchored at La Guaira, Representatives of Customs, Port Captain, National Guard, Health Service, Immigration and Agency board the vessel.

DEVELOPMENTS: Increase in draft to 35 ft. expected.

AUTHORITY: Harbour Master, Capitania de Puerto, Terminal de Pasajeros de La Guaira.

GENERAL: The following "Depth Bulletin", dated June 1978, was received from a Shipmaster in February 1979.

REPUBLIC OF VENEZUELA
NATIONAL INSTITUTE OF CANALIZATIONS
ZULIA ZONE

Depth Bulletin No. BP – 6-78 Dated: 13-06-78

The following data represents the latest information reported and refer to the date shown for each section of the channel. Depths are expressed in metres and are related to the same level of the local Navigation Charts 1001, 1002, 1003 and 1004 of the M.M.M. Mean Monthly Lowest Low Water.

The controlling depths refer to the centre area of the channel demarked by parallel lines on either side at a distance of 60 m. in the outer channel and 45 m. in the rest of the channel. The Puerto Miranda Channel is of 30 m. The theoretical position of the buoys in the aforementioned navigation charts are located at a distance of 30 m. from the edge of the channel.

Main Channel

Channel	From	To	Date	Depth (m.)	Remarks
Outer Section	B – 1	B – 28	19-05-78	12.8	
Inner Section	B – 28	T – 56	10-05-78	12.8	
South Prolongation	T – 56	B – 59	28-04-78	12.8	Entrance to Puerto Miranda (B – 59)

Zulia Zone

(N.B. Certain information common to all Vessels entering Maracaibo Lake is given below. For specific details of ports/terminals within the Lake, see relative Section as indicated above).

FLAG: Local authorities require that the Venezuelan ensign be flown at vessel's masthead, from the time of entering the outer channel until clear of the outer channel outbound.

DOCUMENTS: *(a) Inward Clearance for Scheduled Vessels:* Vessels arriving in ballast or with cargo in transit require following documents:
1 copy Sailing Permit from Last Port.
2 copies Ballast Certificate.
4 copies Passenger Lists.
4 copies Baggage Lists.
4 copies List of Passengers in Transit.
4 copies List of Slop Chest.
4 copies List of Personal Effects.
4 copies Stores Lists.
5 copies Crew Lists.
Vessels arriving with cargo should have, in addition to the foregoing:
4 copies Sobordos (Venezuelan Inward Manifests).
6 copies Bills of Lading.
2 copies Inward Manifests.

(b) Inward Clearance for Diverted Vessels: Vessels diverted to Maracaibo Lake Ports to load cargo, should submit all documents indicated above, except consular mail, which they will not have.

Vessels diverted at sea to Maracaibo Lake Ports which do not have a Venezuelan clearance on board, must advise loading port via radio to arrival, the name of vessel, Master's name, vessel's flag, Venezuelan net tonnage (if available, if not, the registered net tonnage), last port of call, destination port for which originally cleared, ETA San Carlos Pilot station and grade and quantity of cargo to be lifted. This information is required in order that Inward Clearance may be arranged with government officials in ample time prior to vessel's arrival. Also 3 copies of the Diversion Telegram received by vessel and signed by Master, together with copies of those documents listed under *(a)* should be presented to the Port Authorities upon arrival at Maracaibo. In the absence of this information, or of presentation of each of these documents to the Port Authorities the vessel will be subject to a fine. Please note, that the documents covered under *(a)* have to be presented upon arrival, regardless, if the vessel is not arriving with Consular Clearance or arriving after being diverted at sea.

(c) In Maracaibo 2 Clearances from Custom's authorities are needed: One for proceeding from Maracaibo to loading berth, and another after loading for proceeding from Maracaibo to destination. For this reason Custom Dispatch charges may be incurred twice.

(d) American Crew List. All non-American vessels loading for a U.S.A. port should have the American Crew List ready on arrival in Maracaibo to be visaed by the American Consulate in Maracaibo and placed aboard ship before departure. The crew list should be prepared on Immigration and Naturalization Service Form No. I. – 418 (Crew List Manifest) and should contain 2 sections:

Section 1 should list those crew members who are American or who possess individual visa documentation to the United States.

Section 2 should list, in the alphabetical order of their last names, those alien crew men who lack United States visa documentation and therefore require inclusion in the visa of the Crew List.

Only one name may be placed on each line of the Crew List. Two names should not be placed in the space of one line, nor should a full line between two names be left vacant. All copies of the Crew List presented must be legible. Occasionally the names of the crew men included on the carbon copies of some crew lists presented at the consulate are blurred beyond recognition.

The information requested under columns 1, 2 and 3 should be filled in completely. Column 1 should always contain the complete first name and middle initial of the crew man. Column 2 should show the nationality of each crew member and the number of his travel Document. Column 3 should always include the name of the port where the crew man was shipped, not simply the country.

At the time of vessel's first application for a Crew List, the Crew Lis must be presented in four copies: Original and 1 copy should contai only information requested under Columns 1, 2 and 3. 2 copies mus include following information of those crew men to be included on Cre List Visa. Column 4 should list date, city and country of each crew man' birth. Column 5 should show place of issuance of Seaman's Trave Document and name of Government which issued travel document. (is not necessary to list date of issuance of travel document).

Below is a sample line correctly entered on the Master Crew List.

(1)	(2)	(3)	(4)	(5)
Bello, Tomas E.	Z.23455 Venezuelan	Maracaibo Venezuela	December 8, 33 Caracas, Venez.	Cabimas, Venez

Upon subsequent Crew List applications by same vessel within sam year, the Crew List need be presented in duplicate only, and th information in Columns 4 and 5 need be provided only concerning an new crew members who require visa documentation. When twelv months have elapsed since presentation of Original Crew List, a Cre List should again be prepared in 4 copies and should contain all th information required in columns 1 – 5. Such a Master Crew List i required after each 12 months' period.

APPROACHES: Also see "General" above. The channels leading t the Lake of Maracaibo are called the Outer Channel, the Inner Channe and the Lake Channel. The controlling depths of the Outer Channe Inner Channel and the channel Southward to Buoys M1 and M2 ar normally 45 ft. At certain times the controlling depth may be less. A such times suitable notices are published advising mariners of thes temporary reductions of controlling depth.

Outer Channel. The Outer Channel starts at the E.M. Buoy in positio 11° 13′ 47″ North and 71° 33′ 31″ West. The light characteristics of E.M Buoy are: flashing white every 5 seconds, visibility approximatel 5 miles. The distance from E.M. Buoy to the Southern end of the Oute Channel, marked by Buoys B – 27 and B – 28, is approximatel 15.75 miles. The channel is 1,000 ft. wide and has a normal controllin depth of 42 ft. minimum monthly observed lowest water (MMOLW) wit tidal range varying about 2 ft. 3 in. This depth is maintained by periodica dredging. Tankers are required to have a keel clearance of at least 2 f and dry-cargo vessels a keel clearance of at least 3 ft. Vessel navigating the channel at the maximum allowable draft are confine from 2 hours before to 2 hours after high water. There are no turns i the channel and the course is 189°.

There is a breakwater 0.5 mile East of, and parallel to, the Oute Channel and extending 1.6 miles Northward from the North side o Zapara Island. The end of this breakwater is marked with a skeleto steel tower with a light 27 ft. above sea-level. Light characteristics - flashing white light every 8 seconds; visibility about 3 miles.

On Zapara Island there is a skeleton iron tower with a height of 136 f above sea-level.

Cross currents are sometimes encountered near Zapara, San Carlo and Pescadero Islands, especially at low water when the cross current are strong. Overtaking at these points should be avoided.

There is one anchorage zone in the Outer Channel which is trapezoid on the port side when navigating inbound near the Buoys B - 14, B – 15, B – 16 and B – 18. All buoys in the Outer Channel ar equipped with radar reflectors.

Caution: Masters are warned to keep adequate speed in the Oute Channel even when embarking the Pilot as strong cross currents ar encountered near San Carlos and Zapara Island. Pilot boats are fa and fitted with a flying bridge.

Inner Channel. The Inner Channel continues on the same course a the Outer Channel for about 10 miles, whereafter the direction change to 150°. Entire length of the Inner Channel is about 12 miles.

The beginning of the Inner Dredged Channel is marked by Buoy B – 29 and B – 30. Channel is marked by beacons, and terminates beacons T – 55 and T – 56. The channel is 800 ft. wide and the norm controlling depth is 43 ft. MMOLW with tidal range varying fro 1.5 ft. to 2.5 ft.

The channel from beacons T – 56 to Maracaibo Harbour is a dredge channel, the end of which is marked by Buoys Nos. B – 73 and B – 7

About 0.2 mile South of Buoys B – 29 and B – 30, there are locate 2 towers – 1 on each side of the channel, and about 1 mile further Sou are 2 more towers. These 4 towers are marked E – 31 and E – 3 (North) and E – 33 and E – 34 (South). Towers No. E – 31 and E – 3 are of single steel pipe construction on a concrete pile base. Tower No. E – 33 and E – 34 are of skeleton steel construction (former oil-we derricks) each mounted on 4 concrete piles. The characteristics of thes towers are:

Tower No.	*Height above LWS (ft.)*	*Light*
E – 31	43	Green – Fl.
E – 32	43	Red – Fl.
E – 33	123	Green – Fl.
E – 34	128	Red – Fl.

Vessels are not allowed to overtake each other in the Inner Chann between Buoys B – 29 and B – 30 and Light Beacons T – 25 and T – 2 Vessels may overtake each other in the Inner Channel between Lig Beacons T – 39 and T – 40 after having exchanged prescribed signa with the vessels to be passed. This manoeuvre is, of course, allowe only if conditions are favourable and no vessel navigating in the opposi direction is in sight.

Lake Channel. The channel starting at Light Beacons T – 39 and – 40 and leading to Maracaibo Roads is called the Lake Channel. Th is a natural channel 3,000 ft. wide and 11 miles long.

The Main Channel through Maracaibo Lake is approximately 83 mil long, not less than 244 m. wide and with a greater depth than the out channels.

The access channels to the various ports and terminals branch from the main channel as described under Section for each port.

CHANNEL NAVIGATION:

(a) Inbound vessels leave to starboard side the buoys and beacons marked with even numbers and to port side the buoys and beacons marked with odd numbers.

(b) Outbound vessels shall leave to port side the buoys and beacons marked with even numbers and to starboard side the buoys and beacons marked with odd numbers.

(c) Vessels should pass as close as possible to the channel's edge on starboard side. Loaded vessels have preference.

(d) Approaching vessels are to reduce speed in order to minimise the suction force of the displacing waters.

(e) Vessels must maintain a distance of 5 ship's lengths by day and 8 ship's lengths by night from other vessels navigating in the same direction.

(f) No vessel should start to manoeuvre to overtake another vessel before having received clearly the affirmative signal from the ship to be passed.

(g) A grounded vessel is not allowed to start any manoeuvre when another vessel is passing.

(h) Dredgers are frequently at work in the channels and caution should be exercised in passing them. Signals used by the dredgers are as follows:

Daytime

Black cylinder hoisted on side of yardarm: You can overtake me on the side on which the cylinder is shown.

Two black balls over the bridge: The channel is blocked.

Night

Green light on side of yardarm (a white light on mast-head helps to show on which side the green light is placed): You can overtake me on the side on which the green light is shown.

2 red lights over the bridge: The channel is blocked.

The tidal range is 4 ft. at neaps.

(i) Maximum speed for vessels navigating in lake channels has been limited to 10 knots. Masters should exercise the utmost care in complying with this regulation as heavy fines may be imposed to offending vessels.

PILOTAGE: (N.B. Maracaibo Pilotage Regulations require that inbound tankers, in ballast, while crossing the Bar, shall not have greater than 8 ft. difference between fore and aft draft. The Government Pilot will not take the vessel if this requirement is not met, unless he is satisfied that the actual draft of the vessel will permit safe navigation through the Outer and Inner Channels).

Every Master of a vessel navigating in Lake Maracaibo who desires to enter the main ship channel in Pilotage Zones No. 1 or No. 2 must first ensure that said Channel is free of traffic.

The limits of the Main Ship Channel in Pilotage Zone No. 1 are from Buoys B1/B2 located at the entrance to the Outer Bar Channel and Buoys B73/B74, of the city of Maracaibo. Pilotage Zone No. 2 begins approximately 1 mile below Maracaibo and extends Southward to Lightfloats M36/M37. All other channels are considered as access channels to their respective port zones and subject to special local rules. Every vessel navigating to or from any port in Lake Maracaibo must follow the prescribed routes through the main and access channels leading to or from such ports, (unless special permission has been granted to do otherwise).

(a) Pilots are employees of the Venezuelan Government and act in an advisory capacity; the Master retains responsibility for the ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must prepare a full written report of the circumstances, for delivery to the Captain of the port.

(b) Inbound vessels have the option at present to embark government Pilot at the following areas:

(i) In the channel off San Carlos Pilot Station between Buoys B – 24 and B – 26.

(ii) Anchorage area approximately 5.5 miles N.E. of Pilot station, San Carlos Island. Position 11° 04′ 22″ N., 71° 33′ 48″ W. East of Buoy B – 17. This area is demarcated with green light buoy equipment with radar reflector.

(iii) At the E.M. Buoy.

(iv) At Punta Cardon. See "Note", "Agent's Notice" and "Shipmasters' Reports" – August 1979, July 1981 and August 1981.

(c) The Port Captaincy of Maracaibo is unable to guarantee embarking or disembarking Pilots at the E.M. Buoy or at anchorage area position. For this reason Masters should communicate with San Carlos Pilot Station for necessary instructions as to where to pick up Pilot, who usually embarks between Buoys B – 24 and B – 26. The communication system between San Carlos Pilot Station and vessels will be by Morse lamp and radio-telephone. The stand-by frequency at San Carlos is 2182 kHz. Other existing frequencies are 2120 kHz and 2080 kHz; 156.6 and 156.8 MHz. Each pilot launch has a radio-telephone with 2182 kHz. frequency. The launch that leaves San Carlos Pilot Station with Pilot for ship, takes approximately 20 to 30 minutes to cover distance, and distance between buoys and San Carlos is approximately 6 miles or 10 km.

(d) Pilot Permit to navigate the Outer Channel without aid of a Government Pilot will be granted to those Masters who desire to obtain same. In order to fill the application required, a blank sealed paper and 3 copies should be signed by Master on arrival. Copy of this solicitude duly endorsed by Port Captain of Maracaibo, will serve the Master as temporary permit until the official one has been received. Masters in possession of permits to cross the Outer Channel without a Pilot, have the option to enter channel either at the E.M. Buoy or between any other buoy, taking into consideration the heavy traffic of the channel. Government pilotage through the Inner Channel is compulsory at all times.

(e) Outbound vessels will receive Pilot in Maracaibo, who will Pilot vessel up to San Carlos area approximately between Towers E – 31 and E – 33, where he will disembark. The Port Captain of Maracaibo has instructed that all Masters should always in ample time identify themselves with the San Carlos Pilot Station by radio-telephone regardless of time of day. While inbound – between Buoys B – 17 and B – 19 and sailing outbound – between Markers T – 42 and T – 40. These instructions are obligatory and are required in order for the Pilot service to be aware, at any moment, of any emergencies which may arise, and also to avoid, especially during the night, the launch departing with an official Pilot aboard believing that the ship in sight needs his services, in which case, even though the launch or Pilot services are not rendered, the same will be charged to the company owning the ship, or its representative.

Note: A Master approaching the port for the first time must pick up a Pilot in Punta Cardon before entering Maracaibo Lake Channel. In the case of contravention the vessel will be intercepted by San Carlos Pilot Station and returned to Punta Cardon with a resulting loss of at least 1 day and the Master may also run the risk of a possible fine.

Furthermore, the Master should cable ETA via Curacao Radio 72, 48 and 24 hours before arrival in order to allow sufficient time for Agents at Maracaibo to send a Pilot to Punta Cardon.

Agent's Notice: September 1987.

Subject: Pilot Service from/to Punta Cardon.

Harbour Master's Office has issued new regulations mentioned below.

1. Pilot service from Punta Cardon is only compulsory when Masters are crossing the channel of Lake Maracaibo for the first time. If this is not the case, the pilot should be then embarked at San Carlos.
2. Upon your request this pilot service can be arranged by the agency.
3. On departure, pilot service to Punta Cardon is not required.
4. If official pilot is unable to disembark at San Carlos due to difficulties on board or by force majeure, or if you decide to change the instructions given to the agency with regard to Pilot to disembark in San Carlos, a letter addressed to the Harbour Master stating your reasons should be handed to the Pilot before he disembarks in Cardon.

TONNAGE: Venezuelan Port Authorities base part of their pilotage charges on the size of the vessel, i.e.:

(a) On Registered Net Tonnage. Venezuela will accept the tonnage of ships registered in countries with which they have a reciprocal tonnage agreement. As of this date, such countries are:

Denmark
France
Germany F.R.
Great Britain
Ireland
Netherlands
Norway
Portugal
Sweden
U.S.A.

(b) On Venezuelan Nett Tonnage. Ships not registered in countries listed above, when calling at Venezuelan ports for the first time, must be measured for Venezuelan tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan admeasurement certificate, when later issued, is forwarded to the Owners. A fee is charged for this certificate, which is payable only on the ship's first call.

(c) In practice, the procedure for stating the tonnage of all ships entering the Lake of Maracaibo is as follows: The inward Pilot boarding the ship presents Master a form on which among others the Master should fill in the tonnage of ship. Pilotage charges are based on this tonnage given by the Master. Master's attention is drawn to the fact that the Venezuelan nett tonnage is usually higher than the International nett tonnage. Care should be taken if an old Venezuelan nett tonnage certificate is on board, because the country in which the ship is registered might later have signed the reciprocal tonnage agreement with Venezuela. If the pilotage charges are made on basis of a higher tonnage than the one that should be applied, it is later very difficult, if not impossible, to get a refund.

CUSTOMS: *(a) Customs Watch.* While vessel is in port, Venezuelan National Guard Officials are assigned on board to ensure compliance with customs regulations. The Law requires meals be supplied to these officials during regular meal hours. Masters are requested to give them the privilege of eating in officers' messroom, to avoid difficulties.

(b) Firearms and Ammunition. Firearms must not exceed one per officer nor may the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be carefully declared on Stores List and should be collected and held in Master's safe custody while vessel is in Venezuelan waters.

(c) Contraband. Strict compliance with the Customs law of the country is enforced by the authorities, and Masters are strongly advised to caution crew members against attempting to smuggle cigarettes. 1 open package per person is allowed to be carried ashore, but greater quantity will result in fine and imprisonment of the offender as well as lost ship's time. Due to very strict enforcement of the Customs regulations, it is recommended that no goods be carried which are not shown on Stores List. Any new articles (clothes, shoes, etc.) should be included in Stores List and marked as personal belongings. If during a check-up by Customs, articles considered as contraband are found, this will not only mean confiscation of these articles, but also hours or days of lost ship's time, while the case is handled at court.

CONSULS: The following nations maintain consular representative in Maracaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Netherlands
Nicaragua
Norway
Panama
Peru
Portugal
Spain
Sweden
Switzerland
United States of America

TIME: Local time is GMT minus 4 hours.

VISITORS: All visitors to ships are prohibited except those company employees, petroleum inspectors, etc., whose duties require their presence aboard.

PASSENGERS: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include advice to this effect in his radio ETA.

POLLUTION: The Laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast, oil or bilge slops are to be pumped or allowed to escape overboard. All overboard discharge valves from cargo tanks and bilges are to be secured before loading or discharging commences. Loading is to be conducted with greatest care and vigilance in order that errors or delays in handling cargo valves may not result in overflows. All deck scuppers should be plugged before loading to avoid harbour contamination should an overflow occur. The Authorities require a written report to be submitted by the ship involved in the event of an oil spill.

SEAMAN LEFT BEHIND: Sailing may be withheld until all crew members are aboard with exception of those ashore for justified reasons. It is important that Masters bear in mind that the Venezuelan Law will at all times hold the vessel's Master, Agent, or Owner responsible for any seamen left behind in Venezuela.

SHIPMASTER'S REPORT: August 1979.

MARACAIBO/EL TABLAZO AND APPROACHES

Approaches: If making for the "EM" Buoy direct, positions can be a bit vague due to the low lying coast.

A distance off the coast can be obtained before the "EM" Buoy but no real firm position.

Often there is a strong N.E. wind.

Pilot: In the 'Pilot Book', etc., mention is made of picking up the Pilot at Punta Cardon.

From the Pilots and Agent I have a clearer idea of the official viewpoint and requirements.

There is NO compulsion to take a Pilot before San Carlos.

If you are unsure of the area and the visibility is poor from all sources and in my personal viewpoint it is advisable to take a Pilot at Punta Cardon, giving ETA 12 hours in advance.

If vessel is to pick Pilot up at San Carlos send cable 24 hours beforehand through Curacao "PJC" to 'Piloto San Carlos' requesting permission to use Canal Exterior, ETA at "EM" Buoy and at San Carlos. Reconfirm 12 hours before "EM" Buoy and by VHF an hour before arrival on Channel 12.

The difficulty lies in language, although there is meant to be a traffic control system in Canal Exterior it is only in Spanish and the Co-ordinator speaks little English. Little information is required or given if you only speak English.

The Punta Cardon Pilot costs about U.S.$150 extra plus transport charges and entails extra distance of 70 miles from the West and 15 miles from the East.

The San Carlos Pilot boards from a fast launch at "B28" Buoy and usually leaves just before the buoy. He will use hoist, in spite of official regulations which require gangway ladder arrangement, and leaves on port side outward (boards on starboard side inward). This is nearly always the case with situation of pilot station and wind, but may change.

Communications: Venezuelan station La Guaria (YVG – ALRS 6225). Most vessels use Curacao "PJC", very good. Agents reply through "PJC". Telex very good.

VHF: Call 'Piloto San Carlos' on Channel 16 (working Channel 12). Agent at Maracaibo on Channel 16 (works Channel 14, only during office hours). Agent at La Salina on Channel 16 (works Channel 14, 24 hour service but very distorted at El Tablazo).

Canal Exterior: Leads from "EM" Buoy to San Carlos pilot station. A speed of 10 to 12 knots essential to keep vessel in channel on account of strong N.E. winds and currents across channel. Takes about 1 hour 10 minutes from "EM" Buoy to San Carlos.

The least advertised depth at LW is 12.8 m. but shoals quickly at sides of channel. We found 11.0 m. LW to West side of channel at "B18" buoy.

Buoys "B14", "16" and "18" had shifted about 200 m. to West (August 1979). On the outer section of channel between "B4" to "B8" Buoys a Westerly set right across channel very apparent and near Malecon Breakwater. At "B22" Buoy an Easterly set experienced. Wind N.E. 4 – 5 tide 1 hour before and 1 hour after HW Malecon both cases.

The "E 34" pylon light off Pta. Diablo is very conspicuous. A new dredger 'Wado' works this section with North end Canal Interior. A large suction dredger, pulls to side of channel to let vessel pass. Only Spanish and German spoken. The old 'Zulia' dredger has stopped working. Another dredger is being completed for the Government.

Canal Interior: About 1.5 hours pilotage to Puerto Miranda, speed above manoeuvring. This channel is generally deeper than Canal Exterior. The advertised depth of 12.8 m. seems reliable. Pilot told me they hope to get both channel Interior and Exterior deepened to 15 m. LW in the near future.

Pile Light Beacons "T46" and "T40" have been replaced by buoys.

Pratique: Given on berth.

Notice of Readiness: Can be tendered on arrival at berth. It is finally brought down with Bill of Lading on completion. This is normal practice. As we were cooling down it was received at completion of cooldown. Normally on berthing with lines connected.

EL TABLAZO:

Pilot: A Docking Pilot boards just before berthing and unberthing of vessel.

Tugs: 2 tugs of 1,800 h.p. Secure in "American" style using their lines.

Situation: For all intents and purposes part of Puerto Miranda but operated by different company.

Located just S.E. of Puerto Miranda berths. El Tablazo consists of 3 piers. Bulk, liquid and a small soda pier.

Anchorage: At El Tablazo – off berth, just East of main Maracaibo channel. Good holding – 3 shackles.

Pier: The bulk pier handles bulk and bagged urea fertiliser through 4 shiploaders fed from a conveyor. Three on the South side and 1 on the North side. Two of the loaders on the South side handle bagged urea down corkscrew chutes.

The liquid pier is to the South of bulk pier – berth both sides and handles ammonia, butane, propane, propylene.

Two Chicksans each side. The inshore being of 10 in. both sides and seaward being of 8 in. but fed by 10 in. line. Couplings are 300 ASA but 150 ASA spool pieces generally fitted.

Vapour lines are flexible stainless braided with rubber covering – ship's derrick required, 300 ASA coupling with 150 ASA spool piece. All berths – head IN. On the South side the outer edge of the dredged channel is marked by buoys.

All berths have good rubber fenders. Liquid pier outer end has two full faced mooring dolphins connected to main pier by catwalk. The least depth at all berths at LW is 6 fathoms, except small soda berth which has 2 fathoms at LW.

Moorings: 2-3-1 each end. Ship put alongside pier before moorings out. Plenty of mooring gangs. Very particular on position to within 0.5 m. Gangway no problem.

Fresh Water: At 15 t.p.h. from pipe at manifold amidships. There is a pumped supply at 70 t.p.h. used for loading small tankers to take to outports where supply is limited.

Operations: Language problems. There is one Loading Master who speaks good English. Surveyor on arrival and departure. Very co-operative. Venting allowed up riser.

Vapour return line goes to flare at ship's expense and can only be used if 100% product.

Max. rate ammonia 500 t.p.h., but initially can get plenty of stops. S.G. given at 15°C. The control of the rate is not very fine. You can get down to 20 t.p.h. but increase very broad. Usual notice for completion.

Dock Density: 1003.

Documentation: Carried out at berth inward, sometimes vessel taken off berth outward to local anchorage and clearance given there. Sometimes in the past Inward Clearance done at Maracaibo, NOT NOW.

There is much written in publications and passed around about visaed Crew Lists and deviation cables. I have tried, in talking to the Agent and to the Authorities to clarify the situation.

Visaed Crew Lists are NOT required now. But there is still a requirement that because the ship has no visaed Crew List she must have deviated on passage.

Basically what is required is that the ship should be cleared on sailing for Venezuela to say, Trinidad, for orders or Curacao not Maracaibo, then on passage receive a message deviating her to Maracaibo. If she does not have Deviation Message a fine could be imposed but the Agent says all ships have required cable so do not know of fine being imposed.

Required:

7 Crew Lists.

3 Stores Lists. Victualling only, can include bond.

3 Slop Lists. Could probably combine with above.

2 Ballast Lists. To give amount and cleanliness.

1 Vaccination List.

3 Crew Manifests.

1 Health Declaration.

I cabled in a Pratique message as a matter of practice.

Shore Passes: Given by Agent for each crew member, no photos needed. Not required to be handed back on departure. Valid 3 days. After completion there seems to be a normal documentation delay to obtain clearance of up to 12 hours.

Shore Leave: The Agent will lay on a launch, but not really necessary as at El Tablazo liquid berth vessel is near the boat pier and fast launches run frequently to Maracaibo (takes 15 minutes). Arrange through Loading Master.

Can change sterling or dollars in local hotels, rate Bolivars to $, 4.30.

Films: Change Walport films at Puerto Miranda. Agent will send launch. Crew member has to go with films to change.

Agent: Only Agent on departure – no officials. Bill of Lading given by Terminal before Agent arrives.

SHIPMASTER'S REPORT: July, 1981.

Experienced following when entered Maracaibo Lake, mid-July, 1981.

Arrived EM Buoy and obtained permission from San Carlos Pilot Station via VHF to enter outer channel and pick up Pilot at Buoy No. 26. During the piloting the Pilot asked asked me whether I had previously entered outer channel, which I confirmed with the remark *many years ago.*

After berthed my Agent informed me that a new regulation required Ship Masters to pick up Pilot at Punta Cardon inward bound, unless the Master with said vessel had actually entered Maracaibo Lake *within the past 6 months,* for which he was automatically permitted to enter outer channel and pick up Pilot at Buoy No. 26.

Fines might be enforced upon Masters neglecting this new regulation.

SHIPMASTER'S REPORT: August, 1981.

If the Master of a vessel enters the channel for the first time, or even if *more than six months* since the last visit, he must embark the Pilot close to Punta Cardon. The distance between Punta Cardon and "EM" Buoy is approximately 80 miles.

If less *than six months* since the last visit, Master is authorised to pick up the Pilot when passing Buoy No. 26.

In the first case 24 hours prior notice should be given to the Pilot, and when approaching Punta Cardon vessel should call "Marina Cardon" on VHF Channel 16.

Section A

BAJO GRANDE: 10.29 N. 71.38 W. (See Plan)

(1) **OPERATOR:** Maraven, S.A. Oil Terminal.
(2) **OPERATOR:** Maraven, S.A. Natural gas liquids processing facilities.

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

(1) **OPERATORS:** Maraven, S.A.

LOCATION:
Maracaibo: On the North-Western shore of the Lake Maracaibo: Position: Lat. 10° 40′ N., Long. 71° 38′ W.

Maracaibo is the capital of the State of Zulia and seat of all Government and Consular Offices, as well as the port of entry for all vessels loading at terminals in the Lake of Maracaibo. Upon arrival at Maracaibo, a representative of the appointed Agency will go on board to assist vessel.

Bajo Grande: Loading Pier: Position: 10° 30′ 50″ N., 71° 36′ 8″ W., about 8 miles (12.8 km.) South of Maracaibo on the Western shore of the Lake and about 9,000 ft. (2,743 m.) offshore with its centre line North-South. Two vessels can berth simultaneously, one outside at Berth No. 1 and one inside at Berth No. 2.

DOCUMENTS: The following documents should be presented by the Master:

Clearance from Sailing Port with the following attached:
- Stores List.
- Crew List.
- Slop Chest Inventory.
- Ballast Certificate.

Special ballast report made up by Master.

The Maracaibo Port Captaincy, requires that the Masters of all vessels entering this jurisdiction, deliver to the Maracaibo Port Captain's representative, during his visit to ships in the Port of Maracaibo, a report which must answer the following questions concerning ballast:

(1) Port or place where ballast was taken.
(2) Quantity taken.
(3) Type of ballast and condition of same.
(4) Where deballasting operation was or is to be carried out.
(5) Approximate deballasting time.
(6) Any other pertinent information that may be required.

Crew List.	6 copies
Stores List.	6 copies
Slop Chest Inventory (Deck, engine and cabin stores listed separately).	6 copies
List of Personal effects.	6 copies
Derat Exemption Certificate.	Original
Venezuelan Net Tonnage Certificate.	Original
American Crew List.	4 or 2 carbon copies

(If required: See under "American Crew List").

Boarding Party: The boarding party usually consists of the following persons:
- One Quarantine Official.
- Two Customs Officials.
- One Sanitation Department Official.
- One Port Captain's Representative.
- One Foreign Service Department Official.
- One Vessel's Agent.

American Crew List: All non-American vessels loading for USA port should have the American Crew List ready on arrival in Maracaibo to be visaed by the American Consulate in Maracaibo and placed aboard ship before departure. The Crew List should be prepared on Immigration and Naturalization Service Form No. 1–418 (Crew List Manifest) and should contain two sections:

Section 1 – Should list those crew members who are American or who possess individual visa documentation to the United States.

Section 2 – Should list, in the alphabetical order of their last names, those alien crewmen who lack United States visa documentation and therefore require inclusion in the visa of the Crew List.

Only one name may be placed on each line of the Crew List. Two names should not be placed in the space of one line, nor should a full line between two names be left vacant. All copies of the Crew List presented must be legible (Occasionally the names of the crewmen included on the carbon copies of some Crew Lists presented at the consulate are blurred beyond recognition).

The information requested under column 1, 2 and 3 should be filled in completely.

Column 1 – Should always contain the complete first name and middle initial of the crewman.

Column 2 – Should show the nationality of each crew member and the number of his travel document.

Column 3 – Should always include the name of the port where the crewman was shipped, not simply the country.

At the time of the vessel's first application for a Crew List, the Crew List must be presented in 4 copies:

Original and 1 copy – Should contain only the information requested under Columns 1, 2, and 3.

Two Copies – Must include the following information of those crewmen to be included on the Crew List visa.

Column 4 – Should list the date, city and country of each crew member's birth.

Column 5 – Should show the place of issuance of the Seaman's Travel Document and the name of the Government which issued the Travel Document. (It is not necessary to list the date of issuance of the travel document).

Cargo documents:
1. *Master's copy of Bill of Lading* – The Bill of Lading form used is the usual Warshipoilvoy form. Masters wishing to use another form should furnish 20 blanks on arrival in Bajo Grande. Master is requested to sign 3 negotiable Bills of Lading (Originals).
2. *One copy of the Certificate of Quantity and Quality (Q. & Q.).*
3. *One copy of the Ullage Report.*
4. *Time Sheet.*
5. *Certificate of Origin.*
6. *Cargo Manifest.*

Outward Clearance:
Following documents are delivered on board by the local Agent before sailing:
1. *Customs Clearance* – Duplicate of "Conocimiento de Embarque" and Duplicate of "Manifiesto de Carga". (Both stamped and signed by Customs) or any other document specifically requested by the consignee or nominating source.
2. *Communication* – A letter from Maracaibo Customs Authorities to Authorities in port of destination.
3. *Zarpe* – Permission to sail signed by Maracaibo Port Captain. This is brought on board in Bajo Grande by the outbound Pilot.

Customs Guard: The Customs Guard will request Master to countersign his time on board the vessel. This is counted from the time the first hose was connected until all hoses were disconnected, regardless of whether the vessel was receiving cargo or not.

Accommodation Ladder: Vessels must provide an accommodation ladder. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations. Port authorities will board only by means of an *accommodation* ladder. it is recommended to rig this in advance in order to avoid unnecessary delays.

In order to guarantee the security and safeguard the lives of the officers that board the vessel inbound in Maracaibo, it is imperative that Masters strictly comply with the following precautionary measures:

(1) Each of the components and functional parts that holds together or supports the gangway ladder must be maintained in excellent condition.

Therefore, wire ropes, guide blocks and bolts etc., found to be defective or in bad condition must be immediately replaced.

(2) For maximum security, each time that your vessel arrives in this jurisdiction, the above mentioned mechanisms should be thoroughly checked and tested by the personnel aboard vessel before the gangway ladder is used by the boarding party.

APPROACHES:
Channels leading to Lake Maracaibo: The channels leading to the Lake Maracaibo are called the Outer Channel, the Inner Channel and the Lake Channel.

Outer Channel: The Outer Channel starts at the E.M. Buoy position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W. and ends at the Zapara Island, a distance of about 14 miles. (About 22 km.).

The light characteristics of E.M. Buoy are: flashing white every 5 seconds, visibility approximately 5 miles.

There are no turns in the channel and the course is 189°. The channel is 100 ft. wide and has a normal controlling depth of 44 ft. LWS with tidal range varying about 2 ft. 3 in. Cross currents are sometimes encountered near Zapara, San Carlos and Pescadero Islands, especially at LW when the cross currents are strong. Overtaking at these points is forbidden. There is one anchorage zone in the Outer Channel which is a trapezoid on the port side when navigating inbound near the Buoys B – 14, B – 15, B – 16 and B – 18. All buoys in the Outer Channel are equipped with radar reflectors.

The Southern end of the Outer Channel is marked by Buoys B – 27 and B – 28.

Inner Channel: The beginning of the Inner Channel is marked by Buoys B – 29 and B – 30. The Inner Channel continues on the same course as the Outer Channel for about 10 miles, whereafter the direction changes to 150°, The entire length of the Inner Channel is about 12 miles. Beacons T – 55 and T – 56 mark its Southern end. The normal controlling depth is 44 ft. LWS. The channel is 800 ft. wide. Vessels are not allowed to overtake each other in the Inner Channel between Buoys B – 29 and B – 30 and light beacons T – 25 and T – 26.

Vessels may overtake each other in the Inner Channel between light beacons T – 39 and T – 40 after having exchanged prescribed signals with the vessels to be passed. This manoeuvre is, of course, allowed only if conditions are favourable and no vessel navigating in the opposite direction is in sight. From Beacon T – 56 to Maracaibo harbour the channel is 800 ft. wide, depth 44 ft., its end is marked by Buoys B – 73 and B – 74.

Navigation through Channels:
Inbound vessels leave to starboard side the buoys and beacons marked with even numbers and to port side the buoys and beacons marked with odd numbers.

Outbound vessels shall leave to port side the buoys and beacons marked with even numbers and to starboard side the buoys and beacons marked with odd numbers.

Vessels should pass as close as possible to the channel's edge on starboard side. Loaded vessels have preference.

Approaching vessels are to reduce speed in order to minimise the suction force of the displacing waters.

Vessels must maintain a distance of 1 nautical mile (1,852 m.) by day, or night from other vessels navigating in the same direction.

No vessel should start to manoeuvre to overtake another vessel before having received clearly the affirmative signal from the ship to be passed.

A grounded vessel is not allowed to start any manoeuvre when another vessel is passing. Dredgers are frequently at work in the channels and caution should be exercised in passing them. Signals used by the dredgers are as follows:

Daytime: Black cylinder hoisted on side of yardarm:
You may overtake me on the side on which the cylinder is shown.
Two black balls over the bridge:
The channel is blocked.

Night:

Green light on side of yardarm (A white light on mast head helps to show on which side the green light is placed).

You can overtake me on the side on which the green light is shown.

Two red lights over the bridge:

The channel is blocked.

The tidal range is 4 ft. at neaps. Observed squat in the channels is about 1 ft.

Maracaibo Lake Channel Guard Service Corps have had evidence of vessels travelling out of the navigation channel in the vicinity of Buoys B – 3, B – 5 and B – 7; this risky procedure is considered very dangerous to the safety of the channel buoys and its installations.

Masters of all ships are reminded that all vessels inbound or outbound *must* pass the EM Buoy on the port side. This operation will be registered and controlled by their electronic devices installed at San Carlos Pilot Station.

Violators of this regulation, in addition to being economically responsible for damages to the buoys and related accessories, will be prosecuted in accordance with Article 118, Section I of the Venezuelan Law of Navigation.

In view of the above, and keeping in mind the protection of the interests of your owners, we ask that you comply at all times with this regulation emanated from the Port Captaincy.

PILOTAGE: Compulsory. Vessels proceeding direct to the Bajo Grande Terminal must enter outer channel and embark Pilot between Buoys 25 and 27. After vessel arrives in vicinity of channel entrance, Master must contact *San Carlos Pilot Station* by radio telephone on Channel 16 requesting Pilot at Buoys 25 – 27. The launch that leaves San Carlos Pilot Station with Pilot for ship, takes approximately 20 to 30 minutes to cover distance, and distance, between Buoys and San Carlos is approximately 6 miles (10 km.).

Master must advise Maraven, S.A. and Agent ETA Buoys 25 – 27, 72, 48 and 24 hours prior to arrival there.

Masters of Vessels entering Lake Maracaibo for the first time must cable their Local Agent notifying this fact, in order that the Agent may comply with the Port Regulations. This security measure makes it necessary for the ship to pick up a Pilot at Punta Cardon.

The Master should notify Agent or contact Maraven, Punta Cardon by radio on Channel 12. As no Pilots are available at Punta Cardon, the Local Agent for the vessel requires 48 hours' notice in advance to facilitate making arrangements to fly a Pilot to Cardon and then have Maraven place the Pilot on board the ship.

The co-ordinates of Punta Cardon are approximately Lat. 11° 36′ N., Long. 70° 15′ W. Maraven will charge approximately Bolivares 1100.00 for this service. In addition, the ship will have to pay air fare, hotel expenses, and a higher Pilotage fee for this service. However, if the Master of a ship has previously entered the channel as an officer of a ship, he is not required to pick up a Pilot at Punta Cardon.

Masters are reminded that Pilots are authorised to leave the Jurisdiction, only when they are disembarked in Venezuelan ports. With this understanding, when special circumstances arise in which the Pilot cannot be disembarked at San Carlos and the ship is unable to enter the nearest Venezuelan port to disembark the Pilot, in this case the port of "Las Piedras", it is required that the Agent as well as the Master of the vessel, forward to the Port Captaincy at the earliest opportunity a detailed report giving the reasons that compelled the Master to take the Pilot abroad.

Pilots act in an advisory capacity only, and therefore the Master of the vessel retains full responsibility at all times. In the event it becomes necessary to disregard the Pilot's instruction in order to ensure the safety of the ship, Master must forward to Local Agent a full written report on the circumstances for delivery of same to port authorities.

The Venezuelan Pilotage Law stipulates that Pilots must be provided with the same lodging as is given an officer. In case no extra officer's cabin is available, suggest the hospital be used by the Pilot. Also, Pilot should be seated at the officers' mess for his meals.

In case of accident to Pilot while performing his duty on board, it is the responsibility of the Master to furnish the Pilot with a full written report on the accident before the Pilot leaves the vessel. The Pilot must be able to present such a report in case of a legal claim.

Note: According to new Port Regulations for vessels proceeding to the Bajo Grande Terminal, the Official Pilot (Conduct Pilot) will board to conduct the vessel to Bajo Grande and disembark; vessel will then pick-up the other Official Pilot (Docking Pilot) for berthing manoeuvres.

As a result of accidents that caused the loss of lives, the Maracaibo Port Captaincy issued a Regulation with the view of safeguarding human life at sea and other navigable waters; Official Pilots that must embark on or disembark from undocked ships, must use an automatic-inflated type life vest. This procedure is also compulsory for all persons from private or public entities that are required to go aboard vessels that are anchored, stopped or navigating in the waters of Lake Maracaibo. Likewise, at the side of the boarding ladder where the Pilot boards or disembarks, a hoist or boatswain's chair shall be placed there, and within it a life line and a gas light ready to be used in case it becomes necessary. The Port Captaincy will see to it that this Regulation is strictly complied with.

Docking Pilot: The Government's Pilot will assist in docking operations. It should be borne in mind that Pilot acts as adviser only. The Master retains full responsibility at all times. Any damage incurred to vessel or loading platform which may be deemed to have been caused by the Mooring Pilot's fault or negligence, may be held against the ship.

Undocking: Government's Pilot will assist in undocking. Two tugs will be used as for docking and undocking.

ANCHORAGE: The Pilot will not manoeuvre the ship into anchorage, but will indicate the proper location to anchor. Care should be taken because of small boat traffic.

MAX. SIZE: The following restrictions in size and draft upon loadin exists for vessels docking at Bajo Grande:

	Maximum Loading Draft	*Maximum Vessel Size*	*Max. displacement upon Berthing (tons)*
Outside Berth (No. 1)	39 ft. 00 in.	55,000 d.w.t.	42,000
Inside Berth (No. 2)	32 ft. 00 in.	36,000 d.w.t.	20,000
Berth (No. 3)	39 ft. 06 in.	85,000 d.w.t.	105,000

RADIO: *Information to be cabled to Local Agents 3 days prior to arriva*

1. *Flag:* If the vessel has loaded in Bajo Grande before or is listed i the Tanker Register published by H. Clarkson & Company Ltd., London the nationality of the vessel need not be cabled.

2. *Sailing port and at which other port vessel will call in this area* For clearing the vessel in and out of Maracaibo, local ship Agents mus know beforehand from where the ship comes and which other port i will call in this area. Therefore, it is of importance to inform Agents whether the vessel will load part cargo or bunker, at which terminal, and whether inbound or outbound.

3. *Port for which vessel is cleared:* In case the vessel was diverted *en route* and consequently is not cleared for Maracaibo or one of the terminals in the Lake of Maracaibo, the Local Agents must obtain from authorities special permit for the vessel to enter the Lake of Maracaibo

4. *Ballast Certificate:* If the vessel arrives in ballast a "Ballas Certificate" is mandatory. A fine against the vessel will issued by the Port Authorities if vessel does not have this certificate.

5. *Estimated Time of Arrival:* Cable ETA San Carlos Pilot Station Buoys 25 – 27 (See "Pilotage") or, if the vessel is taking part cargo o bunkering inbound, cable ETA, bunker or first loading port. Please use local time if possible (4 hours behind GMT).

6. *Tonnage:* If the vessel has not loaded at Bajo Grande before, also cable the Gross and Net Tonnages. To determine whether the International or the Venezuelan tonnage should be mentioned, see General – "Tonnage Applicable".

7. *Master's Full Name:* Please sign your first message with Master's name and surname, which is also needed to clear the vessel i Maracaibo.

8. *Changed ETA:* An additional cable should be sent about 48 hours and 24 hours prior to arrival at pilot station Buoys 25 – 27 stating ETA

Proper use of Radio Frequencies: We have received several circulars from the Maracaibo Port Captaincy, requesting Terminal Operators t caution all Masters of vessels calling at Bajo Grande Terminal on the improper use of the International Distress Frequency of (2182 kHz) fo personal conversations. This procedure is contrary to the security o vessels.

A letter containing such caution will be delivered to the Master of eac vessel loading at Bajo Grande by the Agent, requesting that the Maste sign a copy signifying his acknowledgement of said letter of notice.

The International Distress Frequency was established specifically and exclusively for emergency calls such as shipwreck, fire and accidents It is also used by ships and shore stations to make first contact (VHF Channel 16) but immediately after contact is made, the operator shoul switch to one of the 52 Channels available.

9. *Compulsory use of Single Side Band Radio:* A circular letter from the Venezuelan Ministry of Communications, states that no licence wi be granted for the installation of radiotelephone stations of modulated amplitude (A3). The installation and use of Single Side Ban radiotelephone equipment is obligatory.

In consequence, the Ministry has requested that the terminal inform all users of Double Side Band (A3) radiotelephone equipment in orde that they proceed immediately to install in their ships, launches and a other marine vessels Single Side Band equipment with the sam frequencies that are presently in authorised use, which is VHF Channel 16.

The listening and Safety Station YXW – 3 installed at the Venezuela Nautical School is equipped to answer any calls on the Internationa Distress Frequency with their transmitter of 1 kW.

As a result of the foregoing, a letter containing the above informatio has been prepared by the Terminal which will be delivered to the Masters of all vessels calling at the Bajo Grande loading terminal. The Masters of all vessels are required to sign a copy of this letter i acknowledgement of receipt.

TUGS: The Venezuelan Government has ruled mandatory the use o 2 tugs for docking and undocking. Vessels over 60,000 d.w.t. will us 3 tugs for docking and undocking.

NOTICE OF READINESS: Masters are free to tender their ships a being ready to load at any place and time which, in their opinion conforms with the terms of the charter party. Terminal personne authorised to countersign the Notice of Readiness have been instructe to indicate the time vessel was all fast. This does not imperil in any wa the rights of the shipowner in his negotiations with the charterer and limits the Terminal's liability to the consignee.

CARGO OPERATIONS:

Deballasting Facilities: A Circular letter from the Venezuelan Ministry o Communications, Maracaibo's Port Captaincy, states that as of Octobe 1976, no ballast (either clean or dirty) can be discharged into Lak Maracaibo waters. Therefore, all ballast must be pumped ashore to th petroleum terminal on which vessel is to take cargo. Heavy fines a assessed for vessels violating this law and therefore we strongl recommend Masters to be particularly careful in this regard.

Shore deballasting facilities are available at Bajo Grande and a subject to no special regulations and procedures as yet. Tanker ballas water is pumped through 2×8 in. hose connections into 1×24 in. line o about 9,000 ft. in length to a 120,000 bbls. receiving basin situated o shore.

The deballasting basin is limited to receiving *only* petroleu hydrocarbons and petroleum hydrocarbons derivates. Emulsifier caustics, acids and chemical slops are absolutely unacceptabl Contamination of Lake Maracaibo waters with oily or chemical materia of any nature is strictly prohibited by Venezuelan Laws. The terminal required to report to the Authorities any such contamination by vessel docked at Bajo Grande. HEAVY FINES ARE THEN ASSESSED AGAINST THE SHIPS. Vessel's cooperation is requested to prevent contamination from tank overflows, bilge oil, line leaks or from any other source.

Tank Cleaning and Drying: Precautions as are common for any heavy oil should be taken to ensure that no ballast is left in any tank. If the cargo is contaminated with water, the water will not separate from the oil. The salt content of the oil will be raised approximately 10 lbs. per 1,000 bbls. for every 0.10% contamination by sea water. All cargo compartments must be stripped extremely dry.

Cargo pipe-line should be drained and or purged of water. On standard T – 2 type vessels, this can be done by draining the fore and aft main cargo lines, both suction and discharge sides, into the pump room bilges followed by opening of main suction valves on each individual compartment, thereby releasing water retained in dead and transverse lines. After this procedure is completed, each compartment should be restripped with stripping pumps and lines, followed by draining the stripping line to pump room bilges. On other ships equipped with looped systems it is possible to blow the system with air and drain water into the bilges. In other situations, fresh water might be used to flush cargo piping systems of salt water and in turn strip salt water and fresh water as outlined for T – 2 vessels. All deck scuppers should be securely plugged and all precautions should be taken to avoid pollution of lake waters.

Inspection of Tanks: Before loading can commence, tanks and loading system must be inspected and passed. This is usually done by the Terminal's own Cargo Inspector but, if consignee so requests, third party inspection can be arranged.

Inspection Companies available in Maracaibo are the following:
Chas. Martin Venezolana de Inspecciones
E. W. Saybolt & Co., S.A.
Redwood Petroleum and Petrochemical Division
Analistas e Inspectores Venezolanos de Petroleo C.A.
Inspecciones, S.A.
Caleb Brett Venezuela, C.A.

Line Displacement: When a vessel is loading crude and products, it is usually necessary to displace lines once or twice during loading. Masters will be advised of necessary line displacements before loading starts and are required to take note because NOTICE HAS TO BE GIVEN BY VESSEL when pumping should be stopped and tanks changed. Once shore tanks have been changed, it will not be possible to change the quantity of the product already in the ship, as shore lines will then contain a product different from the one already loaded. *Ship's gauges and/or draft should be carefully checked when calculating required quantities.*

Spillage: In case spillage occurs, the Terminal Port Supervisor must be advised immediately, as any spillage must be reported to the Authorities without delay.

There has been considerable discussion in Venezuela concerning oil spillages resulting in contamination of Lake Maracaibo. Considerable pressure is being exerted by Government agencies to eliminate all spillage, and the Terminal is making every effort to avoid contamination of Lake Maracaibo.

While vessel is at Bajo Grande take special precautions to avoid dirty ballast, bilge water or any other contaminant entering the Lake.

If a spill should occur and Terminal representative, the Government's representative of the National Guard observes that the waters of the Lake are being contaminated by any substance from the vessel the Terminal will request that vessel suspends deballasting, loading or discharging operations immediately and all consequences that might arise from this operation such as short loading, the unmooring of your vessel, fines, damages to fishermen, clean up costs, etc., *will be strictly, for vessel's account.*

We strongly recommend to Masters to emphasise to the officers on deck to endeavour to avoid spillages and to make certain that the scupper plugs are installed prior to commencement of loading operations in order to withhold on deck any spillage that might occur.

After Loading: All Butterworth plates, tanks tops and ullage plugs should be inspected to ensure against entry of water. Inspection of ullage plugs should follow on completion of temperature readings because of the necessity of taking temperatures en route. Sea suction valves should be secured by positive means until all cargo has been discharged. This may be accomplished by numbered seals, chains and padlocks. The method of securing should be noted on the inspection documents. Regardless of which method is used, appropriate log entries should be made indicating the date, time and method used and under whose supervision, both vessel officer and/or Cargo Inspector, such method was applied.

About 2 hours is required for the preparation of the cargo documents which are normally delivered on board before sailing.

Temperature of Boscan Crude and Boscan Products at Sea: On short voyages, as for instance to the U.S.A., it has proved most practical to maintain the loading temperature. On longer voyages, as for instance to Europe, the temperature may be dropped to 130°F., which does no harm as long as sufficient time is given to bring the temperature up again to that required for discharging. Masters should, however, not expect a temperature rise of more than 5°F. per day, especially if the sea temperature is low. The heat transfer properties of Boscan Crude are very poor as are those of the heavy products made from this crude. Many ships have been delayed in the discharge port due to too low cargo temperature. A temperature of 160°F. is suggested for discharging Boscan Crude, Topped Boscan and cutback asphalts.

Discharge Cargo: Boscan Crude has a flash point of 110°F. – 160°F. and a maximum viscosity of 1400 SSF at 140°F. The viscosity at other temperatures follows the pattern of other petroleum products. Boscan Crude has been successfully handled in ships fitted with both reciprocating and centrifugal type pumps with forward and after pumprooms respectively. It is generally found that this crude can best be handled at a temperature which brings its viscosity to about 600 SSF – 160°F. Vessels with forward pumproom should control stern trim so that it does not exceed about 4 ft. while stripping the after tanks. Also a 5° list is very helpful when stripping. Once the cargo gets below heating coils, tanks must be pumped empty as fast as possible. At times it has been found helpful to gather tanks strippings into a single tank for discharge ashore, as it is very difficult to strip against heavy back pressures. Watch reciprocating pumps for vapourlock. Because of high viscosity, proper care should be taken that no oil is left in vessel discharge lines at low temperature.

Tank Cleaning After Discharge Cargo: Many Masters have expressed concern over tank cleaning after discharge. Assuming that the ship proceeds to sea for this operation and has sufficient time for proper execution, vessel may be cleaned quite thoroughly using the Butterworth system. However, it is of vital importance that the system be used at maximum pressure and temperature (not below 160 p.s.i. and 170°F respectively). At these conditions and with 2 machines, it has been found that about 4 hours are required for each tank. It is of importance to keep the tanks well stripped during the Butterworthing. Some prefer to steam out the tanks before Butterworthing. If this course is adopted care should be taken that the steaming does not last more that 1 hour as the heat will drive off the light ends of the oil and leave a rubbery residue that is very difficult to remove.

It has been found helpful to keep the machines in LOW position for about 1 hour and the HIGH – MIDDLE and LOW in order, in the usual manner.

Boscan Crude and Products/Light Products:

Loading Product	*API Gravity*	*Tempera-ture °F*	*Loading Lines used*	*Normal Loading Rate B/H*
Boscan Crude	10.0 – 11.0	160	2×18 in.	15,000
Boscan Crude Blends	13.0 – 19.0	140	2×18 in.	15,000
Topped Boscan Crude	9.5 – 10.0	160	2×18 in.	15,000
Topped Boscan Crude Asph. Grade	8.0 – 10.0	160	2×18 in.	15,000
Lagomedio Crude	32.0 – 33.0	90	2×18 in.	20,000
Cutback Asphalt	11.0 – 15.0	170	2×12 in.	5,000
Asphalt Cement (Pas)	5.0 – 8.0	300	1×14 in.	5,000
Gasoil	35.0 – 42.5	90	1×12 in.	6,000
Fuel Oil No. 2	38.0 – 40.0	90	1×12 in.	6,000
Fuel Oil No. 5	21.0 – 22.0	120	1×12 in.	5,000
Fuel Oil No. 6	16.0 – 18.0	160	2×18 in.	16,000
Light Naphtha (LSR)	70.0 – 73.0	85	1×12 in.	6,200*
Heavy Naphtha (HSR)	52.0 – 53.5	85	1×12 in.	6,200*
Jet A-1	45.0 – 51.9	80	1×12 in.	6,200*

*Maximum rate due to Bajo Grande Terminal security regulations.

FUEL:

Advance Notice of Requirement: Should a vessel arriving at Bajo Grande require any bunkers, Owner or Operator must place their nomination with Maraven, S.A. via Telex No. 23535 Mara Vc as much in advance of the delivery date as possible. Telex should indicate name of vessel, ETA at Bajo Grande and quantity and quality of Marine Fuels required. A cash deposit in U.S. Dollars covering the nomination must be made prior to the delivery date into the following account:

Chase Manhattan Bank,
Chase Manhattan Plaza,
34th Floor,
New York, N.Y.
Current Account No. 001-1-992773.

Owner or Operator must also request Chase Manhattan Bank to confirm via Telex to Maraven, S.A. that such deposit has been made in order to cover the cost of bunkers to be delivered to vessel arriving at Bajo Grande at the current ETA. Only after this Telex has been received will delivery actually proceed.

Bunker Facilities: Bunkers are available from pipe-line at Bajo Grande Terminal for vessels loading and unloading cargo at Berth Nos. 1, 2 and New Pier. Bunkering rate is about 2,500 bbls.p.h. for Bunker "C", intermediate bunker fuels and marine gas oil.

Marine Fuels and Lubricants Available: Bunker fuel (sometimes called Bunker "C"), intermediate bunker fuels and marine gas oil.

Lubricants are generally available in the Maracaibo area. Should you require any, we recommend that vessel's local Agent be contacted.

Lighterage: Bunker fuel, intermediate bunker fuels, marine diesel and gas oil are also available for ships in the Maracaibo area. 72 hours' advance notice is required for barge deliveries of all products.

FRESH WATER: Delivery of boiler and potable water is made by barge, *minimum quantity 100 tons.* The barge holds about 160 tons and the pumping rate is about 25 t.p.h. Requirements should be cabled in advance to the Agent of the vessel in Maracaibo.

REPAIRS: No major repair facilities are available in Maracaibo but small repairs can be undertaken by local machine and electric shops. Shore labour can be furnished if required. Technicians are available for minor radio repairs. Nearest dry docks are at Curacao for vessels up to 30,000 d.w.t. and at Puerto Cabello, Venezuela for vessels up to 18,000 d.w.t.

CUSTOMS: *Contraband:* Strict compliance with the Customs Law of the Country is enforced by the Authorities and Masters are strongly advised to caution crew members against attempting to smuggle cigarettes. 1 open package per person is allowed to be carried ashore, but a greater quantity will result in fine and imprisonment of the offender as well as lost ship's time. Due to the very strict enforcement of the Customs Regulations, it is recommended that no goods be carried which are not shown on the Stores List. Any new articles (clothes, shoes, etc.) should be included in the store list and marked as personal belongings. If during a checkup by Customs, articles considered as contraband are found, this will not only mean confiscation of these articles, but also hours or days of lost ship's time, while the case is handled at court.

SURVEYORS: American Bureau of Shipping and Lloyd's Register have Agents in Maracaibo. Their services may be procured by cabling requests to the local Agent at Maracaibo.

CONSULS:
Following countries have consular representation in Maracaibo:

Argentina
Austria
Belgium
Bolivia
Colombia
Costa Rica
Denmark
Dominican Rep.
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Mexico
Netherlands
Nicaragua
Norway
Panama
Peru
Puerto Rico
Spain
Sweden
U.S.A

HOLIDAYS: The Terminal office will be closed on the following days. New Year's Day (January 1st); Easter Thursday/Friday (March/April); Declaration of Independence (April 19th); Labour Day (May 1st); Battle of Carabobo (June 24th); Independence Day (July 5th); Birthdate of Simon Bolivar (July 24th); Columbus Day (October 12th); Chiquinquira's Day (November 18th); Christmas Day (December 25th); All Saturdays; All Sundays.

SHORE LEAVE: Shore Leave is permitted at the discretion of the Port Authorities; required number of shore passes will be brought on board on arrival in Maracaibo and have to be returned to the Customs Guard again before the vessel leaves Bajo Grande.

GENERAL:

Tonnage Applicable on Fees: On ships registered in countries which have a reciprocal tonnage agreement with Venezuela, the gross tonnage registered in such countries will be applied for calculating pilotage fees. Such countries are:

Denmark
France
Germany F.R.
Ireland
Netherlands
Norway
Portugal
Sweden
United Kingdom
U.S.A.

On ships registered in countries not listed above, such ships calling at Venezuelan ports for the first time must be measured for Venezuelan tonnage by the Port Captain. It is usual practice to take ashore the ship's Panama Canal or Suez Canal International Gross Registered Tonnage Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the Owners. A fee is charged for this certificate, which is payable only on the ship's first call.

Firearms and Ammunition: Firearms must not exceed 1 per Officer nor may the ammunition exceed 18 cartridges per Officer. All firearms and ammunition must be carefully declared on the store list and should be collected and held in Master's safe custody while vessel is in Venezuelan waters.

Guards: Customs Guards are stationed on the platform at Bajo Grande. They must be provided with sleeping quarters on the ship and seated in the Officers' mess for their meals. Non-compliance may cause cargo stoppage and fines. Masters are reminded that these guards are representatives of the Venezuelan Government and any uncourteous action on the part of the crew or passenger will be regarded as a slight against the Country itself.

Gangways: The ship is to supply a safe gangway, which allows easy access to the vessel. The Terminal has a gangway which may be used on request with the understanding that any damage to the gangway or ship or shore personnel through its use may be held against the ship.

Safety: Vessel must be in readiness to move at all times. The attention of Masters of turbine steamers are called to this regulation.

Ship's fire fighting equipment must be ready for instant use while vessel is alongside. Shore personnel will render assistance in an emergency but, since no fireboats are stationed in the immediate area, vessels should be prepared to combat fire without outside assistance. It is necessary to obtain Terminal's approval for repairs of propelling machinery.

Normal safety precautions apply. Smoking is not allowed on the pier. No hotwork is permitted on vessels alongside without *written* permission from the Port Supervisor. *Swimming alongside pier is dangerous and absolutely prohibited.*

Launch Service: The launch is primarily for the use of the port staff.

Taxi: Taxi service will be generally available upon request to vessel's Agent.

Visitors: According to Port Regulations concerning access to ships and loading terminals and in the interest of industrial safety, only persons directly concerned with loading operations will be permitted to board vessel or visit the loading platform at Bajo Grande.

Plimsoll Marks: The Port Captaincy requires that Plimsoll Marks be readily visible. If they are not clearly legible, permission to sail may be withheld and a fine imposed. This is applicable to inbound and outbound vessels.

We therefore, request your full compliance with this Regulation from the Maracaibo Port Captaincy.

Marine Stores/Charts: Marine stores are available in limited supply. Marine charts are not available.

Compass Adjusters: There are no compass adjusters in Maracaibo.

Seamen Left Behind: Sailing may be withheld until all crew members are aboard with exception of those ashore for justified reasons. It is important that Masters bear in mind that the Venezuelan Law will at all times hold the vessel's Master, Agent, or Owner responsible for any seamen left behind in Venezuela.

Crew in Transit: In case a crew member is left ashore for a justified cause, such as hospitalisation, repatriation, etc., his documents and personal effects are to be delivered to the vessel's Agent before sailing. A letter is required from the Master with detailed instructions as to maximum cash advance, etc. All expenses incurred by such members are for vessel's account.

Port Supervisor: Masters or their representatives are invited to call at the Port Supervisor's Office on shore in Bajo Grande or over the telephone on the pier, for any further help, information or complaints.

Terminal: Cable Address: Maraven, S.A., Maracaibo.

NOTICE: Issued by Maraven, S.A., Bajo Grande Refinery, Maracaibo.

PROCEDURE FOR BERTHING AND UNBERTHING MANOEUVRES

To the Masters of all the tanker ships arriving at Maraven's Refinery, Bajo Grande Marine Oil Loading Terminal, Lake Maracaibo, Venezuela.

Instructions concerning approaching and manoeuvres for berthing/unberthing at this Terminal.

With a view to prevent any possibility that your ship may cause damage to our installations, we shall highly appreciate it if Masters pay attention and respect to the following procedures:

1. Entrance Bajo Grande Refinery Terminal (Lat. 10° 30′ 50″ N., Long. 07° 36′ 08″ W.) is between the Main Navigation Channel Marker Buoys B86 – B88 and leaving between the Buoys BG2, BG1 and B86.

2. On ship's arrival at the Terminal Entrance Buoys, the Official Pilot, a Marine Officer, acting as a Liaison Officer of Maraven, will board the ship in order to assist her Master and the Official Pilot in all matters concerning inter-communications and co-ordination with the Terminal and on basis of his technical and local knowledge and experience give advice relative with the vessel's safe berthing/unberthing and safe mooring/unmooring to/from the pier.

3. For best manoeuvrability ships arriving on ballast or partially laden, must arrive with a draft forward which should not be less than given in the following table and a trim by the stern of about 0.75% of ship's length on ships of 400 ft. length or more.

Length	*Draft Forward*	*Trim by Stern*
400 ft.	10 ft.	3 ft. 00 in.
500 ft.	12 ft.	3 ft. 09 in.
600 ft.	14 ft.	4 ft. 06 in.
700 ft. ideal	16 ft. (nor less than 14 ft.)	5 ft. 03 in.
750 ft. ideal	17 ft. (nor less than 14 ft.)	5 ft. 08 in.

The ship's total displacement in any case should not exceed 42,000 tons for ships mooring at Berth No. 1 and 20,000 tons for ships berthing at Berth No. 2.

4. For more information please consult the instructions and information for the port which will be issued to you opportunely on your arrival for first time to this Terminal, please comply with them, and see that they are complied with.

5. *Mooring Lines:* Prior to arrival at the Terminal, the vessel shall have all the necessary mooring lines ready for use together with a sufficient number of heaving lines and the equipment and the personnel required for mooring. All the lines used for securing the ship to the berth should be of the same material, construction and of approved characteristics.

6. *Tugboats:* Minimum 2 twin-screw tugboats of adequate horsepower for the size of ships ordinarily berthing at this Terminal will assist the vessel in the berthing/unberthing manoeuvres. If the Master so request or in the case of the size of vessel and wind and/or current conditions so require, the Terminal may order the use of 3 tugboats for the manoeuvres. The tugboats, on arrival, will come alongside the ship before entering in the Terminal.

The first communication with the tugs is via VHF Channel 16 as first contact and then changed as per instructions.

7. *Berthing:* At Bajo Grande ships berth bow to North.

On approaching the berth, approaching bow to or at any angle with the berth is to be avoided.

No. 1 Berth (Outer Berth): The ship will be put in a position parallel and abeam to the berth at a minimum distance of about 50 m. or more, depending upon the prevailing conditions of wind and current.

Once in this position and with the ship motionless or almost motionless, the Liaison Officer will assist you and the Official Pilot in the manoeuvres to nurse the ship alongside sideways with the tugs which, generally, will be alongside the ship's side opposite to the side the ship will berth, already made fast and ready to push.

When the manoeuvre is carried out for berthing to No. 1 or Outer Berth, the starboard anchor will be in cockabill position ready for use in case needs arise and in such case the aft tugs or both immediately ordered to pull on reverse.

It will be avoided to haul the mooring ropes secured to the North platform bollards in order to pull the vessel forward. If need arises the ship's engines may be used to move the ship.

8. *Unberthing:* The use of spring lines must be avoided in order to veer the ship on the mooring platform for clearing the vessel's bow or stern while unberthing. These spring lines will be only used in case of extreme emergency.

After all the mooring lines have been cast off, the ship will be towed sideways away from the berth to a distance where she can safely proceed under own power.

The Official Pilot for manoeuvres and Liaison Officer will disembark when the ship is safely free away and offering no risk to the dock.

Maraven will not permit berthing or unberthing without a Maraven Liaison Officer being onboard.

Note: According to new Port Regulations for unberthing, 2 Official Pilots will board; for unberthing manoeuvres and to conduct the vessel to the Outer Channel, respectively. The undocking Pilot disembarks at Bajo Grande.

9. *No. 2 Berth* (Inner Berth): The same procedure hereinbefore described for berthing at No. 1 Berth will be followed for berthing at No. 2 Berth. The ship will be put first parallel to the berth and then the vessel nursed alongside with the tugs. For unberthing, manoeuvres will be the reverse. During berthing and unberthing manoeuvres, ship's engine(s) will be used only when it becomes necessary.

At this berth anchors must not be used because of submarine pipe lines laid there. In this berth the distance from it must not be more than 50 m.

10. *Emergency Towing-Off Wire:* Whilst berthed alongside the platform, emergency towing-off wire-ropes should be rigged both on the offshore bow and quarter of the ship, with their loops kept near the waterline at all times where the tugs can easily and quickly pick them up.

The wire-ropes should be in good condition and of suitable strength for the ship's size. The wires should be properly led outboard through the nearest fairleads leaving sufficient wire-rope coiled on deck and free to go when the tug hauls and of adequate length to tow her safely off the Terminal.

The overboard length of rope should be adjusted as the drafts decrease or increase.

11. *Mooring Lines Whilst at Berth:* Mooring lines should be periodically inspected and attended to ensure that they are kept taut in order to minimise and movement of the ship along or away from the berth.

In the case of ships equipped with automatic tension winches, the brakes of the winches should be applied and the mooring lines handled on manual operation when required to take up slack or pull them taut.

12. *Safety Practices:* While the ship is lying at the Terminal the Master will ensure that all the safe practices in loading or discharging oil products and related operations are complied with on his ship and also ensure the maximum co-operation between the vessel's crew and the Terminal personnel in their mutual interests of safe and efficient operations.

DEVELOPMENTS: A second jetty, North East of the first jetty, is in service and accepts vessels up to 80,000 d.w.t. (Summer).

Other characteristics are:

(a) Capacity: One vessel only.
(b) Length: 1,114 ft.
(c) Max. Draft: 40 ft.
(d) Lighting System: Yellow lights (completely lighted); and flashing red light through the wharf.
(e) Loading Arms: 2 hydraulic loading arms of 10 in. and 1 for bunkering of 6 in.
(f) Cargo Facilities: Only black oils. Crude and fuels.
(g) Bunker Facilities: Intermediate bunker fuels, bunker fuel and marine gasoil.
(h) Loading Rate: Approx. 17,000 bbls./hr. for cargo.
(i) Fire-extinguisher System: Modern fire-extinguisher system has been set up to serve both jetties. Operates with water and foam or water only.

AUTHORITY: Maraven, S.A. – Bajo Grande Refinery, P.O.Box 93, Maracaibo, Venezuela 4033A. *Tel:* (061) 202673. *Telex:* 61254, 61161. *Contact:* Captain N. Arceo, Terminal Supervisor.

(2) OPERATORS: Maraven, S.A.

LOCATION: S.W. of channel Buoys B – 87 and B – 88.

The installations for processing natural gas liquids at Bajo Grande processes liquids for Maraven, S.A., and they are known as Product Owners. The Plant is situated in Bajo Grande, approximately 10 miles to the South of the Port of Maracaibo, on the West bank of Maracaibo Lake.

FLAG: The local authorities require the Venezuelan flag to be hoisted to the top of the vessel's mast from the time it enters the outer channel on arrival, until it leaves the outer channel on departure.

DOCUMENTS: *Customs Clearance for Programmed Vessels:*

Vessels which arrive in ballast or with cargo in transit, require the following documents (with additional file copies if these are required):

(A) Clearance from the last port
2 copies – 1 visaed Ballast Certificate
4 copies – 2 visaed Passenger List
4 copies – 2 visaed Lists of Equipment
4 copies – 2 visaed List of Passengers in Transit
4 copies – 2 visaed List of Mess Equipment and Spares
4 copies List of Personal Effects
4 copies – 2 visaed List of Stores
5 copies Crew Lists.

Vessels which arrive with cargo must have, apart from the foregoing:

(B) 4 copies – 2 visaed Venezuelan Entry Manifests
6 copies – 2 visaed Bill of Lading
2 copies visaed Entrance Manifests.

In the absence of a Venezuelan Consul at the last port, the Customs clearance documents must be signed by the Consul of a friendly nation, one of the Port Authorities, Notary Public, the Chamber of Commerce, or by two recognised signatories.

Clearance Through Customs of Diverted Vessels:

Vessels diverted on the high seas to Maracaibo to load at Bajo Grande must present all the documents indicated in (A) above, except the consular correspondence, which they will not have.

Vessels diverted on the high seas to Maracaibo (Bajo Grande) which do not have a Venezuelan Customs Clearance on board, must advise their Agents by radio prior to their arrival, the name of the vessel, the name of the Master, nationality of the vessel, net Venezuelan tonnage (if available, if not, the net registered tonnage), last port of discharge, port to which it was originally sailing and the ETA at the Pilot station at San Carlos. This information is required to obtain the Entry Permit prior to the arrival of the vessel. Three copies of the diversion telegram received by the vessel, signed by the Master, together with those documents detailed above, must be presented to the Port Authorities on arrival at Maracaibo. Non-presentation to the Port Authorities of the documents or the information mentioned will occasion a fine to the vessel.

Inspection by Customs: All vessels arriving from foreign ports destined for the dock at Bajo Grande must anchor in the Port of Maracaibo for Customs inspection by the Port Authorities before proceeding to Bajo Grande. The vessel's gangway must be in position prior to arrival at Maracaibo.

A member of the National Guard of Venezuela will come on board every vessel at Bajo Grande to observe the activities in connection with the operations of loading and unloading. This official is authorised as representative of Customs and is known as the "Vigilante de Aduana". He must be fed and lodged at the same standard as ship's officers.

Loading Documentation: The loading and Customs papers will be delivered to the Master by the Agent of the ship on his arrival at the Port of Maracaibo, on his voyage outwards.

PILOTAGE: Vessels entering currently have the option of taking on the official Pilot at:

(a) The channel in front of the pilot station at San Carlos, between the Buoys B – 24 and B – 26.

(b) In front of Amuay Bay or Punta Cardon. However, to arrange this service, Agents must be advised at least 48 hours in advance of this requirement.

The Pilot who boards the vessel in front of San Carlos will take it to Maracaibo, where he will disembark.

Due to weather conditions, the Port Captaincy of Maracaibo cannot guarantee the embarkation or disembarkation of the Pilots at the "EM" Buoy. For this reason, Masters must communicate with the pilot station of San Carlos to receive necessary instructions as to where the Pilot will be embarked, the latter usually coming on board between Buoys B – 24 and B – 26. The system of communication between the pilot station of San Carlos and the vessels will be via radio-telephone. The San Carlos frequencies are: 2182 kHz. and 156.8 MHz. (VHF Channel 16). Other frequencies are: 2122 and 2080 kHz. and 156.6 MHz.

Pilotage to navigate through the inner and outer channels is compulsory at all times. The maximum speed of navigation in the dredged channels is 10 knots.

Vessels leaving will take the Lake Pilot on board at Bajo Grande and on reaching the Port of Maracaibo the Pilot will be changed for another to take the vessel through the channel. The Channel Pilot will pilot the vessel up to the San Carlos Bank, generally between Towers E – 31 and E – 33, where he will disembark. The Port Captain of Maracaibo has issued instructions to all ships' Agents so that they may inform the Master and/or Owners of the vessels that all vessels must identify themselves with the pilot station of San Carlos by radio-telephone, regardless of the time of day, when they are entering between Buoys B – 17 and B – 19 and when they are leaving between Buoys T – 42 and T – 40.

Every time a launch with an official Pilot on board leaves to attend to a vessel in sight, the costs will be charged to the company which owns the vessel or to its representative, even when service has not been given.

A government Pilot will assist each vessel from Maracaibo to Bajo Grande and on the outbound trip to Maracaibo. The government Pilot will also assist in the berthing and unberthing operations. The ship's Agent will inform the Master of each vessel, as well as the government Pilot, the schedule for berthing the vessel.

The Plant Mooring Supervisor will board each vessel prior to approaching the dock. Mooring Supervisor will assist in the mooring and unmooring operations. It should be understood that the Mooring Supervisor acts only in an advisory capacity to the Master. The vessel's Master retains full responsibility at all times. The Plant assumes no responsibility in connection with any acts or advice given by the Mooring Supervisor.

APPROACHES: The buoy which marks the entrance to the outer channel (Buoy "EM") is situated in approximately position 11° 13′ 47″ N., 71° 33′ 31″ W. The characteristics of the light of the "EM" Buoy are: white flash every ten seconds, visibility approximately 5 miles. The distance between the "EM" Buoy to the Southern extremity of the outer channel, marked by the Buoys B – 27 and B – 28, is approximately 15.75 miles. The channel is 1,000 ft. wide and normally has a depth of 42 ft. minimum at low tide observed at the time of neap tides with a tidal amplitude varying 2 ft. 3 in.

There is a breakwater 0.5 miles to the East of and parallel to the outer channel which extends 1.6 miles to the North from the Northern side of the Island of Zupara. The end of this breakwater is marked by a steel frame tower with a light 25 ft. above sea level. Characteristics of the light are: white flash every 8 seconds, visibility about 3 miles.

Commencement of the inner dredged channel is marked by the Buoys B – 29 and B – 30. The length of this channel, which is marked by buoys, is approximately 12 miles, and ends at Buoys T – 55 and T – 56. The channel is 800 ft. wide and the normal checked depth is 43 ft. neap tides with a tidal amplitude varying between 1.5 ft. to 2.5 ft.

The channel from the Buoys T – 56 as far as the Port of Maracaibo is a dredged channel, whose end is marked by Buoys B – 73 and B – 74. It is some 800 ft. wide and has a depth of at least 43 ft. The distance is about 11 miles and the tidal amplitude range is insignificant.

RESTRICTIONS: Bridge clearance at MHHW 146 ft.

MAX. SIZE: The maximum permissible fresh water draft at the dock is 36 ft. and the maximum overall length vessel the dock will accept is 700 ft. Vessels with a berthing displacement up to 20,000 long tons will be accepted, providing the approach velocity can be controlled to 0.3 ft. per second or less.

Vessels with an overall length greater than 700 ft. or with a fresh water draft of more than 26 ft. or a displacement greater than 20,000 long tons will not be accepted for loading at Bajo Grande, unless they have obtained the prior authorisation of Maraven, S.A. If the vessel is not equipped to moor, load and unmoor in a safe manner, the vessel will not be loaded. In such cases, there will be no responsibility on the part of Maraven, S.A.

RADIO: Maraven, S.A. Export Department also has radio-telephones with the following frequencies: 2080, 2120, 2182 (stand-by), 2638 and 2738 kHz and 156.8 (stand-by) and 156.6 MHz. operated in accordance with the following schedule:

Monday – Friday:	From 0730 until 1130 From 1300 until 1700
Saturday, Sunday and Holidays:	From 0730 until 1030 approx.

Any tanker or vessel bound for Bajo Grande shall cable Maraven, at least 5 days in advance of its scheduled arrival time in Maracaibo, giving notice of its estimated time of arrival, loading capacity, amount and type of product to be lifted and condition of ship's tanks.

At least 48 hours in advance of arrival at the San Carlos Pilot Station, the vessel's estimated time of arrival, nationality, Venezuelan net tonnage (if available, otherwise its registered tonnage), quantity and type of cargo required, condition of ship's tanks, name of Agent, last port, Master's name and all requirements of the vessel while in port should be cabled to "Maraven, Maracaibo" and to the ship's Agent. As the cable office in Maracaibo is not able to communicate directly with vessels at sea, messages to "Maraven, Maracaibo" and to Agent should be routed via PJC Curacao, and should be prefixed "Via AAC" (All America Cables and Radio Inc.). Failure to give such proper notices shall absolve the Plant from any claim for delays or demurrage.

TUGS: 2 × 1,600 h.p. tugs used for mooring and unmooring operations.

BERTHING: The dock proper may be identified by the overwater pipeline trestle that connects the dock with shore.

The dock is located approximately Lat. 10° 30′ N., Long. 71° 36′ W., which is 2 miles off shore from the Bajo Grande Natural Gas Liquids Processing Plant and S.W. of channel Buoys B – 87 and B – 88 on the Maracaibo channel. The dock is single sided and consists of 4 breasting pilings, 4 mooring dolphins and a loading platform.

The dock is equipped with a compressor and auxiliary equipment to assist the ship in compressing and re-condensing the ship's vapours. No liability will be assumed by the Plant Operator for unavailability of the Dock's vapour compressor. The dock is also equipped with a vent system to dispose of contaminated vapours.

A tie-up crew will handle all mooring lines before and after loading.

The Plant tie-up crew will assist the ship's crew in positioning and connecting the cargo loading arms and in removing same on completion of loading. The dock loading arms are equipped with 10 in. ASA 300 lb. RF flanges. It shall be the responsibility of the ship to furnish its own fittings to mate with the dock's 10 in. ASA 300 lb. FR flanges.

Mooring Procedure: Any vessels calling at Bajo Grande must be equipped with mooring hawsers of sufficient length and strength to run a line to each of the 2 bow and 2 stern mooring dolphins and shall use such equipment while at the dock. Vessels equipped with tension winches and cables shall utilise these in addition to the mooring hawsers or alone if the vessel has sufficient cables to meet the minimum requirements of running a cable to each of the bow and each of the stern mooring dolphins. For added security of those vessels not equipped with tension and/or cables, 1 steel cable will be furnished for a bow and another for a stern mooring dolphin by the Plant. It should be recognised by all parties that while the use of these cables is strongly recommended, the Plant accepts no responsibilities for loss or damage to any vessel or to any facility or to any person that may result from the failure of this equipment.

For the convenience and safety of all personnel boarding or disembarking while at Bajo Grande it is recommended that the vessel's accommodation ladder be rigged on the port side, this being the side normally laying against the dock. The ladder should be suspended after the Mooring Master boards and during docking operations to avoid being fouled.

BALLAST: There are installations for unloading dirty ballast. Vessels which arrive at Bajo Grande with dirty ballast must advise 48 hours in advance with regard to any emulsifiers, detergents or chemicals which may be present in the ballast and which are going to be unloaded. If these emulsifiers, detergents and chemicals are not acceptable, Maraven will advise the ship and the latter must arrive at Bajo Grande with clean ballast.

The ballast will be unloaded at a rate of approximately 5,000 bbls.p.h., nevertheless in the case of unexpected damage or malfunction of the system at Bajo Grande, Maraven will give instructions to the Master of the vessel so that he may arrive with clean ballast and Maraven will not be responsible for the delays which may be suffered by vessels in cleaning their tanks prior to arrival.

It is strictly prohibited to discharge into the lake any liquid or solid waste resulting from tank cleaning. Therefore it is recommended that the Master gives instructions to all personnel so that they avoid any possible leak or contamination in the lake.

In the event that the representative of the Plant or the National Guard observe that dirty ballast is being discharged into the lake, or even residues or other contaminatory organisms whilst clean ballast is being unloaded, such operations will immediately be suspended and the consequences will be strictly for the account of the ship.

LOADING: *Notice of Readiness:* On arrival at Bajo Grande and after inspection by the Customs Authorities, and having obtained any other official approval required before loading, the Master of the vessel will notify Maraven in writing that the vessel is ready to load. This notification must include a report of the conditions of the tanks of the vessel, specifying in detail the temperature, pressure, last loading, list of vessel and trim, possibility of contaminatory organisms and any other conditions which may affect the loading.

The Master of the vessel may request any equipment and/or service which he considers necessary for the safe and efficient loading of his vessel and Maraven will make every effort to fulfil this request.

It will be the responsibility of the vessel to provide its own connections to join up with the RF 10 in. 300 ASA flanges of the dock.

It will be the responsibility of the ship's Master to ensure that prior to commencement of loading, the atmosphere inside the tanks, which are to receive products are within the safety limits stipulated. Nevertheless, Maraven reserves the right to inspect at any time, to verify the fulfilment of these safety precautions and to refuse to load any vessel which in the opinion of Maraven does not fulfil the safety requirements stipulated.

LPG refrigerated vessels will not be considered ready to load at Bajo Grande unless all the LPG tanks contain LPG vapours and are sufficiently cooled to permit shipment of the nominated products.

Vessels which receive completely refrigerated products must be capable of receiving at their boiling point from 0.5 to 2.5 p.s.i.g. Such vessels must have a refrigeration system capable of liquefying all the vapours resulting from the shipment at the rate specified and including those vapours which form as a result of the heat gained by the vessels' tanks.

Loading Procedure: The positioning and connection of the loading arm must be effected to the satisfaction of the personnel in charge of the vessel. After approval of the personnel in charge of the vessel, the loading valves may be opened to check that the connections do not have leaks and loading may commence.

The maximum loading rate is 8,000 bbls.p.h. (750 – 775 tonnes p.h for completely refrigerated products and petrol) and a minimum loading rate of 250 bbls.p.h. (23 tonnes p.h.).

The pumps are designed to supply a minimum flow of 250 bbls.p.h. at a pressure of 225 p.s.i.g. and, since the installations at the Bajo Grande Dock do not have facilities for controlling the pressure of LPG which is being loaded, they are not responsible for any damage or delay which may occur due to the request for reduction in flow and pressure of LPG in order to cool or purge the vessel's tanks.

There are no installations for generation of inert gases. LPG vessels which require cooling, purging or any other assistance in Bajo Grande can be accepted after prior request in writing from the Master of the vessel; however, these services will be charged to the vessel. The responsibility for helping to effect purging and/or cooling is charged at 733 Bolivares per hour, during the time that such operation of purging or cooling causes the vessel to exceed the permitted period of stay.

The quantity of products used in such purging or cooling will be for the account of the vessel.

In the event that the dock vapour compressor is operated at the request of the vessel's Master for a purpose other than for purging or cooling, this will be charged at the rate of 500 Bolivares per hour to the ship.

All loading and unloading operations must be suspended whilst there is bad weather and the tank covers of the vessel must be closed and secured. During periods of calm, petrol or other products with a low flash point can be loaded at reduced rates or the loading operation can be interrupted if the heavy vapours are not being dispersed with sufficient speed to avoid dangers of gas accumulation. Officers on the vessel must be alerted so that they may be on watch whilst such conditions apply.

Under normal operational conditions it may be necessary to displace the loading line. This will require the person in charge of the vessel advising the representative of the Plant when the loading is nearing completion in order to complete an equal quantity to the capacity of the loading line.

Permitted Period of Stay: (a) The permitted period of stay, as is defined hereunder, shall commence to be counted from 6 hours after arrival of the vessel at Bajo Grande. The permitted period of stay will be terminated when the final mooring cable has been withdrawn from the quay.

For the purpose of these instructions, the Notice of Readiness, may be delivered after the vessel has tied up at the dock; nevertheless, the arrival at Bajo Grande shall be defined as the time when the vessel passes between Buoys B – 87 and B – 88, which mark the Maracaibo navigational channel and are situated approximately 1,000 m. in front of the Bajo Grande Dock.

(b) In the event that a vessel arrives at a different time to that confirmed in the shipping programme, and unless Maraven has approved a different arrival time, vessel must await mooring of other programmed vessels before arriving and which vessels may have arrived at that time and the permitted period of stay will commence when the loading operation commences, or 6 hours after receiving Notice of Readiness, whichever is the later. It is agreed that a vessel shall be included in the loading programme if it arrives at Bajo Grande between the hours of 12.01 hrs. on the accepted date and 0600 hrs. of the following day.

(c) Except for the provisions in (b) above, all vessels arriving at Bajo Grande will have the right to moor in the order in which they appear in the shipping programme. Maraven at their discretion may change the order of shipment when it may be necessary for reasons of safety or for the purpose of obviating a closure of the Plant or reduction in production.

(d) The waiting time permitted shall be 24 hours, plus one (1) hour for each 6,000 bbls. of product loaded in excess of 114,000 bbls. This waiting time shall be that permitted to load the complete cargo or part of the cargo of the vessel, it being understood that any time spent in deballasting operations will not be taken as waiting time. If the loading operations are delayed or interrupted by *force majeure,* which shall include the closure of the shipping terminal due to bad weather, the time thus lost will not be counted as permitted waiting time.

(e) The loading operations shall be considered as terminated when the loading hoses are disconnected. Every vessel will leave the quay as quickly as may be practically possible after having completed shipment of the cargo and the personnel of the vessel and those on land have arrived at an agreement as to the quantity of products shipped.

(f) In the event that a vessel is moored at the quay for 6 consecutive hours after Maraven has notified the Master of the ship that the installations are ready to deliver the product, if the vessel on completion of this time is not in a position to receive products, then at the discretion of Maraven the vessel may be withdrawn from the quay, to prevent the products burning or a reduction in production.

A vessel may be withdrawn from the quay at any time for reasons of safety.

Verification and Measurement: Determining factors to arrive at the official figures of a shipment:

(A) Petrol and Butane:

(1) Correction factors of the individual meters less than 1%. In this event the terminal shall always use the figures of the meters as official (and not take into account the absolute difference in barrels) taking always the precaution of carrying out a comparison between the figures of the ship and those of the land.

(2) Factor of correction in any of the meters greater than 1%. In this event the vessel's figures will be used, comparing them in all aspects with the figure of the meters without applying the correction factor and with the land tanks.

In those cases in which the vessel's figures are used, it is appropriate to suggest that they check their figures.

(3) In the event of the measuring system not operating, and the vessel cannot give its own figures, as a last recourse the figures of the shore tanks will be used.

(B) Propane:

(1) The vessel's figures will be taken proceeding in exactly the same way as in point (2) of sub-section (a) above.

(2) In the event that the vessel cannot supply figures, the figures of the shore tanks will be used.

All volumes will be adjusted to the volume equivalent to 60°F in accordance with the applicable sections of Standard API 2534 and the corresponding tables of the Measurement Tables of Oil ASTM (latest edition) or other methods or standards selected by Maraven.

If the product delivered is LPG, the content of the ship's tanks will include the quantity of the product in the form of vapour.

All volumes will be calculated in U.S. liquid barrels at 60°F and the adjustments at this temperature will be made in accordance with the Oil Measurement Tables ASTM – 1P, American Edition 1952 (or the ruling tables which may replace these).

In the event of the products being loaded in a vessel whose tanks, pipes and equipment are empty when loading commences, the gross volume of products which may remain in the pipes and equipment on completion of shipment and at the time of final measurement, shall be calculated on the basis of the volumetric capacity of those pipes and equipment, adding the calculated volume loaded in the vessel's tanks and including in the total volume delivered to and received by the vessel at that time. In the event that the procedure described is used to determine the volume of products delivered and if during the time of this delivery vapours from the vessel's tanks be vented then the quantity of vapours vented shall be determined as shall also be the liquid volume equivalent to these vapours in normal conditions and this will be added to the quantity determined in (a) and (b) above.

Permissible Composition of the Atmosphere of the Tank for Purging: Maximum percentage per volume of air or oxygen permissible for the safe shipment of the product when the vessel's tanks are purged with CO_2 or N_2:

	%Air		*%Oxygen*	
Product	(CO_2)	(N_2)	(CO_2)	(N_2)*
LPG	50	40	8	7
Petrol	50	40	8	7

*The percentages of nitrogen do not include the nitrogen of the air in the mixtures.

Example: If a vessel is going to load LPG and it is going to be purged with N_2, it must add sufficient N_2 to ensure that the mixture does not contain more than 40% by volume of air. The other 60% will be N_2.

Ref. Principles & Practices of Purging, 1954. American Gas Assoc. – Chapter 2, page 28.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bunker "C" fuel oil are available in the area. Lubricating oils in limited quantities are also available from local contractors. All bunker, lubricating oils, water and other requirements should be cabled to the ship's Agent. For reasons of safety, no bunkers may be taken on the vessel while berthed at Bajo Grande.

FRESH WATER: Available at Maracaibo Harbour.

MEDICAL: Complete medical services are available in Maracaibo.

REPAIRS: Maracaibo: No major repair facilities are available, minor repair jobs can be taken care of through local machine and electrical shops. Shore labour can be furnished if required. Radio, radar and gyro compass technicians are available upon request.

Bajo Grande: No repair facilities are available, but when required, personnel from shops in Maracaibo will travel to Bajo Grande to effect repairs.

CONSULS: The following nations have Consular representation in Maracaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Netherlands
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

SHORE LEAVE: Launch service for official business purposes and emergencies is readily available in Maracaibo. Launch service for shore leave can be arranged through contract marine service and will be the responsibility of ship's personnel. Arrangements for shore leave transportation can be made through the ship's Agent. No shore leave facilities are available at Bajo Grande.

CLASSIFICATION SOCIETIES: American Bureau of Shipping and Lloyd's Register of Shipping, U.S. Salvage Association, Salvage Association of London, Det Norske Veritas, Bureau Veritas, Registro Italiano Navale, and Germanischer Lloyd have Agents in Maracaibo. Surveyors are available by appointment from any of these Agents.

CURRENCY: The Venezuelan unit of currency is the Bolivar (Bs) and is the only currency recognised as legal tender within the country. Masters desiring a cash advance should make the request to their Agent when advising ETA.

MAIL: Outgoing mail for ship's account may be given to the Agent's representative who boards the vessel on arrival at Maracaibo inbound. Personal mail will be accepted only if carrying the correct amount of Venezuelan postage, or if postage is authorised by the Master for the vessel's account.

GENERAL: *Maracaibo Port Captaincy:* Directive which must be observed by vessels entering and leaving Maracaibo Lake:

OBJECTIVES:

To increase the safety of Human Life at Sea, to take all necessary measures to avoid marine accidents in general and to ensure that vessels are navigated with safety in the navigable channels and waters of Maracaibo Lake.

1. All radio-telephone communications between the Control Offices of Maritime Transit under the control of the Port Captaincy of Maracaibo and vessels, shall be made, for the first contact, via Channel 16 (156.8 MHz) and immediately it shall be agreed that for the transmission of required information they will change to Channels 12 or 14. Also this procedure will be adopted in communication from ship to ship.

2. Any vessel which navigates in the vicinity of the Buoy "EM" of the outer channel being 10 miles from the latter shall call the pilot station at San Carlos, requesting permission to enter the zone and will supply the following information:

(a) Name and type of the vessel.
(b) Nationality.
(c) Draft.
(d) Last port of call
(e) ETA at the "EM" and "B – 26" Buoys.

3. The Port Captaincy will authorise by radio, via the pilot station of San Carlos, to Masters of vessels who have reported to that station request to cross the outer channel, or part of it, with the assistance of the Official Pilot, in accordance with the sequence of arrival.

4. Every 5 miles, the Master of the vessel will call up San Carlos, indicating any information which he may have and giving his position within the channel, by reference to the buoys which are on his starboard side.

5. When communication in item 1 has occurred, San Carlos will inform the vessel as follows:

(a) The location of any dredger (mobile or stationary) which is operating in the outer channel, buoys whose lights are out, changes in buoys' positions or where buoys have disappeared, vessels which have sunk, etc.

(b) If there are vessels leaving the port, to give the position of these by reference to the odd numbered buoys.

6. Vessels shall establish radio-telephone communications with the dredger when they are 5 miles from it. In this communication, they will indicate the place they estimate that the vessel will meet the dredger and any other information which they consider necessary for the safety of navigation of both.

7. San Carlos will keep vessels informed of all the circumstances mentioned above, especially the time and place that each of them estimate to pass close to any dredger which is operating in the outer channel, and in order that they do not meet the dredger simultaneously.

8. Masters of vessels will inform the pilot station at San Carlos of any other information which the latter may request.

9. Masters of vessels will keep a watch on Channel 16, on the order of the Official Pilot, until their arrival at port of destination in Maracaibo Lake and on leaving until the Pilot has left the vessel.

10. Pilots, when they are bringing a vessel into the port, at the level of the parallel of Palmas del Norte Point (Buoys T – 55 and T – 56), will call up the Port Captaincy and transmit the following information:

(a) Name of vessel
(b) Time
(c) Port where operations will be effected
(d) Name of Pilot calling.

11. When the vessel continues to navigate to the South of General Rafael Urdaneta Bridge, the Pilot will inform the Control Office of Maritime Transit in Maracaibo, the time at which the vessel will pass Buoy "B – 79".

12. The average speed of vessel in the navigable channels will be ten (10) knots, Masters being authorised as are also Official Pilots, to alter this, when the safety of navigation may require it.

13. San Carlos will check by radio-telephone the transit of vessels from the Entrance Buoy "EM" to the level of the parallel which passes in front of Palmas del Norte Point (Buoys T – 55 and T – 56 and vice versa).

14. Loaded vessels navigating outwards, and being in the outer channel, will have priority over vessels coming in to the same channel, provided that these do not meet with those coming out in the critical zone, included between Buoys B – 21 and B – 22 and E – 33 and E – 34. For this purpose, the San Carlos Pilot Station will inform entering vessels the situation of leaving vessels so that they may take necessary measures to avoid meeting those vessels coming out in the referred zone.

15. The Port Captaincy will check via the office of Control of Maritime Transit, the Navigation of vessels, from the parallel passing Palmas del Norte Point (Buoys T – 55 and T – 56), as far as the terminals and ports to the South of General Rafael Urdaneta Bridge and vice versa.

16. Every Official Pilot navigating outwards when passing the Buoy B – 72, will call up San Carlos by radio-telephone and will supply the following information:

(a) The time that he is passing Buoy B – 72.
(b) The time that he is arriving at San Carlos.

17. When the dredger receives any call from a vessel it will give information as follows:

(a) Location where it is at that time.
(b) Direction of dredging (South North or North South).
(c) The side on which the vessel must pass.
(d) Time necessary to make the manoeuvre indicating on which side of the channel dredging will continue after the manoeuvre.

18. The pilot station at San Carlos will be attentive to all communications made and will take note of them, in the event that their intervention may be required by dredgers or by vessels.

19. Any vessel sailing from any port in the No. 2 Pilotage Area of Maracaibo, will inform the Port Captain as follows:

(a) Type and name of vessel.
(b) Where from and time of leaving the port.
(c) Speed and port of destination.
(d) Estimated time of passing Buoy B – 72.

Signed – Port Captain.

LA ESTACADA: 10.42 N. 71.32 W.

TERMINAL NOT IN USE. BUOYS HAVE BEEN REMOVED.

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

OPERATOR: Maraven, S.A.

LOCATION: Loading Terminal in the Lake of Maracaibo at La Estacada, located at Lat. 10° 42′ 30″ N., Long. 71° 31′ 40″ W. Entrance to and leaving this terminal is made between Buoys B-65 and B-66.

DOCUMENTS: As soon as vessel is safely moored Agents' representative will board the ship together with Port Authorities. The following documents are needed on arrival:

1. Clearance from Last Port with the following attached:
    Stores List
    Crew List
    Slop Chest Inventory
    Ballast Certificate
2. Crew List (6 copies).
3. Stores List (6 copies).
4. Slop Chest Inventory (Deck, engines and cabin store listed separately) (6 copies).
5. List of Personal Effects (6 copies).
6. Derat Exemption Certificate (original).
7. Venezuelan Net Tonnage Certificate (original).

See "Tonnage Applicable".

The Health Officer sometimes requests to see the Vaccination Certificates of crew members.

PILOTAGE: (See "Maracaibo Lake"). Pilotage Compulsory.

1. All vessels must call Maraven, S.A. and Agent on VHF Channel 16, when passing the E.M. Buoy and when embarking the Pilot at San Carlos.

2. Reduce speed approaching Inner Channel Buoy B-63; rig accommodation ladder starboard side properly illuminated. Company Cargo Co-ordinator will board between B-63 and B-65.

3. Listen during transit on 2182 kHz and VHF Channel 16.

4. In event of unforeseen circumstances requiring vessels to anchor, area West of Estacada Northern Buoy mooring outside of channel limits will be used.

Vessels proceeding to La Estacada Terminal must enter the Outer Channel and embark the Government Pilot between Buoys B-25 and B-27. After vessel arrives in the vicinity of the E.M. Buoy, Master must contact San Carlos Pilot Station by radio-telephone on frequency 2182 kHz or VHF Channel 16 requesting Pilot between Buoys B-25 and B-27.

Caution: Masters are warned to keep adequate speed in the Outer Channel even when embarking the Pilot as strong cross currents are encountered near San Carlos and Zapara Island. Pilot boats are fast and fitted with a flying bridge. Once the Pilot is on board the vessel will proceed to La Estacada, reducing speed in the vicinity of Inner Channel Buoys B-63 and B-65 where Maraven Cargo Co-ordinator will board. Accommodation ladder must be rigged up on starboard side.

MAX. SIZE: Water depth in both buoy moorings is 40 ft. mean monthly observed lowest water (MMOLW). Because of the depth of the surrounding approaches, 39 ft. (MMOLW), admissible mid-ships maximum draft in No. 1 is 35 ft. 06 in. fresh water. Under certain tidal conditions, however, with vessels over 60,000 d.w.t., it may be necessary to restrict loading to draft. Masters are requested to be guided by the Cargo Co-ordinator in appropriate draft be loaded.

Berth No. 1: Length up to 720 ft. Beam unlimited.

RADIO: *Information to be cabled to Agent, Maracaibo.*

Upon vessel's departure from the last port bound for La Estacada cable 72, 48 and 24 hours ETA at San Carlos Pilot Station, including in this message last port, Master's name, if A.C. current on board and any requirements. If diverted, cable original destination, also have 5 copies of diversion cable ready on arrival. If the vessel is nominated to load a part cargo only at La Estacada, indicate at which port cargo will be completed. All cables should be sent via PJC (Curacao Radio) and via ITT All American Cables.

A separate cable should be sent to Maraven, S.A. Maracaibo indicating ETA at San Carlos only.

TUGS: Use of 2 tugs of at least 1,600 h.p. is compulsory for mooring and unmooring at La Estacada (Government Decree). Use of 2 mooring launches with crew including a diver, who inspects the submarine loading hoses, is compulsory at La Estacada. These mooring launches remain alongside ship during stay in berth order act in any emergency.

BERTHING: *(a) Description:* Marine Oil Loading Terminal, is an off-shore installation and consists of two permanent buoy moorings, No. 1 to the South, and No. 2 to the North (out of service).

Berth No. 1 consists of 4×14 ft. cylindrical steel buoys, each fitted with a pelican hook to which ship's mooring lines are attached by contractor's mooring launches. On each buoy there are 2×1.625 in. improved plow steel wirelines to supplement mooring lines in order to provide additional security during strong winds. In Berth No. 1 the plow steel wires are 520 ft. long.

Ships moored heading North or South according to prevailing current.

(b) Deballasting: There are no facilities at La Estacada to receive and treat dirty ballast therefore *same must be clean.* All ballast is discharged ashore through a 16 in. line.

(c) Mooring: All ships should have an adequate supply of stoppers or other special equipment necessary to handle wires attached on mooring buoys. Vessels mooring in berths must be equipped with 4 ropes forward and 4 ropes aft. Vessels are cautioned that good quality ropes are essential and that they will be held liable for any damage occurring through improper or poor mooring ropes or inability to properly handle same.

Vessels in buoy moorings must have deck winches in readiness for use at all times. Method of berthing will be at discretion of the Government Pilot, as weather and other conditions permit.

During berthing and unberthing, ship's engines, tackle and all other gear must be in operative condition and in a state of readiness for use on immediate notice.

Weather permitting, and berths being available, vessels may be berthed at any hour of the day or night. Mooring buoys are properly lighted.

Government Pilots will assist in mooring the vessel in Berth. Loading hoses can be connected both port and starboard side, according to ship's position. The Company Cargo Co-ordinator will remain on board ship to advise on connecting and disconnecting loading hoses, and loading of cargo.

The Government Pilot will later unmoor the vessel and take her out to the channel for departure.

When ship is in position and mooring wires taut, mooring winches such as tension winches must have their manual brakes put on securely, and should not rely on automatic rendering devices.

During time vessel is at the berth, frequent and regular inspection of mooring essential to ensure that mooring lines are kept taut and that movement of ship is kept to a minimum. When tugs are alongside or assisting a tanker, all cargo openings, permanent ballast tanks, lids and pump-room doors must be closed no matter what grade oil is being or has been carried, unless these spaces are gas-free.

The mooring operations are carried out by 2 mooring launches and 2 tugs.

TANK INSPECTION: As soon as all ballast is discharged and hoses connected, production supervisor or cargo co-ordinator will inspect ship's tanks. If same are dry and clean he will sign corresponding certificate.

LOADING: Berth No. 1 has 1×24 in. loading line with the corresponding manifold. 12 in. – 150 lb. marine loading hoses are used. The berth is capable of a max. loading rate of 22,500 bbls.p.h., with an appropriate reduction for topping-off.

However, maximum loading rate entirely at Company's option and will vary according to circumstances and type of tanker concerned. When completing loading, stoppage of cargo will be determined on board, and Masters are requested to inform Cargo Co-ordinator at least 30 minutes in advance in order reduce pumping rate for topping-off. Cargo Co-ordinator will be in continuous contact with pumping station by means of portable radio. Should this means of communication fail, the following signals on ship's whistle will apply:

One long blast = Stand-by
Two long blasts = Commence pumping
Three long blasts = Stop pumping

Upon completion of loading, Cargo Co-ordinator, together with ship's officer, will gauge ship's tanks and later prepare cargo documentation.

FUEL: Bunkers and marine fuels supplied by barge before or after loading operation at anchorage. Agent should be given prior notice.

FRESH WATER: Must be ordered with first ETA cable to Agents so that arrangement can be made with supplier. A water barge and a tug must be hired.

DENSITY: 997 – 1003.

REPAIRS: Only smaller repairs can be effected locally; however, technicians available for radio and radar repairs. Contact Agent.

SURVEYORS: American Bureau of Shipping and Lloyd's Register have Agents in Maracaibo.

CONSULS:

The following have consular representatives in Maracaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Mexico
Netherlands
Nicaragua
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

SHORE LEAVE: Launch is primarily for use of authorities and company staff, but will effect trips for crew if required by Master. Contact Agent who will make necessary arrangements.

GUARDS: One National Guard stationed on board. He must be provided with sleeping quarters and seated in officers' mess for meals.

He is the representative of the Venezuelan Government and therefore any courtesy extended to him will be appreciated.

CLEARANCE: Immediately after termination of loading operations hoses are disconnected and Government Pilot will proceed to unmoor vessel. In the meantime, cargo documents are prepared by Terminal personnel, and as soon as vessel is cleared, she will proceed to her destination.

CURRENT/TIDE: Current velocity max. 4 knots. Nature of bottom, mud. The tidal range in feet for the Estacada Terminal is Springs 1.5, Neaps 0.5.

GENERAL: *(a) Cash Advance:* Cash advance will be in local currency (Bolivares). Cable in advance any such requirements to Agents.

(b) Mail: Outgoing correspondence may be given to the marine dispatcher. For personal mail (crew) a list should be made, indicating name of crew member, quantity of letters and destinations, and handed to Agents.

(c) Ship Chandlers: 2 ship chandlers in Maracaibo who can supply vessels with fresh meat, fish, vegetables, fruits, etc. Requirements should be transmitted in first ETA cable to Agents.

TONNAGE APPLICABLE:

The Venezuelan Port Authorities base part of their pilotage charges on the size of the vessel, i.e. on registered net tonnage or on Venezuelan net tonnage.

On Registered Net Tonnage:

Venezuela will accept the tonnage of ships registered in countries with which they have a reciprocal tonnage agreement.

As of this date, such countries are:

- Denmark
- France
- Germany F.R.
- Ireland
- Netherlands
- Norway
- Portugal
- Sweden
- United Kingdom
- U.S.A.

On Venezuelan Net Tonnage:

Ships not registered in countries listed above, when calling at Venezuelan ports for the first time, must be measured for Venezuelan tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the owners. A fee is charged for this certificate, which is payable only on the ship's first call.

AUTHORITY: Capitania de Puerto, La Ciega – Maracaibo, Venezuela. *Tel:* 226480, 226880. *Cables:* Caripuerto.

Section C

LA SALINA (Lacustre): 10.22 N. 71.28 W. (See Plan)

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

OPERATORS: All terminal facilities are under the control of Lagoven, S.A.

APPROACH: Entrance and leaving this terminal is made between Buoys B – 97 and B – 98.

LOCATION: La Salina located on Eastern shore of Lake Maracaibo, in Lat. 10° 22′ 18″ N., Long. 71° 27′ 49″ W. about 60 miles from the Entrance Buoy "EM".

DOCUMENTS: These are generally placed on board prior to departure. Vessels whose Master accepts the early departure procedure may sail with documents in blank. Figures are then radioed for inclusion in blank documents. Outward Clearance documents are placed on board the vessel prior to departure.

PILOTAGE: In the event that no contact can be made with San Carlos Pilotage Station, or if there is a language problem, contact should be made with Vensport, at La Salina by voice radio on VHF Channel 16 (156.8 MHz).

The Docking Master boards by tug or launch at the waiting anchorage or in the outer part of the navigation channel leading to the terminal.

ANCHORAGE: The waiting anchorage off La Salina is located immediately Eastward of Buoys B – 97, AS – 1 and AS – 3 (Old numbers M – 1, M – 1a and S – 1); it has a depth of between 40 ft. and 41 ft. and fair to poor holding ground in soft mud.

RESTRICTIONS: None. The port is open for navigation during the day and night, allowing ships to enter and sail at any hour.

MAX. SIZE: Up to 112,000 d.w.t., LOA 900 ft. and max. draft 39 ft. (brackish water) at Berth Nos. 6N, 6S, 7N and 7S. Max. distance bow to manifold 450 ft.

Pier No. 3 (West Side) LOA 690 ft., draft 26 ft. and 36,000 d.w.t.

Pier No. 3 (East side) LOA 575 ft., draft 26 ft. Max. 18,000 d.w.t.

No restrictions on vessel's beam at any of the berths.

The access channel to La Salina has a least depth of 41 ft.

Special Note: Maximum draft for loading vessels at La Salina Lacustre Terminal is actually restricted to 39 ft. Vessels loading at this maximum draft of 39 ft. must cross the outer bar channel at HW.

RADIO: The cable and telegraphic address for the Lagoven, at La Salina is "Lagoven La Salina". Radio messages to and from ships at sea are routed through the Government radio station at Maiquetia (La Guaira) call letters YVG. This station operates on a 24 hour continuous watch on 500 kHz and 2182 kHz.

Listening frequencies: long wave: 500 kHz; medium wave 2182 kHz; short wave Channels 5 and 6.

Working frequencies: long wave 417 kHz and 464 kHz; medium wave 2120 kHz; short wave 4222 kHz, 6351.5 kHz, 8461 kHz and 17141.5 kHz.

Answering frequencies: long wave 500 kHz.; medium wave 2182 kHz.

Hours of watch:

4222, 6531.5 kHz	0100 – 1300 hrs. GMT
8461, 17141.5 kHz	1300 – 0100 hrs. GMT

Cables for vessels may also be routed via Curacao Radio, call sign PJC.

Radio notice of arrival should be sent 72 hours prior to arrival at La Salina and corrected if weather or other conditions delay the vessel.

Vensport La Salina handle all communications between vessels and Lagoven Terminal control tower. VHF radio-telephone Channel 16 (156.8 MHz) may be used for initial contact. Channels 6, 10, 13 and 14 are also available on a 24 hour basis.

All vessels en route to La Salina may also communicate with Lagoven Amuay or Caripito Marine Offices and request that messages dealing with corrected ETAs, Pilots and other business be relayed to Vensport La Salina.

VHF: Transmit on VHF when passing Aruba or Amuay Bay updated ETA messages to either Lago Marine or Amuay Marine for relay to La Salina. Contact Vensport La Salina on VHF when within reach (normally after passing General Urdaneta Bridge) for latest berthing instructions.

TUGS: Lagoven S.A. maintains one 3,000 h.p. diesel tug and one 1,300 h.p. diesel tug. Tug-boat assistance is considered essential and is afforded to all vessels entering, leaving or shifting in the harbour.

Additional tugs can, in an emergency, be ordered from Maracaibo. The tugs are usually employed in the alongside mode and are made fast using their own ropes (2.5 in. diameter nylon).

BERTHING: At La Salina, Lagoven maintains a deep-water terminal (Lacustre) consisting of an island where are located 2 finger piers, each 1,100 ft. in length and 500 ft. between piers, providing 4 berths to accommodate tankers up to 112,000 d.w.t. Berths are numbered 6N, 6S, 7N and 7S, from North to South. At these berths various products can be loaded simultaneously namely – 6N and 6S – Crude, Naphtha and Butane; 7N and 7S – Crude; Pier No. 3 (West side), Propane and Butane; Pier No. 3 (East side), same as West side but not concurrently with West side. In addition there is an offshore platform (Pier No. 3) where liquefied petroleum gases (Butane and Propane) can be loaded.

Instructions concerning berthing are given by Vensport La Salina by means of radio-telephone.

The use of an anchor when docking is permitted at all berths. It is considered prudent to have the outboard anchor hove-out prior to entering the harbour in order to facilitate speedy release if necessary while docking. The Pilot will advise whether the ship is to be berthed port or starboard side to the dock.

The tugs are made fast on the seaward side, one forward and one aft. Vessels berth under normal circumstances always with head in, which is a relatively simple manoeuvre. Vessels are berthed starboard side alongside Berths 6 North and 7 North; portside alongside at Berths 6 South and 7 South.

When the vessel's bow is between two and three ships' lengths from the head of the pier, the engines are stopped or reversed. The vessel then slowly enters the berth parallel to and about 40 ft. from the continuous fender face. When the vessel's bow is just past the berth's manifold area, the forward spring line is sent in by heaving line. The vessel is then positioned by using its ropes and is pushed alongside by tugs. The current sets mostly in a general Northwesterly direction with a velocity between 0 and 2 knots. This should be taken into account, particularly when berthing at the South facing berths where the vessel may be set onto the pier.

Moorings: Mooring bollards spaced with 80 ft. intervals are located on both sides of the pier, and provide the basis for a potentially excellent mooring configuration consisting of:

3 Headlines
3 Sternlines
2 Breastlines
1 Forward, Spring line and
1 Aft Spring line.

BALLAST: Vessel should arrive at La Salina with sufficient ballast to permit safe handling. Government Pilot requirements in this connection under normal weather conditions are interpreted as drawing approximately 8 ft. forward, 18 ft. aft, on a T – 2 or similar type tanker, and 11 ft. forward, 20 ft. aft on a 26,000 d.w.t., on larger type vessels the minimum draft required is 14 ft. forward and 22 ft. aft.

Ballast should be carried in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

It has been established that one of the major causes of contamination of crude oil is the relatively small amount of salt water remaining in the ship's tanks, pumps, and ballast lines after ballast discharge. This very small amount of salt, nevertheless, frequently results in costly damage and downtime to refining equipment, besides presenting many other processing problems.

It is therefore requested that the full co-operation of the Master and Officers of ships loading for Aruba, be given to ensure that all ballast tanks and lines are flushed with lake water and stripped as dry as possible.

Vessels equipped with a separate and completely segregated system of ballast tanks, lines and pumps, will be permitted to discharge ballast and load cargo simultaneously, providing approval of both the pier foreman and Petroleum Inspector is secured.

A pier supervisor who is in direct communication with the loading pumphouse is stationed at each pier during the entire time the vessel is discharging ballast or cargo or receiving cargo.

All dirty ballast must be discharged ashore. The terminal has a 100,000 bbl. reservoir connected to two high capacity separator units. Max. ballast discharge is 40,000 bbls./hr. with max. 130 p.s.i. at rail. One or two hard arms (12 in.) are usually connected for ballast discharge.

If it is desired to follow the "load-on-top" procedure it is requested that the marine representative be informed on arrival.

POLLUTION: There are no shore facilities to recover an oil spill. The Venezuelan authorities take a very serious view of oil pollution and heavy fines are imposed for violations of the strict pollution rules. A government representative is stationed at the terminal. It is therefore important that all precautionary measures be taken and spills avoided. In case of a spill, the port services section should be informed immediately by VHF or telephone, which is located on the pier. The use of dispersants or detergents on the water is not permitted.

LOADING: Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master on arrival. Supplementary information including number and size of lines and Chicksan arms will be furnished to the Chief Officer before loading commences. Loading rates will be reduced as required when topping off.

If vessel's loading orders from owners or charterers do not agree with the terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "standby" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

Shut-down controls for all crude oil pumps are available at each loading berth at ship's rail of loading vessels for use in case of emergency only.

LOADING RATES: Loading operations at La Salina Terminal are normally carried out at relatively high pumping rates; up to an average of 40,000 bbls.p.h. Ship's officer will be advised by the pier supervisor at what rate the cargo will be loaded. LPG is loaded up to an average max. rate of 7,500 bbls.p.h. at Platform No. 3.

During periods of calm, loading of gasoline or other similar low flash products may be at lower rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazards from accumulated gas pockets. Ships' officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping off, if requested by the ship's officer.

Cargo Handling: The terminal is mainly a crude exporting facility, but also LPG, bunkers, condensate and gasoline are handled.

The cargo transfer facilities are:

Berth 6 North and South:
3 × 12 in. Chicksan arms for crude loading.
1 × 8 in. Chicksan arm for bunkers (located aft of manifold).
Berth 7 North:
4 × 12 in. Chicksan arms for crude loading.
1 × 8 in. Chicksan arm for bunkers (located aft of manifold).
Berth 7 South:
4 × 12 in. Chicksan arms for crude loading.
3 × 12 in. Chicksan arms for pressurised gas loading (located forward of crude loading manifold)
1 × 8 in. Chicksan arm for bunker (located aft of manifold).

Gasoline, condensate and pressurised butane are handled at Berth 6 at both sides of the manifold.

All connections are standard 150 ASA bolt hole flanges.

The emergency cargo stop button is located in the operators' shelter on both piers.

Crude loading rates up to 50,000 bbls./hr. can be provided.

The loading and discharging of all crude petroleum and its products will be stopped during the passage of an electric storm and ullage covers must be closed and dogged down.

Cautionary Advice: Whenever non-matching flange sizes necessitate the use of reducers (spool pieces), Masters should insist that the reducer or hard arm be adequately supported by a proper jack, and should refuse to let cargo transfer operations commence before a satisfactory vessel manifold and hard arm connection has been provided.

FIRE PRECAUTIONS: The recognised fire alarm signal is 4 long blasts with ship's or tug's whistle. An 8 in. fire water main line runs alongside all 4 berths with numerous double 2.5 in. outlets for connection to ship's hoses. Four elevated water/foam monitors are located on each pier providing relatively good fire fighting protection for the main deck area.

The 2 tugs are also equipped with elevated fire water/foam monitors, though on board foam storage capacity is relatively limited.

MEDICAL: Complete medical, dental and hospitalisation facilities are available at La Salina. Medical treatment is provided at a private clinic.

Authorisation forms for medical treatment are provided which require the Master's signature. Transportation will be supplied by Vensport La Salina.

If the patient does not speak Spanish or English, an interpreter should accompany him.

FRESH WATER: A limited supply of fresh and boiler water is available at La Salina Lacustre Terminal. Delivery is made through 2.5 in. National Standard Fire Hose Thread hydrants. Ship's personnel must provide hoses and connect up.

FUEL: Bunker C fuel oil, marine diesel and intermediate fuels are available at La Salina Terminal Lacustre. Delivery is made alongside Piers 6 or 7 by 8 in. diameter Chicksan hose, located about midships.

Loading Rates: Bunker "C" and intermediate – 3,000 bbls.p.h. Diesel – 2,000 bbls.p.h.

It is the responsibility of the ship's engineer to give "stand-by" notice to the terminal employee and advise him when to shut down.

Supplies of lubricating oils in drums are available. Delivery will be effected while loading and requirements should be incorporated in the radio ETA.

DENSITY: Average density at the berth is 1002 but varies dependent upon amount of rainfall. The temperature ranges from 82°F. to 86°F.

REPAIRS: Vensport's Port Staff will assist with emergency repairs as may be required in each case depending upon availability of competent personnel and equipment. The company's shop facilities while not equipped for extensive ship repairs, may be made available to fabricate or repair items that are urgently required.

The nearest dry docks are those at Puerto Cabello and Curacao, N.A. Several contractors in the area provide labour for hull painting and for tank cleaning. Contracts for these services are made by the ship's Master directly with the contractor.

Radio technicians are available for minor repairs. With sufficient advance notice a radar specialist can be arranged to board the ship at La Salina.

CONSULS: The following countries have consular representatives in the area:

Belgium
Chile
Colombia
Costa Rica
Denmark
Dominican Rep.
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Netherlands
Nicaragua
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing, and given to Pilot undocking the vessel. Vessels are not permitted to sail until all crew members are on board, unless hospitalised or prior arrangements made for disembarking. No launch service for liberty parties is available while vessel is anchored off La Salina awaiting berth.

TIME: GMT minus 4 hours.

GENERAL: Representatives of Vensport La Salina board vessels immediately on arrival, and it is particularly requested that Masters indicate at that time all ships' requirements. The office building is located at the Pier Head Trestle and personnel are available for assistance at all hours.

(a) Bonded Stores. Cigarettes or other stores in bond are not obtainable in La Salina.

(b) Cash Advances. Cash advances are made in local currency, the Venezuelan Bolivare. Cash requirements should be included in the radio ETA.

(c) Charts. On first arrival of each tanker, the Agency Dispatcher will furnish a set of local charts if required. No supplies of U.S. Hydrographic or British Admiralty charts, or sailing directions, are available.

(d) Classification Societies. American Bureau and Lloyd's Register have non-exclusive Agents in Maracaibo, and qualified Masters and Chief Engineers are available for appointment as Surveyors when required.

(e) Gangways. All vessels using the Port of La Salina must provide a safe gangway. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

(f) Plimsoll Marks. The Captain of the Port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels may be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

(g) Port Services. On arrival at La Salina Terminal, a company representative boards vessels, so it is particularly requested that Masters make known to him all ship's requirements. Master should bear in mind that while vessels are within Venezuelan territorial waters, Government Authorities do not permit the use of ship's radio equipment. Cables and radiograms should be handed to the company representative for transmittal via shore radio communication system. La Salina also has radio telephone communication with North and South America and Europe. For further information contact Vensport in the terminal building, tel. 88491 and 88492.

(h) Rat-guards. By order of the Port Authorities, vessels are required to use ratguards on all mooring lines.

(i) Personnel – Seamen left ashore: In the case of seamen left ashore for hospitalisation, repatriation or other reason, documents and personal effects are to be delivered to the Vensport Office in La Salina before sailing. A letter is required from the Master advising maximum advances to be made to seamen if any, and instructions concerning repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account.

It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, Agent or Owner, responsible for any seamen left behind in Venezuela.

(j) Provisions and stores. Fresh and dry provisions are supplied by various Ship Chandlers in Maracaibo and Cabimas (La Salina). Master should deliver his signed requisition to the Vensport Office representative who boards on arrival. Provisions would then be delivered to the vessel while loading. The prices and quality of some items, such as fresh fruit, fish, shrimps, vegetables, etc., are competitive; dry stores are considerably higher than in most ports. The Fleet Steward will assist in filling requisitions. It is important that the Master sign the Ship Chandlers invoice as authorisation for the Marine Department to make settlement.

(k) Mail. Any pending ship's mail will be delivered on board by the Vensport Dispatcher on arrival at La Salina. At same time he will receive ship's mail to be dispatched. The Vensport Dispatcher will accept personal mail only if it carries the proper amount of Venezuelan postage, or if Master authorises the postage by signing 7 copies of the Company Postal Transmittal form. Masters interested in knowing the individual postage amounts to be paid by each crew member, should provide a list, in duplicate, of the senders, and number of letters sent by each one identified by a number written on each letter.

Copy of this list will be returned aboard the vessel when leaving this port outward bound. If not ready on time, it will be airmailed to the vessel's next port of call.

(l) Inspection of Petroleum Products and Crude Oil. Chas. Martin & Company and E. W. Saybolt petroleum inspectors are available if specified.

(m) Laundry. Laundry service is available between 0700 hrs. and 1700 hrs. on week-days. No guarantee can be given on time of delivery.

AGENT'S NOTICE: December 1987.

TO ALL MASTERS CALLING AT LA SALINA

We would like to draw your attention to the following:

(a) Terminal of La Salina is an artificial island. For safety reasons during your vessel's call, a permanent (24 hours) taxi service has been arranged to take you and your crew from island to main gate and vice-versa.
(b) This taxi service MUST NOT be paid for by you or your crew.
(c) No idling or walking around the island and/or terminal is allowed.
(d) It is impossible to go through La Salina's main gate without the Harbour Office Shore Pass duly filled in with name, nationality, vessel's name, passport number and date.
(e) Your agent's call name at branch office of La Salina is "Agemar La Salina", standing-by 24 hours on VHF Channel 16, telephone numbers 45665 and 43089, direct line of Lagoven 3235. Agency's call name at main office also standing-by 24 hours on VHF Channels 12, 14 and 16 is "Agemar Maracaibo".
(f) Whenever calling "Agemar La Salina" and no reply is obtained, please contact "Agemar Maracaibo" and leave your message.
(g) If an emergency arises concerning bunkers or cargo, you must contact Lagoven's employee-in-charge of the pier at the small house beside the vessel or call by the telephone of the pier to the Loading Master, Tel. No. 3587, 3304 or 3258.

(h) Launch operator's call name is "Servicios Portuarios" on VHF Channel 16 (24 hours), Tel: 3491 and 3492. In case you need to contact Lagoven, there is always an employee on the pier with a telephone. Bunkers or water facilities are available at this pier.

(i) Water and bunkers are available at Piers No. 7 and No. 6. Water is taken through vessel's hose while bunkers by shore's Chicksan or rubber hose.

(j) Two hours before loading operation finishes, a radio call should be made to "Agemar La Salina", so that arrangements for pilot, tugboats and other sailing procedures can be made. (*)

(k) In case of oil spillage, an immediate call should be made to "Agemar La Salina" or "Agemar Maracaibo", giving the name of your P & I Club. We will contact the area representative and request their assistance.

(l) It is recommended that a crew member stands-by on VHF, one hour after vessel finishes loading.

(m) Maximum sailing draft is 39 ft. 00 in. even keel – NOT ONE INCH MORE.

(n) Crew Disembarking – In order to obtain 25% discount on air tickets and to cover IATA Regulations, Master must issue a letter addressed to Agemar requesting the tickets and mentioning name, destination, passport number, nationality, age. If any excess luggage (only 40 kgs. allowed per person), Master has to authorise same and inform agents. Our agent at Maiquetia Airport will take charge of this expense on behalf of Owners. Weighing of baggage should be done onboard and letter must be done on vessel's official paper, signed by Master and with the vessel's stamp on it. Crew members disembarking have to keep their Shore Passes. *All other shore passes must be returned to the Agent and he must be informed whether all crew members are on board.*

(o) Medical Attendance – Call immediately "Agemar La Salina" and send the person that is sick to the hospital, by the taxi, also call Lagoven's Control Tower. Taxi has a visible identification that says "Linea Zulia". Taxi driver will not only take the crew member to the hospital but will also pick up Agemar's agent and service order as well.

(p) No external painting of vessel (hull) is allowed while berthed or anchored. It is forbidden to deballast from cargo tanks (clean or dirty) into the lake. Heavy fines will be imposed on those not complying with these regulations. Smoking is not allowed on all piers.

(*) Please call by VHF Channel 16 to "Agemar La Salina", today at 1800 hours local time, informing the estimated time of completion of loading.

Section D

MARACAIBO: 10.42 N. 71.39 W.

On the N.W. shore of the Lake Maracaibo.

Maracaibo is the capital of the State of Zulia and seat of all Government and Consular Offices, as well as the port of entry for all vessels loading at one of the Terminals in the Lake of Maracaibo. (N.B. For information details of Documentation, Pilotage etc., see "Maracaibo Lake").

Also see "Shipmaster's Report" before Bajo Grande.

ANCHORAGE: The Pilot will not con the ship into the anchorage, but will indicate the proper location to anchor. Care should be taken because of small boats and ferry traffic.

ACCOMMODATION LADDER: Vessels must provide an accommodation ladder. The use of trunk ladders, pilot ladders, etc., is contrary to port regulations. Port Authorities will board only by means of an accommodation ladder. It is recommended to rig this in advance to avoid unnecessary delays.

BOARDING PARTY: The boarding party usually consists of the following persons: One Quarantine Official, Two Customs Officials, One Port Captain's Representative, Two representatives (Agent and Mooring Master).

RADIO: "Radio Marina" transmits information of interest to navigation every day from Monday to Friday from 1000 hrs. to 1015 hrs. and from 1600 hrs. to 1615 hrs. on frequency of 4,420.7 kHz in the 60 m. band, output 1 kW. All bunker, lubricating oils, water and other requirements should be included in the cable giving ETA of the vessel.

TUGS: Service not compulsory, assistance is rendered if required by the Harbour Master.

BERTHING: The manoeuvring area within Maracaibo harbour has a depth of 26 ft.

		Length	*Depth alongside*
Wharf No.	1	106 m.	15 ft.
" "	2	106 m.	15 ft.
" "	3	159 m.	15 ft.
" "	4	159 m.	22 ft.
" "	5	135 m.	25 ft.
" "	6	135 m.	26 ft.
" "	7	135 m.	26 ft.
" "	8	135 m.	26 ft.
" "	9	120 m.	25 ft.
" "	10	120 m.	22 ft.
" "	11	120 m.	22 ft.
National Brewery Wharf		125 m.	19 ft.
Regional " "		120 m.	21 ft.
New Pier (2 berths)		—	30 ft. – 33 ft.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bunker "C" fuel oil are available at Maracaibo from local contractors with barges. Supplied only by barge at the wharves or anchorage. Lubricating oils are also available.

FRESH WATER: All wharves supplied with fresh water by 2 in. hoses. Rate 15/20 t.p.h. Fresh water also available from local contractors with barges.

MEDICAL: Complete medical services are available.

CONSULS:	Telephone		Telephone
Belgium	3235	Italy	—
Colombia	72232	Mexico	6781
Costa Rica	6511	Netherlands	4621
Denmark	6531	Nicaragua	76703
Dominican Rep.	6511	Norway	78911
Ecuador	74055	Panama	78110
El Salvador	74241	Peru	4545
France	5297	Portugal	80870
Germany F.R.	76061	Spain	71118
Great Britain	6169	Sweden	6511
Guatemala	71193	United States	2123

STEVEDORES: Normal working hours 0700 – 1100; 1300 – 1700 and 1800 – 2300 hrs.

TELEPHONES: There is no service for connecting telephones on board vessels. Public telephones are situated in the warehouses adjacent to all wharves.

HOLIDAYS: All Sundays; 1st January; Good Thursday and Friday; 19th April; 1st May; 24th June; 5th July; 24th July; 12th October; 24th October; 18th November; 17th December; 25th December.

POLICE/FIRE/AMBULANCE: Police tel. 3821; Fire tel. 6585; Ambulance tel. 2209.

REPAIRS: No major repairs facilities are available; however, repair work can be done through local machine and electrical shops, and shore labour can be furnished if required. Radio and radar technicians are also available.

AIRPORT: International Airport "Granode Oro" situated N.W. of Maracaibo City served by many national and international airlines. A second airport with cargo and passenger services is situated at Santa Barbara del Zulia, on the banks of the Escalante River.

PROVISIONS: Fresh and dry provisions are available through ship chandlers in Maracaibo for delivery at Maracaibo Harbour or at the terminal.

SHORE LEAVE: Launch service in the Maracaibo harbour is readily available for official ship business. For personnel shore leave, depends on launch availabilities on arrival.

SHIPMASTER'S REPORT: 1976

Communication: Considerable difficulty was experienced raising La Guaira Radio Station (YVG) for transmitting the necessary ETAs. Our messages were transmitted via Portishead (GKR). Agents, however, advised that messages are normally transmitted through Curacao (PJC).

Pilotage: Masters making their first visit to the port are to embark the Pilot at Punta Cardon (Paraguana Peninsula). Ample notice must be given to the Agents as the Pilot has to be flown there from Maracaibo. Masters making their first visit to Maracaibo must also disembark the Pilot at Punta Cardon on departure. Masters may thereafter proceed directly to San Carlos pilot station.

Communications can be made through the Harbour Master's Office Punta Cardon.

Delays experienced off Punta Cardon did not occur on this particular occasion. Pilot boards and normally rests in the pilot's cabin until 30 minutes from the "EM" Buoy.

Berthing: 2 tugs are compulsory for vessels berthing/unberthing when the vessel's length exceeds 476 ft. All other vessels 1 tug compulsory.

Stevedoring:

Normal working hours	
(Monday – Friday)	0700 to 1100 hrs.
	1300 to 1700 hrs.
	1800 to 2300 hrs. (Overtime)
(Saturday)	0700 to 1200 hrs.
(Sundays & Public Holidays)	*No work.*

Vessels must be fully rigged and hatches open and ready in all respects to load or discharge at least 15 minutes before stevedores arrive. If necessary shore labour is available to assist.

SHIPMASTER'S REPORT: 1975.

Arrival Messages: Cable Agent – Maracaibo via La Guaira Radio on departure Cristobal with ETA Punta Cardon, draft, cargo stowage, gangs required and requirements. (For subsequent calls vessel will be permitted to proceed to San Carlos pilot station to embark Pilot).

24 hours prior to arrival repeat ETA Punta Cardon, to be sent as described above.

2 hours before arrival at pilot station – Punta Cardon call on Channel 12 VHF to update time of arrival.

Pilotage: Pilot boards at Punta Cardon about 1 mile off the tanker berths from a launch with a "roof landing", therefore the pilot ladder must be about 6 ft. from the water. This Pilot travels from Maracaibo to meet the vessel at Punta Cardon and takes the vessel all the way to Maracaibo. Punta Cardon to "EM" Fairway Buoy – 78 miles. "EM" Buoy to Maracaibo – 35 miles.

Once the vessel has made a call at Maracaibo the Master is then exempt and may take his vessel direct to the "EM" Buoy and negotiate the buoyed channel for 12 miles to San Carlos Pilot Station. The channel is straight, wide and the buoys are well lit and marked. A Westerly set is said to prevail across this channel from the "EM" Buoy to San Carlos Pilot Station but it was not evident on our passage in or out. However, a strong ebb tide was noticed running out to sea off San Carlos Pilot Station. The channel from the "EM" Buoy to Maracaibo is dredged to 41 ft. but off the berths at Maracaibo the maximum draft is 26 ft. There had been a lot of unseasonal rain prior to our call and we noted that the density of the dock water was 1001.

Documents:

1 Health Declaration.
8 Stores Lists.
8 Crew Lists.
6 Passenger Lists (If no passengers these papers have to be entered as "Nil" passengers).
8 Crew Declaration Lists.
2 Venezuelan Manifests (Sent from N.Z.).
2 Sets Bills of Lading (Sent from N.Z.).
12 Sets Tally Books (Sent from N.Z.).

Stevedores: "Servicios Portuarios de Maracaibo".

They have 24 gangs in the port and mechanical equipment to support 16 gangs. Normal working hours are 0700 – 1130 and 1300 – 1630 hrs. Overtime 1800 – 2230 hrs. Saturday 0700 – 1200 hrs. No work on Sunday.

The labour works well but is not accustomed to working refrigerated ships and when the gangs work into the wings the Agent had to supply the men with warm clothing and hot coffee. Their discharge rate for cartons of frozen cream was 18 t.p.h. In hindsight I would suggest that it would be advisable to stow frozen cream for Maracaibo in a hatch square if possible to obviate the need for the labour to go into the wings as the complaint about the "cold" does not arise until this happens. They had 14 open trucks laid on to take the cartons of cream direct to the butter works and they had an unbroken flow so the "hook" was not held up on this account.

Berthing: There are berths for 6 ocean going ships and they say they can berth these ships up to 26 ft. Tugs are available and because of berthing starboard side to we used 2 tugs. The berths are concrete with rubber fenders and there is plenty of working space for the mechanical vehicles. The Pilots speak a little English but sufficient to make themselves understood and are capable. Fresh water is available alongside but I understand if bunkers are required they have to be brought by barge and there is a minimum charge of $1,000 irrespective of the amount of fuel required. They have a repair facility which is in the hands of a local engineering company. Fresh vegetables are available and can be recommended, supplied by the only providore. He maintains a listening watch on Channel 16 VHF and has a liaison with Agents for any messages sent prior to arrival at the berth. His station is called Automercado Venezia.

Section E.

EL TABLAZO: 10.45 N. 71.32 W. (See Plan)

(N.B. for important details of Documentation, Pilotage, etc., see "Maracaibo Lake".)

Also see "Shipmaster's Report" before Bajo Grande.

LOCATION: S.E. part of Puerto Miranda. Entrance by Buoys 63 and 64. Distance from San Carlos Pilot Station 16.5 miles.

PUERTO MIRANDA: 10.46 N. 71.34 W. (See Plan)

(N.B. For important details of documentation, Pilotage, etc., see "Maracaibo Lake").

LOCATION: Situated at Eastern shore of entrance to Lake of Maracaibo in position Lat. 10° 46′ N., Long. 71° 34′ W.

OPERATOR: Maraven, S.A.

DOCUMENTS: On arrival the Master must present to the Port Authorities the following documents:

1 copy Clearance (Note: If the vessel was diverted, Master has to present a telegram in which vessel received instructions to procee to Puerto Miranda).
7 copies Crew List.
3 copies Stores List.
1 copy Vaccination List.
3 copies Personal Effects Lists.

Vessel sailing for U.S. ports requested to have American Crew Lis ready on arrival so it can be forwarded to U.S. Consulate without delay

PILOTAGE: Compulsory. On arrival Puerto Miranda under Governmen Channel Pilot's assistance, the vessel will be boarded by Governmen Berthing Master, who will assist Master in docking and undocking.

For Channel Pilot see "Maracaibo Lake".

ANCHORAGES: North anchorage area is situated at Northern part o the exit channel and is marked by the Buoys No. B57B, AP1, AP2 and AP4. Maximum depth 10.0 m.

South anchorage area is situated at Southern part of the exit channe and is marked by Buoys No. B59, AP3, AP5 and B63. Maximum dept 10.36 m.

RESTRICTIONS: There are restrictions for docking and undocking whe strong currents are running.

MAX. SIZE: Length 910 ft., breadth 147 ft., draft 39.5 ft.

HEALTH: On arrival, when Pratique is requested, all vessels should f international flag signal "Q", or show a yellow light during hours o darkness. Customs will grant Free Pratique only when they are on boar

RADIO: All information such as ETA, ballast, etc. may be sent throug Curacao Radio. Telex No. 1143-6472.

Puerto Miranda can be contacted by Telex No. 61115.

VHF: Channels 16 and 12. Vessels are requested to call Puerto Mirand about 3 hours before arrival at the port. Calls made in Spanish languag will be answered promptly, as there is always a Spanish-speaking cler on duty. Calls in English will be answered by the Supervisor on duty except when he is occupied, in which case the call should be repeate later. As an alternative, the Master could ask Government Pilot to repo in Spanish his arrival to Puerto Miranda.

TUGS: 2 motor tugs of 4,200 h.p. assist all vessels in docking an undocking. Tugs always used as required by pilots.

TANKERS: Discharge lines 12 in.

Tank cleaning and dirty ballast facilities up to a maximum of 25% o vessel's deadweight.

Discharge of waxy slops and sewage water is forbidden.

Maximum receiving rate for ballast discharge 1,000 t.p.h.

Maximum loading rate 6,000 t.p.h.

Winds are mainly from the N.E. quadrant.

Vessels of any deadweight must secure with at least:

Forward: 4 headlines; 4 breasting fibre ropes and 1 spring in Berth No. 1 and 2.

Aft: 2 stern lines; 4 breasting fibre ropes and 1 spring in Berths No. and 2.

In Berths No. 3, 4, 5 and 6. Forward: 2 head lines; 4 breasting line and 1 spring.

A suitable gangway will be provided by the shore installation. Whe it is out of order vessel's gangway has to be used.

The terminal assist in the event of any vessel spillage; but the Maste is obligated to make his own arrangements to control the spillage.

BERTHING:

Jetties/Berths	Depth M.M.O.L.W. ft.	Maximum Permissible Draft ft.	Length ft.	Displacement tons
Jetty No. 2				
1 (North Outer)	42	39.5	910	90,000
2 (South Outer)	42	39.5	910	90,000
3 (North Inner)	35	34	†575	62,000
4 (South Inner)	28	27	‡575	62,000
Jetty No. 3				
5 Inshore (North Seaward)	42	39.5	910	90,000
6 Inshore (South Seaward)	42	39.5	910	90,000

Remarks: Alongside UKC for ships up to 700 ft. LOA = 1 ft.
Alongside UKC for ships over 700 ft. LOA = 2 ft.

(†) LOA in Berth No. 3: This can be increased up to 620 ft. whenever vessel on Berth No. 1 has LOA up to 555 ft.

(‡) LOA in Berth No. 4: This can be increased up to 610 ft. if Berth No. 2 or 5 are empty when vessel arrives, then Berth No. 2 has to be temporarily restricted to vessels up to 665 ft. LOA

The alongside drafts are subject to reduction owing to depth in inner and outer channels.

Vessels drawing over 37 ft. 06 in. will proceed according to monthly sailing draft table issued by Maraven, S.A.

MEDICAL: Written request for medical attendance, as well as a shore pass, is always required. Master must inform by telex how many crew members will be sent to Maracaibo through the Agent. Ample hospital facilities available at Maracaibo.

BALLAST: *Agent's Notice:* September 1987.

For your guidance please note Maraven's tariff stipulates an additional charge of U.S.$515.00 per hour for extra berth occupation covering any delays attributable to the vessel (tank cleaning, repairs, etc.).

It is important that vessel arrives with tanks in suitable condition to load as per charter party.

If tanks are not accepted by Inspector, the Terminal will charge additional berth occupancy as per above, and if vessel proceeds to anchorage for further cleaning, Terminal fee (tugs and launch for running lines) will be charged again in full for second docking.

The volume of ballast accepted without extra charge to the vessel is up to 25% of her Summer deadweight.

For vessels over 115,000 S.D.W.T., volume in excess of 28,750 tons ballast also applies.

DENSITY: Density of water at berths 997-1003.

Density of water in outer channel 1015-1025.

FRESH WATER: Available at all jetties at a loading rate of between 20 t.p.h. to 30 t.p.h., depending on number of vessels being supplied at any one time. Approximate cost is U.S.$4.0 per ton.

FUEL: Available ex-wharf: Bunker "C", thin fuels from 200 to 3,500 seconds Redwood, and marine diesel. Delivery rate 400 t.p.h. and 80 t.p.h. respectively.

Gas oil, fuel oil and thin fuels may be supplied by barge ex-Maracaibo, delivered at anchor at a maximum rate of 110 t.p.h. and 140 t.p.h.

Notice in advance is requested for delivery.

FIRE PRECAUTIONS: Any hot work is forbidden whilst alongside the Pier. Terminal approval is compulsory for any special requirements.

CONSULS: On all Italian vessels, the Consul comes on board on arrival. Other Consulates are at Maracaibo: Colombia, Netherlands, Panama, Peru, Spain, Great Britain, Guatemala, Switzerland, U.S.A., Chile and Portugal.

REPAIRS: There are small workshops in the area. Contact Agent on arrival.

SURVEYORS:

(1) Cargo Inspectors:
Saybolt. Telex 61120 Maracaibo. Tel: 76975.
Caleb Brett. Telex 23333 Caracas. Tel: (02) 325875.
Inspecciones C.A. Telex 62292 Maracaibo. Tel: 78642.
AIVEPET. Telex 21050 Caracas. Tel: (02) 9860422.
Chas. Martin. Telex 62451 Maracaibo. Tel: 78651.
S.G.S. Telex 23324 Caracas. Tel: (02) 338569.

(2) Surveyors:
Lloyd's Register, American Bureau, Bureau Veritas and Norske Veritas.

CUSTOMS ALLOWANCES: One opened packet of cigarettes allowed to be taken from vessel by each crew member when going ashore. When a crew member signs off, he must present his personal effects to the Customs.

REPATRIATION: Crew changes and repatriation possible. All the arrangements are made by the Agent.

AIRPORT: An International Airport is situated in Maracaibo City. It is served by National and International Airlines. All arrangements through the Agent.

TIME: GMT minus 4 hours.

HOLIDAYS: Do not affect port operations, port works throughout 24 hours, 7 days a week.

POLICE/AMBULANCE/FIRE: All contact must be made in Spanish language. The supervisor will assist in making contact.

Telephones: Police 169. Fire 166. National Guard 168.

EMERGENCY CO-ORDINATION CENTRE: Port Captaincy at Maracaibo, Tel: 9-0-223279 or VHF Channel 16.

TELEPHONES: Whilst alongside, a telephone is placed on board for operational purposes, emergency and internal communication with Maraven telephones. There is no charge.

SERVICES: Radar repairs, R/T repairs, gyro-compass adjusting and all types of electronic repairs.

BANKS: The nearest bank is located at Los Puertos de Altagracia or at Maracaibo City.

STORING: Vessel can be stored by barge or truck; but it is strictly prohibited by barge during loading or discharging, likewise it is prohibited for truck to proceed alongside the ship during loading or discharging.

SHIP SUPPLY SERVICES: Available in Maracaibo. Contact to be made through the Agent.

SHORE LEAVE: Not granted until shore passes are stamped and signed by Authorities. Passport and shore pass required by all crew members going ashore. Passes must be shown to guards at gangway and gates. Crew members must be properly dressed before proceeding ashore. Master must collect all passes and return them to Agent before vessel's departure.

DELAYS: Delays can be expected during deballasting if the levels in the pits are high.

GENERAL: *(a) Tides:* In view of the changing depth in the channels which allow navigation to vessels up to about 70,000 d.w.t. fully laden at high water, permanent predictions of sailing draft tables have been prepared by Maraven S.A., and they will send these on board ships of over 47,000 d.w.t.

(b) Currents: The tidal current (Lunar tide) at this port can at times be very strong and subject to changes. Usually the outgoing tide runs for 7 to 8 hours against 4 to 5 hours for incoming tide. Direction approx. at right angles to jetty.

(c) Movement of Passengers: Embarkation or disembarkation of passengers through this port is not allowed by Venezuelan Law, as this Terminal is only authorised by the Treasury Ministry (Ministerio de Hacienda) exclusively for exporting crude oil.

(d) Failure to Rejoin Vessel: If any member of crew is not aboard at sailing time, Authorities will not clear vessel although permission may be given to proceed to anchorage if the berth is required. If sailing permission is granted, Master is required to sign letter accepting all costs in connection with this matter being for Owner's account.

(e) Launch Service: Masters who have to go on business to Maracaibo can make use of public service launches. Please contact your Agent.

(f) Guards: Custom Guards (Guardia Nacional) will be posted on all vessels and Masters are reminded that these guards must be accommodated and treated in the same manner as ships' officers. Non-compliance entails not only a fine but will result in delays in clearance and cargo operations.

(g) Visitors: Only persons on business allowed on piers. Visitors, as guest of Master, allowed to board vessels provided a written and signed request presented by Master to Port Services Department. Further particulars covering procedure for obtaining permits for visitors can be obtained from Port Services Office.

(h) Charts – Nautical Publications: On arrival of each tanker the Agency Representative will furnish a set of lake charts if required. No supplies of U.S. Hydrographic or British Admiralty charts or Sailing Directions, Nautical Almanac, etc., are available at this port.

(i) Films Exchange: Films may be exchanged at Maracaibo.

(j) Fire Alarm: Each Thursday morning at 1100 hrs. there will be a test of fire alarms including sirens at the wharves.

(k) Cash Advances: Local currency is Venezuelan Bolivar and cash advances are made only in this currency. It is requested that any requirement for cash advances be included in vessel's radio ETA, to permit delivery on board on arrival.

REGULATIONS: Following regulations should be strictly observed by the vessel's crew whilst alongside or at anchor. Non-compliance with these instructions entails not only a fine but delays in cargo operations.

1. Use of rafts for painting the ship's sides is strictly prohibited.
2. Lifeboats should not be lowered without the special permission of the Government Port Captaincy.
3. Swimming in the harbour is strictly prohibited.
4. Waste water, sanitary or other must not be discharged on jetty.
5. It is strictly prohibited to paint ship's name or others on jetties. When this occurs the vessel will be charged for the cleaning.
6. Painting in ships alongside is strictly prohibited.
7. Before start of cargo operations it is compulsory to execute all requirements established in the Check List.
8. It is necessary to keep a close and constant watch on moorings and to adjust when necessary. When adjusting, call for assistance of tugs before slackening off any mooring lines, if the current is setting the vessel off the pier.

AUTHORITY: Maraven, S.A. Apartado 829, Codigo Postal 1010A, Caracas, Venezuela. *Tel:* 908.2111. *Telex:* 23535, 23536. *Cables:* Maraven Caracas.

Section F

PUNTA DE PALMAS: 10.24 N. 71.34 W. (See Plan)

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake".)

OPERATORS: Maraven, S.A.

FLAG: The Authorities require the Venezuelan flag to be flown from the mast head from the time the vessel enters the outer channel to come into the port until it leaves again by the same channel.

LOCATION: The terminal is located at Punta de Palmas del Sur, approximately 13 miles South of the Port of Maracaibo on the West shore of Lake Maracaibo. The terminal proper may be identified by a 300 ft. radio tower, having 2 small red lights 200 ft. from the base, and 1 large red light on top of tower. The top light flashes every 2 seconds.

PILOTAGE: Vessels which arrive have the option of taking on the Official Pilot at the following places:

(a) In the outer channel of the Lake of Maracaibo, between Buoys B-24 and B-26.

(b) In the anchorage area, located approximately 5.5 miles to the N.E. of the Island of San Carlos and to the East of the Buoy B-17. This area is identified by a green light buoy, equipped with a radar reflector (position: Lat. 11° 04′ 22″ N., Long. 71° 33′ 48″ W.).

(c) On the "EM" Buoy (i.e. Entrance to Maracaibo), there is also a radar reflector (position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W.).

The Official Pilot who comes on board at San Carlos will take the vessel to Maracaibo. At times, due to bad weather, the Maracaibo Port Captaincy cannot guarantee the embarkation or disembarkation of Pilots at the "EM" Buoy or in the anchorage at Lat. 11° 04′ 22″ N., Long. 71° 33′ 48″ W. For this reason, Masters must contact the pilots station at San Carlos so that they may give him appropriate instructions as to the place of boarding or disembarkation of the Official Pilot, who, generally speaking embarks between Buoys B-24 and B-26.

The system of communications which vessels use with the pilots station of San Carlos will be the morse lamp, radio-telephone or radio.

The frequencies on which San Carlos listens out are: Radio 2182 kHz. Radio-telephone 156.6 MHz. It also operates with frequencies 2080, 2120, 2638, 2738 kHz R/T and 156.8 MHz VHF.

Vessels sailing from Punta de Palmas will take on the Official Pilot at the mooring where they are located after having terminated their loading operations. This Pilot must be requested one hour and forty-five minutes before the estimated time of being ready to sail. Vessels which embark their Official Pilot at Punta de Palmas to sail to Maracaibo will change their Pilot again on arriving at that port. The Pilot who embarks will guide the vessel to the proximities of the Island of San Carlos, between the towers E-31 and E-33, where he will disembark onto a pilot launch. The Port Captaincy of Maracaibo has given instructions to shipping Agents for the purpose of informing Masters and Owners of vessels that every Master must identify himself in advance to the pilot station at San Carlos at any time of the day, when they are arriving at Buoys B-17 and B-19, and when they are sailing at T-42 and T-40. These instructions are of an obligatory nature in order to keep the Pilots' service informed at all times of any emergency that may arise. Also to avoid an Official Pilot going out unnecessarily from his base, especially during the night in the belief that the vessel which is in sight requires his services; in this case both the service of the launch and that of the Pilotage not given will be charged to the ship's Agent or Representative.

Lake Pilotage: An Official Government Pilot will assist every ship in crossing from Maracaibo to Punta de Palmas and in its exit voyage from Punta de Palmas to Maracaibo. This Pilot will also assist in the operations of mooring and unmooring. The Agent will inform the Master and the Official Pilot of the time determined for berthing the vessel when it arrives at Maracaibo. Vessels which load in Punta de Palmas must request a Pilot for their exit journey at least 1 hour 45 minutes in advance of the time at which they consider the vessel will sail.

CARGO DOCUMENTS: Vessel's clearance and cargo papers will be delivered to the Master on arrival in Maracaibo Harbour outbound. Maraven will accept no responsibility for delay in clearing a vessel due to unavailability of personnel from offices of the Port Authorities.

APPROACHES: The buoy which indicates the entrance to the outer channel ("EM" Buoy) is located in the geographical position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W. The light of the "EM" Buoy has the following characteristics: white light, with 1 flash every 10 seconds, visibility approximately 5 miles. The distance between the "EM" Buoy and the inner extremity (South) of the inner channel, marked with Buoys B-27 and B-28 is approximately 15.75 miles. The outer channel has a width of 300 m. between the limit on both sides. The navigable portion for loaded vessels is 240 m. wide. The average depth which has been checked at low tide is 13.72 m. (45 ft.) and the tidal amplitude is up to a maximum of 1.49 m. (4.9 ft.). There is a breakwater located a half a mile to the East and parallel to the external channel which extends for 2,574 m. (1.6 miles) to the North from the Northern coast of the Island of Zapara. In its outer extremity there is installed the lighthouse of the steel lattice type construction, with a height of 7.62 m. (25 ft.). The characteristics of its light are: white, with 1 flash every 8 seconds, visibility approximately 5,556 m. (3 miles).

The commencement of the internal dredged channel is marked by Buoys B-29 and B-30. The extension of this channel is 19.31 km. (12 miles) approximately and ends at Towers T-55 and T-56. The channel is 244 m. (800 ft.) wide and its normal checked depth is 13.72 m. (45 ft.) at average low tide, with a tidal amplitude which varies between 0.49 m. and 0.89 m. (1.5 ft. and 3 ft.), at Tower T-66, and from 0.82 m. to 1.46 m. (4.5 ft.) at Buoy B-29.

The channel from Tower T-56 as far as the Port of Maracaibo is dredged and its termination is marked by Buoys B-73 and B-74. It is 244 m. (800 ft.) wide and has a depth of 13.72 m. (45 ft.). Its distance is 17 km. (11 miles).

The depth in all the channels may vary in accordance with the sedimentation to which they are subjected and the formation of sand banks. The Port Captaincy at Maracaibo issues Notices to Mariners keeping them informed as to changes in depths in the channels. Navigators are advised to keep themselves up-to-date with these notices of variations of depth when they calculate their exit draft of their respective vessels.

MAX. SIZE:

Berth	*Max. LOA*	*Max. Draft*	*Max. d.w.t.*
No. 1	835 ft.	38 ft.	80,000 tons
No. 2	835 ft.	37 ft. 6 in.	80,000 tons
No. 3	890 ft.	42 ft.	100,000 tons

Also see "Berthing".

RADIO: *Time of Arrival (ETA):* When a vessel leaves its previous port destined for the Terminal of Punta de Palmas, it must inform both its Agent and Maraven S.A. in Maracaibo as to its best estimate of the date and time of arrival in Maracaibo. Then at least 24 hours prior to arrival at the San Carlos pilots' station, it must send another message to confirm the time of arrival at Maracaibo. The nationality of the vessel, name, nett Venezuelan tonnage (if it does not have this, its registered tonnage), last port, name of Master, permanent ballast or cargo in tanks or both, and any other information which is pertinent must be included in this message. The cable address of Maraven S.A. is as follows: Maraven, Maracaibo, Telex 61126. By virtue of the circumstances that the Cable Office in Maracaibo is not equipped to communicate with vessels on the high seas directly, messages sent to Maraven S.A. and to the Agent of the vessel must be transmitted through "PJC" (Curacao), with the prefi "Via ACC" (All American Cables and Radio, Inc.).

We wish to emphasise that by virtue of the fact that our undertaking rents a part of its equipment which it uses for mooring vessels in accordance with the last message of arrival of the vessel, this message must be compiled with the greatest accuracy possible. Any alteration in the time and date of arrival affecting the vessel before or after the time indicated in its message, will be for the account of the vessel as will be the cost of rental of the equipment used.

Maraven S.A. is in no way obligated to carry out the mooring of any vessel, except at the estimated time of its arrival at Punta de Palmas, although exception is made where the vessel may have been delayed in Maracaibo by virture of reasons beyond the control of the Master.

TUGS: Tug service consisting of 2 tugs of not less than 1,600 h.p. each is provided by the terminal operator for all vessels. Both tugs will assist all vessels in mooring and unmooring operations. Should it be deemed necessary by the terminal operator to require a tug in addition to the 2 terminal tugs for mooring or unmooring vessels exceeding 750 ft. in length, charges for this additional service will be for the account of vessel.

Vessels which exceed 835 ft. overall length, and destined for Berth No. 3, require the assistance of at least an additional tug. This additional tug will remain at the convenience of the Terminal for the time that the vessel remains at the berth.

In all cases where there are adverse weather conditions, without taking into account the size of the vessel, the Operator of the Terminal, at his convenience, may request the services of an additional tug to protect the installations of the Terminal and the ship, which will be for the account of the vessel.

The Terminal Department will make the necessary arrangements through the intermediary of the ship's Agent, for contracting additional tugs. These services will be charged to the ship's Agent by the tug operator who is contracted.

MOORING: *Berth No. 1:* Located approximately 8.85 km. (5.5 miles from the Terminal and 2 km. (1.25 miles) to the West of Buoys D-95 and D-96 in the Maracaibo Channel. Distance between the bow and stern buoys is 364.90 m. (1,200 ft.).

This berth is equipped, apart from the mooring buoys, with a transversal mooring pile on its Eastern side, submerged, with chain and cable the same as those of the Buoys. This does not interfere with the operations of mooring and unmooring.

Berth No. 2: Located approximately 8.85 km. (5.5 miles) from the Terminal and 2 km. (1.25 miles) to the East of the Buoys D-95 and D-96 and to the N.E. of Berth No. 1. Distance between the bow and stern Buoys is 350.50 m. (1,150 ft.).

This berth is equipped, apart from the mooring buoys with a transversal submerged mooring pile equal to that of Berth No. 1.

Berth No. 3: Located approximately 9.65 km. (6 miles) from the Terminal 1.2 km. (0.75 mile) to the West of the Buoys D-95 and D-96 and approximately 914 m. (3,000 ft.) to the East of Berth No. 2. Distance between the bow and stern buoys is 365.76 m. (1,200 ft.).

This berth is equipped similarly to Berths No. 1 & 2 with a transversal submerged pile on the Western side of the berth.

Conditions applicable to all berths: (a) Vessels which have a total overal length of 239.26 m. (785 ft.) or more must be equipped with 2 tensio capstans at the bow and on the after deck, with sufficient cable to reac the stern and bow buoys respectively.

(b) Every vessel loading at any of the berths must take int consideration that due to Government regulations, the vessel must hav a minimum clearance of 0.984 m. (3 ft.) below the keel at any poin during its transit through the Maracaibo Channel, without taking int account the limitations of the channel assigned to the 3 berths by th Terminal Operator. In view of this regulation and the constant variation of the depths of the channel, Masters must be guided by the most recen "Depth Bulletins" which are issued by the National Channel Institute and by the tide tables when they are planning their transit time throug the channel, and the maximum draft to which they may load their vesse

Mooring procedures and rules applicable to mooring points: Ever vessel carrying out mooring operations at any of the 3 berths must arriv with a minimum draft of 3.65 m. (12 ft.) forward and respect the followin procedure and rules for berthing:

(a) Anchor: Vessels approaching the berths from the East, in the mos convenient manner and safely as possible they must drop their starboar anchor in its location once the vessel has been berthed, the chain facin East, with a length of not less than 137.16 m. (450 ft.).

(b) Mooring cables: One of the following alternatives for moorin cables at each side of the vessel must be fulfilled:

1. Two cables of synthetic fibre (Nylon or Polypropylene) with 9 i circumference and 1 steel cable which has a minimum diameter 1.25 in.
2. One cable of synthetic fibre (Nylon or Polypropylene) with 9 i circumference and 2 steel cables also supplied by the vessel an which have a minimum diameter of 1.25 in.
3. One cable of synthetic fibre with a 9 in. circumference and safety cable of 1.5 in. diameter which will be supplied by the Termina

(c) Countertension cables: A countertension cable will be attached the stern or fore deck. Vessels which have a length exceeding 800 must use countertension cables on both sides of the dec simultaneously.

(d) Transversal cable: The transversal cable which will be supplie by the Terminal will be attached to the after deck on the starboard sid Vessels mooring at Berth No. 3 must also attach an addition transversal cable to the after deck on the port side.

(e) All cables which are attached to vessels must have 6 turns aroun the bitts, and these must be secured so as to prevent them fro unwinding.

(f) The pressure capstans must be secured in the braked position, once all other cables for mooring the vessel have been secured. These mooring cables must be maintained tight as the vessel goes down in the water whilst it is being loaded.

(g) Vessels must be supplied with sufficient cables as spares which can be used as the Terminal may require. All cables must be maintained in good condition and are subject to acceptance by the representative of the Terminal. Vessels must maintain sufficient personnel on deck during the whole time that the vessel is at the berth to attend to the cables for mooring purposes whenever this may be required by the Terminal.

It is understood by both parties that, when the Terminal may require safety cables to be used, and where such are required, Maraven S.A. accepts no responsibility for damages or losses occasioned to any vessel, installation or person due to the use or failure of this equipment.

The vessel's gangway must be in position so that the mooring supervisor or other personnel from the Terminal can come on board the vessel when it arrives at Punta de Palmas.

This gangway must be suspended whilst manoeuvres are being carried out, this for the purpose of obviating any damage to it occasioned by tugs or launches.

Berthing Supervisor: The Berthing Supervisor of Maraven S.A. will come on board every vessel prior to its entrance to the berth to establish radio contact between the vessel, the Marine equipment and the Office at the Terminal.

Mooring gangs and equipment: The mooring equipment will be handled by the launches employed in the manoeuvres. The tug service will be available 24 hours of the day through the intermediary of the Terminal Port.

The mooring gangs will assist the vessel personnel in the operations of hoisting, connecting and disconnecting the 2×12 in. diameter loading hoses. The approximate weight of the loading hoses is 4 tons.

The launches used for the manoeuvres will place on board equipment to facilitate the work of connecting the hoses. This equipment will be at the disposal of the vessel's personnel when required as are also the launches to transport personnel.

Responsibility: The Master may request any equipment or service which he may consider necessary for a safe and efficient operation of his vessel and the Terminal Operator will do everything within his power to fulfil this requirement. Therefore all owners and operators of vessels arriving at Punta de Palmas will accept the responsibility of the safety inherent in the manoeuvring of their vessels and their movements to and from the Terminal. Maraven S.A. will accept no responsibility for losses or damages occasioned to the ship, its installations and others unless such loss and damage be occasioned due to the faults in the installations belonging to the Terminal or operated by the Terminal with the exception of the security equipment.

Operational check list: At the time when the vessel is moored and the hoses are connected, prior to the commencement of the operations of loading, the representative of Maraven S.A. on board will deliver to the Master an operational checklist. The Master is required, or whomsoever he may appoint to carry out this work together with Terminal representative, to check very carefully that all the safety regulations have been fulfilled.

Berthing Supervisor: The Berthing Supervisor will have charts and plans which will be at the disposal of the Master and his advice if he should require it. The representative will also be available to inspect the vessel's tanks and to act as liaison between the Master of the vessel and the Agent or with the Terminal of Punta de Palmas, to transmit any information relative to the ship. This supervisor must receive lodging and treatment at the same level as the ship's officers.

Unmooring procedure: When the loading operations are completed, the launches will proceed to remove all mooring cables from the buoys under the supervision of the official entrusted with the vessel or the Official Pilot, assisted by the Berthing Supervisor of Maraven S.A.

Documentation: The departure and loading documents will be delivered to the Master by his Agent or his representative, when he passes through the Port of Maracaibo.

BALLAST: *Deballasting:* It is understood that it is not permitted to discharge ballast in the lake, even though this may come from tanks used solely for ballast. Ballast will be discharged with the pumps of the vessel to the deballasting system which exists at the Terminal. As soon as the loading hoses are connected, the personnel of the Terminal will align the system with its respective valves. Once these operations are completed the Berthing Supervisor on board will inform the Master that he may commence deballasting and in turn will keep him informed as to the pressures which will be used in the operation. Once the deballasting operation has been completed, the personnel of the Terminal will align the system again and its valves so that the vessel can receive cargo through the same hoses which are used for unloading ballast and simultaneously the personnel of the vessel will align their systems on board to receive cargo. The personnel of the vessel responsible for receiving the cargo will inform the Representative of Maraven S.A.(Berthing Supervisor) when the vessel is in a condition to receive and he in turn will inform the personnel of the Terminal that they may commence pumping.

LOADING: *Oil leakage:* In order to obviate contamination of Maracaibo Lake and possible legal actions, we recommend strongly that Masters of vessels emphasise to their deck officers in order to obviate leakage that they make sure that all necessary measures have been taken on board to this end prior to commencing the loading operations. The purpose of this is to maintain on deck any leak or wastage which may occur in the vessel.

Guarantee of responsibility: In the event of an oil leakage or any other contamination or any other damages to installations caused by a vessel, the operator of the Terminal, prior to the vessel sailing, will require the Agent to deposit bond in favour of Maraven S.A. to cover the fine or other charges which may be incurred in collecting, cleaning, repairing the installations of the Terminal and also to cover any claims from third parties.

Loading procedure and pumping rates: The position of the loading hoses, supports and connections must be to the satisfaction of the personnel on board. The valves of the hoses for loading purposes will be opened in order to test the connections, detect leaks and then ultimately to commence operations.

The responsibility and custody of the cargo passes to the personnel of the ship from the moment when the cargo arrives at the connection which is the property of the ship.

The minimum loading rate at Berths Nos. 1 and 2 is 4,000 b.p.h. The average pumping rate, under normal conditions is 13,000 b.p.h. Sudden stoppages in loading will not be permitted during loading except in cases of emergency.

Personnel on board, responsible for the loading operations, must notify the Terminal representative, not less than 30 minutes in advance of the completion of loading. This will enable the representative to instruct the operator to reduce the rate of pumping or to continue loading by gravity as he sees fit.

For reasons of security, loading may be suspended and the hoses disconnected from the vessel's manifold when weather conditions are not favourable or at any time that the Terminal considers it convenient to do so due to *force majeure* or other reasons.

Displacement of the line: Sometimes it will be necessary to displace the submarine line in combination with the loading operation. To carry out this operation it is required that the personnel responsible for receiving the cargo notify sufficiently in advance the Berthing Supervisor when the amount of cargo lacking is equal to the capacity of the line.

The capacity of the line is a fixed quantity. Therefore it must not be considered with shortcomings or excesses.

Therefore when it is necessary to effect a displacement, the loading must be calculated carefully by the vessel personnel responsible for this operation.

It is understood that any error or negligence on the part of the vessel personnel in calculating the initiation point of the displacement of the line, will require a land pump to correct the displacement. Due to the submerged manifold it will be necessary to employ a diver to operate the valves and this operation may result in a fairly costly procedure and involve a lot of time. All costs involved in fulfilling this operation, together with the time lost will be for the account of the vessel.

Increase in pumping rates: At the request of the Master and subject to the approval of Maraven S.A., it is possible to suppy a pumping rate of 17,000 b.p.h. up to a maximum of 30,000 b.p.h., provided the operations of the Terminal permit this to be done.

MEDICAL: *Maracaibo:* Complete services are available.

Punta de Palmas: Emergency cases only will be transferred to Maracaibo for treatment, at the request of the official in charge of the vessel.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bunker "C" fuel oil available. Lubricating oils also available. Pumping will be affected during daylight hours and with prior permission of the Terminal.

FRESH WATER: Available from local contractors with barges. Pumping will be affected during daylight hours and with prior permission of the Terminal.

STORES: Fresh and dry provisions procurable through ship chandlers in Maracaibo for delivery at the Terminal.

REPAIRS: *Maracaibo:* There are no facilities available for carrying out major repairs. Nevertheless, repair work may be carried out through local workshops and labour can be supplied if this is required. Technicians in radio, radar, gyro compass repairs are also available.

Punta de Palmas: No type of repair will be effected here, which may prevent the unmooring of the vessel without the authority of the Marine Supervisor. Neither may boiler tubes be "blown" whilst the vessel is moored.

SHORE LEAVE: Launch service for business purposes and emergencies is readily available. Launch service for shore leave can be arranged through contract marine service and will be responsibility of ship's personnel. Arrangements for shore leave transportation can be made through Loading Master on board.

CUSTOMS: All vessels entering from foreign ports and bound for Punta de Palmas Terminal are required to anchor in Maracaibo Harbour for formal customs clearance and visit of government port authorities prior to proceeding to destination.

The vessel's accommodation ladder should be rigged prior to the vessel's arrival at Maracaibo. A member of the National Guard will board each vessel at Punta de Palmas to observe all activities connected with loading or unloading operations. This official is authorised as the customs representative, and is referred to as Customs Watch. Food and accommodation similar to officers should be made available to him by vessel.

CONSULS: See "Maracaibo".

GENERAL:

Transportation: Transportation will be supplied by launch between vessel and Punta de Palmas to the following persons, without exception:

1. Master of the vessel or the Chief Engineer, to attend to matters relating to the ship.
2. Sick personnel who require emergency medical attention.
3. Official Pilot.
4. Members of the National Guard and other Government Officials whose services relate to the tanker.
5. Doctors, when these may be required by Master, in the event of emergency only.
6. Inspectors of the oil industry.

Consular representatives, ship's suppliers, engineers, naval experts, representatives of the oil companies, suppliers of fuel and water and any other person who requires to come on board tankers when they are in Punta de Palmas must make their own arrangements for transportation to and from the ship through the intermediary of the ship's Agent. Also Agents must make their own arrangements for their own transportation.

Personnel of the ship with licence to disembark: The transportation of personnel with licence, when this is required by the Master, must be arranged through the intermediary of the Agent. Also passengers must embark and disembark at the Port of Maracaibo.

Personnel with licence are not permitted to go ashore at the Terminal of Punta de Palmas.

Classification Societies: American Bureau of Shipping, Lloyd's Register of Shipping, Salvage Association of London, Det Norske Veritas, Bureau Veritas, Registro Italiano Navale and Germanischer Lloyd have Agents in Maracaibo or in Caracas. There are experts available through the intermediary of the Agents mentioned above.

Monetary System: The monetary system of Venezuela is the Bolivar (Bs.), and is the only money legally recognised in the country. A Master who requires a cash advance must request same from his Agent when he notifies his ETA. Payment of all invoices for Terminal charges must be made in Bolivares at the Office of Maraven S.A. in Maracaibo, unless other instructions are given.

Mail: Mail for the vessel can be delivered to the representative of the Agent who comes on board the vessel at the time of its arrival or sailing from Maracaibo.

AUTHORITY: Maraven S.A.

Capitania de Puerto, La Ciega – Maracaibo, Venezuela. *Tel:* 226488.

Section G

SAN LORENZO: 09.47 N. 71.05 W.

OPERATOR: Maraven, S.A.

LOCATION: S.E. side of Lake Maracaibo.

APPROACHES: Vessels have to arrive at Maracaibo Roads through a dredged channel with controlling depths of 45 ft. in outer bar, inner channel and Punta Palmas area. In vicinity of terminal the controlling depth is 36 ft.

PILOTAGE: It is compulsory from San Carlos to Maracaibo. Pilot normally boards vessel at Buoy B–26 (Position Lat. 11° 01′ N. Long. 71° 35′ W.). It is also compulsory for all vessels which have to load at any terminal located South of the bridge Rafael General Urdaneta. This bridge has a horizontal clearance of 656 ft. and a vertical one of 148 ft. at 45 ft. MMOLW level. Pilots have to embark and disembark at Maracaibo.

When Masters have no Pilot exemption Certificate for crossing outer bar, permission has to be requested by VHF or 2182 kHz prior to arrival, which is being granted on request.

ANCHORAGES: Masters may use the following:

(a) Near E.M. Buoy, (not recommended because of the distance from San Carlos. The pilot launch never reaches this point).

(b) At Maracaibo Roads.

(c) At terminal approaches, in accordance with depths available in the area, and ship's draft.

LIGHTENING POSITION: In the Southern lake Area, arrangements have to be made in advance. Also at Maracaibo.

HEALTH: Quarantine officials board vessels at Maracaibo Roads. Pratique cannot be granted by radio.

RADIO: San Carlos Pilot Station has VHF Channels 12 & 16. Emergency call 2182 kHz. Terminal has VHF Channel 12.

TUGS: Compulsory. When vessel is over 25,000 d.w.t. a second tug is required, which is available in the area, 1,200 h.p. each. There is also a launch to assist the vessel during manoeuvring.

BERTHING: Continuous wharf 2,340 ft. in length with dolphins. This terminal is only for handling crude and its products. Maximum berthing displacement: 20,000 tons.

	Berth No. 1	*Berth No. 2*	*Berth No. 4*
Max. LOA	560 ft. 00 in.	665 ft. 00 in.	
Max. Depth	24 ft. 06 in.	35 ft. 06 in.	Out of
Max. Draft	23 ft. 06 in.	34 ft. 06 in.	Service
Loading Rate	1,450 t.p.h.	2,000 t.p.h.	

These depths are referred to the minimum monthly observed lowest water level (MMOLW).

DENSITY: At berths 998 and at outer bar between 1020 and 1025.

FRESH WATER: Available ex-barge at Maracaibo Roads.

FUEL: Any grade. In case vessels require grade not available at berth it may be supplied ex-barge at Maracaibo, which has mixing equipment able to supply the grade involved. Rate 20 – 140 t.p.h.

MOORING-UNMOORING: Carried out by Official Pilots. Mooring is Head-out to facilitate departure.

DEBALLASTING: Installations have ballast pit with capacity 650 cu.m. Max. discharge rate 600 t.p.h.

TANK CLEANING FACILITIES: Carried out by outside contractor.

REPAIRS: Minor repairs only, including electronics.

LA CEIBA: 09.28 N. 71.04 W.

SHIPMASTER'S REPORT: 1979.

BERTHING: There is a cement loading installation about 2 cables South of the 160 m. long pier at La Ceiba suitable for vessels up to 120 m. in length.

The approach channel is dredged to 9 m.

END OF MARACAIBO SECTION.

MORON: 10.32 N. 68.11 W.

This Terminal finished operations in 1981. All installations are being dismantled.

Vessels loading/discharging operations are now performed at El Palito Marine Terminal operated by Corpoven, S.A.

ORINOCO RIVER

Including Section A – MATANZAS
Section B – PALUA
Section C – PUERTO ORDAZ
(CVG Ferrominera Orinoco)
Section D – PUNTA CUCHILLO
(Lagoven S.A.)
Section E – VENALUM TERMINAL

IMPORTANT: VHF compulsory. Vessels without at least a VHF radi aboard will not be attended to by the Pilots at the Barima pilot statio and so will not be allowed to enter the Orinoco River.

GENERAL:

1. As early as possible, advise Puerto Ordaz Radio Station, (Radi Marina) call letters YVM, giving ETA at Buoy 0.1 of South (dredged Channel.

Shipmaster's Report: October 1982 (Updated 1988).

Contact with YVM was made 48 hours before arrival Buoy 0.1 accordingly, 72 hours ETA sent via Curacao Radio.

2. 24 hours prior to arrival, send another ETA to YVM.
3. Upon arrival, adhere to following procedure:
   (a) Request permission to enter from "Barima Pilot", via Channe 16. *Do not enter* until granted permission; while awaiting, la to or anchor at least 1 mile outside of Buoy 0.1.
   (b) All vessels must also communicate with the Point Barima pil station, call sign "Barima Pilot" 2182 kHz HF or 43.18 VH to be informed of traffic.
4. While navigating waterway, inbound or outbound, report position t YVM hourly on the hour.
5. No Pilot required nor available for navigation along channel at th Boca Grande of the Orinoco River.
6. The International Rules for Preventing Collisions at Sea appl outside of Buoy 27.
7. Anchoring in channel is forbidden.
8. Throughout Orinoco waterway, the down-bound loaded vessel i the privileged vessel.
9. It is compulsory to fly Venezuelan ensign inside of Buoy 0.1.
10. Vessels can only carry clean ballast within Orinoco Waterway.
11. Pilotage compulsory within Pilotage Zones No. 1 and No. 2 of th Orinoco. Pilots board at outer boundary of said pilotage zone i upstreamward vicinities of Buoy 27 up to Mile 128.1. Zone No. 2 i from Mile 128.1 up to Matanzas.
12. Regulations for the Pilotage Zone No. 1 of the Orinoco apply insid of Buoy 27.

APPROACHES: (Also see "Radio" – paragraphs *(b)* and *(c)*).

1. *The Waterway*

A Radio Direction Finder (non-operational October 1982), located at La 08° 03′ 45″ N., Long. 60° 28′ 28″ W., transmits following sign continuously: YV – AYV. The transmitter has an output of 500 watts wi a range of about 200 miles and operates on a frequency of 305 kH While navigating the waterway, ships should favour the shore on the starboard side to the extent possible, giving preference of manoeuv to loaded vessels in all cases. Ships navigating upstreamward (inbound upon approaching narrow channels should await the passing and gi way to downbound vessels. It follows, therefore, that downbound loade vessels are the privileged vessels.

2. *The Boca Grande (Barima Bar) Channel*

There is 1 navigable channel across the Boca Grande (Barima Ba Vessels navigating the dredged channel are privileged, regardless the direction in which they travel.

The Dredged Channel
The channel is a 400 ft. wide dredged channel. Depths therein accommodate the maximum draft authorised by the Port Captain. The approach from the sea is marked by a battery-operated electric flashing black buoy, identified with the number 0.1. This buoy is located in 45 ft. of water at Lat. 08° 55′ 52″ N., Long. 60° 11′ 17″ W. Its characteristics are: colour of light, white; flash, 0.5 seconds; eclipse, 11.5 seconds; height above water, 25 ft.; visibility, 11 miles. From Seabuoy 0.1, the channel develops along 4 different courses over a total distance of 27.7 Miles to Buoy 27. The course reduces by about 7° True at each of 3 turning points, located at Miles 9, 15 and 21 respectively. The initial course of 234° 18′ True continues to Mile 9 where it changes to 227° 07′ True. Upon reaching Mile 15, the course again changes to 219° 51′ True to Mile 21. At Mile 21, the course changes to 212° 45′ True to Buoy 27 at Mile 27.7. The centreline of the channel on all courses is visually marked by range structures fitted with green flashing, directionally beamed lights. The West (right ascending) side limit of the channel through Mile 21 is also visually marked by range structures fitted with amber flashing, directionally beamed lights; the alignment given by the side ranges develops 200 ft. to the West and parallel to the centreline of the channel. Battery operated electric flashing navigation aids are located along both sides of the channel. All navigation aids along the East (left ascending) side of the channel are located 325 ft. from centreline or 125 ft. outside of the channel lateral limit. White flashing navigation aids are located at 1 Mile intervals through Mile 25.1; all aids along this side are black buoys, except Beacons 8.1, 9.1, 14.1, 15.1, 20.1, 21.1, 22.1, 23.1, 24.1, 25.1, 27.1 and 27.7 (Buoy 27). All navigation aids along the West (right ascending) side of the channel are located 200 ft. from centreline or on the exact lateral limit of the channel. Red flashing buoys painted red are located at 1 mile intervals from Mile 1.6 to Mile 11.6. From Mile 11.6 to Mile 27.7, there are only 2 aids; red buoys 13.6 and 26.0.

3. *The River Channel*
From Mile 27.7, the navigable channel develops upstream. The river channel is generally deep and wide, except for the following 12 reaches which require periodic dredging: Miles 27.7 to 36.5; Miles 37.3 to 38.6; Miles 53.1 to 54.2; Miles 99.0 to 106.5; Miles 109.1 to 111.0; Miles 131.7 to 131.9; Miles 136.6 to 139.0; Miles 141.2 to 145.8; Miles 146.2 to 149.4; Miles 167.6 to 170.8; Miles 178.4 to 182.4; Miles 183.5 to 184.1. Dredged channels are normally 300 ft. in width, but occasionally can be restricted to a minimum of 250 ft. The depth maintained therein can accommodate the maximum draft authorised by the Port Captain. By Notice to Mariners, the Port Captain has instructed all Masters and Pilots to reduce speed and to proceed with caution while navigating the aforesaid reaches, especially during the low water season.

4. *River Stages*
In response to the cycle of wet and dry seasons, the flow of the Orinoco River follows a relatively regular pattern of rise and fall each year. The river normally begins rising in late March or early April and continues to rise until it peaks at crest in late August. In September, the river begins a fairly steady recession until the extreme low-water stage is reached, generally in March. The amplitude of stage variation above the low water plane of reference (0.0 ft.) at Palua (Mile 181.7) averages about 35 ft. with min. variations of 31 ft. and max. variations of 39 ft. The effects of the flood rise decrease progressively below Palua and practically vanish in the upstreamward vicinities of the Boca Grande.

5. *Tides and Currents*

(a) The indicated mean tidal range is 5.4 ft. Tidal influence is not experienced above Mile 60 during high river stages. At low river stages, a tidal effect can be observed throughout the waterway, although it progressively diminishes, moving upstreamward. However, the tidal effect is still significant at Puerto Ordaz, Mile 184, where a max. semi-diurnal change of 1.7 ft. has been recorded.

(b) The strength of river currents is generally commensurate with flow, the strongest currents occurring at high river stages. The velocity of currents at any one time generally decreases moving downstreamward. However, in certain locations, this pattern is affected by particular characteristics of river width and shape as well as by bottom gradient. Max. velocities of about 6 knots have been recorded.

6. *Navigation Aids*

(a) The navigation aids installed along the waterway consist of buoys, beacon and ranges. All aids are lighted. Identification is provided by means of numbers representing the approximate mileage of each aid, to the nearest one-tenth of a mile. The last digit of numbers identifying green lighted aids is odd, while the last digit of numbers identifying red lighted aids is even. Green lighted aids mark the left ascending limit of the navigable channel, while red lighted aids mark the right ascending limit. Aids are placed as to be intervisible, to the extent that — when abreast of any one aid — the preceding and following ones can be sighted. Consecutive aids always carry different light characteristics. Buoys are normally placed on the exact lateral limit of the channel (except for black buoys along the South Channel at the Boca Grande); beacons, instead, are located at variable distances outside of the channel.

(b) During the execution of dredging along any of the reaches which require periodic maintenance, buoys are generally moved 100 ft. outside the channel lateral limits. This information is made available to ships by YVM.

(c) The Ministerio de Comunicaciones, Direccion de Transporte Aguatico, publishes semi-annually a complete list of navigation aids. Monthly lists of changes are also published so that the complete current list can be maintained up to date.

(d) Upon encountering damaged, inoperative, or misplaced navigation aids, vessels should immediately notify YVM.

(e) Vessels are forbidden to make fast to any navigation aid.

7. *Dredging Aids*
Range structures, generally located close to shore or over the bank, are normally used to mark the lateral alignments of the channel along the reaches which require periodic dredging. These ranges are generally fitted with amber flashing, directionally beamed lights. The lights are extinguished except during execution of dredging. Dredging ranges *are not* to be used for navigation.

8. *Navigation Charts*
Navigation charts of the Orinoco Waterway should be aboard vessels for use by the Master. These charts are sold by the Instituto Nacional de Canalizaciones and are also available for purchase from the CVG Ferrominero Orinoco. If requested, CVG Ferrominero Orinoco will, if possible, arrange to make the charts and latest revisions available through the Pilot who boards at Punta Barima, provided such request is received by radio (YVM) at least 48 hours in advance of the Pilot's boarding. A set of navigation charts, corrected to latest revisions, is maintained in the office of the Traffic and Ships' Agency of CVG Ferrominero Orinoco in Puerto Ordaz. Masters may use this facility to keep their charts up to date.

Report: 1986.
Deficient Navigational Aids:
The deep draft New Barima (South) dredged channel is officially a 400 ft. wide dredged channel, but in reality it is considerably less in portions. Many of the red buoys showing a flashing red light which should be placed 200 ft. from the centre of the channel or exactly on the lateral limit, are either missing, out of position or unlit. The light on the black buoy which marks the entrance of the channel is inoperative. Several of the gauge structures fitted with green, flashing, directionally beamed lights, are inoperative. This makes it hazardous for a deep draft vessel to navigate the narrow and shallow channel during the hours of darkness. During the rainy period the authorised drafts declared by the Port Captain are in excess of the depths in certain portions of the channel.

We have been informed that about 20 vessels grounded in this area during the first 6 weeks of this year (1986).

DOCUMENTS: (Clearance, documentation and other requirements).

1. *Consignment of Inbound Vessels*
The official documents of all vessels proceeding to Puerto Ordaz and Palua should show the following consignment: to: CVG Ferrominera Orinoco, Ciudad Guayama.

2. *Customs Requirements*
Vessels bound for Venezuela in ballast, without passengers, from foreign ports outside the West Indies or Guianas, require the following documentation:

The vessel must have a clearance certificate (Certificade de Zarpe) or sailing authorisation issued by the Customs Authorities of the port of departure, representing the government of the country the vessel is departing from. No consular certification need be placed upon this document.

Spare Parts List (Lista de Repuestos). It must contain a note of all the spare parts and objects for the service of the vessel, including fuel. To be signed by the Master and to be current as of the day of entering the Venezuelan port.

List of Effects for use of Captain and Crewmen (Lista de efectos personales de la dotacion). To be signed by the Master and to be current as of the day of entering the Venezuelan port. The Customs are very strict and will confiscate any article that appears new.

3. *Health, Immigration, and Police Requirements*
Vessels bound for Venezuela in ballast, without passengers, from foreign ports outside the West Indies or Guianas, require following documentation.

(a) Current individual International Vaccination Certificates for each member of the crew.

(b) Derat Exemption Certificate.

(c) Crew Lists (original and seven copies).

(d) Panama or Suez Canal or any comparable type measurement certificate.

Contraband: The Venezuelan law is very strict on this subject. It cannot be emphasised too strongly that all new articles, clothing, cigarettes, liquor, etc., must be declared and sealed-up upon arrival.

Meals for Pilots and Government Officials. It is requested these men be granted the privilege of eating in the officers' dining salon.

N.B. Masters of vessels calling at Trinidad for bunkers before proceeding to Venezuela must also have the documents stamped by the Venezuelan Consulate at Port of Spain.

PILOTAGE: In order to expedite the movement of shipping in the waterways, Masters are requested to establish contact with YVM station as soon as possible, giving ETA Seabuoy 0.1. At the same time a radio-telegraph message must be sent to Agents giving ETA Barima and cargo required. When vessels is 24 hours from pilot station, send another ETA via YVM.

After reporting the ETA in advance of arrival, try to contact directly, by VHF, "Barima Pilot" when the ship approaches Seabuoy 0.1 off the bar entrance (about 2 hours before arrival at the pilot station). (It is possible to contact Pilots 100 miles before arrival Seabuoy 0.1.)

After taking the Pilots aboard, report to Radio Marina (YVM) and continue giving the ship's position according to the mile, up-river, at exactly every hour on the hour, and receive from Radio Marina the pertinent information concerning the traffic in the river waterway. If no communication can be established by voice radio aboard, comply by radio-telegraph by way of the YVM station. See "Ship's Officer's Reports" in 1st Section – "General".

Ship's Officer's Report: July, 1980.
Hourly position reports are made on W/T to YVM when the Pilot is aboard (He writes the telegrams in Spanish).

Pilots are the employees of the Venezuelan Government and act in an advisory capacity. The Master retains responsibility for the ship at all times.

(1) Pilotage is not required and Pilots are not available for navigation outside the pilotage zone. Masters will take charge of inbound and outbound navigation on the South Channel outside Buoy 27 at the Boca Grande, without Pilot's assistance.

(2) Pilotage is mandatory within the Pilotage Zones No. 1 and No. 2 of the Orinoco. Inbound vessels will embark the government River Pilot in the upstreamward vicinities of Buoy 27. It is important that vessels pass Buoy 27 and be in sight of the pilot station at Barima in order to avoid any delay, as Pilots may not proceed until vessel is sighted. The government River Pilot will pilot the vessel while navigating the waterway; a special government Docking Pilot will generally take the vessel into and out of the Puerto Ordaz harbour.

Signals

(1) All signals used outside of the Pilotage Zone No. 1 (that is to say, seaward of Buoy 27 – Mile 27.7) shall conform to the International Rules for Prevention of Collisions at Sea.

(2) Within the Pilotage Zones (that is to say, inside of Buoy 27 – Mile 27.7) the signals used shall be in accordance with the "Regulations for the Pilotage Zones No.1 and No. 2 of the Orinoco". It should be noted that these signals are peculiar to the Orinoco Waterway, and are not necessarily in conformance with the International Rules.

(3) Within the Pilotage Zone, special signals are used for passing dredgers at work along the waterway.

Speed

The Captain of the Port has the authority to impose speed restrictions. By means of "Notices to Mariners", the Port Captain has ordered that all vessels reduce speed while navigating by the following locations: San Felix Dock, Mile 179.8; El Toro, Miles 95.4 to 96.6. It is recommended that speed be also reduced while navigating by the Palua Dock (Mile 181.8), Barrancas (Mile 143.2), and Curiapo (Mile 60.4). At the inception of the low water season each year (generally in early January), the Port Captain has in the past issued a "Notice to Mariners" instructing all vessels to reduce speed and proceed with caution while navigating the following river reaches: (1) Miles 184 to 178, (2) Miles 171 to 167, (3) Miles 150 to 141, (4) Miles 140 to 137, (5) Miles 133 to 131, (6) Miles 112 to 109, (7) Miles 106 to 98, (8) Miles 55 to 53, (9) Miles 39 to 36.

ANCHORAGES:

(1) No ships are permitted to anchor in the South Channel at the Boca Grande. Vessels are to anchor at least 1 mile outside of Buoy EO or Buoy 0.1.

(2) Within the Pilotage Zones, no vessel is allowed to anchor in narrow channels, nor close to a turn.

(3) Between Buoy 27 — Mile 27.7 and Mile 137, vessels which need anchoring may do so by coming as close as possible to shore on the ship's starboard side.

(4) Between Mile 137 and Mile 184, the Pilotage Regulations provide for 3 permanent anchorages and 1 seasonal anchorage, as follows: Area No. 5 (permanent); Miles 139.3 to 140.4. Area No. 6 (permanent): Miles 150.1 to 151.7. Area No. 7 (permanent): Miles 178.0 to 179.0. Area No. 8 (seasonal): at the junction of the Caroni and the Orinoco. It should be observed that Area No. 7, as determined in the Pilotage Regulations, partially encroaches on the narrow (dredged) channel and on shore. Vessels are to anchor in the naturally deep and wide part of the area.

(5) The low-water anchorage (for 1 ship only) previously established by the Port Captain between Miles 182 and 183 is no longer in use. This area is currently used as the turning basin for vessels exiting the Palua Channel, upon sailing from the new Palua dock at Mile 181.8.

(6) If due to emergency a ship is required to anchor in places other than the designated areas, it should do so in such a way as not to obstruct the channel and by taking the necessary precautions to avoid swinging around.

(7) Upon anchoring vessels should notify YVM.

MAX. SIZE:

(1) *Max. permissible draft.* The Port Captain of Ciudad Guayama can establish the permissible draft for the Orinoco waterway to a max. of about 44 ft.

(2) *Controlling Depths and Authorised Draft*

The draft authorised by the Port Captain for the Orinoco Waterway is made public by means of a "Daily Bulletin of Depths and Draft" (Boletin Diario de Profundidades y Calado). Each daily bulletin issued by the Port Captain carries the following information, in Spanish and English:

(a) Controlling (minimum) depth between Miles 194 and 0, and corresponding location.

(b) Authorised draft, in feet and decimals of feet.

The controlling depths given for locations comprised between Miles 184 and 42 are actual depths, and reflect depth conditions as of the date of the bulletin. The controlling depth given for locations comprised between Miles 42 and 0 is referred to MLWS and does not include the height of tide at high water.

The authorised draft may be predicted either on the controlling depth existent between Miles 184 and 42 or between Miles 42 and 0, dependent upon whichever is the least.

When the controlling depth between Miles 184 and 42 is the significant factor, the permitted draft authorised is at least 2 ft. less than the controlling depth in this sector.

When the controlling depth between Miles 42 and 0 is the significant factor, the permitted draft authorised is generally less than the mean low water springs controlling depth but occasionally can be equal to the mean low springs controlling depth.

Whenever the MLWS controlling depth existing between Miles 42 and 0 does not provide sufficient clearance under the keel of the vessel at low water, the Master is expected to navigate by the site where the controlling depth is located only at times when the height of tide will assure a safe passage.

(3) *Variations in authorised draft:*

(a) The authorised draft is generally increased or decreased by multiples of 6 inches.

(b) Throughout the year the authorised draft is susceptible to variations, according to the conditions of the depth and width existing in the channel at any one time. On the basis of average river stages i is estimated that the authorised draft should be about 33 ft. in the dry season from December to May.

During the rainy season, from June to November, the max. permissible draft may be as high as 44 ft.

HEALTH: Radio Pratique may be obtained by sending a message, after picking up Pilot, to the Port Health Officer, advising that there is no sickness on board, name of last port, ETA, number of crew and nationality of vessel and name and nationality of Master (This does not apply at Palua).

RADIO:

(a) Communications: Communications are generally handled through the radio-telegraph station at Puerto Ordaz, call letter YVM. This station is operated on a 24 hour basis. The operating frequencies are: 440 kHz 472 kHz; 4322 kHz; 6505.5 kHz. The GMT — CQ times and frequencies are: 0900 hrs., 4322 kHz; 1200 hrs. 6505.5 kHz; 1430 hrs. 8722 kHz 2000 hrs. 8722 kHz; 0030 hrs. 8722 kHz; 0300 hrs. 4322 kHz.

There is no charge for messages from ship to shore or from shore to ship handled directly through YVM. A VHF frequency modulated radio system provides voice communications along the Orinoco Waterway Master sets for the system are installed in the Puerto Ordaz Radio telegraph Station (voice call: "Master Radio"); Marine Radio handles shipping matters exclusively, The system consists of a high-band VHF frequency modulated voice radio network. To ensure a more efficient and satisfactory coverage, this system operates on dual frequencies alternating according to location, so that ships can either transmit on 161.700 MHz receiving on 159.000 MHz, or transmit on 161.150 MHz receiving on 159.850 MHz. For best results, ships should select frequencies according to the following: From sea to Mile 50: transmit on 161.700 MHz, receiving on 159.000 MHz; From Mile 50 to Mile 112 transmit on 161.150 MHz, receiving on 159.850 MHz; From Mile 112 to Mile 159: transmit on 161.700 MHz, receiving on 159.000 MHz; From Mile 159 to Mile 184: transmit on 161.150 MHz, receiving on 159.85 MHz.

Pilot station at Barima Bar, Palua and Matanzas are equipped with this system. For the Puerto Ordaz area, ships will transmit to Marine Radio on a frequency of 43.02 MHz and to others on a frequency of 43.18 MHz, receiving in both cases on a frequency of 43.18 MHz.

Ship's Officer's Report: July, 1980.

The VHF Channels listed are not available on standard marine sets All VHF work is done on Channel 16 (Pilot to Pilot), and reporting on W/T to Radio Marina.

(b) Control of Navigation:

(i) Navigation on the Barima Channel at Boca Grande is free. However vessels are requested to notify the Port Captain, Ciudad Guayama via "Barima Pilots" on Channel 16, upon arrival at Buoy EO, giving ETA at Buoy 27, Mile 27.7.

(ii) Simultaneous navigation in opposite directions by 2 or more vessels is not permitted on the South (dredged) channel at the Boca Grande The restriction is placed on inbound traffic, to the extent that any vessel wishing to enter the South channel requires prior authorisation from the Port Captaincy of Ciudad Guayama. The request for permission to enter the South channel is to be addressed to the Port Captain, Ciudad Guayama, via "Barima Pilots" on Channel 16. and is to be transmitted before the vessel reaches Buoy 0.1. Upon receipt of the request, the Port Captain will notify the vessel via "Barima Pilots" on Channel 16, whether permission is or is not granted, indicating, in the latter case, the approximate waiting time. Until permitted to enter, vessels are to anchor at least 1 mile outside of Buoy 0.1. Once that authorisation has been granted, vessels are to enter the South channel at the earliest opportunity.

(iii) While navigating the Orinoco Waterway inbound or outbound vessels are to report their position to YVM hourly on the hour. Seaward of Punta Barima, to "Barima Pilots".

(c) Accident, Stranding, etc.

(i) Should a collision, stranding or other accident occur in the waterway, or should it be found necessary to take control of the vessel away from the Pilot for any reason, the Venezuelan law requires that a written report be made to the Captain of the Port by the Master of the vessel involved within 24 hours. The report is to be addressed to the Captain of the Port and may be handed to the Pilot or the ship's Agent for delivery. The Master need not appear in person before the Captain of the Port unless specifically ordered to do so.

(ii) Slight groundings or touching of banks and bottom may simply be noted on the reverse side of the receipt for pilotage signed by the Master.

(iii) In case of collision, stranding, slight grounding, touching of bank and bottom, or other accidents, vessels should immediately notify YVM.

738 ft.

Section A

MATANZAS: 08.17 N. 62.52 W. (See Plan)

N.B. See "Orinoco River" for all important entry requirements.

LOCATION: At Mile 195 from sea on Orinoco River.
ANCHORAGES: Between Mile Nos. 195 and 197, Orinoco River.
MAX. SIZE: Length 600 ft., breadth 74 ft., distance between rail and hatch coaming 23 ft., max. draft 41 ft. in rainy season May to November, and 28 ft. in dry season.
RADIO: See "Orinoco River". Cables address of Matanzas terminal operators is "Sidor Matanzas – Telex 86366" and cables may be routed through Caracas, Curacao or Trinidad Radio.
TUGS: Every vessel over 2,000 registered tons is required to use a tug when berthing. Tug is 1,600 h.p.
BERTHING: Reinforced concrete structure consisting of 3 different sections running in a straight line, bearing 065°.

From West to East, 3 sections should be pointed out:

The first section, some 320 m. long, is used mainly for unloading bulk cargoes. Depth 10 m. below MSL.

The second section, 400 m. long, is for handling steel products. Depth 11 m. below MSL.

The third part, some 280 m. long, is for general cargo. Depth 11 m. below MSL.

The level of the river fluctuates from 0.6 m. over MSL at low river water in the dry season (February – March) to 14 m. over MSL at high river water in the rainy season (July – August).

The river bed drops sharply from the edge of the pier to the navigation channel where the depth reaches 30 m. below MSL.

Berth No. 1:	Runs from bollard No. 1 to No. 7, length 155.30 m.
Berth No. 2:	Runs from bollard No. 7 to No. 14, length 176.38 m.
Berth No. 3:	Runs from bollard No. 14 to No. 24, length 204.25 m.
Berth No. 4:	Runs from bollard No. 24 to No. 33, length 182.75 m.
Berth No. 5:	Runs from bollard No. 33 to No. 39, length 160.45 m.
Berth No. 6:	Runs from bollard No. 39 to No. 44, length 158.85 m.

In addition there is another berth, length 149 m., South of No. 6, with 24 ft. of water under MSL, that runs from bollard No. 38 to No. 44.

The reinforced concrete platform is 25 m. wide at the first section and 20 m. at the second and third sections. The surface of the pier is 15.5 m. over MSL.

CRANES: Berths No. 1 and No. 2 are served by 2 "Ceretti Tanfani" bulk unloaders of 22 tonnes capacity, able to handle clamshells of 4.5 cu.m., for iron ore, lime stone and other heavy bulk, 10 cu.m. clamshells for coke and other light bulk and orange peeler and magnets for unloading scrap iron.

The reach of these cranes is 10 m. from the pier edge. The working field is from bollard No. 2 to bollard No. 13.

Berths No. 3 and No. 4 are served by 6 "CMI" gantry/trolley cranes fitted with 2 hoists of 15 tonnes each, with a total capacity of 30 tonnes with the 2 hoists in tandem. The working field is from bollards No. 15 to No. 31.

Berths No. 5 and No. 6 are served by 3 "Ansaldo" gantry/trolley cranes of 16 tonnes capacity. The working area is from bollards No. 35 to No. 44.

At bollard No. 34 there is a stationary rotary derrick of 400 tonnes capacity and a reach of 18 m.

In addition, there are 3 "Grove" auxiliary moving cranes, of the telescopic type, with a rated capacity of 80 tonnes able to work at any part of the pier.

WAREHOUSES: From bollard No. 14 to bollard No. 29, running along the South edge of the pier, there are 10 adjoining warehouses, 30×100 m. each, 3 of them open at either end and the four in the middle roofed. All of them are provided with 1 gantry crane of 25 tonnes each.
STEVEDORES: Operations are round the clock, 7 days a week.
MEDICAL: Private hospital and several doctors available.
FRESH WATER: Available at rate of 12 t.p.h.
FUEL: Available ex-barge.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle spirits allowed per crew member for personal consumption.
IDENTIFICATION CARDS: Provided by authorities, and necessary if crew going ashore.
REPAIRS: Local workshops undertake minor repairs.
AIRPORT: Matanzas is served by Puerto Ordaz Airport with several daily flights from Caracas.
POLICE/AMBULANCE/FIRE: The entire length of the pier is fitted with fire hydrants and at the steel mill, about 6 km. away, there is a well equipped fire brigade with firetrucks, ambulances and rescue vehicles.

A first aid centre is located close to the fire station.

TELEPHONES: No telephones or telex services are available at Matanzas for the use of vessel's personnel. Local telephones only available at the pier and dock supervisor's office. Recommend vessels use their VHF to communicate with their Agents while at anchorage and when alongside.
REGULATIONS:
Pollution: Venezuelan law and Sidor's port regulations are very strict on air and river water pollution, the following restrictions being in force:

1. No smoke to be ejected from vessels' funnels while moored at Sidor's pier.
2. No waste, refuse or garbage to be dumped in the river while in the river channel, at Matanzas roads or laying alongside the pier.
3. All waste, refuse or garbage kept on deck, to be sprayed with anti-vermin and kept covered.
4. No salt water ballast, bilge water, oils, refuse water from galleys and lavatories, etc., to be pumped into the river.

In addition to whatever penalty the vessel shall incur under Venezuelan law, Sidor reserves its right to place the offending vessel "off hire" until she has complied with the regulations.

Safety: Under Sidor's security norms, every person which, for whatsoever the reason or business, has to transit or stand on the pier's platform is bound to use a hard hat. People doing any kind of work on the pier have also to use safety shoes.
GENERAL: Sidor's pier will discharge and/or load cargoes for other industries of the area provided a berth is available and no Sidor vessels are waiting. Permission for such operations must be requested prior to vessel's arrival.

Sidor require Agents to provide stowage plan and cargo documents prior to vessel's arrival otherwise Notice of Readiness will not be accepted.

OPERATOR: C.V.G. Siderurgica del Orinoco C.A., Codigo Postal 8016, Matanzas, Ciudad Guayana, Estado Bolivar, Venezuela. *Tel:* 991111 and 991118. *Telex:* 86366 and 86229 (Sidor). *Cables:* Sidor Matanzas. *Contact:* Superintendent, Port Services.

Section B

PALUA: 08.21 N. 62.41 W.

N.B. See "Orinoco River" for all important entry requirements. Specific details, relevant to Palua only, are as follows:
SUPPLIER: The ore supplier is CVG Ferrominera Orinoco C.A., cable address "Ferrominera". Their Palua office is fitted with VHF radio-telephone on 161.150/159.850 MHz and 2182 kHz (call).
CLEARANCE: Agent will secure the Clearance dispatch.

Note: The Palua dock and facilities are the private property of CVG Ferrominera Orinoco C.A. All Company regulations must be obeyed by vessels and vessels' personnel.

The Bill of lading will be prepared by CVG Ferrominera Orinoco C.A., also the Commercial Invoice on the Consular Invoice form 138. The Inward Foreign Manifest, U.S. Customs form 7527–B, should be prepared by Master after sailing from Palua.

MAX. SIZE: Max. d.w.t. 100,000 tons. Max. LOA 274.32 m. Max. beam 33.53 m.
HEALTH: The vessel will be boarded by the Public Health Doctor after docking at Palua; unless instructions to the contrary.

In the event that the Authorities have to board the vessel anchored out in the stream, an accommodation ladder should be rigged, preferably on the starboard side, to keep the port side clear for docking. Venezuelan authorities and workmen will not use Pilot ladders.

RADIO: Should a vessel receive radio advice at sea to proceed to Palua, and the clearance is to another port, it is requested to send following information to "Ferrominera" at earliest convenience. i.e. Master's full name and nationality, vessel's nationality, port and number of register, net and gross tonnage, type of vessel M/V or S/S, vessel's overall length and width, last port of call, original port of destination. This is necessary in order to comply with the Venezuelan Custom Law.
BALLAST: To provide the best manoeuvring trim on docking, it will be at the discretion of the Master to properly ballast the vessel. But in order to lose no time on loading operations, as well as to prevent short loading, the ballast should be pumped out as soon as possible, using utmost caution not to pump oil or sludge overboard in the port area.
APPROACH AND DOCKING IN PALUA: After passing the village of San Felix, and before reaching the turn off from the main channel, 2 tugs and a Docking Pilot will meet the vessel and will assist in the docking manoeuvre. Although the Master will always be responsible for the vessel's movements either in the case of docking or undocking, the Docking Pilot will actually pilot the vessel to, and dock the ship at Palua.

At Mile 180.5 the ship should leave the main channel, turning to the left to follow the new dredged entrance channel of approach which is marked by 2 flashing buoys: white on the port and red on the starboard side. Diamond-shape range marks of 6 ft. side, painted white with black diagonal cross, indicate the centre line of the approach channel. The front range, fastened on the ore loading pier, shows flashing green light, and the rear range, set on a tower shows flashing green light, and the rear range, set on a tower approximately 2,000 ft. away, has fixed green light.

The docking shall be port side to in all events; and please stow all hatch boards, or pontoons, or steel battens, etc., on the starboard side of the hatch as this will keep the gear cleaner and lessen the work of the ore handling gang.

Vessel's accommodation ladder is used. Nothing should overhang the port side of the vessel on docking.

If the loading berth is not available the arriving vessel would be instructed to anchor at an anchorage just below the entrance to Palua approach channel at Mile 178.

LOADING DOCK: The ore loading port is located at Mile 181.5 of the Orinoco waterway, along the left bank going up-river. The steel dock here is aligned up and down stream in the general direction of the current. It is 907 ft. long between its pointed heads, with 791 ft. of boarding side along, the deck fixed at about 6 ft. over the maximum rise of the river in the flood season. It has a strong fender system of steel structure covered with timber overhanging the side, down to near the lower river stage; and is fitted with 14 bollards plus 2 more, one on each head, for proper docking and securing the vessel.

Once the vessel is moored alongside the new ore loading dock, there shall be no further shifting necessary to load, as the loading tower moves along the dock on rails to facilitate the loading through the various hatches.

LOADING: The ore handling and loading equipment for Palua has a max. capacity to load 3,000 metric tons of ore per hour, for the time being. With this capacity, the vessel's mooring lines should be tended during the operation.

The boom of the loading tower is so designed as to allow free movement in any direction, fore and aft. The gantry and boom travel along the dock for a distance of 518 ft., and can place the ore at a distance horizontally out from the dock fenderline of 23 ft. minimum and 62 ft. maximum at the highest water stage, and from minimum 29 ft. to maximum 67 ft. horizontally out at the lowest stage.

Care must be taken during the course of loading to avoid piling the ore too high in the holds, as this necessitates hand trimming before the hatch covers can be properly secured, and incurs unnecessary trouble.

UNDOCKING: The Master, assisted by a Docking Pilot, if required, will handle the vessel on leaving the dock, going upstream from the dock not less than 0.75 miles distance to the turning basin in the same heading as when the ship moored alongside. Two tugs will go alongside the ship prior to undocking and will assist the vessel until it is headed downstream in the main Orinoco Channel. The amber lights at the heads of the dock form a range to mark the shoreside boundary of the local dredged channel. A red light high up on the loading gantry will come in the same range as the 2 amber lights. In the turning basin a tug-boat will assist the vessel swinging downstream.

When the ship is in the main channel, properly headed downstream, the Docking Pilot will leave on the tug, and the River Pilots (2 of them) will assume the navigational direction. Report to Radio Marina by voice radio and give ETA at Mile 27.

Report again to Radio Marina giving position every hour, and try to contact Barima Pilot Station sometime before arrival at Mile 31, where the Pilots will disembark.

If voice radio communication is not possible, comply by radiotelegraph by way of the YVM station.

REGULATIONS: The Venezuelan law is very strict on the subject of contraband. It cannot be stressed strongly enough that all *new* articles, clothing, cigarettes, liquor, etc., must be declared and sealed up on arrival.

Concerning passes, the regulation states that "members of the crew who are not officers of the vessel, in order to go ashore and return aboard, have to be supplied with an identification card to be issued by the Purser of the vessel or his substitute, which card will contain the name of the vessel, the name of the crew member and the date of issue. This card will have to be signed by the person issuing same and has to be authorised by the respective officer of the Port Captain's office for the district".

GAS-FREE CERTIFICATE: Vessels reporting to Palua to load ore should have the holds and cargo compartments swept clean and ready to receive cargo. Also, any combination ore/tanker vessel tendering to load iron ore at Palua shall present, along with the Notice of Readiness, a Gas-free Certificate if said vessel has in the past been employed in the carriage of petroleum products. Such certificate shall be dated subsequent to the discharge of the vessel's last petroleum cargo. But they are advised that around Palua in Venezuela there is no chemist available for granting such a Gas-free Certificate. It may be secured before arriving at Venezuela by calling at Trinidad, reporting to cable address: Harriman, Port of Spain.

In case of necessity, or for convenience, it could be arranged for the chemist to travel to Venezuela to meet the ship in Palua, advising Harriman (Port of Spain) at least 3 days before arrival at Palua.

If the vessel is equipped with a gas-indicating meter (explosimeter), CVG Ferrominera Orinoco C.A. will accept the Master's certification in writing that the vessel is gas-free. However, they reserve the right to check the vessel with their own equipment prior to acceptance.

CONSULS: See "Puerto Ordaz".

FLOOD SEASON: The port experiences a yearly flood season from the middle of June to the middle of November, to a max. of about 38 ft. at the last days of August, above the lowest stage (during the first days of April) in the dry season that occurs from the middle of November to the middle of June.

TIDE: The wind in the locality blows generally upstream, and on exceptional occasions during the dry or low-river season, when the current is weak, does overcome the current and cause the anchored ships to tend with stern upstream.

REPAIRS: Minor emergency repairs of mechanical, electrical and electronic types may be carried out in the shops by the personnel of the Iron Mines Company of Venezuela. The American Bureau of Shipping has a surveyor at Puerto Ordaz, near Palua.

MEDICAL: There is a medical dispensary at Palua, and a hospital of the Company at El Pao, where seamen may be admitted when requiring hospitalisation in emergency cases.

FUEL: All grades of bunker fuel are available at Palua, delivered by barge.

FRESH WATER: Drinking water is available at the dockside in limited quantity of about 100 tons every 24 hours. Small amounts of fresh provisions may be obtained in the locality.

Section C

PUERTO ORDAZ: 08.21 N. 62.43 W.

OPERATORS: CVG Ferrominera Orinoco.

LOCATION: The operations of the CVG Ferrominera Orinoco are centred in the State of Bolivar in Eastern Venezuela and iron ore is loaded into ocean-going vessels at Puerto Ordaz (08° 21′ N., 62° 43′ W.), at the junction of the Caroni and Orinoco Rivers, approximately 184 nautical miles from the open sea.

GAS-FREE CERTIFICATE: Any combination ore-tanker vessel tendering to load iron ore at Puerto Ordaz shall present, along with the Notice of Readiness, a Gas-Free Certificate if said vessel has in the past been employed in the transportation of petroleum products. Such certificate shall be dated subsequent to the discharge of the vessel's last petroleum cargo. Gas-Free Certificates can be obtained through an approved surveyor in Puerto Ordaz.

APPROACHES: See "Punta Cuchillo".

MAX. SIZE: Max. d.w.t. 115,000 tons. Max. LOA 289.56 m. Max. beam 39.01 m.

HEALTH: Vessels could be boarded by the Public Health Doctor in the stream off Puerto Ordaz. He will not come up a Pilot ladder and will insist on an accommodation ladder which should be rigged and ready when he approaches. In order not to delay docking, this accommodation ladder should be rigged on the port side during low river stage, and starboard side during high river stage. If vessel moves directly to berth, Health Doctor will board vessel at dock.

RADIO: Should a vessel receive radio advice at sea to proceed to Puerto Ordaz, and the clearance is to another port, the Master must radio station YVM Puerto Ordaz, and advise the name of the vessel, flag, port of embarkation, original port of destination, Master's name and number of members in the ship's crew. This is necessary in order to comply with article 17 of the Venezuelan Customs Law.

TUGS: All vessels touching at Puerto Ordaz will be assisted by a tug in docking and undocking manoeuvres. Line-handlers are available on the dock to secure mooring lines on vessel's arrival, and to release them on vessel's departure.

BERTHING:

1. **The Harbour:** The Puerto Ordaz Harbour extends from Mile 183.5 to Mile 184.1 of the waterway. The harbour consists of a natural basin formed by the mouth of the Caroni as it flows into the Orinoco. The width of the turning area within the basin varies from a min. of about 1,600 ft. at low water to a max. of about 2,000 ft. at high water. The lighted buoys marking the navigable limits on either side of the harbour are moved to different positions according to river stages in order to achieve full utilisation of navigable waters. The bottom of the harbour is generally rock, with scattered layers of sand overburden deposited as sediment by the river. This sand is regularly removed by dredging in order to maintain depths which will accommodate the maximum draft authorised by the Port Captain. The bottom configuration across the harbour consists of a rocky shelf extending about 900 ft. from the face of the dock. Beyond this shelf the bottom slopes steeply into a deep gorge, then rises to form a sandy beach along the opposite shore. The velocity of river currents at this site varies according to stage levels. A slower current is generally experienced over the rocky shelf adjacent to the dock, with velocities averaging about 1.5 knots at flood stages and about 0.5 knots or less at reduced river stages. The velocity of the current over and along the deep gorge averages about 3.5 knots at flood stages and 1.5 knots or less at reduced river stages. During extreme low water, the basin is subject to tidal influence and the velocity of currents is minimal, although there is no reversal of flow. The direction of the current is aimed slightly toward the face of the dock at its S.E. end but deflects away from the pier about 500 ft. downstreamward. Access to the harbour is by way of a naturally deep and wide fairway which is the continuation of the gorge as it enters the Orinoco River.

2. **The Dock:** The Puerto Ordaz Dock is located along the right ascending side of the harbour and extends outward from shore on a S.E. by East alignment. The all-steel fixed-height dock is 1,885 ft. long; its elevation is 41 ft. above low water plane (0.0 ft. stage). This dock is fitted with a strong fender system and with a sufficient number of accessible bollards for proper docking and securing.

3. **Arrival:**

(a) Notice of Readiness: When completely ready to receive cargo, vessels will submit "Notice of Readiness" to CVG Ferrominera Orinoco. Vessels will normally be loaded in the order in which Notices of Readiness are accepted by CVG Ferrominera Orinoco. The Company will advise when the vessel may proceed alongside the dock.

(b) Docking: Special Docking Pilots are provided for the docking and undocking of vessels at Puerto Ordaz. These Pilots are qualified River Pilots, thoroughly familiar with local conditions. All vessels will dock starboard side to. During the low water stage, which is from the middle of November to the middle of June, no gangway should be rigged and nothing should overhang the starboard side of the vessel. When the river is sufficiently high which is from the middle of June to the middle of November vessels are requested to have starboard gangway or accommodation ladder rigged and ready to lower immediately after docking in order to expedite the commencement of loading. Venezuelan authorities and workmen will not use Pilot ladders. Vessels reporting to Puerto Ordaz to load ore should have holds and cargo compartments broom clean and ready to receive cargo. Considerable time will be gained if this requirement is met prior to reporting.

(c) Hatches: On arrival at Puerto Ordaz all hatch boards or pontoons, beams, tarpaulins, steel battens, wedges, etc., should be stowed on the port side of the hatch. This will keep the hatch gear cleaner and lessen the work of the ore handling clean-up gang.

(d) Ballast: In order to lose no time with the loading operations, as well as preventing short-lifting, all ballast should be pumped out before arrival at the dock. Use utmost caution not to pump oil or sludge overboard in the port area. CVG Ferrominera Orinoco Ships' Agency Representative will contact vessel on arrival and will assist in every way possible.

4. **Departure:** All vessels which have completed loading at Puerto Ordaz and have received the latest river information from the port offices and are ready for their river transit in every respect, will proceed outward via the Orinoco Waterway, disembarking the Pilot at Mile 27. Once the Pilot has disembarked, vessels shall proceed over the South (dredged) Channel to Mile 0, and exit the waterway.

TANKERS: See "Punta Cuchillo".

MEDICAL: There is a hospital at Puerto Ordaz which will admit seamen requiring hospitalisation.

FRESH WATER: Drinking water is available alongside the dock.

FUEL: Bunker "C" and diesel oil is available.

CONSULS: An Italian consulate Agent at Puerto Ordaz, nearest consuls for other countries at Cuidad Bolivar or Caracas.

REPAIRS: Minor emergency repairs may be carried out in the shops of CVG Ferrominera Orinoco.

TIME: The legal time of Venezuela, which is 4 hours behind GMT, shall be used in Pilotage Zones No. 1 and No. 2 of the Orinoco River.
SHORE LEAVE: Permitted, but it is mandatory that all crew members should report back to their respective ships before sailing time.
GENERAL: 1. *Ore Loading Equipment:* The ore handling and loading equipment installed on the pier has a speed ratio of 6,000 metric tons of ore loaded per hour. Due to this great loading capacity the vessel's mooring lines must be tended at all times.

2. *Handling Facilities:* A movable 110-ton, rail mounted stiff-leg derrick is installed on the dock for the handling of general cargo.

3. *Provisions:* Small amounts of fresh provisions are available.

4. *Surveyor:* The American Bureau of Shipping has a non-exclusive surveyor in Puerto Ordaz. Lloyd's has an Agency in Ciudad Bolivar with a branch office in Puerto Ordaz, and will appoint surveyors upon request.

SHIPMASTER'S REPORT: October 1986.
Terminal: Interalumina Terminal.
Location: Lat. 08° 18.7′ N., Long. 62° 49.0′ W.
Local Time: GMT minus 4 hours.
Approaches: Vessel can anchor 3 miles North of Sea Buoy (Lat. 08° 56′ N., Long. 60° 10.4′ W.). Contact Punta Barima Pilots or Amacuro Pilots on VHF Channel 16. After obtaining permission, vessel must proceed to inbound buoyed channel without Pilot for 27 miles up to Buoy No. 27.1. Channel of sufficient depth, variable width becoming very narrow at times. One way transit only. Current sets are various.
Pilotage: River Pilot boards at Buoy No. 27.1 and continues till 2 miles before berth. There are various buoyed channels enroute with dredging in progress. Several bends in the river, requiring close watch on steering at all times. For outbound pilotage, River Pilot and Berthing Pilot board at berth with River Pilot disembarking at Buoy No. 32.1.
Berthing: Berthing Pilot boards 2 miles before berth. Length of berth over 300 m. One tug available. Multi-purpose berth for alumina loading by chute and bauxite discharge by grabs. Sufficient depth alongside.
Loading: Cargo worked throughout 24 hours. Loading by conveyor-fed telescopic chute, capacity about 1,000 t.p.h. Chute reaches all holds.
Density: About 995 alongside berth.
Fresh Water: Available at berth, good for washing water but unsuitable for drinking.
Bunkers: HFO and DO can be supplied by barge.
Provisions: Fresh provisions and bonded stores can be supplied by Puerto Ordaz Ship Chandlers.
Shore Leave: No restrictions. Shore passes required. Puerto Ordaz City is 30 minutes by car.
Radio: For messages addressed to local Agents in Puerto Ordaz, it is better using some nearby foreign coast stations. YVG (Maracaibo Radio) provides unreliable service on HF. YVM (Puerto Ordaz Radio) does not accept public correspondence and controls all inward bound and outward bound transitting traffic only. Necessary that vessel gives time of passing Entrance Buoy and ETA at Buoy No. 27.1. Vessel is also required to give hourly position at the beginning of each hour until arriving at berth or anchorage and at the same time will obtain information concerning the changes of channel buoy positions and the transitting traffic for the vessels in the channel from the station.

For outward bound vessel, vessel to keep the same watch until passing Entrance Buoy.

The following are the paired frequencies for communicating with YVM (Puerto Ordaz Traffic Control): 468/472; 4192/4322; 6320/6372; 8386/8453 kHz.

SHIPMASTER'S REPORT: September 1988.
The following information is to be read in conjunction with the 1987/88 Edition of the "Guide".

1. The information that advises Masters to pump out all ballast before berthing should be amended.

At the end of September (1988) the river level was 2 ft. less than the highest predicted range. The actual depth at Puerto Ordaz Mineral Quay was measured at 53 ft. and the permitted air draft was 46 ft.

Ship's Masters may adjust their ballast condition through computing the relationship between their draft/air draft and actual depth at the jetty, which is subject to seasonal river level.

In addition to our regular ballast we took 1,100 cu.m. of ballast in the cargo holds in order to reduce our airdraft to the requested 46 ft., whereas we could have pumped out all ballast before going alongside.

2. The officially declared depth is 44 ft. and the permissible draft at Boca Grande Bar in late September was 42 ft.

3. The depth through the Boca Grande Bar Channel and its extension up to the 40 mile Buoy may not conform to the declared depth, and despite the pilot's statement, the part of the Channel on the Bar between No. 30-20 Buoys is the shallowest part of the passage and ships speed is reduced to half speed, instead of the section between Buoys 13.1 – 15.1.

4. The actual position of the Fairway Buoy is Lat. 08° 55.55′ N., Long. 60° 11′ W. and on our visit the buoy was unlit.

5. Many of the channel marking buoys (especially the red buoys) are unlit or have very weak flashing lights.

6. The rate of the river flow averages 3 knots – 4 knots.

7. It is suggested that deep draft vessels, outward bound, adjust their ETA at Buoy No. 44 in order that the vessel may be at Buoy No. 13.6 at daylight, taking into account that the vessel's speed will be reduced to half speed whilst navigating through the Boca Grande Channel from Mile 30 to Mile 13, due to the effect of the flood tide and mud under the keel.

The following figures may be of guidance to other vessels:

Declared depth:	44 ft.
Permitted draft:	42 ft.
Vessel's draft:	39 ft.
Vessel's sea speed:	12.5 knots
Passed Buoy 44:	1400 hrs.
Dropped Pilot at Buoy 32:	1530 hrs.
Arrived Buoy 13.6:	1820 hrs.
Vessel's average speed over the Bar between Buoy 30 – Buoy 13.6:	6 knots
High water time at Buoy 13.6:	1730 hrs.
Height of water at H.W. time:	2.0 m.
Date:	27th September 1988.

8. It is suggested that whilst navigating through the Boca Grande Channel, fuel oil is used in order to reach a high speed as quick as possible.

9. Nett ore loading rate experienced was 3,500 tonnes p.h.

10. The boarding officers were very co-operative and polite and were at all times courteous to the ship's officers and the Master.

The only documents requested were 8 copies Crew List, 3 copies Crew Personal Effects List and 3 copies of the Stores List (indicating fuel, narcotics, arms and ammunition, bonded stores and usual ship's stores).

AGENCY: Mailing Address for Puerto Ordaz: CVG Ferrominera Orinoco C.A., Agencia de Barques, Puerto Ordaz. Telex: 86472 Fmopu.

CVG Ferrominera Orinoco acts as ship's Agent for all vessels consigned to load iron ore at Puerto Ordaz. This function is performed by the Superintendent, Traffic & Ship's Agency and his staff, whose offices are located adjacent to the loading dock at Puerto Ordaz.

AUTHORITY: Capitania de Puerto de Ciudad Guayama. *Tel:* (86) 229268. *Contact:* Captain Lino Garcia Ibarra, Port Captain.

Section D

PUNTA CUCHILLO, (Puerto Ordaz Terminal): 08.20 N. 62.47 W. **(See Plan)**

N.B. See "Orinoco River" for all important entry requirements. Specific details relevant to Punta Cuchillo only are as follows:
OPERATORS: Lagoven S.A.
LOCATION: The terminal and dock is located near Mile Post 192 on the South side of the river.
PILOTAGE: Government Pilot will pilot vessel to Puerto Ordaz. In some cases this same Pilot will act as Mooring Pilot and dock vessel at the terminal. If River Pilot does not also act as Docking Pilot, the River Pilot will disembark at Mile 178 during LW, and Mile 183, in HW, and a Docking Pilot will embark and take the vessel to mooring.

Pilots are obtained at Buoy 27 of the old channel, which is the same as Buoy 27.7 of the new channel and is located 5 miles West of the old lighthouse at Punta Barima at Lat. 08° 36′ 00″ N., Long. 60° 30′ 40″ W. It is important that vessels pass this buoy and be in sight of the Pilot Station (1 mile E.S.E. of Punta Barima Lighthouse), as Pilots will not proceed to the vessel until it has been sighted.
APPROACHES: *Shipowners Report:* 1982.
Cautionary Advice: Due to several wrecks located in the approaches 6 miles North and 13 miles N.W. of the Fairway Buoy, extreme caution is necessary when approaching.

The coastline is difficult to pick up on radar and the Fairway Buoy is detected within a distance of only 3.5 miles. Contrary to the chart, it is currently not fitted with a racon. The buoy is not 25 ft. high as described in pilot books. It is, in fact, a small black buoy with a lattice construction with the radar reflector missing. In clear weather the channel buoys can be visually sighted and detected on radar at about 5 miles.

From the Sea Buoy 0.1 to position Mile 9, a strong N.W. set is experienced and an average of 5° set to channel course can be expected. After position Mile 9 set decreases and becomes variable in direction until arriving at Pilot Station Mile 27 position.

From August until the end of the year the river current can attain a rate of 5 knots, making it necessary for an outbound vessel to reduce speed when approaching river bends in order to ensure bends can be safely negotiated. Due to the strong currents of the Orinoco River, recent experience indicates that, if a vessel goes aground, the Master when attempting to lighter the vessel should drop an anchor prior to discharging ballast.

All stretches of the river have range markers which mark the centre of the channel. While manoeuvring in the river, the vessel tends to steady up when rudder is put midship without any counter rudder. This does not affect the manoeuvrability of the vessel but Master and Pilot should be aware of this so as not to take rudder off too fast when turning.

Buoys are NOT on the edge of the channel from the Sea Buoy to Mile 27.0. White buoys are 125 ft., Red buoys are 75 ft. outside the edge of the channel. Buoys are located at the point where the channel starts to slant downward to the deeper water. The main dredged channel is 400 ft. wide. The ranges are on the centre of the channel.

Masters must refer to the sailing directions for additional information.
MAX. SIZE:

Gauge Reading	*Maximum Draft*	*Tide Required at Bar*
12 ft. – 14 ft.	33 ft.	None
14 ft. – 17 ft.	34 ft.	None
17 ft. – 20 ft.	35 ft.	None
20 ft. – 23 ft.	36 ft.	None
23 ft. – 26 ft.	37 ft.	None
26 ft. – 29 ft.	38 ft.	None
29 ft. – 32 ft.	39 ft.	None
32 ft. – 35 ft.	40 ft.	None
35 ft. – 38 ft.	41 ft.	half of high tide
38 ft. – 41 ft.	43 ft.	half of high tide

HEALTH: Vessel will be boarded by the Public Health Doctor in the stream off San Felix or Puerto Ordaz or occasionally at the Terminal. If he boards before docking, an accommodation ladder should be rigged and ready when he approaches, as he will not come up a pilot ladder.

RADIO: Vessels diverted at sea to Punta Cuchillo which do not have a Venezuelan Clearance on board, must advise Lagoven by radio as soon as they receive their orders to change destination. The following information must be given: Master's name, vessels flag, net tonnage, last port of call, port to which originally cleared and ETA. This information is required in order that inward clearance may be arranged with government officials in ample time prior to vessel's arrival. In absence of this information, vessel will be subject to a fine.

TUGS: The use of tugs is necessary in docking and undocking manoeuvres of boats at this Marine Terminal. Alcoa has a 2,100 h.p. tug available for this service. A tie-up launch will be provided to assist in the mooring of the vessel, and will handle all the mooring lines before and after loading.

BERTHING: The dock at the terminal consists of a docking platform, 2 breasting dolphins and 2 mooring dolphins. The docking platform is connected to shore by a 10 ft. causeway capable of carrying a light truck.

At mean low river stage, water depth at the face of breasting structures is 40 ft. The bank rises sharply from face of dolphins toward shore. The 40 ft. depth contour extends parallel to shore for a considerable distance upstream and down stream from the dock, allowing a flat approach angle.

Current is negligible during low river stage and is approximately 6 knots at midstream at high river stage. Current runs generally parallel to the face of the dock at the dock site.

Top of dock elevation is 45 ft. above low water stage. Buffering system extends from a point below low water stage to a point immediately below top of dock. Nothing should overhang the shoreward side of the vessel when docking during the lower stages of the river. The buffering system is designed to accommodate forces exerted by a vessel of 47,000 tons displacement, approaching the dock with a velocity component perpendicular to the dockface, of 0.5 ft. per second.

Bollards for vessel's lines are provided at the mooring dolphins and at the breasting structures. Mooring dolphins will safely withstand 200,000 lbs. of mooring line tension.

The facilities include a 24 in. diameter submarine pipe-line which crosses the river a short distance down-stream of the dock. The crossing is marked by triangular-shaped signs on both banks of the river. Masters are cautioned against use of vessel anchors in this area.

The terminal pumps are capable of loading oil aboard ship at the rate of approximately 14,000 bbls.p.h.

INWARD CLEARANCE FOR DIVERTED VESSELS: Vessels diverted to Puerto Ordaz to load cargo should submit all documents, except consular mail, which they will not have. In lieu of this, they should submit 4 copies of the cable to divert, leaving enough space for the translation in Spanish. Vessels diverted at sea to Puerto Ordaz (Lagoven Terminal) which do not have a Venezuelan clearance on board must advise Lagoven at Puerto Ordaz, by radio as soon as they receive their orders to change destination. The following information must be given: Master's name, vessel's flag, net tonnage, last port of call, port to which originally cleared and ETA. This information is required in order that inward clearance may be arranged with government officials in ample time prior to vessel's arrival. In absence of this information, vessels will be subject to a fine.

SAFETY: The following is a condensation of the safety precautions that should be observed when the vessel is alongside the dock:

(i) All passageway doors leading to the cargo deck areas are to be kept closed during cargo-loading operations.

(ii) Ship's firefighting equipment must be kept ready at all times while berthed at Lagoven dock.

(iii) Smoking or carrying lighted or unlighted pipes, cigars or cigarettes on the weather decks of the vessel, or on the dock, is strictly prohibited under all circumstances. Masters are requested to instruct their crew not to throw lighted cigars or cigarettes over the side or out of the portholes.

(iv) An efficient watch must be maintained on deck and in the engine-room on the vessel, and a sufficient number of men must be on board at all times to move the vessel any time, in case such is required.

(v) If the galley is located near oil-handling operations of any nature, the skylight lids should be kept down and secured to prevent the galley being sprayed with oil in the event of a burst hose.

(vi) Ventilators in the vicinity should be turned away from the scene of operation.

LOADING: Monagas Crude is the only cargo available at the Puerto Ordaz Terminal. This crude has an API gravity of 11.9° to 12.5° F. (6.490 – 6.517 U.S. barrels per long ton). This cargo must be heated to approximately 140° F. in order to attain normal discharge rates.

Loading is accomplished through 3×10 in. hoses provided with 10 in., 150 lb. ASA flanges. Hoisting gear is provided for handling the hoses. A dock crew will connect the cargo hoses and disconnect them on completion of loading. Some adapters and other tools are available on dock. The oil will be loaded at an elevated temperature.

Precautions, as are common for any heavy oil, should be taken to ensure that no ballast water is left in any tank to be filled with this oil. If the cargo is contaminated with water, the water will not separate from the oil. The salt content of the oil will be raised approximately 10 lb. per 1,000 barrels for every 0.10% contamination by sea water.

All cargo compartments must be stripped dry. Cargo pipe-lines should be drained and/or purged of water.

There is no provision at the Puerto Ordaz Terminal for disposal of dirty ballast or tank washings. Tankers bound for Puerto Ordaz for loading must dispose of all dirty ballast and tank washings before entering the Orinoco River.

Prior to proceeding to sea, all Butterworth plates, cargo tank hatch covers and ullage plugs should be inspected to ensure against entry of salt water.

FRESH WATER: Fresh water is available ex-barge; cable advice of 24 hours is required. Dry provisions may be obtained in very limited quantities.

FUEL: Bunker fuels are available at all hours from Astilleros Orinoco C.A., who operate a floating storage and blending facility in the Orinoco River. Bunker fuels may be received at Lagoven dry dock while loading crude. Full cargoes can be made available.

TIME: GMT minus 4 hours.

MEDICAL: Medical assistance can usually be arranged, particularly in the case of an emergency.

REPAIRS: No major repair facilities are available. However, small repairs can be taken care of through local machine and electrical shops, and shore labour can be obtained if required.

SHIPMASTER'S REPORT: June 1987.

Location: The Terminal at Punta Cuchillo (Puerto Ordaz Terminal) lies some 192 miles up the Orinoco River.

Approaches: The buoyed channel was picked up at a distance of 15 miles, and we made contact with Barima Pilot 2 hours prior to arrival. Pilot Station instructed us to anchor 1 mile East of Buoy "0.1". No vessel may enter Boca Grande Channel without permission from the Pilot or local Radio Station "YVM". We anchored for a few hours and then proceeded up the dredged channel to Buoy 27.1 to the pilot station. The Pilot boarded from a fast launch using the pilot ladder on the starboard side. We continued up the river at 90 r.p.m. making an average speed of 10 knots. The Pilot was competent, but spoke little English. The vessel finally anchored off San Felix, 179 miles up river at 2324 hrs.

BA. Chart No. 3322 is not really adequate, so we obtained the local river charts through the Agent. In the lower reaches the leading lights are poor in daylight, being hard to pick out. The Boca Grande dredged channel is said to be 400 ft. wide, with red buoys with red lights marking the starboard side of the channel inwards and black buoys with green lights marking the port side. At times of dredging, buoys are displaced some 100 ft. outwards from the channel.

Communications: Throughout the river passage, the Radio Officer is in contact with "YVM" on the hour, giving the ship's position; they in return give positions of other ship movements, and navigational information with regards to shifting of buoys and where the dredger is working.

Berthing: We remained at anchor for 10 days, after which we picked up anchor in the afternoon and sailed the last 14 miles to the berth. It is of modern construction, fendered with wooden sheaving, with dolphins for the head and stern lines, which were long leads. Two tugs were used for mooring, tug ropes, close alongside "American style". The after tug was of conventional type, whilst the forward was a powerful flat bottom pusher type boat. The tugs kept the vessel in position whilst moorings were run.

The headlines were taken first, followed by the stern lines, run by a mooring boat, 3 lines at a time, springs by heaving line. Ending up with 3 lines and 2 springs each end. Ship's gangway used.

Cargo Operations: The independent surveyor spoke good English. Vessel loaded Morichal Crude (described as Asphalt) but not what I know as asphalt, being much thinner. API 12.5, loading temperature 132°F. To be kept at loading temperature. Flashpoint 192°F.

A loading rate of 2,467 t.p.h. was achieved using 2 × 10 in. hoses. Shore stop at end of loading.

On completion of cargo operations 3 hours should be allowed for paperwork. The cargo documentation is brought on board by the Agent,who signed for the Notes of Protest on behalf of the suppliers (Lagoven SA).

Officials: The vessel was boarded at San Felix anchorage by the Agent and 5 officials, and everything proceeded smoothly.

The following documents were required:

5 copies Crew List
3 copies Crew Personal Effects List
3 copies Bond List
Clearance from Last Port

The Ship's Certificates were inspected.

Departure: The Docking Pilot took the ship off the berth, using the same 2 tugs. Pilot departed once the ship was swung. We carried 3 river pilots, two were there for the journey only, although they all did a spell on the bridge. The vessel anchored at Buoy 44.3A for 5 hours, awaiting tide. The pilots left at Buoy 32.5. At 90 r.p.m. we made 8.5 knots until we were clear of the channel.

The maximum sailing draft allowed on this occasion was given as 38 ft. 6 in. (F.W.) which, to say the least, was optimistic!

AGENCY: Lagoven handles all papers and documentation connected with the ship's business. Lagoven will also help the ship's Master in providing required land transportation, limited provisions, or any other assistance that may be required for the operation of the ship's norma business. Alcoa will also assure that the ship's requirements are met in regard to Sanitary Inspection, Customs Inspection and Guardia Nacional.

Section E

VENALUM TERMINAL: 08.18 N. 62.50 W.

SHIPMASTER'S REPORT: February, 1981.

LOCATION: Mile 194 on Orinoco River. See "Matanzas – San Felix" in "Plan Section".

ENTRY: See "General, etc." under Orinoco River.

TUGS: Are summoned by Pilot when required.

BERTHING: Modern quay built on piles parallel to the bank with access by two piers, one at either end of the general cargo quay, allowing a one way system to be operated.

Length of general cargo quay – 215 m.
Length of bulk cargo quay – 85 m.
Depth alongside at lowest state of river – 12 m.

CRANES: The general cargo quay has two container cranes of 35 tonnes S.W.L. each. Aluminium ingots are the main cargo but other cargoes are handled. Container spreaders are available and also electro-magnets for use with the cranes.

BULK CARGO FACILITIES: Also see "Berthing".

The bulk cargo quay is served by an elevator with two suckers and is used exclusively for the discharge of alumina. An average rate of 200 tonnes/p.h. is claimed.

STEVEDORES: Working hours – 24 hours a day, 7 days a week.

AUTHORITY: Industrias Venezolanas de Aliminio C.A., Zona Industrial Matanzas, Puerto Ordaz – Edo Bolivar. *Tel:* 27177 (ext. 359 – 530). *Telex:* 86302, 86437. *Contact:* L. Rene Siampon, Traffic Chief.

Industrias Venezolanas de Aluminio C.A., Av. La Estancia, Edificio Torre Las Mercedes, Piso 09, Urbanizacion Chuao, Caracas 1060, Venezuela. *Telex:* 23444. *Contact:* Luis Suarez, Terminal Operator.

END OF ORINOCO RIVER SECTION

PERTIGALETE: 10.15 N. 64.34 W.

LOCATION: Situated in a sheltered bay about 2 miles East of the port of Guanta, or about 4 miles from the pilotage zone situated in the North.

PILOTAGE: The pilotage zone in Pozuelos Bay is the same as for Guanta, i.e. an area situated between the islands of Borracha and Chimana, in the Bay of Pozuelos (formerly called Bergantin Bay).

From the pilotage zone for the port of Guanta/Puerto La Cruz, the private pier Pertigalete is to be approached by sailing between the Isla de Plata and the island of Cachicamo. Pilotage is compulsory in and out and is performed by well-trained government Pilots. The navigation is considered very safe.

MAX. SIZE: The depth of water for ocean-going vessels alongside the Pier is 20 ft. (shore side) to 40 ft. (sea side).

TUGS: Available from Inward Clearance port at Guanta/Puerto la Cruz.

BERTHING: The private pier in Pertigalete for berthing ocean-going vessels is up to 150 m. (492 ft.) long. The apron is ample and allows easy manoeuvre of trucks with cement. On the same pier the cement factory is regularly receiving raw material and machinery, but the berthing is along the West side of the pier for coastal trade, so does not interfere with operations for ocean-going vessels. There are chutes, conveyor belts from the nearby silos. No cranes available.

TANKERS: Berth at private wharf at Pamatacualito, operated by Baroid de Venezuela SA. Length of berth 113.60 m., depth alongside 10 m.

LOADING: The cement factory is able to deliver to the pier 600 tonnes per hour (cement in bulk).

STEVEDORES: Loading operations are performed exclusively by the personnel of the cement factory. All costs, including overtime, are for account of the cement factory.

Under normal conditions on Saturday afternoon there is no work, but almost without exception the cement factory works overtime on Saturdays if by doing so the vessel can be despatched that day. On holidays, if circumstances call for urgent operation, the cement factory has the option to work overtime. Work on Sunday is prohibited.

OPERATOR: Private pier of C. A. Venezolana de Cementos is under the jurisdiction of Customs and Harbour Master of Guanta/Puerto La Cruz, Eastern Venezuela. All charter business and general administration is covered by Caracas Headquarters of C. A. Venezolana de Cementos.

Local address: Venezolana de Cementos, Apartado 4141, Puerto La Cruz. *Tel:* 95421-28. *Telex:* 81154 Vencemos.

AUTHORITY: Capitania de Puerto La Cruz, Paseo Colon, Sector Los Cocos, Puerto La Cruz, Venezuela. *Tel:* 660378. *Telex:* 81386. *Contact:* Captain Asisco Hernandez, Harbour Master.

AGENT: Servicios Navieros Tisa (Sernatica), P.O.Box 4356, Puerto La Cruz, Venezuela. Tel: (081) 95710-713. Telex: 81390. Fax: (081) 95708.

PUERTO CABELLO (inc. Borburata): 10.29 N. 68.01 W. (See Plan)

DOCUMENTS:

Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
3 Stores Lists.
3 Narcotics Drugs Lists.
2 Lists of Personal Effects.
1 Vaccination List.
Derat Certificate.

PILOTAGE: Pilotage is compulsory, but vessels must first anchor in roads 1 mile North of Punta Brava to await entry formalities and berthing orders.

MAX. SIZE: Bulk Cargo Pier: Up to 32 ft. draft.

Inner Port: Up to 28 ft. draft.

Also see "Tankers".

TUGS: The use of tug-boats within the port is compulsory both for entering and leaving port, as well as for manoeuvres in the port basin, for foreign flag ships over 300 tons.

BERTHING: The port entrance is 100 m. wide in direction West to East. Berth No. 1 and half of Berth No. 2 are along the same entrance channel, where ships are berthed only as an exception or when the port is rather congested. The total length of the North (main) Pier for the berthing of ocean-going vessels is 1,025 m., room enough for 6 to 8 vessels. For administrative reasons the pier is divided into 8 berths of about 128 m. each. Between Berths No. 2 and 3, the pier turns Southwards. Along the pier there are warehouses which under normal circumstances provide sufficient indoor space.

Along the East Pier, of 350 m. length, there are no warehouses. This pier gives berthing facilities to 3 or 4 middle-sized vessels.

Along the South Pier, of 500 m. length, there are 2 warehouses. This pier is exclusively used for coastwise shipping, fishery and small craft in general.

The dredged channel along the East Pier is only 80 m. wide. This is the only channel which connects the main basin of the port with the South basin of the port, the latter served through the South Pier.

Ro-Ro facilities available.

BULK HANDLING FACILITIES: 400 m. long new pier, designed exclusively for the handling of bulk cargoes.

This bulk cargo pier has an apron of about 25 m. and allows ships with a draft of 10 m. at any time.

Ships moored along this new pier are not able to take water there, but have to be shifted to the general cargo piers in the port of Puerto Cabello.

There is no telephone installation on the new pier.

Tug-boat service and assistance of Pilots is compulsory to negotiate the distance to and from the bulk cargo pier.

General cargo is not allowed to be handled at this pier. There are no cargo handling facilities whatsoever and no kind of rolling equipment either. All the vessels, unless they have up-to-date discharging equipment of their own, have to provide derricks of minimum 5 tons capacity to support the SKT discharging equipment of receivers. The cargo is discharged in bulk cargo trucks, fully closed and with only rather narrow manholes for the SKT arm.

The new grain terminal has been opened. The wharf is 400 m. long and allows 2 vessels to berth. Max. depth 30 ft. Average discharge rate 1,500 tons per day.

TANKERS: *Borburata:* The Maraven Terminal lies about 2 miles East of the port entrance.

Berth No.	*Max. length*	*Max. beam*	*Max. draft*
1	400 ft.	—	20 ft.
2	575 ft.	72 ft.	31 ft.

No. 1 Berth is used for bunkering only.

No. 2 Berth is used for the discharge of refined products and bulk chemicals. It is fitted with 4×8 in. Chicksans and a range of hoses from 4 in. to 8 in.

A Pilot is compulsory, and boards at Puerto Cabello. If the vessel is cleared outwards at Borburata, the Pilot may return to the pilot station by road.

Berthing and unberthing in daylight only.

Also see "Shipmaster's Report".

Lagoven Terminal: The buoy mooring is used for the discharge of petroleum products. Max. length 198 m. Max. beam 28 m. Max. draft 34 ft., will be increased to 38 ft. Max. Tonnage 40,000 d.w.t. Vessels berth using 5 shackles on the port anchor, and 6 stern lines to 3 mooring buoys.

Terminal Marino Holanda: Consists of 3 buoys situated in a depth of 45 ft. near Guaguaza Lighthouse. Used for loading/discharge of Chemicals.

STEVEDORES: *Straight Time:* Monday to Friday: 0700 – 1100 hrs. and 1300 – 1700 hrs.

Overtime: Monday to Friday: 1800 – 2300 hrs. Normally overtime beyond 2300 hours is not permitted.

Relief Gangs: Obtainable, if there are not too many ships working in the port at a time, from 1100 – 1300 hrs. and 1700 – 1800 hrs.

Work on Sunday: Not permitted except for passenger vessels, and considered as such are those carrying more than 60 passengers, and with a medical doctor on board.

Saturday Afternoon Work: Not permitted. But if a vessel can terminate operation and sail with a maximum of 3 additional hours' work, a special permit can be obtained from Customs and Port Authorities. In such case, the additional working hours are considered straight time work.

FRESH WATER: Available by tanker trucks only.

The drinking water in Puerto Cabello is tropical treated, well-filtered and wholesome.

Every vessel of over 600 nett tons calling at Puerto Cabello, and other ports in Venezuela, should arrange to take water only at Puerto Cabello in order to avoid double water dues.

OPENING/CLOSING HATCHES: Is not performed by the National Port Services, but instead either the ship's crew or hired assistance labour must be used. Recommended that ship's crew open and close hatches.

WATCHMEN: A very careful watch must be maintained in and around the accommodation as ships' safes and cabins have been broken into.

REPAIRS: The adjacent Naval Yard, the entrance to which is within the main port, opposite the North Pier, is equipped for minor repairs both on engine and hull. For emergency purposes, the dry dock could be used. Its capacity is for ships up to 30,000 to 35,000 tons. All repairs on the hull are effected by a special crew transferred from the Naval Yard.

At the dry dock there is 1 crane of 15 tons capacity. Within the Naval Yard there are 2 slipways for ships of 125 ft. length and 210 ft. length max. respectively.

Venezuelan Navy ships always have priority.

REGULATIONS: Port regulations referring to contamination of the port waters will be strictly applied and fines for contravention will be imposed.

No maintenance to bridgehouse, hull or deck should be carried out whilst in port unless special permit issued by the Port Captain has been obtained.

SHIPMASTER'S REPORT: November 1984 (see "Plans").
Vessel: LOA 170 m., beam 26 m.
Berth: Maraven Berth at Borburata.
Pilot: Pilot boards off Puerto Cabello during daylight hours only.
Max. Draft: 32 ft.
Tugs: When berthing, 2 tugs are made fast on the Main Deck fore and aft.

When unberthing 2 tugs are used, 1 tug tows aft and the other stands by forward.
Charts: BA 1523 and 1966.

SHIPMASTER'S REPORT: October 1985.

Depth within the port received from Agent:

Entrance to the Harbour	31 ft. 6 in.

Pier No. 37	27 ft. 0 in.
Pier Nos. 38 and 39	30 ft. 0 in.
Pier Nos. 40, 41 and 42	32 ft. 0 in.

PUERTO DE HIERRO: 10.38 N. 62.05 W.

DOCUMENTS:
Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
6 Stores Lists.
6 Narcotic Drugs Lists.
2 Health Declarations (forms provided and filled by doctor on arrival).
Derat Certificate.

PILOTAGE: Pilot boards at Sea Buoy, Lat. 10° 37′ N., Long. 62° 06′ W. If no pilot boat meets vessel on arrival, ship must anchor to wait orders. Send 7 day, 48 and 24 hour ETAs to cable address "Transterm Guiria". Vessels should anchor in the vicinity of Sea Buoy. No radio-telephone available.
ANCHORAGE: Vicinity of Sea Buoy. Good holding ground.
RESTRICTIONS: Vessels may have to wait at anchorage until slack water for docking when tide/current is strong.
MAX. SIZE: Dock, East berth: 30 ft. at LW; 33 ft. at HW; 690 ft. length, 90 ft. beam.

Dock, West berth: 19 ft. at LW; 32 ft. at HW; 600 ft. length, 60 ft. beam. Also see "Berthing".
HEALTH: Doctor boards at berth and grants Pratique. Any suspected disease or fever to be reported at that time. Vessels arriving from a Venezuelan port do not require Pratique.
RADIO: La Guaira, Venezuela.
TUGS: None available.
BERTHING: Berthing at times limited to slack water period depending on strength of tides. Pilot will advise.
Bauxite Terminal: Max. draft 37 ft. Depth alongside 40 ft. Max. 40,000 d.w.t. Loading rate 3,000 t.p.h.
STEVEDORES: Bulk cargoes: discharging rate 700 – 800 t.p.h., loading rate 800 – 1,000 t.p.h. No facilities available for handling general cargo.
MEDICAL: No notice required. Venezuelan Navy Hospital with limited medical assistance.
TANKERS: No oil carriers.
DENSITY: LW – 1020. HW – 1023.
FRESH WATER: Available in limited quantities at berth. Rate of delivery 30 t.p.h.
FUEL: In an emergency. Diesel fuel medium, specific gravity at 60°F 0.85, API gravity at 60°F 35, viscosity SSU at 100°F 37, viscosity engler at 20°C 1.40.
CUSTOMS ALLOWANCES: Two cartons of 200 cigarettes each or equivalent in tobacco. Two 0.75 litre bottles.
IDENTIFICATION CARDS: Issued locally by Navy on arrival.
REPAIRS: None. Small company workshop.
CONSULS: None.
AIRPORT: Nearest airport (1 hour voyage on launch) is Guiria with 2 weekly flights to Caracas and the same number to Port of Spain, Trinidad. Next nearest (1 hour launch plus 2 hours car) is Carupano with 4 daily flights to Caracas.
TIME: GMT minus 4 hours all year round.
HOLIDAYS: Cargo worked 24 hours a day, 365 days a year.

GENERAL: The whole of Puerto de Hierro is a Venezuelan Navy Supply Base. The dock and cargo installations are operated by Puerto de Hierro, S.A., a subsidiary of Caribbean Steamship Company, S.A. Only bulk cargoes transhipped by Caribbean Steamship are handled.
DEVELOPMENTS: Possibility of increasing draft to 42 ft. at loading berth, and to 30 ft. at discharging berth.
AUTHORITY: Puerto de Hierro, S.A.

PUERTO LA CRUZ, (Puerto La Cruz Terminal): 10.13 N. 64.38 W. **(See Plan)**

FLAG: Venezuelan flag must be displayed from the foremast when entering Pozuelos Bay as well as in docking operations regardless of the hour. At all other times the Venezuelan flag must be displayed between sunrise and sunset.
LOCATION: Puerto La Cruz located on Pozuelos Bay on the N.E. coast of Venezuela. Its harbour is well protected by numerous islands against sea currents. The hurricane path is several hundred miles to the North and has never affected the flow of navigation in the Puerto La Cruz area.

The lighthouse marking the entrance to Pozuelos Bay is located: Lat. 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.
DOCUMENTS: Arrival Clearance is effected on board vessel shortly after docking by Government Officials and a representative of the Company.

The following documents are required and should be prepared prior to arrival:
Ship's Register.
Ballast Manifest (1 copy).
Crew List (6 copies).
Passenger and Baggage List, if any (5 copies).
List of Passengers in Transit, if any (5 copies).
List of Personal Effects (4 copies).
Stores List* (5 copies).
List of Slop Chests (4 copies).
Sailing Permit issued by Marine Authority at last port of call (Original).

*Stores List should indicate separately all deck, engine and cabin stores.
PILOTAGE: The use of Government Pilots is compulsory for all vessels docking and undocking. The Company will arrange for this service at all times. If it becomes necessary for the Master of the vessel to disregard Pilot's orders in order to ensure safety of the ship a written report from the Master shall be submitted promptly to the Government Port Captain in Spanish. Meneven will assist in translation, when necessary.

The zone for Pilot to board or to anchor awaiting Pilot is delineated by the following 3 lines: South by parallel 10° 15′ N., East by meridian 64° 40′ W., and West by an imaginary line from Punta Puinare on Isla Chimana del Oeste to the North point of Morro de Barcelona.

When ready to dock, a Pilot will be despatched by launch to ship.
RESTRICTIONS: No restrictions on arrival or sailing time.
MAX. SIZE: No limitation is placed on width of tankers. Ships up to 1,000 ft. in length can be turned around in the inner harbour area. Max. safe draft alongside (Berth No. 5) is 55 ft. (Also see "Berthing".)
HEALTH: In theory the Government Port Doctor is to board each incoming vessel and board only outgoing vessels which carry passengers. In practice, however, the doctor boards at his discretion.

Ships cleared between the hours of 1700 – 0800. Mondays through Fridays and all day Saturday, Sundays and holidays are charged by Immigration Service for the issuance of shore leave passes. There is no charge for this service from 0800 – 1700 hrs. Mondays through Fridays. Transportation and immigration clearance fees on movemen of seamen are billed at cost.
RADIO: Masters are requested to advise Corpoven Puerto La Cruz by radio 72 hours in advance of estimated arrival giving vessel's name, date and hour of arrival, bunkers, name of Master, port of departure, draft (arrival), Venezuelan gross tonnage, flag of ship. Vessels may contact the terminal by radio-telephone on 2182 kHz and VHF Channe 16. There is standby attention 24 hours a day. The terminal also has the frequencies 2080, 2120, 2638, 2738 and VHF Channel 13.

Ship-to-shore radios are installed on the oil dock and on both tugs. A 350-watt AM transmitter-receiver is monitored 24 hours a day.
TUGS: The use of 2 tugs is compulsory for all vessels over 145 m. LOA. The Company has available a first-class diesel-electric tug of 1,600 h.p. and a contract tug of 2,100 h.p.
BERTHING: The loading facilities consist of 6 berths. Products availabl and safe draft are as follows:

	Berth 1	*2*	*3*	*4*	*5*	*6**
Crudes	×	×	×	×	×	×
Heavy fuel oil					×	
Refined products		×	×	×		×
LPG		×				
Bunker "C" fuel	×	×	×	×	×	
Diesel fuel	×	×	×	×	×	
Intermediate fuels	×	×	×	×	×	
Fresh water	×	×	×	×	×	×
Max. safe draft (ft.)	38	38	38	55	55	40
Max. d.w.t. (thous.)	45	45	45	110	110	60
Max. LOA (ft.)	750	750	750	950	950	750

*El Chaure Terminal – Now Pier No. 6. Also see "El Chaure".

Upon arrival at dock the following rules must be observed:
(a) Masters must ensure that mooring lines are properly tende during the discharge of ballast and loading of cargo, and tha sufficient personnel are on board at all times to handle same Discharging or loading will be temporarily suspended upo infringement of this regulation.

(b) Masters are requested to remove the blank flanges from their vessel's loading manifold before docking, so as to expedite the connecting of the shore hoses by company personnel. Vessels using Berth No. 5 are also requested to have their derrick and gangway ready for use.
Note: Vessels normally dock with starboard side to dock, unless otherwise advised.

(c) While docked, discharge of sea water, hot water or steam on dockside of ship is prohibited. Hot water or steam may activate the automatic sprinkler system as well as damage piping located under the dock surface.

(d) Rat-guards must be placed on all ropes connected with the shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officers' mess-room for Venezuelan National Guard personnel who may be assigned to the vessel during stay in port.

LOADING: After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions as to grade or grades of cargo, loading rates, information on size of hoses and lines, and other information pertinent to the loading of the vessel.

During loading operations, company employees are on watch to administer to the needs of each vessel.

Upon termination of loading cargo of crude or fuel oil, hoses are normally displaced with air at controlled rates prior to disconnecting. If the ship's officers request that the alternate procedure of draining hoses be effected, shore personnel will be happy to comply provided the following steps are observed by ship's officers:

1. Advice be received prior to termination of loading cargo.
2. Ship's receptacles be situated to receive oil drained on board. It should be noted that heavy fines are imposed for spills or overflows which contaminate the bay.

Shortly after completion of loading, company personnel together with ship's officer will take ship's ullages and, later, deliver cargo and sailing papers to an officer of the vessel.

Ships must vacate berth upon completion of loading and await papers at anchorage if the berth is needed for another vessel. The Dock Supervisor on duty will advise ship's officer on this matter.

BALLAST: Although climatic conditions in Puerto La Cruz are relatively mild, vessels should arrive with sufficient ballast to permit safe handling. Venezuelan regulations strictly prohibit the pumping overboard of dirty ballast in territorial waters. All ballast must be pumped ashore with the exception of vessels especially equipped with clean segregated systems which are reserved for ballast only. Vessels so equipped will be permitted to pump overboard after first being inspected and approved by shore personnel. Heavy fines are imposed for pollution of waters and industrial fishermen are quick to report any infringement. Max. discharge pressure to shore installations is 90 p.s.i. through the 16 in. line which dumps into ballast lakes approximately 300 m. South of dock.

No vessel will be allowed to discharge ballast if any of the following conditions exist:

(a) Last previous cargo was sour crude/product and/or could result in unpleasantness to area inhabitants.

(b) Ballast has lead gasoline, naphtha and/or other volatile residue which may cause an explosive atmosphere at the open ballast pit.

(c) Last previous cargo had to be heated and/or pour point was higher than 80°F. This will be verified by the laboratory.

MEDICAL: All requests for medical or dental treatment must be accompanied by a written request from the Master to the vessel's Agent.

FRESH WATER: Fresh chlorinated water is available at an average rate of approximately 2 t.p.h. Total volume of water that can be supplied during the normal period alongside averages about 150 tons. As water is not held in special reserve for vessels' requirements but supplied from terminal water system, availability may be limited dependent on time of year and other conditions.

FUEL: The terminal is not a general bunker station. Only ships loading petroleum or its products may take bunkers.

Bunker "C", heavy diesel fuel and complete range of intermediate fuels are available in reasonable quantities. Delivery rates to the ships are approximately as follows: Bunker "C", 200 t.p.h.; heavy diesel, 150 t.p.h.; intermediate fuels, 150 t.p.h.

Bunkers are delivered concurrent with the cargo and should be taken as soon as clearance is granted.

Meters are installed on all bunker systems and are calibrated in net barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines will only be opened and closed upon advice from the ship's personnel.

Lubricants and gasoil are available through the vessel's Agent.

CUSTOMS: Crew members should be warned against taking knives or other lethal weapons ashore, as this is strictly prohibited. All firearms and ammunition must be noted on stores list. They cannot exceed 1 per officer and 18 cartridges per gun. No arms may be carried while ship is in Venezuelan waters or tied up at dock. Contraband of any description will be confiscated. Each man is allowed 1 package of cigarettes on his person and this package must be opened. No liquor is to be taken ashore. It is prohibited to carry liquor from shore to ship without authorisation from Master of vessel. It is further strictly prohibited to consume liquor in dock area.

It is normally forbidden to take photographic cameras ashore. However, upon written request to the National Guard contingent on the oil dock, special permission may be obtained. This is subject to 2 limitations: (1) that the camera is returned to the ship; (2) that no photographs are taken of the petroleum installations.

IDENTITY CARDS: Passes for shore leave are issued by the officials of the "Capitania de Puerto", who board with the Customs authorities upon the vessel's arrival at dock. These passes are valid for the duration of the vessel's stay in port and must be returned before sailing to the guard assigned to the vessel.

In order to comply with Immigration Regulations, crews should be carefully checked before sailing, and any missing seamen reported to the vessel's Agent. Crew members left behind when the vessel sails will be held in custody until deported at the vessel's expense.

CONSULS: The following foreign countries have consular offices in the vicinity of Puerto La Cruz:

Belgium
Brazil
Colombia
Denmark
France
Great Britain
Italy
Netherlands
Norway
Sweden

Vessel's Agent should be appraised of vessel's consular requirements promptly upon docking.

REPAIRS: Request for repair work by local contractors must be accompanied by a written request from the Master of the vessel.

REPATRIATION: Seamen discharged from hospital for transfer to another port, seamen arriving from another port or those being repatriated are handled by the vessel's Agent, who must comply with all Venezuelan Regulations.

In the case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances if any, and instructions for repatriation. Venezuelan regulations, at all times hold the vessel responsible for a seaman during his stay in the country. Close contact is maintained by radio with ship owners regarding disposition of their seamen.

TIME: GMT minus 4 hours all year round.

REGULATIONS:

Excessive Smoke. It is absolutely prohibited to exhaust heavy smoke through a ship's funnel while tied up at the Company's docks. It is also prohibited to blow boiler tubes. Failure to comply with this regulation will result in any or all of the following actions:

1. Vessel's discharge of ballast or loading of crude or products will be immediately shut down.
2. Vessel will be subject to fine from authorities.
3. Vessel may be removed from dock.
4. Ship's Agent will be advised of infractions of this regulation.
5. Fines, time lost, and other related expenses will be charged against the vessel.

Pollution. Venezuelan laws are very strict on this subject and local authorities quickly enforce existing statutes. For this reason each Master is handed a circular that emphasises the necessity of complying with federal and local laws and customs.

The spilling or discharge of dirty ballast, crude oil or petroleum products into coastal waters is defined as pollution, as is also the throwing overboard of garbage, trash or other unwanted objects while the vessel is at anchor or dockside. Prior to the start of loading operations all discharge valves, bilges and scuppers must be closed and strict vigilance exercised during deballasting and loading operations.

When a spill does occur, the Master, Government officials and a company representative evaluate the quantity and submit a report to the Government Petroleum Inspector. This report becomes the basis for a federal fine that is practically incontestable. An additional expense occurs when local authorities require assistance in cleaning beaches and shorelines after a major spill and can pinpoint the responsible vessel or source.

TONNAGE CERTIFICATE: Due to reciprocal agreements between Venezuela and the following countries, ships flying the flag of any of the below-named countries are exempted from Arqueo compliance and payment of fees: Denmark, Great Britain, France, Germany F.R., Netherlands, Norway, Portugal, Sweden, United States.

Ships bearing the flag of any other nation shall require a Venezuelan Arqueo Certificate. The cost of measuring is contingent on the size and tonnage of vessel. The certificate is usually issued after the ship sails from port. It is then sent to the marine department of the Owners of the vessel by airmail.

BANKS: Banco Royal Venezolano. Tel: (081) 691921.

Cash: The local currency is the Bolivar.

Foreign currency may be exchanged at local banks. Local banks are open Monday to Friday from 0830 – 1130 hrs. and from 1400 – 1630 hrs., except holidays.

EMERGENCY CO-ORDINATION CENTRE: Seccion de Seguridad, Busqueda y Salvamento Maritimo. Telex: 31154. Tel: (02) 513395, 512156.

STORING: See "Prelims".

1. Vessel can be stored by truck.
2. No need for barge storing while ship is alongside.
3. Trucks can proceed to the berth gate only. Distance from gate to ships berth 200 ft.
4. Fork lift trucks cannot be permitted inside the berth while the ship is either deballasting or loading.

No fork lift trucks whatsoever permitted alongside LPG ships.

5. No Customs regulations in force regarding storing.
6. Local riggers can be employed to assist with storing through ship's local Agent.

SURVEYORS: 1. Saybolt, Caleb Brett, Chass Martin, AIVEPET cargo inspectors available at the Terminal Office.

2. Lloyd's Register, American Bureau, Bureau Veritas, P & I available locally or from Caracas via the ship's agent.

TELEPHONES: There is a telephone booth on each dock. The supervisor on duty may be contacted by calling number 308 or 906.

GENERAL:

No charts or sailing directions are available in the terminal. Same should be forwarded by airmail to the vessel's Agent for delivery to the ship.

All ship requirements such as chandlery supplies, mail, cash advances, medical, dental, consular requirements, repair work, laundry service, bonded stores, transportation etc. should be obtained through the vessel's Agent.

Local authorities strictly forbid the throwing overboard of garbage, trash or any objects while anchored or docked, and they also forbid the exchange of articles between crew members and the occupants of adjacent small craft.

Corpoven as operator of the Terminal charges a fixed fee for General Services such as supervising the docking and undocking manoeuvres, hose connections, loading and documents required by the cargo buyers or consignee. Handling of Telexes, documents and air postage will be charged at cost.

Offices of Corpoven loading and marine personnel are located on the first floor of the building between berths Nos. 1 and 2. Any matter concerning loading, bunkering, is handled through this office, which is open 24 hours of every day. On the ground floor of this same building is the Documentation Section.

SHIPMASTER'S REPORT: February 1979.

Documents:

3 Copies of List of Passengers or nil passengers.

3 copies of a letter by Master stating that vessel was diverted after sailing from previous port and explaining why clearance destination is wrong.

3 copies of cable ordering diversion.

Anchorages: Good holding ground in N.W. part of anchorage area, thick mud.

Restrictions: Maximum height of manifold about 18.95 m., so necessary for vessels of 140,000 d.w.t. to load some cargo before completion of ballast.

Max. Size: If draft less than 30 ft. on arrival vessel can approach berth direct from West, and use 2 tugs. If more than 30 ft. draft then vessel must use channel to the North of berth and use 3 or 4 tugs. This for vessels of 140,000 d.w.t.

VHF: Tankers call "Corpoven" on Channel 16, then change to Channel 12 or 13. Also call Agents on Channel 16.

Berthing: Back springs to bollards on jetty. Breasts and heads and stern lines to hooks on dolphins. These hooks are secured to bollards by wire of circumference 19 cm. or diameter 6 cm.

Consuls: No U.S. Consul available and Agents will give Master letter to this effect for U.S. Immigration.

General: Ballast, if clean, may be pumped overside. If dirty, advise Meneven prior to arrival of quantities to be pumped ashore. They will also accept slops if not sour crude or smelling too badly.

Notice to Shipmasters:

We wish to advise the Masters of all vessels calling at this port that it is strictly prohibited to take photographs.

It is likewise contrary to regulations to carry ashore a camera. Same is liable to be confiscated by the Government Authorities.

Signed S. A. Corpoven.

AGENCY:
All incoming ships to lift cargoes at this Terminal must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all ships disbursements during the port stay.

AUTHORITY: Capitan de Puerto, Capitania de Puerto, Guanta, Puerto La Cruz. *Tel:* 081-660534, 081-660367. *Telex:* Capipuerto 81386.

OPERATOR: Corpoven S.A.

PUERTO SUCRE (Cumana): 10.28 N. 64.12 W.

(See Plan)

SHIPMASTER'S REPORT: August 1980.

DOCUMENTS: As for Guanta. Entry formalities, normally after berthing but if at anchor will board about 0900 hrs.

PILOTAGE: Pilotage is compulsory for berthing and unberthing. Pilot will anchor vessel if required.

APPROACHES: Approaching Puerto Sucre at night, the lights of the city are visible for many miles, but the light indicated at the end of the pier is non-existent, also the water tower marked on the chart with red lights is non-existent.

Two vessels were alongside when this vessel approached so the pier was clearly visible with the lights of the ships, otherwise there are no lights on the pier.

The pier indicated on the chart just North of the main pier is no longer there although at low water parts of the supports are still visible. Further North there are 3 piers, approximately half cable long, used by fishing boats. They start approximately 1 cable North and 1 cable between each, also there are car ferry terminals before the mouth of the river South of Pta. Carenero. This river mouth is undergoing extensive work which is apparently to be a fishing harbour.

A tall white building is situated in approximate position Lat. 10° 27.8′ N., Long. 64° 11.1′ W., it has a fixed red light and an occulting red light at night. A silo is situated in approximate position Lat. 10° 26.7′ N., Long. 64° 11.25′ W., this has 3 red lights in a horizontal line at night. There is an air light on the control tower at the airport, alternating white and green every 5 seconds, but this is only lit when an aircraft is due.

ANCHORAGE: Anchorage is limited in pilotage area "A". This vessel anchored 3 cables off the shore line and 3 cables off the pier in 30 fathoms of water, vessels also anchor 2.5 to 3 miles S.W. of pier in 25 fathoms, however Pilots prefer vessels to use nearer anchorage.

VHF: Pilots occasionally on Channel 16, but very little English spoken. The ship's chandler has a VHF set and can be very helpful as he speaks very good English.

TUGS: One tug is available to assist with berthing/unberthing.

BERTHING: Vessels use both sides of the pier and Ro/Ro vessels tie up stern to the head of the pier. Soundings were taken around the pier (See "Plan").

CARGO HANDLING FACILITIES: There are numerous fork lift trucks of all sizes, 4 mobile cranes and some small towing vehicles. This vessel had a cargo of bagged fertiliser which was discharged onto lorries and there was no shortage of these, even when working 2 ships with 10 gangs no delays were caused due to lack of transport. Ship's gear is used at all times but the mobile cranes can be hired if required.

MEDICAL: Services available.

FRESH WATER: Available using ship's hoses.

FUEL: Diesel oil is available but difficult to obtain as it has to be brought from Puerto la Cruz by road tankers.

WATCHMEN: Not available, one member of National Guard on board, requires a cabin if one available. This vessel had no spare accommodation but the guard must still be fed.

SHORE LEAVE: Permitted, but shore passes must be carried and passes returned when vessel leaves.

GENERAL: *Provisions and Laundry:* Available.
Garbage Disposal: No facilities.

PUNTA CARDON: 11.38 N. 70.14 W.

PORT LIMITS: The area enclosed by the parallels of Lat. 11° 38′ 00″ N. and Lat. 11° 36′ 38″ N. and the meridian of Long. 70° 14′ 25″ W.

FLAG: It is compulsory to display the Venezuelan flag at the foremast starboard yardarm during daylight hours for ships anchored or berthed in Venezuelan waters. The ship's Services will provide a Venezuelan flag at any time for ship's account.

LOCATION: The port of Punta Cardon is located on the Gulf of Venezuela, on S.W. coast of Paraguana Peninsula, Venezuela. Punta Cardon is an open sea port with practically no swell, due to the Easterly winds prevailing almost all year from the shore side.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA at least 3 days before arrival at Punta Cardon.

2. If a ship, originally cleared for another port (including any other Venezuelan port) is diverted at sea to Punta Cardon, certain information must be radioed prior to arrival in order to avoid heavy fine(s) and/or delays.

3. No dirty ballast may be pumped overside in port in Venezuelan coastal waters. Ballast disposal facilities are available at Punta Cardon Terminal.

4. The use of Venezuelan Government Pilots is compulsory for berthing and unberthing.

5. In addition to other clearance documents, 5 copies of an itemised list of articles in the ship's slop chest must be presented to the authorities on arrival.

6. The emergency fire signal is 5 long blasts on the ship's whistle or siren. No other signal is to be given in cases of emergency.

7. Rat-guards must be placed on all mooring lines.

DOCUMENTS: Clearance (inward Pratique). Inward Clearance is effected on board by Government Port and Customs Officials and a representative of the Oil Movements Department immediately after berthing. The following documents must be ready on arrival:

(1) In ballast:

(a) Clearance from Last Port (1 copy).

(b) Ballast Manifest from Last Port (1 copy).

(c) Crew List (7 copies).

(d) Steward's Stores List (all foodstuff, liquors, tobacco, etc.), to be declared on a separate and independent sheet (5 copies, see note (2)).

(e) Deck and Engine Stores and Spare Parts List (paints, varnishes, chains, ropes, etc.), to be declared on a separate and independent sheet (5 copies, see note (2)).

(f) Medicine Chest Lists (including narcotics accurately itemised) (5 copies).

(g) Slop Chest Lists (5 copies).

(h) Personal Effects Lists (4 copies).

(i) Sailing Permit (issued by Maritime Authority at Last Port of call) (1 copy).

(j) Passenger and Baggage Lists (if any) (2 copies).

(k) List of Passengers in transit (if any) (4 copies).

(2) Both the Steward's Stores List, the Deck and Engine Stores and Spare Parts List may be prepared on board prior to the vessel's arrival. The Steward's Stores List must be comprehensive and accurate especially with regard to cigarettes and liquor. All new clothing, gifts souvenirs, etc. are to be clearly marked. All personal effects of the crew are to be collected and placed in the Bonded Stores Locker, ready for sealing by the Customs Authorities on arrival.

Although vessels proceed directly to Punta Cardon, clearance documents should be made out showing the port as "Las Piedras Paraguana (Punta Cardon)". Failure to comply with this requirement may result in fines up to a max. of U.S. $600.00.

(3) Clearance documents out-bound: Outward Clearance and cargo documents are delivered on board by the Ship's Services Representative.

In the event that the berth is required by another vessel, a vessel having completed loading may be requested to vacate the berth promptly and proceed to anchorage to await cargo documents and clearance.

PILOTAGE: Pilots are employees of Venezuelan Government and pilotage is compulsory for vessels entering or leaving harbour. The Ship's Services Office will arrange for this service at any time. If it becomes necessary for Master of the vessel to disregard Pilot's orders in order to ensure safety to the ship, the Master must promptly submit a written report to the Harbour Master on the matter, via the Ship's Services Representative, stating reason for this action.

Pilots sustaining injuries: It is compulsory to submit a full report in cases where a Pilot is injured while performing duties on board vessels

Agent's Notice to Masters: Dated July 1986.
Subject: Pilot Service from/to Punta Cardon

Harbour Master's Office has issued new regulations. Here below are mentioned regulations:

1. Pilot service from Punta Cardon is only compulsory when Masters are crossing the channel of Lake Maracaibo for the first time. If this is not the case, the Pilot should be then embarked at San Carlos.
2. Upon your request this Pilot service can be arranged by the Agency.
3. On departure, Pilot service to Punta Cardon is not required.
4. If Official Pilot is unable to disembark at San Carlos due to difficulties on board or by *force majeure,* or if you decide to change the instructions given to the Agency with regard to Pilot disembarking San Carlos, a letter addressed to the Harbour Master stating your reasons should be handed to the Pilot before he disembarks in Cardon.

Master's Note: With regard to the above, on reflection the content of the letter from Agent may not be too clear to those not familiar with this area. At risk of stating the obvious, what this Notice is saying is that pilotage inwards from the "Em" Buoy, to the San Carlos Pilot Station is only necessary on the Master's first visit to a Lake Maracaibo Port. Thereafter he may navigate the Outer Channel without a Pilot. The Outer Channel Pilot is taken at Punta Cardon on the inward passage, and disembarked there on the outward passage, should a Pilot be so required. SotR.

ANCHORAGE: The anchorage at Cardon roads within a radius of 2 miles from end of jetties has depths varying from 54 ft. to 100 ft. (LWS) and a bottom consisting of mud with some patches of small stones, sand and shells. There are no known obstructions from West to N.W. of the Piers and there is ample water for a clear approach when coming from West and N.W., but the anchorage is limited on the South by a sandspit projecting 1 mile S.W. off Punta Cardon Cape. A beacon is located on this Sandspit in position: Lat. 11° 36′ 03.4″ N., Long. 70° 14′ 15.6″ W. Fl.R. ev. 1 sec. 17 ft. 5 miles (U).

APPROACHES: Restricted Fishing Area. Masters when approaching coast should keep a particularly sharp lookout for fishing boats, nets and small craft.

Mechanically propelled vessels drawing more than 5 ft. are prohibited from navigating in the restricted fishing area that extends off Paraguana Peninsular from Punta Macolla, Lat. 12° 05′ 32″ N., Long. 70° 12′ 55″ W. to Punta Estanques (Los Taques), Lat. 11° 48′ 45″ N., Long. 70° 16′ 45″ W., and a line connecting the position indicated below:

(a) Lat. 11° 37′ 12″ N., Long. 70° 14′ 25″ W.
(b) Lat. 11° 37′ 30″ N., Long. 70° 19′ 23″ W.
(c) Lat. 11° 37′ 36″ N., Long. 70° 21′ 50″ W.

Navigation Aids

A light is located on the outer radio tower.

Position: Lat. 11° 38′ 03″ N., Long. 70° 13′ 56.2″ W.

Characteristics: Fl. White and Red, ev. 10 sec. Height 205 ft. (62.5 m.) 21 miles (U).

Sectors: Red 340° – 009°, White 009° – 202°, Eclipsed 189° – 340°. (All bearings are true from seaward).

2 large chimneys are very conspicuous in the Refinery Area. The North chimney is situated Lat. 11° 37′ 54.6″ N., Long. 70° 13′ 10.8″ W. Height above MLWS 399.6 ft. (121.8 m). The South chimney is situated Lat. 11° 37′ 52.9″ N., Long. 70° 13′ 09.8″ W. Height above MLWS 396.3 ft. (120.8 m.). For daylight distinguishing marks, both are painted with broad red and white bands and at night both have a string of all round fixed red lights at the top and the same at the middle height.

MAX. SIZE:

	Jetty/Berth		*Depth LWS* (ft. in.)	*Draft* (ft. in.)	*Length* (ft.)	*Displac.* (tons)
No. 1	North Outer	(3)	42 00	39 06	710	25,000
	South Outer	(4)	42 06	40 00	710	25,000

No. 4	North Outer	(3)	47 06	45 00	900	54,000
	South Outer	(4)	47 06	45 00	900	54,000

TUGS: 2 tugs of 2,700 h.p. are available, and their assistance is compulsory for berthing. Number, disposition and manoeuvres of tugboats are directed by the Pilot. The following tug signals in practice in this port are listed below for Master's guidance:

Short blasts are used to give orders to the tug situated ahead.

Long blasts are used to give orders to the tug situated aft.

1 blast means *push* tug engine, ahead (if it is stopped); *stop* tug engine, stop (if it is moving).

2 blasts, *pull* tug engine, astern.

1 long, 1 short, 1 long and 1 short whistle, "Calling tugs".

2 long and 2 short whistles, "Tugs Dismissed".

RADIO: Arrival messages (ETA). Master of vessels bound for or diverted to Cardon are requested to radio the following information to "Maraven. Caracas" via La Guaira Radio, call sign YVG, 72 hours in advance of estimated arrival, or as soon as possible.

(a) Name of vessel
(b) Flag
(c) ETA
(d) Last Port.
(e) Master's name
(f) Number of crew and passengers
(g) Port for which the vessel is cleared
(h) Quantity of clean ballast on board
(i) All requirements

This information is of the utmost importance to the Harbour Authorities in facilitating the entry of vessels in general, and in case of diversion.

VHF Radio Telephony. The radio and communication centre is located in the Oil Movements Office Building situated at the foot of No. 2 Pier at a height of 50 ft. above sea level. The roof of the building is painted black and the word "Marine" painted across in large white letters.

There is an RT set operating 24 hours a day on the following frequencies, and manned by English speaking operators:

156.6	MHz	FM	VHF	(Channel 12)	Range	limit	25	miles
156.8	MHz	FM	VHF	(Channel 16)	,,	,,	25	,,
2120	kHz	AM	HF		,,	,,	150	,,
2182	kHz	AM	HF	(Channel 1)	,,	,,	150	,,
7620	kHz	(SSB)	HF	(Channel 3)	,,	,,	300	,,

Call sign: "Marine Cardon".

Vessels not equipped with radio telephone may call the installation by signal lamp (Aldis lamp) whereupon the service launch will be sent out to vessel to pick up any message it may have.

BERTHING: Without exception ships always moor head-in on all berths. It is considered prudent to have the outboard anchor hove out prior to approaching piers to facilitate speedy release while docking if necessary. Vessels are to be moored to satisfaction of the Port Services Superintendent or his deputy; mooring lines must be tended regularly and kept hove taut to prevent surging and possible damage to ships, docks or hoses. When adjusting mooring lines, the assistance of harbour tugs should be requested before slackening off any mooring line.

BALLAST: It is suggested that vessels nominated to load at this installation arrive with the minimum of ballast on board, necessary for the safe handling of the vessel under normal conditions. In this connection experience has shown that, under normal weather conditions, vessels can be safely berthed and unberthed with a quantity of ballast of approximately 25% of their respective Summer deadweights. Clean ballast can be pumped into the sea, but Masters are reminded that pollution of the sea incurs heavy fines. Dirty ballast can be received ashore. Maximum discharge pressure to shore installation is 150 p.s.i. in the 20 in. ballast line of Jetty No. 2; Jetties Nos. 4 and 1 have a 24 in. ballast line, and Jetty No. 3 has a 16 in. line. Masters are requested to endeavour to arrive at this port with 20% SDW ballast.

MEDICAL: Facilities are available for medical and dental treatment, vaccination and hospitalisation in a private clinic.

Emergency cases will be attended to at all times.

Masters requiring medical or dental service or vaccination for their crew members should call Ship's Services by dialling 2105. Our representative will make the necessary arrangements with the clinic and arrange for transportation to pick up the crew members on the pier and to take them to the clinic and back. Any crew member who is sent ashore for medical or dental treatment, and who does not speak English or Spanish, must be accompanied by a crew member who speaks one of these languages.

Doctors do not attend patients on board. In serious cases where the patient is unable to walk an ambulance will be provided to take him to the hospital.

FRESH WATER: Fresh water is available at all berths. Loading rate is 30 t.p.h.

FUEL: Available if advance notice given. Funds at to be remitted to Chase Manhattan Bank, One Chase Manhattan Plaza, New York, 24 hours in advance to Maraven S.A. (Account No. 001-1-992773).

CUSTOMS: Venezuelan National Guards are stationed at the piers to ensure that vessels in port comply with regulations.

1. *Smuggling.* Strict compliance with the Customs laws of the country is enforced by the Authorities and Masters are strongly advised to caution crew members against attempting to smuggle ashore cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) or other articles. A maximum of twenty cigarettes per person for personal use is allowed to be carried but a greater quantity will result in the imprisonment of the offender with possible heavy fines and delay to the vessel.

2. *Bar.* On Customs Authorities instructions vessels maintaining a "Bar Service" on board for the use of officers, crew, passengers and visitors, must keep the bar closed during the vessel's stay in port.

3. *Firearms.* Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be declared on stores list. Officers must not carry firearms while ship is in Venezuelan waters. Said arms should be collected together with the ammunition and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore as these will be confiscated and the bearer fined.

TIME: Local time is GMT minus 4 hours.

CERTIFICATES: All ships arriving in Venezuelan ports for the first time must be measured by the Maritime Authorities for issuance of a Venezuelan Tonnage Certificate, known as "Certificado de Arqueo". This document gives the measurements and weight of the vessel in accordance with existing laws. The cost of measuring and issuing of the Certificate is contingent on size and tonnage of vessel.

It is usual practice to take ashore the ship's "General Arrangement" and "Capacity" plans, which are used as a basis for calculations. These plans and the Venezuelan Tonnage Certificate are later forwarded to ship's Owners.

Vessels registered in following countries are exempt from above regulations, due to existing reciprocal agreement with Venezuela: Denmark, France, Germany (F.R.), Great Britain, Ireland, Netherlands, Norway, Portugal, Sweden, U.S.A.

The Venezuelan Tonnage Certificate is used in calculating Venezuelan Government Port charges, such as Port Captain Habilitation for entry and despatch of vessels and Pilotage Dues, for all vessels except those registered in the countries mentioned above, in which case the Lloyd's Registered Tonnage is used.

HOLIDAYS: By order of the local Port Authorities it is requested that all ships in port be fully dressed on the following national holidays: January 1st, April 19th, July 5th, July 24th, October 12th, December 25th.

REPAIRS: Shore facilities are available for emergency repairs of a minor nature. The nearest dry docks are located at Puerto Cabello and Curacao, N.A. Request for repairs should be mentioned in the ship's ETA message.

SHORE LEAVE: Shore leave is permitted and Harbour Master's representative who boards vessel on arrival issues the required number of shore passes. These passes must be shown when proceeding ashore to the Government and Company Guards at the gangway and refinery gates. They are to be collected by Master prior to sailing and handed to Pilot unberthing the vessel. Masters are reminded that in accordance with the instructions of local police, crew members be properly dressed before leaving the vessel, i.e. long trousers and shirts.

Masters are requested to have shore leave expire at least 2 hours before expected departure. Men then found missing should be reported to the Ship's Services Office, tel. 2105, who will endeavour to locate them. An officer must accompany shore personnel in order to identify the missing crew member.

Vessels are not permitted to sail until all crew members are on board, unless said crew members are hospitalised or previously signed off by the Master through the Ship's Services representative. If any crew member is missing at sailing time and cannot be found, his passport and other personal documents must be handed to the Ship's Service representative, as well as written instructions as to his repatriation, when found. All costs and expenses of a crew member so left behind will be for ship's account.

GENERAL:

1. *Animals:* The importation and transit of all birds belonging to the genus parrot or parakeet is prohibited. For other birds a valid health certificate is required. For so-called "small animals" e.g. dogs, cats, monkeys, rabbits, etc. a valid health certificate and a valid rabies vaccination certificate are required.

2. *Bonded Stores:* Stores in bond are not obtainable in Punta Cardon. The nearest port with bonded stores facilities is Curacao.

3. *Board of Trade Gangway:* A safe gangway must be provided by the vessel and should be rigged as soon as possible after mooring to allow the Port Authorities to board, and should not be taken in until Pilot has boarded to unmoor vessel. The use of rung ladders, pilot ladders, etc. is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

4. *Damage during Manoeuvres:* When a vessel or the pier sustains damage during manoeuvres with an official Pilot on board, it is the responsibility of the Master to submit to the Ship's Services representatives, immediately after the accident, a report in quintuplicate, for presentation to the Harbour Master. Such reports should give full details of the accident and of all engine movements as ordered by the Pilot, as well as a sketch in triplicate of the ship's manoeuvring position at the time. These will be translated by the Agents into Spanish and forwarded to the Harbour Master.

5. *Cash Advance to Masters:* Cash advances to Masters are made only in Venezuelan currency, which is the Bolivar. Cash requirements should be included in the vessel's ETA message. Foreign currencies are accepted in the United Seamen's Service Club.

6. *Rat-guards:* By order of the Port Authorities rat-guards must be fitted to all mooring lines. Non compliance entails a fine of 200 Bolivares for each unguarded line.

7. *Kerosene, Motor Gasoline, Gas-Oil, Solvents:* Supplies for ship's purposes are available in drums. The return of empty drums ashore is prohibited by Customs regulations. Therefore the cost of each drum will be billed to the vessel in the Port Disbursement Account.

8. *Lubricants, Oils and Greases:* Supplies of products are available. Vessels arriving at Punta Cardon on Saturday or Sunday or on a holiday should give ample notice of their requirements by cable in order that the necessary labour arrangements for delivery can be made. This procedure also applies to the delivery of white oils mentioned under 7 above, when required outside working days.

9. *Laundry Service:* Laundry service is available throughout each working day. Such service should be requested in the vessel's ETA message.

10. *Wireless Transmitters in Port:* It is strictly prohibited to use vessel's wireless transmitters in the Port of Cardon. Non-compliance with this regulation may result in a fine being imposed on the vessel by the authorities.

11. *Mail:* On vessels' arrival, blank Mail List Forms will be handed to the Master to be completed in sextuplicate and duly signed by him, when sending ship's and crew mail ashore for posting. Ship's mail received after ship has sailed, or for vessels on which no advice has been received, will be held for 15 days and then returned by airmail to the owners or operators or senders, at ship's expense unless specific instructions have been received beforehand.

12. *Marine Surveyors:* Both the Lloyd's Agents at Maracaibo and Norske Veritas at Caracas have a representative in Punta Cardon who acts on their behalf when a surveyor is requested. However, in the case of continuous or classification surveys, advance notice of 4 days should be given in order to arrange for an appointed surveyor to come from Caracas. There is also a representative of the American Bureau of Shipping in this area (Caracas).

13. *Miramar Club:* Masters, chief engineers and their wives can visit the Miramar Club. For this purpose entrance passes should be requested from the Ship's Services Office, tel. 2105.

14. *Manaure Bathing Beach:* The above mentioned bathing beach is open to all ship's staff and crew members.

15. *Navigation Charts:* Navigation charts are not available at this port.

16. *Passengers:* Movement of passengers over Cardon Piers is subject to restriction under terms of agreement with the government. Passengers will not be permitted to disembark unless in possession of the required Venezuelan visa and travel documents. If passengers are carried, Master should so advise in his radio ETA so that arrangements can be made for Immigration Authorities to visit vessel on arrival and thus facilitate clearance.

17. *Petroleum Inspection:* Charles Martin & Co., and E. W. Saybolt petroleum inspectors, are available in this area. Contact can be made through the Loading Supervisor (tel. 2821).

18. *Personnel – Seamen Left Ashore:* In the case of seamen left ashore for hospitalisation, repatriation, desertion or other reasons, all documents and personal effects are to be handed to the Oil Movement Department's representative before sailing. A letter is required from the Master advising the maximum advances, if any, to be made to the seamen, and instructions concerning his repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account. It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, or Owner responsible for any seamen left behind in Venezuela.

19. *Photographing:* The taking of photographs within the boundary fence of the Cardon Refinery is prohibited. Taking cameras ashore is likewise prohibited.

20. *Provision and Stores:* Provisions and stores are available. Requisitions should be conducted through the Ship's Services Office. Telephone number 2105 or the Ship's Services representative when he calls on board with the authorities on arrival. Ships' chandlers are not permitted to visit ships, unless specifically instructed to do so by the Agents.

21. *Radar and Radio Repairs:* Repair and maintenance services for radar, radio, gyro compass, radio direction finder, echo sounder, etc. are available. The repair man should be contacted through the Ship's Services Office, telephone number 2105.

22. *Safety of Personnel:* It will be appreciated that persons intoxicated by alcoholic drinks can create risks of accidents; therefore we ask the Master's co-operation to ensure that these persons do not enter the refinery gates and/or board their vessel unless accompanied by sober members of their crew. In this connection we will advise the Master or one of his officers, so that measures can be taken to ensure the safety of the forementioned person(s) e.g. by sending one or more of the crew to the gate to accompany him (or them) to the ship.

23. *Visitors:* Visits to ships are prohibited except from those company employees, petroleum inspectors, etc., whose duties require their presence on board.

24. *Staff and Crew Changes:* No staff and/or crew should be engaged or discharged without consulting Ship's Services (telephone 2105). In case of discharge, identification documents must be handed to the Ship's Services representative or the Norwegian Consular Officer in the case of Norwegian vessels.

25. *Tank Cleaning and Mopping:* Several contractors in the area provide labour for tank cleaning and mopping. Masters in need of this service should submit their requirements to the Ship's Services Office (telephone 2105), who will contact and request a contractor to go on board to discuss details and estimate costs of work to be effected. It must be pointed out that the Master of the vessel is solely responsible for the proper fitness of the ship's tanks for loading his next cargo, and will therefore be held liable for any contamination of the cargo after loading, due to inadequate tank cleaning. Therefore it is up to him to decide the degree of tank cleaning necessary. He may, of course, seek advice from the installation representative in this respect, whenever there is any doubt.

26. *Turnaround:* To promote the economical operation of their vessels Masters are requested to co-operate with installation representatives in minimising their in-port time. Any delays which are considered unnecessary or extensive should be reported to the loading Supervisor (tel. 2133) so that corrective measures can be taken.

TELEPHONES:

Communications Office (General and Port Information, 24 hours service), 2604. Ship's Service Office (All services to ships: mail, doctor, taxi, papers, etc., 24 hours service), 2105. Socialist Republic of Vietnam

GENERAL:

The following ports are open for international trade:

1. Campha	4. Ben Thuy	7. Nha Trang
2. Hon Gay	5. Danang	8. Saigon
3. Haiphong	6. Quy Nhon	9. Vungtau

DOCUMENTS: (All ports).

Arrival Procedure:

(a) Arrival documents to be filled in or signed:

Clearance from Last Port.
2 copies Declaration of Arrival.
2 copies Crew Lists.
8 copies Passenger Lists.
2 copies Health Declaration.
Crew Personal Effects (individual declaration).
Passengers Personal Effects (individual declaration).
5 copies Dangerous Cargo Declaration.
5 copies Cargo Manifest.
5 copies Cargo Plan.
8 copies List of Articles Forbidden to be Used in Port.
Zoological Quarantine Declaration.
Phyto Quarantine Declaration.
Ship's Stores Manifest.
Phyto Sanitary and Fumigation Certificates.
Veterinary Certificate.
Phyto Quarantine Certificate.
Application for Crew Members and Passengers Shore Passes (to be returned before Ship's Departure).

(b) Arrival documents to be submitted to Port Authority:

Ship Nationality Certificate and Navigation Certificates.
International Load Line Certificate.
International Tonnage Certificate.
Safety Radio Telephony Certificate.
Safety Equipment Certificate.
International Certificate of Vaccination for Passengers and Crew.
Ship's Derat (or Exemption) Certificate.
Seamans Passports or Seaman's Books of Crew and Passports of Passengers.
Transit Cargo Manifest.
Zoological and Botanical Transit Cargo Manifest.
Certificates of Competency of Officers and Engineers.
Certificates of Proficiency in Manoeuvring Lifeboats.
Foreign Currency Declaration and Invoices.

Departure Procedure:

1 copy Health Declaration.
6 copies Outward Cargo Manifest.
6 copies Crew Lists and Passenger Lists (if changes).
6 copies Personal Effects Declaration.

RADIO: *Notice of Arrival:* ETA message to be given 48 hours prior to ship's arrival including particulars of vessel and cargo on board. 4 hours prior to arrival send correct time of arrival.

PILOTAGE: Compulsory.

Haiphong, Campha and Hon Gay Port Pilot Station at "Zero Buoy" (position Lat. 20° 42′ 01″ N., Long. 106° 57′ 08″ E.).

Vungtau and Saigon Port Pilot Station at "Zero Buoy" (position Lat. 10° 20′ 40″ N., Long. 107° 03′ E.).

HEALTH: *Sanitary and Quarantine:* Quarantine Documents: See "Documents".

Pratique is free at the second port in Vietnam.

MEDICAL: Assistance available.

RESCUE AND SALVAGE: Rescue and salvage company available with head office in Haiphong and branches in other ports.

REPORT: In June, 1985 the Ministry of Transport and Communications and Ministry of Interior issued a joint Circular concerning foreign vessels trading to Vietnam.

Some of the major points in the Circular are:

Commercial vessels may call at all ports officially declared open if permission from Transport and Communication Minister obtained at least 7 days in advance of arrival. The arrival should be re-confirmed at least 24 hours before entering territorial waters.

Emergency calls are allowed but the Maritime Administration should be notified immediately.

Vessels only allowed to leave the pilot station when all formalities such as Free Pratique, Customs Clearance, etc., have been performed.

Crew members and Officers are not allowed to have contact with other than Officials and Pilot during arrival and sailing formalities.

AUTHORITY: Ministry of Communication and Transport, Maritime Legislation Department, 11 Vo Thi Sau Street, Haiphong, Vietnam. *Tel:* 393. *Contact:* Nguyen Cong Duc, Director.

BEN THUY: 18.39 N. 105.42 E.

PORT LIMITS: The seaward boundaries of Ben Thuy Port are the Lat. 18° 50′ N. in the North, the Lat. 18° 45′ N. in the South and the Long. 105° 49′ E. in the East.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilot boat arrives at "Zero Buoy" (Lat. 18° 47′ N., Long. 105° 47′ E.) at correct arrival time.

ANCHORAGE: Anchorage Area: "Zero Buoy" and Hon Ngu Island within port limits.

RESTRICTIONS: Maximum draft to enter 4.5 m. (15 ft.). Vessels exceeding 4.5 m. draft discharge cargo into self propelled barges at position: Lat. 18° 49′ N., Long. 105° 45′ E. (N.W. of Hon Ngu Island). Pilot boat may only arrive at "Zero Buoy" in conditions of weather with wind not exceeding Force 5. Pilot boards during daytime only.

MAX. SIZE: At berth, LOA 100 m., max. draft 4.5 m.

HEALTH: See "General" before first port.

RADIO: There is no radio contact with Ben Thuy Port. Notice of Arrival messages sent via Haiphong Radio XVG or Danang Radio XVT.

VHF: Ben Thuy Harbour Master on Channel 16 from 0800 – 1400 hrs. and 1600 – 2000 hrs. local time.

TUGS: 2 tugs, 305 h.p. each available.

BERTHING: One pier of 200 m. length and 3 shorter berths.

CRANES: There are 7 mobile truck cranes, capacity 6 tons each.

BRIDGES: None.

STEVEDORES: Stevedores work 2 shifts. 0600 – 1800 hrs. and 1800 – 0600 hrs. with one meal interval between 1130 – 1230 hrs.

One gang average for day (24 hours).
Grain and Bulk Cargo: 300 tons.
General Cargo: 150 – 200 tons.

DENSITY: 1,000 at low tide.

FRESH WATER/FUEL: Not guaranteed.

SURVEYORS: Cargo Surveyors: Nina Control attend from Hanoi.
Ship Surveyors: Vires, Branch No. 3, Vinh City.

PORT REGULATIONS: To Harbour Master's advice.

SHIPMASTER'S REPORT: July 1982.

Location: 10 miles upstream from the entrance of the Song Ca River. Vessels exceeding 4.5 m. draft discharge cargo at anchor off the entrance to the river into self-propelled barges which transport the cargo to Ben Thuy.

Pilot/Anchorage: Vessels anchor in position: Lat. 18° 47′ N., Long. 105° 47′ E. 1.5 miles S.E. of Hon Niem Island in 14 m., soft grey mud and sand. Pilot and officials board at this position. After Clearance granted, vessel shifts to discharge anchorage in position Lat. 18° 49′ N., Long. 105° 45′ E., 1 mile N.W. of Hon Niem Island in 10 m. This anchorage was approached by rounding Hon Niem Island to the Eastward, not less than 0.5 miles off, there is a dangerous rock awash at LW in position Lat. 18° 50.7′ N., Long. 105° 46′ E. It is prudent to approach the port in daylight due to the large amount of unlit fishing craft in the vicinity.

Documents/Officials

Officials boarding with Pilot on arrival:

3 Security Officers.
2 Customs Officers.
2 Immigration Officers.
2 Quarantine Inspectors.
1 Agricultural Inspector.
1 Agent.
1 Harbour Master.

To be accommodated and victualled during stay of vessel in port:

3 Security Officers.
2 Customs Officers.
1 Agent.

Agent is the only person who speaks/understands a limited amount of English.

Documents required:

6 Crew Lists.
2 Stores Lists (deck, engine and cabin).
1 Health Declaration.
2 Stores Lists (provisions).
2 Crew Customs Declaration Lists.
2 Currency Lists (foreign monies in crew's possession).
2 Bonded Stores Lists.
4 copies Cargo Manifests.
4 copies of Bills of Lading.
2 Cargo Stowage Plans.
3 Forms (supplied) for Sextants, Binoculars, Cameras, etc.
3 Forms (supplied) for Arrival details and times.
1 Form (supplied) Report concerning where water taken during the voyage, drinking and ballast in tons and tank being used at present for drinking water.

Certificates of Registry, Radio, Load Line, Safety Equipment and Derat sighted, also Clearance from last port.

All Passports/Seamen's Identity Cards collected and taken ashore, require to see each crew member and compare with passport photo. Discharge Books were not required. All Vaccination Certificates sighted and returned. Inspection of all crew cabins and each crew member's foreign money counted at the same time.

Restrictions: Main switch for Radio Transmitter/Receiver sealed.

All Cameras sealed. Bond and beer lockers sealed. (Release of bonded stores available at any time from Customs Officers on board).

General: There is no Radio or VHF contact with Ben Thuy. ETA/Health messages, etc, via Haiphong Radio XVG to VOSA Haiphong.

No fresh water or oil fuels are available at the anchorages off Ben Thuy.

Limited quantities of fruit and vegetables are available when in season.

There are no facilities for sending or receiving mail.

Draft survey is carried out at commencement and completion of cargo, 3 surveyors attend from Hanoi, a journey of approximately 10 hours by road.

Bulk cargoes are discharged by ship's gear using shore grabs (which are in poor condition) each grab capacity approximately 1.5 tons (bulk wheat) also burlap savealls, sewn on to cargo nets are used.

Cargo loaded into self propelled barges, each carrying 40/50 tons bulk grain, approximately 20 barges are available when none are under repair, which is quite frequent, journey to discharge wharf takes 3 hours, 6 hours to discharge and 3 hours to return to the ship.

Stevedores work two shifts 0600 – 1800 hrs. and 1800 – 0600 hrs. with one meal interval between 1130 – 1230 hrs.

1 gang's average discharge per day (24 hours) 250/350 tons.

AUTHORITY: Ben Thuy Port Director and Harbour Master.

DANANG: (Tourane): 16.04 N. 108.13 E. (See Plan)

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilot station at position: Lat. 16° 10′ N., Long. 108° 11′ E. Pilot boards from a tug boat during daytime only. Ships arriving at night should anchor in a position close to the pilot station.
ANCHORAGE: In the Bay of Tourane, depths up to 19 m.
RESTRICTIONS: No restrictions in the Bay and anchorage.
MAX. SIZE: See "Berthing".
HEALTH: See "General" before first port.
RADIO/VHF: Danang Radio, call sign XVT. Pilot and Harbour Master on VHF Channel 16.
TUGS: 3 Tugs available. 1×1,200 h.p. and 2×800 h.p.
BERTHING: There is one finger pier of 250 m. at Cang Sau (deep port) location Lat. 16° 07′ 01″ N., Long. 108° 12′ 6″ E.
MAX. SIZE: Permissible LOA 190 m. Beam 26 m. and max. draft 11 m.
CRANES: There are no cranes available. There is one heavy lift floating crane of 100 tons capacity.
STEVEDORES: Ordered by Agent work continuous throughout 24 hours except for meal breaks.
MEDICAL: 6 hours' notice required for medical assistance. There is a hospital in town.
TANKERS: Two submarine hoses of 8 in., all kinds of white spirits discharged through both lines. Maximum back pressure 8 kgs. Average discharging rate 200 tons per hour per line.
FRESH WATER: Available by barges, rate of delivery 50 t.p.h.
FUEL: Fuel oil, diesel oil and lubricating oil available.
REPAIRS: Minor repair facilities. There are no dry docks at this port.
AIRPORT: There is an airport about 7 km. from the town. Air services to Ho Chi Min City, Hanoi and Haiphong City, local flights only.
TIME: GMT plus 7 hours.
HOLIDAYS: There are no special holidays.
POLICE/AMBULANCE/FIRE: Via local Agent.
SERVICES: Shipchandler available at all times.
SHORE LEAVE: Permitted via local Agent.
SURVEYORS: Cargo Surveyors: Vina Control.
Ship Surveyors: Vires, Branch No. 4, 114 Bach Dang Street, Danang City.

SHIPMASTER'S REPORT: 1976.
Documents: On arrival usually dealt with immediately by the Immigration Service, Police Service, Customs Service, Agency and Health Service. Ship's Documents: Certificate of Registry, Radio Certificate, Load Line Certificate, Safety Equipment Certificate, Port Clearance from last port. Cargo Documents: Bill of Lading (8 copies), Cargo Manifest (8 copies), Stowage Plan (5 copies), In Transit Cargo Manifest (if any). Immigration: Crew List (7 copies), Stores List (2 copies), Crew's Effect Declaration (2 copies), Passports of the Crew.
Health: Vaccination List (2 copies), Provisions List (2 copies), International Vaccination Certificates.

All documents to be ready on arrival. Cameras and binoculars to be collected and placed in a locker, to be sealed. Bonded stores not sealed.
Pilotage: Pilot station at a position Lat. 16° 10′ N., Long. 108° 11′ E. Pilot boards from a tugboat and moves the ship to a position about 1 mile West of Phare de l'observatoire. Pilot boarding during daytime only. Ships arriving at night should anchor in a position close to the pilot station. Pilot will board the ship at 0600 hrs. ETA should be given 48 hours and 24 hours prior to arrival at the pilot station.
Restrictions: There are no restrictions for entering the bay.
Health: A 24 hours cable should be sent to the Agent, stating that all crew are fit and healthy. If any sickness on board cable 48 hours in advance.
Radio:

Call sign	Frequency	Working hours GMT
XVT	500 kHz	0001 – 1200 hrs.
XVT 2	417.5 kHz	0001 – 1200 hrs.
XVT 2	8,570 kHz	0130 – 0145 hrs. 0830 – 0845 hrs. 1200 – 1315 hrs.

VHF: There is no VHF station.
Radar: There is no radar post.
Tugs: There are 3 tugboats available, 1×1,200 h.p., 2×800 h.p. each. Tug's lines are used if necessary.
Berthing: There is one finger pier of 250 m. and another under construction. The latter to be ready towards the end of 1976. A tanker berth is situated in position Lat. 16° 04′ N., Long. 108° 15′ E., called My Khe. Tankers proceed to this position, after clearance, with Pilot rounding by the peninsula. (See "Plan"). At the cargo pier all discharging is done by ship's gear.
Cranes: There are no cranes available. There is 1 heavy lift floating crane of 100 tons capacity.
Bulk Handling Facilities: Bulk cargoes are sometimes handled at the port (i.e. maize) but there are no special facilities.
Bridges: No bridges.
Stevedores: Ordered by the Agent. No ETA necessary. Working hours 0001 – 0400 hrs., 0800 – 2400 hrs. Approx. discharging rate general cargo 400 tons/gang.
Medical: Six hours' notice required for medical assistance. There is a hospital in town. Inoculations required for cholera and yellow fever.
Tankers: Two submarine hoses of 8 in., all kinds of white spirits discharged through both lines. Maximum back pressure 8 kg. at ship's manifold. Average discharging rate 200 t.p.h. per line.
Density: Cargo pier brackish depending on the season. At the tanker berth salt.
Fresh Water: Available by barge, rate of delivery 50 t.p.h.
Repairs: Repairs taking longer than 2 hours are not permitted unless permission is granted by the Port Master. Small repair facilities can be carried out ashore. There are no drydocks at this port.
Deck Watchmen: Cargo ships alongside the pier are provided with gangway watch. Tankers discharging at My Khe will have two securi guards on board during the stay in port.
Hatches: Old type hatches opened and closed by shore labour. Speci patent hatches by crew.
Customs Allowances: The bonded stores are not sealed. There are n restrictions for quantity of spirits, cigarettes, beer, etc. It is strict prohibited to supply any bonded stores to shore personnel.
Cargo Gear: There is 1 floating heavy lift crane of 100 tons.
Repatriation: Possible, but takes some time and can be very difficu Haiphong is a better place for crew changes.
Airport: There is an airport about 7 km. from the town. Air services Ho Chi Min City and Haiphong, local flights only, twice a week.
Time: GMT plus 7 hours (no Summertime) is kept along the whole coas
Holidays: There are no special holidays.
Police/Ambulance/Fire: Via local Agent, telephone number 21161.
Services: There are laundry facilities (2 days ashore) with a 24 hou service. Shipchandler available at all times. Good fresh vegetables an fruits, depending on the season. Also good sea food.
Shore Leave: Permitted via local Agent with 6 hours' notice. Person with invalid passport are not allowed to go ashore.
Regulations: It is strictly prohibited to throw any garbage into the ba heavy fines. Garbage collected by barge.
Delays: Remittance has to be granted by Owners or Charterers befor sailing. Without a sufficient remittance the vessel does not receive clearance.

Alongside the pier berthing and unberthing only between sunrise an 1400 hrs. due to strong winds in the afternoon. At any other time whe strong winds are experienced berthing and unberthing not allowed. Th fore mentioned also for the tanker berth at My Khe, here berthing normally carried out during the morning hours, when there are wea winds. During a strong monsoon it is sometimes necessary to sto discharging operations and unberth the ship.
General: Ships calling for the first time at Danang port should give the ETA and call sign, nationality, all other necessary particulars so that th ship can be identified by the Navy. Ships, chartered by the Vietnames Government should state this also and whether time or voyage charte Ships carrying general cargo should also give all particulars about th stowage of the cargo, whether any deck cargo, heavy lifts etc.
Agent: Vietnam Ocean Shipping Agency, 1a Quang Trung, Danang Cable: OSA Danang, telephone 21161.

SHIPMASTERS' REPORT: September 1980.
Documents: See "General".
Pilotage: Compulsory. Pilot boards in position Lat. 16° 10′ N., Long 108° 11′ E. Notice required 24 hours. Daylight only for berthing excep in cases of emergency.
Anchorage: In the Bay of Tourane; depth up to 19.0 m.
Restrictions: No restrictions in the bay and anchorage, depth of wate up to 19.0 m.
Radio: Danang Radio.
VHF: Pilot on Channel 16.
Tugs: Two tugs available; 1 of 1,200 h.p., the other being used for barg work only.
Berthing: Location Lat. 16° 07.1′ N., Long. 108° 12.6′ E. Two pier available. Distance from sea to berth 4 miles. Max. size permissible LOA 190 m., beam 26 m. and deepest draft 11 m. Least depth of wate in channel from sea to berth 13.0 m. Mean tidal range at berth 0.5 m Nature of bottom at berth – mud and sand. Average density 1016.

Cargo Handling Facilities: No bulk handling facilities or quay crane available. There is a quarter ramp for Ro/Ro vessels and a 50 ton floatin crane. Security is good as armed police are on duty throughout th vessel's stay. There is adequate storage space for break bulk an palletised cargoes. No container handling facilities. Stevedore gang are available as required and work throughout 24 hours except for mea breaks.
Barges: There are steel barges of various sizes which are towed b tugs.
Services: The following are available: Fresh water; fresh provisions minor repairs facilities; airport with internal flights only; laundry services bunker fuel oil; diesel oil; lubricating oil; doctor and hospital; grocerie and meats.
General:
Officials Boarding on Arrival with Pilots:
Two armed police who remain aboard during vessel's stay at ancho
Officials Boarding when Vessel Anchored:
Agent and assistant.
1 Customs Officer.
1 Immigration Officer.
1 Agriculture Inspector.
2 Quarantine Inspectors.
2 Security Officers.
Documentation:
8 Crew Lists.
2 Stores Lists – Deck, Engine and Provisions.
2 Crew Customs Declaration Lists.
2 Currency Lists for foreign money in Crew's possession.
2 Bonded Stores Lists.
1 Health Declaration.
2 Crew Vaccination Lists.
All Vaccination Certificates.
4 Copies of Bills of Lading.
7 Copies of Cargo Manifest.
2 Copies of Cargo Manifest – Cargo in Transit.
1 Form (Supplied) for Ship's Sextants, Binoculars, Cameras, etc.
1 Form (Supplied) for Arrival Details and Times.
All Discharge Books (Passports of Officers' wives collected for sa keeping ashore).

Restrictions:

Main and Emergency Transmitters sealed.

Stornos (Walkie Talkies) sealed.

Cameras sealed.

Bond sealed.

Inspection of all cabins on arrival.

General:

Vessel on 4 hours' notice at all times for sailing or shifting berth. Although bond sealed release of spirits available at any time from Customs.

Very strict on cigarettes with issue of only 200 per week per person. Shore passes issued to all personnel. Shore leave very restricted but bus service available to Seaman's Club nightly from 1800 – 2130 hrs. accompanied by a guard.

Maximum of 20 cigarettes per person for shore leave.

Seaman's Club takes Sterling (£5 notes and above only) and U.S. Dollars.

One sight seeing tour was to have been arranged this call but cancelled due to adverse weather conditions. (Limited number of cameras would have been available on this occasion).

Remittances from Owners take at least 1 month before any cash is made available.

One typoon warning received this call when vessel had to vacate berth and proceed to anchorage.

One emergency vacation of berth at 0300 hrs. this call when heavy swell built up alongside pier.

On departure full inspection of cabins and personnel, discharge books (passports of Officers' wives returned). Shore passes collected. No mail received this call due 1 month delivery time. No restriction on bond for coastal passage Danang to Haiphong.

AUTHORITY: Danang Port Director and Harbour Master.

AGENT: Vosa, 1a Qang Trung Street, Danang City.

HAIPHONG: 20.52 N. 106.41 E.

PORT LIMITS: Seaward boundaries of Haiphong port limits within 3 miles of "Zero Buoy" (Lat. 20° 42′ 01″ N., Long. 106° 57′ 08″ E.) toward sea.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilot boat arrives at "Zero Buoy" at correct arrival time (CTA). Pilot station on VHF Channel 16.

ANCHORAGE: To Pilot's advice.

Ninhtiep Bachdang anchorage areas with max. draft 25 ft. Ha Long Bay with max. depth 10.00 m. (low tide).

RESTRICTIONS: Max. draft to enter 25 ft. on lower tide time. Ships have to operate lighterage at anchorage areas.

MAX. SIZE: At berths, LOA 200 m. Breadth 26 m. Draft 25 ft.

HEALTH: See "General" before first port.

RADIO: Haiphong Radio handles vessel traffic. Call sign XVG frequency 500 kHz and 8364 kHz.

TUGS: Tugs available of 500 h.p. and 600 h.p. A larger tug of 3,200 h.p. is used for rescue, salvage and towage.

BERTHING: Port central area has 12 berths available.

Berth Nos. 1 and 2: Ore and coal cargo.

Berth Nos. 9 and 10: Grain cargo.

Berth No. 11: Refrigerated cargo and general cargo.

Doanxa Area: 2 berths for Ro/Ro and container ships.

ChuaVe Area: 2 berths for passenger ships and cargo ships.

SoDau Area: 1 pier and mooring buoy for tankers.

VatCach Area: 1 quay for barges.

CRANES: Port Central Area and Doanxa Area have shore cranes with capacities of 5 tons, 6 tons, 7 tons, 10 tons, 16 tons, 25 tons and max. 30 tons.

Floating cranes 60 tons to max. 200 tons available.

BRIDGES: None.

STEVEDORES: Ordered by Agent, 4 gangs/24 hours continuously. Loading and discharging rates stipulated by charter party.

Particular advice: see "General" – "Radio" – "Notice of Arrival".

DENSITY: Low tide 1000.

FRESH WATER: Supplied by ship chandler from barges.

FUEL: Not guaranteed.

FIRE PRECAUTIONS: Safety Regulations for tankers and other ships with dangerous cargo.

REPAIRS/DRY DOCKS: Pha Rung ship repair yard. Dry dock available for ship's with max. length 150 m.

SURVEYORS: Cargo surveyors: Vinacontrol. Ship surveyors: Vietnam Register of Shipping (VIRES).

CUSTOMS ALLOWANCES: No restrictions for spirits, cigarettes and beer for crews use, but strictly prohibited for commercial purposes.

REPATRIATION: To Agent's advice.

AIRPORT: Haiphong Airport available only for domestic flights to Danang and Ho Chi Min City International airport.

Noibai situated 130 km. from Haiphong.

TIME: GMT plus 7 hours.

POLICE/AMBULANCE/FIRE: Available.

SERVICES: To Agent's advice.

SHIP SUPPLY SERVICE: If necessary, to Agent's advice.

SHORE LEAVE: No restrictions.

SHIPMASTER'S REPORT: 1976.

Documents:

8 Crew Lists.

2 Ship's Stores Manifests.

2 Crew Personal Effects Declaration (especially: cameras, binoculars, and Foreign Currency).

2 Vaccination Lists: cholera. All International Vaccination Certificates.

All Passports (are taken into custody by Security Officials).

Special Documents: Special forms which are handed to vessel on arrival.

Health Dept:

1 Declaration of Health on arrival.

1 List of Provision Store (incl. vegetables, fruits, fish, shellfish, meats etc. and where taken).

1 Report of water taken on board: (Drinking — or Ballast water, tons, ports where taken) — tank now being used to supply drinking water.

State Security Dept.:

4 Copies List of Articles forbidden to be used in port: ie. radio transmitter/receiver — Numbers and power; radar; VHF; radio direction finder; echo sounder; sextant, signal gun, signal rockets, flare signals, arms, ammunition, cameras, binoculars, tape recorders, band recorders.

Note: The radio transmitter, VHF, radar, binoculars, cameras are sealed.

2 Copies Declaration of Arrival.

Note: Cameras, binoculars of the crew have to be collected and placed in a locker which is sealed. Bond is *not* sealed, and consumption is free.

Pilot: Boards at "Zero Buoy".

Note: There is no VHF radio contact possible and there is no signal station available, ETA should be given as exact as possible.

Restrictions: Max. draft to enter: 25 ft. (HW).

If ship's draft is more than 25 ft. ship has to lighten into lighters. This is done in Baie d'Halong. The procedure is that after embarking the Pilot at "Zero Buoy", the ship is brought to this bay (in daylight hours only) via: Bai de Lan Ha – Entree Profonde – Rade du Crapaud – Chenal du Volta – Chenal de la Cathedrale.

In our case we anchored in Chenal de la Cathedrale; Lat. 20° 52′ N. Long. 107° 03′ 06″ E. and discharged our gas oil cargo into tanker barges varying in size from 125 – 400 long tons. Some coastal tankers (1,500 – 2,000 long tons) are also available for accepting the cargo.

When discharging into lighters ship should provide suitable hoses.

General:

1. Ship was cleared by Authorities at this anchorage. In view of the distance to Haiphong – 5 hours by motorboat – this clearance is only given in daylight hours. Often the ship's Agent stays on board during cargo operations.

2. Because the radio transmitter is sealed, no direct contact with the outside world is possible. All messages for the Agents at Haiphong should be given to the lighters going there.

3. Medical assistance: A doctor and Hospital is available in Hon Gay – on the other side of the Baie d'Halong. The doctor inspects the patient on board before permission to go ashore is given.

4. Outward clearance: Same procedure as Inward Clearance. Authorities come by motorboat from Haiphong (boat leaves there at about 0600 hrs. and arrives in Halong Bay at about 1100 hrs.). Passports are handed back to crew.

5. On inward as well as on outward clearing, crew has to stay in their cabins for inspection by Customs and security officials.

SHIPMASTER'S REPORT: April 1979.

Pilotage: Boarding position: Lat. 20° 41′ N., Long. 106° 58′ E.

The pilot boat is a 25 m. long steel vessel with white hull and superstructure. A Vietnamese flag is printed on the white funnel.

The Pilot boarded without notice, also the Agent (VOSA) did not reply to any cables requesting information. Pilotage carried out during night time only in the Winter.

Two soldiers board with the Pilot and if vessel is to anchor for lightering the Pilot and soldiers remain onboard.

Buoys: The marking of the channel by buoys is good, but for day time only. At night the lights are poor and vessels have to keep a good lookout for them.

Customs: Bond is sealed when the vessel is alongside. Very strict allowance for cigarettes.

SHIPMASTER'S REPORT: October 1980.

Documents: See "Shipmaster's Report" for Danang dated September, 1980.

Pilotage: Compulsory. Pilot boards in position Lat. 20° 41′ N., Long. 106° 58′ E. 24 hours' notice required.

Anchorage: The inner anchorage is between the outer bar and the channel cut, depth at LW 8 m.

Restrictions: It is not advisable to enter or leave during hours of darkness as there are only a limited number of lights and buoys.

Max. Size: Max. LOA 200 m., beam 26 m., draft 7.5 m. Lightening facilities are available at Baie d'Halong for vessels with draft of up to 10 m.

Health: Quarantine Authority require 24 hours' notice of arrival.

Radio: Haiphong Radio handles vessel's traffic.

Tugs: Available. 1×600 h.p., 1×500 h.p.

VHF: The Agency (Vietnam Ocean Shipping Agency – VOSA) on Channels 6 and 16. They will forward messages to the Pilot.

Berthing: Berth situated in position Lat. 20° 52′ N., Long. 106° 43′ E. The berth was built in 1976 and is down river from the town berths. In all there are 12 berths available. Our berth was 18 miles from the entrance. Max. size acceptable at the berth, LOA 200 m., beam 26 m. and deepest draft 7.4 m.

Cargo Facilities: No bulk handling facilities; no cranes at this berth but some were sighted at the town berths; no Ro-Ro facilities visible. There is a floating crane with a capacity of 60 tons (approx.). Security is good as armed guards stay aboard the vessel throughout. No container facilities of any kind sighted. Labour works around the clock in 3 shifts.

Barges: Wood and steel barges available, some have engines.
Consuls: None, nearest are in Hanoi.
Services: The following are available: Fresh water; fresh provisions (depending on time of year); minor repair facilities; airport; laundry service; diesel oil; lubricating oil; doctor and hospital; small amounts of groceries and meats.
General: Any vessel intending to remain at the port for a long period of time should have onboard sufficient stores and fresh water prior to arrival, as if vessel at anchor, stores and fresh water can take up to one week to arrive.

SHIPMASTER'S REPORT: November 1981.
Pilot Station: The Pilot boards the vessel at the anchorage which is about 2 to 3 miles S.S.E. from Zero Buoy. Pilot boat is a metal boat about 20 m. length. The funnel is painted buff with a red stripe and a yellow star.
Restrictions: There are 2 mud banks up river. One after the buoyed channel and one after the ship-canal about 1.5 miles before the berths. River draft depends on the tide which varies from 6.4 m. to 7.2 m. at HW. Haiphong port draft about 6.9 m.
Pilotage: The channel from Zero Buoy to Haiphong has buoys but no lights visible and the buoys are often out of position. The channel is very narrow having only a few centimetres' bottom clearance. Pilots are good.
Anchorage: For deeper draft than 6.9 m., ships are lightened at Halong Anchorage. Pilots, Security Officers and Customs Officer board at Zero Buoy and the vessel proceeds to the anchorage via Passe Henriette. Depths are 18 m. to 21 m. and good holding ground. The place is sheltered from all winds except North.
Documents: 1 more copy of Crew List and Money Declaration necessary than stated in "Shipmaster's Report", September 1980 for Danang.
Also see "General".
Security Police: At Halong Anchorage 2 security policemen remain on board, requesting accommodation and food.
Agency: During the vessel's lightening, Agent's clerk remains continuously on board requesting accommodation and food. Any communication with the Agency at Haiphong is done by telegram. Ship's transmitter is unsealed by Security Officer, message sent, and then resealed. Whilst alongside, Agent visits every day and they are quite efficient.
Stevedores: At Halong Anchorage, a barge with quarters for the stevedores comes alongside the vessel. Chief Stevedore is always available speaking efficient English. Discharging performed by vessel's derricks with shore grabs. Rate about 1,500 metric tons per day. At Haiphong berth discharging performed by shore cranes with a rate of about 1,800 – 2,000 metric tons per day. Haiphong Port has a berth accommodating ten large ships. There are about 25 shore cranes from 10 to 15 tons capacity and we have seen 1 floating crane of about 200 tons.
Ship Chandler: Fresh provisions are poor quality and only small quantities available. Low prices. Also ship chandler takes care of sick crew members for hospital and doctors.
Shore Leave: From Halong Anchorage crew are not allowed to go ashore. At Haiphong berth shore leave allowed from 0700 – 2300 hrs. All foreign currency, rings, watches, must be declared at the gate.
Repatriation: Agent assures Master that repatriation is very easy, however the need of formalities and permissions will take a long time.
Health: Quarantine doctor will revaccinate any crew member with expired certificate.
Communications: VOSA Agency has VHF Channel 16 and it is possible to contact them from Zero Buoy. Communication with Owners is very slow and the cable needs 2 to 3 days to reach the destination. Crew mail requires more than 40 days to reach the vessel.
Density: Halong anchorage 1020. Haiphong port 1000.
General: A lot of people visit the vessel claiming that they are Harbour Officers, Chief Stevedores, Receivers, Surveyors, Stevedores, Customs Officers, Security Officers.
Important: Stevedore's barge which is alongside the vessel at Halong Anchorage is full of rats, which come on board via ladders and other ropes, with result that the vessel becomes infested with rats.
Ships must have on board, from their previous port of call, sufficient quantity of rat poison to kill them after sailing from Vietnam.

DEVELOPMENTS: *1st Phase:* Construction of graving dock (150 m.×25 m.×6.3 m.) and 200 m. length berth with depth 6.5 m.
2nd Phase: Construction of Dry Dock (180 m.×30 m.×7 m.) and small piers length 100 m. and 150 m.
AUTHORITY: Haiphong Port Office, No. 12 HoangDieu Street. Harbour Master's office in port area.

AGENT: Vietnam Ocean Shipping Agency (VOSA), 25 Dien Bien Phu Street, Haiphong City. Telegrams: VOSA Haiphong. VHF: Channels 6 and 16.

HO CHI MIN CITY (Saigon Port): 10.45 N. 106.45 E.

DOCUMENTS: See "General" before first port.
PILOTAGE: Upon arrival at Pilot Station, the pilot service should be informed by cable of the exact position of anchorage, draft of the vessel, and the maximum speed the ship can do in the river.
Every evening from 2000 hrs. to 2200 hrs. (local time) radio watch should be kept with Saigon XVS on the frequency of 500 kHz. In case the vessel is to proceed up the river the next morning the pilot service will cable the Master the exact hour of departure from Cape St. Jacques (Vung Tau).
The pilot service will not send any Pilot to ships that do not give the information as to draft, speed of vessel, and exact position at the anchorage station at Cape St. Jacques (Vung Tau).
Pilot station at Vung Tau, Tel: 6. Pilot station at Saigon Tel: 21222 and 90508. Pilot boards at Vinh Dua (Gulf of Coco Trees).
ANCHORAGE: Vessels anchor in approach of "Zero Buoy" (position Lat. 10° 20′ 40″ N., Long. 107° 03′ E.) with depths of about 30 ft.
RESTRICTIONS: River transits, berthing and unberthing are effected in daylight hours only. Vessels should arrive 2 hours before daylight HW. At least 1 ft. keel clearance required. Least depth in channel, 27 ft. below Chart Datum.
MAX. SIZE: Length 673 ft. Vessels can proceed with draft 27 ft. depending on daily tide.
HEALTH: See "General" before first port.
Port officials board at Vung Tau if vessels call at Vung Tau. Free Pratique will be obtained from local authorities. For vessels calling at Saigon port, port officials will board upon docking alongside at Saigon port. Free Pratique will be granted at Saigon.
RADIO: Saigon Port Radio, call sign XVS.
TUGS: Available up to 2,600 h.p. Tankers usually berth without tug assistance.
BERTHING: Depth at quays 26 ft. to 36 ft.
TANKERS: Discharge at Nha-Be: Ex-Caltex Terminal, narrow pier with mooring buoys, depth in berth 27 ft. Ex-Shell Terminal, "T" jetty with mooring buoys, depth in berth 30 ft. No slop disposal facilities.
DENSITY: About 1005 at berths.
MEDICAL: Doctors and hospital facilities available.
FRESH WATER: Can be supplied by barge subject to advance notice of 24 hours.
FUEL: Diesel oil can be supplied.
REPAIRS: Machine shop facilities only.
AIRPORT: Situated about 5 miles from the port. International services.
DRY DOCK: Available at Basoong shipyard.
SURVEYORS: Cargo surveyors: Vinacontrol.
Ship's surveyors: Vires, Branch No. 6, 22 Nguyen Hue Sreet, Ho Chi Min City.
AUTHORITY: Saigon Port Director and Harbour Master, No. 01 Nguyen Tat Thanh Street, Ho Chi Min City.

NHA TRANG: 12.12 N. 109.13 E.

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilot boards at one of 2 stations.
Southern Pilot Station: Lat. 12° 09′ 33″ N., Long. 109° 16′ 03″ E.
Northern Pilot Station: Lat. 12° 14′ 30″ N., Long. 109° 13′ 40″ E. on correct arrival time.
ANCHORAGE: To Pilot's advice.
Anchorage area for ships carrying dangerous cargo in North, West of Hon Mot. Max. depth 20 m. Other cargo ships anchor within 0.5 miles of port pier, max. depth 15 m.
RESTRICTIONS: Pilots board during daylight only.
HEALTH: See "General" before first port.
RADIO: Nha Trang Radio, call sign XVN.
VHF: Harbour Master on VHF Channel 16.
TUGS: 3 tugs available. 600 h.p., 400 h.p. and 300 h.p. Use ship's lines.
BERTHING: 1 quay with length 100 m. available, also new construction of 80 m. length. Max. size ship at berth LOA 150 m., depth of water 6.0 m.
CRANES: 3 shore cranes available. 1 max. capacity 12 tons, 2 with max. capacities 5 tons. There are no floating cranes.
BRIDGES: None.
STEVEDORES: Stevedores work 3 shifts: 0000 – 0800 hrs., 0800 – 1600 hrs. and 1600 – 0000 hrs.
Load and discharge rates:
At berth: General cargo: 300 tons per day.
Bulk cargo: 400 tons per day.
Lightering: General cargo: 240 tons per day.
Bulk cargo: 300 tons per day.
TANKERS: Submarine pipe-line with max. pumping pressure of 100 p.s.i. (5 kg.) (300 m. distance from shore).
DENSITY: 1020.
FRESH WATER: Available by barges.
FUEL: Supplied by ship chandler, available from self-propelled barge with max. capacity 50 tons.
FIRE PRECAUTIONS: Safety Regulations for tankers and other dangerous cargoes apply.
SURVEYORS: Cargo surveyors: Vinacontrol.
Ship Surveyors: Vires, Branch No. 5, Nha Trang City.
REPAIRS: Contact Agent.
AIRPORT: Nha Trang Airport serves Ho Chi Min City and Hanoi.
TIME: GMT plus 7 hours.
HOLIDAYS: There are no special holidays.

RADIO/VHF: Contact Haiphong Radio.
TUGS: 1 tug of 1,200 h.p.
BERTHING: Coal loading only. One quay available at Campha with 500 m. length. Hon Gay, one pier of 250 m. length.
CRANES: Shore cranes available.
TANKERS: One mooring berth located at Lat. 20° 57′ 47″ N., Long. 107° 03′ 30″ E.
BRIDGES: None, but tankers going into and going out of mooring berth must contact Harbour Master to get permission to pass under high voltage electric line at Hon Gay Bai Chay.

SHIP'S OFFICERS REPORT: July 1986.
Pilotage: Compulsory. Pilot will board at pilot station between 0600 hrs. and 1800 hrs. (daylight hours). Pilot will bring vessel to either Quarantine Anchorage or Inner Harbour, via Vung Ha Long Buoyed Channel, for Customs and Immigration clearance.
Pilot Station: Lat. 20° 44.2′ N., Long. 107° 10.5′ E.
Anchorages:
Quarantine Anchorage: Lat. 20° 52.2′ N., Long. 107° 06.2′ E.
Inner Harbour Anchorage: 0.8 miles S.S.W. off Hon Gay.
Restrictions: 1. Transit from Pilot Station to Quarantine Anchorage in daylight hours only.
2. Vung Ha Long Buoyed Channel dredged to 7.0 m. Draft restriction according to tides. Approximate max. draft 10.0 m.
3. Height restriction through Cua Lu to tanker berth 39.0 m. (air draft) at Chart Datum.
Radio/VHF: Hon Gay Pilot and Vosa Hon Gay (Agent) on VHF Channel 16.
Tankers: Tanker berth in position Lat. 20° 58.0′ N., Long. 107° 03.7′ E. Vessel tied up to buoys and discharged via flexible hose of 6 in. Vessel can expect delays. Average discharge rate 180 t.p.h.
Density: Between 1009 and 1017, according to tidal stream.
Agent: Vosa is sole government Agent. Agent acts as interpreter.

SHIPMASTER'S REPORT: September 1988.
Hon Gay: Radio contact direct through Haiphong (XVG) is possible for sending cables, but working hours are unreliable.
Not a single cable was acknowledged by Vosa Agent at Hon Gay. However queries were received from Vosa Haiphong via Haiphong Radio.
VHF contact after arrival was also difficult, due to frequent electricity shutdown in Hon Gay.
No draft restriction from Pilot Station (Lat. 20° 44.12′ N., Long. 107° 10.3′ E.) to Lightering Anchorage (Lat. 20°50.3′ N., Long. 107° 07.7′ E.).
The main channel to reach Hon Gay is marked by 10 unlit buoys and dredged up to 6.3 m. at low water. When crossing the channel with 9.0 m. draft and 3.3 m. of high tide, the echo sounder indicated a clearance of 2.0 m.
All movements in the channel during daytime.
The Sea Berth is just after passing the electricity high tension overhead cables. Air draft required to pass under the high tension cables with high tide of 3.3 m. was 33 m.
Mooring and unmooring during daylight hours and during slack water.
One tug available for mooring and unmooring.
Sea Berth consists of 5 buoys (3 forward and 2 aft). The hoses are rigged on the port side, we were given 2×6 in. hoses for discharging Gas Oil. The rate of discharging was 200 tonnes per line per hour. Shore capacity is around 15,000 tonnes.
Shore start/stop of cargo operations is by flag signals during daytime and by light signals during night time. During rain and blackout at night time, the signal arrangement is inadequate and unreliable.
During the stay at Sea Berth, lightering is allowed.
At all times, 3 policemen reside onboard. Accommodation and meals are to be supplied.
Fresh water is available.
Shipchandler service is minimal. Most essentials out of stock or out of season.
AUTHORITY: Quang Ninh Port Director and Harbour Master.

QUY NHON: 13.46 N. 109.14 E.

DOCUMENTS: See "General" before first port. Additional copies of documents may be required.
PILOTAGE: Pilot boards on correct arrival time at "Zero Buoy" (Lat. 13° 44′ 19″ N., Long. 109° 15′ 16″ E.). During bad weather Harbour Master will advise by VHF the anchorage position where Pilot may board in safety.
RESTRICTIONS: Pilot boards during daylight only.
ANCHORAGE: In "Zero Buoy" area with max. depth 10.00 m. If draft exceeds 9.00 m. vessels anchor in the Southern port limits.
MAX. SIZE: LOA 140 m. Draft 6.0 m.
HEALTH: See "General" before first port.
RADIO: Quy Nhon Port, call sign XVH.
VHF: Harbour Master on watch: 0630 – 1100 hrs. and 1330 – 1730 hrs. on Channel 16.
TUGS: One tug of 800 h.p. available.
BERTHING: One quay with length 140 m., depth 6.50 m. (low tide) available.
CRANES: 5 shore cranes with capacities 15 tons, 12 tons, 10 tons and 2 shore cranes of 8 tons available.
BRIDGES: None.
STEVEDORES: Stevedores work 3 shifts: 0600 – 1400 hrs., 1400 – 2200 hrs and 2200 – 0600 hrs.
TANKERS: One floating pier for tankers with max. draft 9.0 m. Pipes and hoses of diameter 200 mm. and 159 mm. (6 in.).
DENSITY: 1020.
FRESH WATER: Available at berth.
FUEL: Not guaranteed.
FIRE PRECAUTIONS: Tanker regulations apply and fire service available on wharf.
REPAIRS: Machine shop in port. Minor repairs possible.
DRY DOCKS: 500 tons capacity for small ship construction.
SURVEYORS: Cargo surveyors: Vina Control attend from Hanoi.
Ship surveyors: Vires, branch 5, Nha Trang City.
AIRPORT: Pha Chat Airport 35 km. from Quy Nhon city. Flights: Quy Nhon – Hanoi.
HOLIDAYS: There are no special holidays.
AMBULANCE/FIRE: Ambulance, tel. 17 or 2290. Fire, tel. 18 or 2291.
SERVICES: Contact Agent.
AUTHORITY: Quy Nhon Port Director and Harbour Master. *Tel:* 2221.

VUNG TAU: 10.21 N. 107.04 E.

PORT LIMITS: Seaward boundaries of Vung Tau – Port limits within 3 miles of Zero Buoy (Lat. 10° 20′ 40″ N., Long. 107° 03′ E.) toward East and South of Sea and the area within circle of 1.5 miles radius of the floating store.
DOCUMENTS/HEALTH: See "General" before first port.
PILOTAGE: General Pilot Station for Saigon/Vung Tau ports and Mekong River is at Zero Buoy in position Lat. 10° 20′ 40″ N., Long. 107° 03′ E.
Preferential Pilot Station for tankers loading crude at "No Wharf" Crudex Port (but with permission of Vung Tau Harbour Master) is in position Lat. 09° 41′ N., Long. 107° 55′ E.
ANCHORAGE: *Waiting Area:*
1. All ships waiting to enter Saigon Port must fly the signal flag No. 1 at top of foremast.
2. All ships waiting to transit Mekong River must fly the signal flag No. 2 at top of foremast.
3. All ships waiting to enter Saigon Port may be inspected by Vung Tau Harbour Master (if requested by Master).
RADIO/VHF: Contact Saigon Port.
BERTHING: Vung Tau Port comprises three ports.
1. "No Wharf" Crudex (export Crude) port.
2. Petroleum and gas service port in position Lat. 10° 23′ 36″ N., Long. 107° 05′ 56″ E.
3. Cat Lo port in position Lat. 10° 24′ 48″ N., Long. 107° 08′ E.
TANKERS: Petroleum and gas port.
AUTHORITY: Director Legislation Department, Vietnam General Maritime Department, 11 Vo Thi Sau Street, Haiphong, Vietnam. *Tel:* 46719. *Telex:* 45229 Trans Vt.

Virgin Islands

FREDERIKSTED, St. Croix: 17.43 N. 64.53 W.

DOCUMENTS: All forms are standard U.S. Government Forms:

Passenger List (I-418) – 3 copies.
Crew List (I-418) – 3 copies.
Clearance from Last Port.
Inward Customs Manifest (1302) – 4 copies.
Ship's Stores Declaration – Customs Form 1303 – 2 copies.
Crew Effects Declaration – Customs Form 1304 – 1 copy.

(Also see separate headings – "Health" – "Customs" – "Immigration").

PILOTAGE: Services available day or night. Payment for Pilot services is mandatory whether Master uses Pilot or not. (Vessels commissioned by the U.S. or foreign government, yachts and vessels under 100 gross tons are exempt from pilotage fees, except when the services of a Pilot are requested).

ANCHORAGE: Open roadstead on the lee (West) side of St. Croix, providing a good anchorage with no significant tide.

HEALTH: See "Health Regulations" before first U.S.A. Port (Albany).

Garbage should be disposed of beyond the 3-mile limit. On passing the 3-mile limit all garbage disposal units which open to the sea should be closed. All garbage should then be placed in covered cans and retained on board until the ship is again beyond the 3-mile limit.

RADIO: (a) Vessels may communicate with Island via:

Mackay Radio, Amagansett, New York	Call Letters WSL
Chatham Radio, Massachusetts	Call Letters WCC
Lantana Radio, Florida	Call Letters WOE
Barbados Radio, Barbados	Call Letters VPO
Destrellan Radio, Guadeloupe	Call Letters FFO
Fort de France Radio, Martinique	Call Letters FFP

All stations maintaining 24-hour service. These radio stations then relay the messages by cablegram to Frederiksted via either ITT World Communications Inc., Cable and Wireless or Western Union International.

(b) Master of every vessel arriving Frederiksted is required to give at least 24 hours advance notice of arrival to Captain of the Port, U.S. Coast Guard – San Juan, Puerto Rico, by wireless on 500 kHz or by radio telephone 2182 kHz. Call Letters for U.S. Coast Guard, San Juan, Puerto Rico – NMR.

(c) Masters are requested to advise Agent their expected time of arrival as far in advance as is possible, vessels arriving from ports other than U.S. or Caribbean Islands should give at least 7 days' notice, and vessels arriving from U.S. ports should give at least 4 days' notice. In addition, a message should be sent verifying arrival at least 48 hours in advance, with delays reported as necessary. Arrival messages should include information regarding repairs, stores, number of crew and passengers on board. If cash is required, a minimum of 7 days' (prior to date of arrival) notice is mandatory.

(d) While vessels are in Frederiksted the Authorities do not permit the use of the ship's radio transmitters.

(e) Vessels equipped with VHF equipment should commence radio watch on Channel 16 when vessel is 100 miles from St. Croix. Contact with Agents and shore facilities can be made direct or via Virgin Islands Marine Operator – Station WAH – Call Letters WAH.

(f) Masters of vessels arriving at Frederiksted Pier are required to contact V.I. Port Authority through their Agent or by FAX No. (809) 778 1033, 24 hours in advance of arrival.

VHF: Port Authority on Channel 16.

TUGS: None readily available – tugs can be arranged with 48 hours advance notice.

BERTHING: A government-owned pier with a 1,400 ft. long approachway, bridging Maritime Zone to a pier-head 240 ft. long by 60 ft. wide. Vessels 600 ft. and over with a max. forward draft of 25 ft. have been accommodated.

FRESH WATER: Available at dock, arranged by Agent.

TIME: GMT minus 4 hours. Atlantic Standard Time.

HOLIDAYS: The following are legal holidays: Sundays; January 1st (New Year's Day); The third Monday in February (President's Day); March 31st (Transfer Day); Holy Thursday; Good Friday; Easter Monday; Whit Monday; Last Monday in May (Memorial Day); June 22nd (Organic Act Day); July 4th (Independence Day); July 3rd (Emancipation Day); Last Monday in July (Supplication Day); The first Monday in September (Labour Day); The second Monday in October (Columbus Day); The fourth Monday in October (Veterans' Day); The fourth Thursday in November (Thanksgiving Day); December 25th (Christmas Day); December 26th (Christmas Second Day), and such other days as the President or the Government may by proclamation declare as holidays. The port remains open on holidays.

REGULATIONS: The U.S. Coast Guard strictly enforces the Harbour Pollution Act of 1924, prohibiting discharge of refuse and oil in navigable waters of the U.S. Virgin Islands. Local Port Regulations are similar to those applying in U.S. Mainland Ports.

CUSTOMS: Customs Officers will board at anchorage or wharf berths, and will require an accommodation ladder.

Vessels required to enter and clear through Customs House:

Vessels loading or unloading cargo;
Vessels embarking or disembarking passengers;
Vessels remaining in port over 24 hours;
Vessels requesting permission for their passengers to go ashore during the stay of the vessel in port.

Vessels in above categories must present following documents:

Clearance from Last Port;
3 copies of Crew List (Form I-418) or substantially similar form – see note*
3 copies Passenger List (Form I-418) or substantially similar form – see note*
4 copies Inward Foreign Manifest covering all cargo for discharge at St. Croix, V.I., showing weights or measurements (of basis of how cargo is freighted) on all items (Customs Form 1302).
2 copies Stores List (Engine-Deck-Commissary-Narcotics).
1 copy Crew Effects Declaration (Custom's Form 1304).

* List of passengers and crew shall be on Customs and Immigration Form I-418 or on a substantially similar form, except that where no steerage passengers are aboard upon arrival, the listing of the passengers may be in the form of a vessel "Souvenir List" or similar list, in which the names of the passengers are listed alphabetically by class.

Sealing of Stores: Upon arrival of a vessel from a foreign port, or a vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use of consumption on board while vessel is in port and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action. Customs Inspectors in charge of vessel, from time to time, may issue stores from under seal for consumption on board by passengers and crew.

Passengers disembarking must present personal baggage declaration if from foreign.

IMMIGRATION: Recommended that Masters who are unfamiliar with U.S. Immigration Procedure should seek clarification from Agents as far in advance as is possible.

If a vessel arrives direct from a United States mainland port or from Puerto Rico no Immigration inspection will be performed. If a vessel arrives direct from a foreign port the vessel shall undergo Immigration inspection.

Vessels arriving without a visaed crew list, may be able to obtain a waiver from Officer in Charge of U.S. Immigration & Naturalisation Service, by making application on Form I-193. A fee of $10.00 is required to obtain a waiver.

In order to expedite the clearing of the vessel, it is suggested that prior to arrival all passengers subject to inspection should be assembled where the inspection is to be performed.

Stowaways must be reported in ETA Message and listed on a Passenger Manifest (Form I-418) and on Form I-94, and must be reported to the U.S. Immigration Officer as soon as he boards.

All non-resident alien crew members, whether shore leave is required or not, are required to have in their possession valid Passports, Seamen's Book or Identification Card (with photo) and Form I-95 (crewman's Landing Permit) or Form I-184 (Alien Crewman's Permit and Identification Card) on arrival. All resident alien crew members are required to have in their possession Alien Registration Receipt Card (Form I-151) on arrival.

SHORE GANGWAYS: Available.

LAUNCHES/TENDERS: Not available.

AIRPORT: Distant 8.5 miles.

AUTHORITY: Virgin Islands Port Authority, Marine Division, P.O.Box 1134, Christiansted, St. Croix, Virgin Islands, U.S.A. 00820. *Tel:* (809) 778-3131 (St. Croix). *Contact:* Larry Finch, Marine Manager.

LIMETREE BAY, St. Croix: 17.41 N. 64.44 W.

(See Plan)

LOCATION: The facilities of Hess Oil Virgin Islands Corp. (HOVIC) are located in Limetree Bay on the South coast of the island of St. Croix, U.S. Virgin Islands. St. Croix is 32 miles South of St. Thomas and St. John Islands and 50 miles S.E. of the island of Puerto Rico. It is the largest of the U.S. Virgin Islands being 27 miles long and averages 5 miles in width.

The Sea Buoy "No. 2" marking the entrance to Limetree Bay Channel is located in 80 ft. of water on the East side of the channel at Lat.17° 40′ 27″ N., Long. 64° 44′ 18″ W. The Sea Buoy is painted red and is equipped with a quick flashing red light with a visibility of 5 miles.

On approaching the Sea Buoy, Mariners are advised to stay to the South of the 100 fathom curve to avoid fish traps and shoal areas which have not been completely surveyed.

A vessel is considered to be "Arrived" when it is on the Pilot Station, that is South of the Sea Buoy (see "Pilotage").

Charts: Virgin Islands (including Saint Croix) U.S.C. & G.S. Chart No. 905, U.S. Naval Oceanographic Office Chart No. 25246, and British Admiralty Chart No. 485.

DOCUMENTS: Vessels arriving are to have the following documentation:

Last Port Clearance.
Master's Oath (Form 1300) – 1 copy for entry, 1 copy for clearance.
Crew Lists (Form I-418) – 4 copies.
Cargo Declaration (Form 1302) – 2 copies for clearance.
Ship's Stores/Provisions List (Form 1303).
Crew Personal Effects List (Form 1304).
General Declaration (Form 1301) – 1 copy for entry and 2 copies for clearance.

Vessels calling to discharge cargo or having cargo in-transit onboard should advise the Agent of their cargo figures in barrels and long tons and load port and discharge port of each grade in order to prepare the necessary documentation.

PILOTAGE: Service is available 24 hours a day. All vessels entering Limetree Bay must comply with the Navigation Safety Regulations per 33 CFR, Part 164 and an entry denoting this should be made in the vessel's logbook. A HOVIC Pilot is mandatory for all vessels entering, shifting, or leaving the facilities at Limetree Bay. Pilots will assist the Master in the docking and undocking of the vessel; however, the Master of each vessel retains *full* responsibility for the vessel at all times.

The Pilot can be contacted by VHF Channel 11.

Pilot boarding area is 2.5 miles South of the Sea Buoy for vessels up to 125,000 d.w.t. and 3 miles South of the Sea Buoy for vessels over

125,000 d.w.t. Vessels over 100,000 d.w.t. are restricted to daylight dockings. Vessels are to remain in the Pilot boarding area until boarded by the Pilot, unless otherwise instructed. The Pilot will be placed aboard by a Company tug.

Masters shall contact the HOVIC Marine Port Captain on VHF Channel 11, 3 hours and 1 hour prior to arrival at the Pilot Station in order to avoid docking delays.

ANCHORAGE: There is no suitable anchorage for deep draft vessels off the port. Normal practice is to stop engines and wait 6 to 8 miles South of the Sea Buoy if required, when awaiting berthing instructions. In bad weather it is possible to proceed to Frederickstед on the West end of the island and anchor in 30 ft. to 60 ft. of water. Vessels shall have their anchors ready to let go upon entering the channel into Limetree Bay.

APPROACHES: The harbour entrance is marked by a red Sea Buoy "No. 2" equipped with a red quick flashing light with a 5 mile visibility. The channel is 500 ft. in width and 60 ft. in depth at Mean Low Water (MLW). This depth extends into the VLCC Berths No.3 and No. 4. Docks No. 5 and No. 6 have 50 ft. at the face. Docks No. 1, No. 2, No. 8 and No. 9 have 45 ft. at the face of MLW. Dry Cargo Berth has a draft restriction of 34 ft. without fenders and 38 ft. 06 in. with fenders. Draft restriction for Berths No. 3 and No. 4 is 55 ft., for Berths No. 5 and No. 6 is 47 ft. 06 in., and for Berths No.1, No. 2, No. 8 and No. 9 is 42 ft. 06 in. Berth No. 7 is currently out of service. The turning basin opens up Eastward from the channel line and is approximately 1,200 ft. long and 1,000 ft. wide. The West Turning Basin is 1,500 ft. × 1,200 ft. A breakwater extends out from the head of the East Basin to the coral reef which forms the Southern harbour limit.

RESTRICTIONS: Navigation is permitted 24 hours a day, except for vessels over 100,000 d.w.t. Vessels over 100,000 d.w.t. are handled on a daylight basis inbound only. The Port Captain will check and report on each vessel's draft before a Pilot is dispatched.

Ballast draft restrictions are as follows:

Vessel d.w.t.	*Forward* (ft.)	*Aft* (ft.)
Under 30,000	10	16
30,000 – 50,000	12	18
50,000 – 70,000	15	21
70,000 – 100,000	18	24
100,000 – 150,000	28	32
150,000 – 200,000	32	36
Over 200,000	40	40

MAX. SIZE: At Mean Low Water (Salt).

Berth No.	*LOA* (ft.)	*Draft* (ft.)	*Beam* (ft.)	*D.W.T.*
*DC	650	34.0	Unlimited	45,000
		38.5	With fenders	
1	900	42.5	Unlimited	80,000
2	900	42.5	"	80,000
3	1,200	55.0	"	300,000
4	1,200	55.0	"	300,000
5	900	47.5	"	100,000
6	900	47.5	"	100,000
**7	500	40.0	"	35,000
8	900	42.5	"	100,000
9	900	42.5	"	100,000

*Dry Cargo.
**Currently not in Service.

HEALTH: Pratique is granted after the vessel has met on-board inspection regulations of the U.S. Customs Service, Immigration Service and Department of Agriculture. Deratisation Certificates should be valid and can be renewed with advance notice to the vessel's Agent. If there is an illness on board of a suspicious nature, it must be reported together with the symptoms prior to arrival. All trash and refuse kept in drums on deck must be in closed plastic trash bags and the drums must have securely attached lids. No plastic bags laid upon the deck nor open containers on and/or below decks will be acceptable. No garbage collection or disposal service is allowed or available. No trash or refuse will be allowed to be deposited in the harbour. Failure to comply with any of the aforementioned items results in immediate and large fines.

RADIO: Masters must advise HOVIC-MARINE St. Croix (Call Sign KFL-984) and their agents by radio or telex 72 hours, 48 hours and 24 hours in advance of their ETA, giving the vessel's name, date and hour of arrival (Local time) and the name of their last port of call, otherwise delays may result in berthing the vessel. In addition a radio call on VHF Channel 11 to HOVIC MARINE (KFL-984) 3 hours and 1 hour prior to arrival is required. A vessel will be considered as "Arrived" when it reaches the Pilot Station 2.5 miles to 3 miles South of the Sea Buoy.

Telex communication with vessels so equipped is possible by telexing HOVIC MARINE, Telex No. 3473013.

VHF: VHF radio communications in the harbour facilities are as follows:

HOVIC Port Captain – Channel 11.
HOVIC Pilots – Calling Channel 11 and working Channel 65.
Agency – Channels 10 and 11.

For Ship to Shore calls at Sea, Virgin Islands Radio has Marine Operators available and can be contacted on Channel 16.

RADAR: No Port Radar Service or Vessel Traffic Management System exists in the port.

TUGS: Tug assistance in the harbour limits for docking, shifting or undocking is mandatory and is provided by 3 × 3,000 h.p. diesel tugs and 2 × 7,200 h.p. diesel tugs that are stationed in the port to provide this service. All tugs are under the orders of the HOVIC Pilot or the HOVIC Port Captain and are equipped with fire pumps and monitors to assist in fire fighting. Tug lines are used.

MEDICAL: Medical requirements are arranged through the vessel's Agent. Hospital and dental facilities are available; however, the vessel's Agent should be advised of any medical requirements prior to arrival. Standard United States health requirements apply. Inoculations and vaccinations are available.

BERTHING:
HOVIC Terminal (Hess): A shore gangway is provided. For berth limitations due to size see "Maximum Size". All berths are for the handling of petroleum products with the exception of Dry Cargo (DC) Berth which has in addition the capability of loading sulphur pellets in bulk. There are no other facilities for handling any other cargoes beside petroleum at the HOVIC Terminal. No shore steam/power is available.

Port Alucroix: Situated to the West of the HOVIC Terminal. The port is entered via the Krause Lagoon Channel with a controlling depth of 35 ft. at Mean Low Water and a width of 300 ft. At the head of the Lagoon is the Martin Marietta Alumina Terminal which is currently idle. Pilot boards approximately 2.5 miles South of the Krause Lagoon Channel Sea Buoys.

Container Port: Situated close to the West of the HOVIC Terminal. The port is entered via the Krause Lagoon Channel (300 ft. wide and 35 ft. depth) and the Container Port Cross Channel (400 ft. wide and 35 ft. depth). Length of the pier is 1,200 ft. with 35 ft. depth. 1 × 30 ton Paceco container crane is available with a telescopic spreader to handle 20 ft., 35 ft. and 40 ft. containers. Also a berth at the head of the pier can handle Ro/Ro cargoes.

BALLAST: United States laws prohibit the pumping overboard of dirty ballast while a vessel is within U.S. coastal waters. All ballast must be pumped to facilities available ashore. However, if a vessel is especially equipped with clean segregated systems which are reserved for ballast use only, it is permissible to pump the segregated ballast overboard at the dock after first being inspected and approved by the Port Captain.

In pumping dirty ballast ashore, it is received into 2×10 in. hoses connected to 1×16 in. line into another 1×36 in. shore line at a max. discharge pressure of about 100 p.s.i. on the dock. The ballast is pumped into a ballast facility about 1 mile North of the dock. Due to the limited facilities and the possibility of more than one vessel deballasting at a time, it is requested that vessel arrive with a minimum amount of ballast, consistent with Pilot's ballast draft restrictions, and include the amount to be discharged on their ETA advices to their Agents.

The U.S. Oil Pollution Act of 1924 applies to the Pollution of Coastal Waters. Violators are subject to fines and possible imprisonment.

NOTICE OF READINESS: Notice of Readiness to load or discharge is a warranty that the vessel is in all respects ready to load or discharge, and that all of the ship's equipment, including, but not limited to, tanks, pumps, valves and pipelines, are ready and fit to load or discharge petroleum or petrochemical products. Notice of Readiness will not be accepted unless the vessel is in all respects ready to load or discharge as appropriate. Vessel will not be deemed ready to load or discharge and pumping will not commence until the Senior Deck Officer shall have executed and delivered to HOVIC a "Declaration of Inspection Prior to Bulk Cargo Transfer" as required by U.S. Coast Guard Regulations.

LOADING: The Petroleum docks are serviced by the following shore lines: 1×42 in. crude line, 1×36 in. crude line, 1×36 in. No. 6 oil line, 1×36 in. ballast line, 1×30 in. VGO (Catfeed) line, 1×24 in. No. 6 oil line, 1×24 in. VGO (Catfeed) line, 2×20 in. gasoline lines, 1×20 in. Jet/Kerosene line, 1×16 in. gasoline line, 1×12 in. line for each of the following: Paraxylene, Xylenes, Benzene and Toluene, 1×8 in. Caustic Soda line and bunker lines of 1×18 in., 1×12 in. and 1×8 in. All hose connections are 10 in. diameter, there are 4×16 in. loading/discharge arms at Berths No. 3 and No. 4 for crude oil, 2×16 in. arms for No. 6 oil/crude at Berth No. 6, and 2×16 in. arms for VGO (Catfeed)/Crude at Berths No. 8 and No. 9. Chemical grades are handled via 1×10 in. hose with Caustic Soda handled by 1×6 in. and balance grades via 2×10 in. hoses. Facilities are available to handle dirty slops/tank washings.

BRIDGES: There are no bridges that affect harbour movements.

DENSITY: 1025.

FRESH WATER: The Island of St. Croix is dependent almost entirely on rainfall for its supply of fresh water. There are wells but many of them are rather saline in nature. As a result fresh water is scarce and expensive. In conjunction with its refinery operation HOVIC operates a desalination plant and limited quantities of fresh water are available providing at least 48 hours' notice of these requirements is given prior to the ship's arrival. All fresh water is metered aboard ship. Costs are as follows: 1st 50 tons = US$5.00 per ton, between 50 tons and 100 tons = US$10.00 per ton, and over 100 tons = US$15.00 per ton.

FUEL: No. 6 fuel oil (Bunker C), 1500 Redwood, 3500 Redwood and light marine diesel are available by prior arrangement and with 72 hours' notice. Credit must be cleared by Amerada Hess Corporation in Woodbridge, New Jersey, USA. Advice concerning quantities and quality of fuel desired should be given in the ETA advices sent to the vessel's Agent.

FIRE PRECAUTIONS: Standard fire precautions for tanker safety apply, including but not limited to: Smoking is prohibited on the weather decks of tank vessels, on docks, and in the general dock vicinity. All doors and portholes from the quarters facing outside must be kept closed while transferring cargo at the dock. No portable cables connected to an electrical source shall be used while transferring cargo or ballast. When illumination is needed, approved explosion-proof lights are to be used. Boiler cleaning, tank cleaning, gas freeing, welding, burning or hot work is not allowed at the dock. Tank mopping is permitted on an individual basis. Vessel's main engines should not be out of service while the vessel is in port. It is not permitted to shut down both main boilers on a steam vessel or pull the cylinder heads from the main engine of a motor vessel. In the event a stack or engine exhaust emits live sparks, the transfer of cargo must be stopped. The main radio transmitter is not to be used while transferring cargo or ballast. The transfer of cargo and ballast must be stopped during electrical storms, or when lightening appears in close vicinity. A fire towing wire should be led out forward and aft on the offshore side of the vessel and lowered to the water's edge, made fast to the deck and tended to maintain them at the water's edge. In the event of fire on the vessel, dock or waterfront area, the transfer of cargo will be suspended and the vessel made ready for immediate departure if the danger is imminent. Furthermore, should an emergency or accident occur, vessel and terminal personnel must take immediate action in order to protect life and property. Contact the HOVIC

Port Captain on VHF Channel 11 and the terminal dockwatch to inform them of the nature of the emergency.

CONSULS: Denmark and Netherlands.

REPAIRS: In general no repair work is authorised, except for emergencies while the vessel is at the dock.

DRY DOCKS: No dry docks are available in the port.

SURVEYORS: Cargo Inspectors are available at Limetree Bay as follows: SGS Inspectorate, Chas. Martin and Caleb Brett. E. W. Saybolt is available from San Juan, Puerto Rico.

Representatives of the American Bureau of Shipping, Lloyd's Register and other maritime classification societies are available from San Juan, Puerto Rico on 24 hours' notice. The ship's Agent will assist the Master in soliciting their services.

GANGWAY/DECK WATCHMEN: Vessel to provide personnel at manifold and gangway.

CUSTOMS ALLOWANCES: Crew members are permitted to hold out of bond 1,500 cigarettes and 1 litre of alcohol per crew member.

REPATRIATION: Facilities exist for effecting Crew changes and arranging repatriation.

AIRPORT: HOVIC Terminal at Limetree Bay is located 15 minutes via highway from the airport. Daily flights direct to Miami, Fla., New York, N.Y., Newark, N.J. and numerous flights to San Juan, Puerto Rico with worldwide connections are available.

TIME: The U.S. Virgin Islands use Atlantic Standard Time (A.S.T.) which is Greenwich Mean Time minus 4 hours.

HOLIDAYS: The refinery and terminal operates 24 hours per day all year round.

POLICE/AMBULANCE/FIRE: The refinery and terminal have their own ambulance and fire department. Contact the HOVIC Port Captain on VHF Channel 11. Local police may be contacted via the Agent.

TELEPHONES: No arrangements are available for placing telephones aboard ship.

SERVICES: Following services are available: Radio/Radar repair, Ship Chandler, Liferaft Service/repacking, ship classification societies surveyors (from San Juan, P.R.), and charts, publications or Notice to Mariners in very limited supply.

BANKS:

The Bank of Nova Scotia, Christiansted (809-773-1013).
Banco Popular, Christiansted (809-773-0077).
Chase Manhattan Bank, Christiansted (809-773-1200).
First Pennsylvania Bank NA, Christiansted (809-773-0440).

STORING: Vessels can only be stored by truck delivery to the pier. Trucks may approach the vessel no closer than 150 ft., where goods are pushed/pulled alongside using vendor's wheeled carts. A shore crane is capable of lifting light weights to the vessel from the apron. Forklifts are not allowed on the dock. Local riggers are available for assistance provided a minimum of 24 hours' notice is given to the Agent.

SHORE LEAVE: Crew members are granted shore leave consistent with standard U.S.A. requirements and procedures. Crew members desiring shore leave are not permitted to walk through the refinery. Bicycles are not permitted either. Taxi cabs are available as required for transportation through the refinery and to Christiansted and Frederiksted. Crew members should await pickup at the dock approach or walk to the taxi stand located alongside the Marine/Terminal building at the head of the docks.

IDENTIFICATION CARDS: Agency representative will supply Master with Refinery Gate Passes.

TIDES AND CURRENTS: The tides are small and diurnal, the mean range being about 0.5 ft. and the diurnal range less than 1 ft. depending upon wind and weather conditions. Normally there is a drift of 0.5 knots to 1.0 knots moving along the South shore of the island in a Westerly direction. H.O. Sailing Directions and U.S. Coast Pilots No. 5 can provide additional details.

REGULATIONS: Vessel will be held responsible for the cost of labour and material required to clean up any oil spill caused by the vessel in Limetree Bay. Slick booms are available to isolate spills and contingency plans are in force for oil spills. The U.S. Coast Guard will be notified of any oil spills, no matter how minor, also vessel's cargo transfer operations will be suspended pending U.S. Coast Guard investigation.

AIR POLLUTION: It is unlawful to permit emission of smoke darker than No. 2 on the Ringlemann Scale. Violation of this law in Limetree Bay may result in fines to the vessel from local authorities.

SWIMMING: Swimming in the Harbour is not permitted as sharks and barracudas frequent the area.

COMMUNICATIONS:

Communication with U.S. Navy at Frederiksted: Arriving at or departing from Limetree Bay, all vessels passing the Western end of St. Croix are to monitor VHF Channel 16 for radio traffic from the U.S. Navy Weapons Tracking Station at Frederiksted. Vessels may be requested to alter course to avoid interrupting naval activities that are being conducted with aircraft, ships and submarines.

DELAYS: Due to the multiple capabilities of the harbour, infrequent delays are encountered in the transfer of petroleum or petrochemical products.

DEVELOPMENTS: Currently there are no planned revisions to the harbour.

GENERAL:

Liquors: The transportation of alcoholic beverages inside HOVIC's property is strictly prohibited; consequently, no liquor or beer may be removed from vessels, the only exception to the foregoing is in the case of bonded stores ordered by the Master.

Visitors: No visitors are permitted in the dock area. Only persons on official ship's business are permitted on the piers.

Laundry: Only limited facilities are available to handle ship's laundry.

Mail: Official and personal mail will be delivered on board by the ship's Agent when vessels are being cleared inwards. Mail received for vessels while in port will be delivered on board prior to sailing. Outgoing mail is accepted from Master, provided it is accompanied by a mail transmittal slip to support disbursements.

Supplies and Repairs: Limited supplies of provisions and marine hardware are available on the island. There are no facilities for major repairs closer than San Juan, Puerto Rico. Machine shops in Christiansted and Frederiksted can assist in making minor repairs.

Overloading: Masters are advised that the international laws are strictly enforced with regard to overloading and should be guided accordingly. In cases where overloaded cargo has to be discharged, all expenses incurred, including ship delay, will be for the vessel's account.

Weather Conditions: The loading and discharging of all crude petroleum and its products will be stopped during any electrical storm. Ullage screens or ullage plugs must be in place. Loading of gasoline or other similar low flash products will be stopped during periods of calm when the heavy vapours cannot be dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's Officers are cautioned to be on their guard during such conditions. In the event of abnormal weather conditions in the area, such as a hurricane, vessels will be notified that additional moorings are required. If the situation so demands, Masters will be told to suspend all operations and proceed to sea until normal weather conditions return.

Demurrage: Vessels are required to vacate the berth promptly upon completion of cargo handling operations. Permission to lay alongside at any time the vessel is not engaged in cargo handling operations must be granted in writing by the Marine Manager. The Port Captain will keep vessels advised of other vessels awaiting berth. If any vessel fails to vacate its berth upon completion of cargo handling operations and expiration of free laytime for dock usage as outlined below, the vessel will be responsible for penalties and demurrage as follows:

1) To pay dock demurrage at the rate of US$1,000 per hour or a pro-rata share thereof for a fraction of an hour.
2) To hold HOVIC harmless for any demurrage and consequential damages incurred as a result of any other vessels suffering berthing delays or for any other events resulting from the vessel's failure to properly vacate the berth.

The following rules shall govern the determination of demurrage:

1) 1 hour of free laytime will be allowed after completion of cargo loading operations. This free time will start at the time cargo hoses are disconnected from the ship's manifold on completion of cargo transfer operations.

   Vessels awaiting cargo papers and/or Customs Clearance must vacate the berth within the 1 hour period and move outside to await their papers.
2) 6 hours free Laytime will be allowed for ballasting after discharge operations are completed.
3) Ballasting times for VLCC's will be handled on an individual basis for each ship.
4) Delays caused by the terminal are excepted.

AUTHORITY: Hess Oil Virgin Islands Corporation (HOVIC), P.O.Box 127, Kingshill, St. Croix, U.S. Virgin Islands 00850. *Tel:* 809-778-4000. *Telex:* 3473013. *Contact:* Andrew B. Koski, Port Captain. John H. Frederick, Marine Manager.

Virgin Islands Port Authority, P.O.Box 1707, St. Thomas, Virgin Islands, U.S.A. 00801. *Tel:* (809) 774-2250 (St. Thomas), (809) 778-1180 (St. Croix).

ROAD HARBOUR & PORT PURCELL, Tortola, British Virgin Islands: 18.25 N. 64.37 W.

PORT LIMITS: All the area of water North of an imaginary line drawn from Burt Point to Hog Point (see BA Chart 2020).

DOCUMENTS:

Clearance from last port.
1 Declaration of Health Certificate.
4 Crew Lists.
2 Crew Store Lists.
2 Ship's Stores Lists.
2 Passenger Lists.

PILOTAGE: Only compulsory for vessels of 200 g.r.t. and over, unless a vessel is in possession of a valid Exemption Certificate issued by the Ports Manager. Pilot boards at Port limits after receiving advice from Agents preferably 12 hours prior to arrival. Link calls made through Tortola Radio, Channel 27 in daytime and Channel 16 at night.

Vessels arriving ahead of ETA sound "G" on whistle if unable to advise Agent.

No inward pilotage at night, unless emergency, night Pilotage outwards by special arrangement.

ANCHORAGES: Between Buck Island and Beef Island or immediately South of Port limits, approximately 12 fathoms.

RESTRICTIONS: Anchorage within Port limits prohibited unless authorised by Ports Manager. Max. draft alongside Port Purcell 21 ft.

HEALTH: Customs issue Pratique for vessels with clear bill of health, otherwise request doctor to board on arrival alongside or at anchor.

RADIO: Call sign "Port Purcell" – can be reached by VHF Channel 16. Cable and Wireless maintain a Public Coast Station on Tortola, call sign "Tortola Radio", with an approximate range of 50 miles and provides linked telephone calls between ships and any shore based telephone subscriber. From 0700 hrs. – 1900 hrs. watch is kept on Channel 16, at night for emergencies only.

For distances in excess of 50 miles any other convenient shore station (eg. Barbados, St. Thomas) that will accept messages for onward cabling or telephoning to Tortola.

TUGS: None available.

BERTHING: Port Purcell quay is 800 ft. long, max. draft 21 ft. at any state of tide, salt water. Ships discharge with own gear.

CRANES: Port Purcell has 1 mobile shore crane, max. lift 8 tons. Prior advice required for use.

MEDICAL: Hospital facilities available, no routine inoculations, etc., required unless specially notified.
DENSITY: Entirely salt water within port limits.
FRESH WATER: Available in limited quantities at Port Purcell, approx. delivery 20 t.p.h. and costs US$14.00 per 1,000 gallons.
FUEL: Diesel only for small vessels delivered by road tanker to Port Purcell, 2 hours' notice.
REPAIRS: Minor repairs only.
SURVEYORS: Available.
HATCHES: Opened and closed by crew.
CUSTOMS ALLOWANCES: No sealing of tobacco, wine or spirits.
AIRPORT: Beef Island, 7 miles, regular local flights to St. Thomas, Puerto Rico, Antigua which connect with several main lines to Europe and the Americas.
TIME: GMT minus 4 hours.
HOLIDAYS: Port Purcell closed Christmas Day, Good Friday and 1st Monday in August.
POLICE/AMBULANCE/FIRE: Dial 999 (emergency). Police station 43422.
TELEPHONES: Telephones available for use on board ship.
SHORE LEAVE: No restrictions for crews.
IDENTIFICATION CARDS: None required.
DELAYS: None should be expected. Cargo working is geared to ship's arrival, irrespective of time and 24 hours continuous working if required.
AUTHORITY: Ports Manager and Harbour Master, Road Town, Tortola, Virgin Islands.

ST. THOMAS: 18.20 N. 64.56 W. (See Plan)

Harbour of St. Thomas, U.S.V.I. situated on South side of Island of St. Thomas. It is 1,434 miles from port of New York. Northern side of island borders on Atlantic Ocean, and Southern side on Caribbean Sea. The Harbour is one of the best in the West Indies, being almost landlocked.

WEATHER: The weather is usually mild with little wind. Squalls when they occur, usually come from the N.E.

DOCUMENTS: *Quarantine, Customs and Immigration* – see "Frederiksted".

Agent:

1 Copy Crew List (Form I-418).
1 Copy Passenger List (Form I-418).

PILOTAGE: Compulsory and available day and night. Pilot Boat has letter "P" on deck house and flies International Code flag "P". Pilots will meet vessels 1 to 3 miles outside harbour, boarding via Jacob's ladder.

ANCHORAGE: Outer Harbour Anchorage located beginning at Scorpion Rock Lighted Buoy No. 1 (Lat. 18° 19′ 25.6″ N., Long. 64° 55′ 08″ W.) thence 180° 1,580 yards; thence 263°, 2,490 yards; thence due North 1,255 yards; thence due East to the Southerly tip of Sprat Point, Water Island; thence to Cowell Point, Hassel Island, and thence to point of beginning. This anchorage is considered good and is about 8 fathoms with sand bottom.

RADIO: The St. Thomas Marine Operator will guard the following from 0600 to 2100 hrs.: Channel 26, 16 VHF, 2009 – 2506 and 2182 kHz AM, and the upper side band (2010.4 – 2507.4 kHz) of the same frequency. The Harbour Master's Office maintain a 24 hour watch on VHF Channel 16 (working on Channel 12).

(*b*) Master of every vessel arriving at St. Thomas is required to give at least 24 hours advance notice of arrival to Captain of the Port U.S. Coast Guard – San Juan, Puerto Rico by wireless on 500 kHz or by radio telephone 2182 kHz.

(*c*) Masters are requested to advise Agents their ETA, at least 36 hours in advance. Arrival messages should include cash requirements (local currency U.S. Dollar) and advice regarding repairs, stores, etc. This information is particularly necessary in the cases of vessel arriving on weekends or holidays. For cruise vessels the arrival messages should also include the number of passengers and crew on board.

(*d*) While vessels are in St. Thomas Harbour, the Authorities do not permit the use of the ship's radio transmitters.

(*e*) U.S. Coast Guards: This organisation maintains a small Marine Safety Detachment in St. Thomas to observe, service and effect repairs to navigation aids in vicinity of St. Thomas. An 82 ft. Coast Guard Patrol Boat "Point Whitehorn" (82364) is attached to the station for primary purpose of search and rescue work. Maintains watch on VHF Channel 16. Radio telephone marine information broadcasts, including Notices to Mariners, will be made on 2670 kHz, after first making a preliminary announcement on 2182 kHz. Radio telephone urgent and safety broadcasts or Marine Information will continue to be made on 2182 kHz.

TUGS: Normally not considered necessary for docking, however tugs are available for docking and undocking ships.

BERTHING: Wharf of the West Indian Company Limited, located on Eastern shore of harbour basin. Wharf is bulkhead type, 2,234 ft. long, running N.E./S.W., and is well protected to seaward. Mooring bitts are spaced at intervals of 50 ft. There is a "cut out" in the wharf 950 ft. from N.E. corner, which is 22 ft. wide and approximately 3.5 ft. above low water. This ramp is slanting from 8.3 ft. to 3.5 ft. over a distance of 20 ft. Similar type of ramp located on West Corner of wharf. Safe depth alongside from 27 ft. near N.E. end to 30 ft. on S.W. end. Bulwark is 8.3 ft. above mean tide. Average difference between high and low tide is 11 in.

Dockage dues are payable to the West Indian Company Limited, as per tariff.

In the Crown Bay area (access via East or West Gregerie Channels) the V.I. Port Authority maintains facilities which include a pier extending 800 ft. from shore with 500 ft. of berthing space on South side and 200 ft. on North side, where ships up to 25,000 g.r.t. can moor. Controlling depth presently 38 ft. This pier is used for berthing tourist and tanker vessels only. A curved bulkhead at top of Crown Bay, approximately 900 ft. long, is used for Ro/Ro, container and break bulk cargo. Controlling depth 15 ft. 24-hour arrival notice is required.

Phase II-A of the development at Crown Bay will include a 650 ft. berth for cargo vessels.

CARGO HANDLING: Containers are handled at the West Indian Company and the Crown Bay area (V.I. Port Authority), but no special gantry cranes are available. Ro/Ro cargo handled at these facilities as well. No liquid chemicals facilities exist here but there is a small privately-owned LPG plant limited to 20 ft. draft and 250 ft. length. Shell uses this facility for gasoline and light diesel. The "T"-pier in Crown Bay is used for the V.I. Water and Power Authority for movement of fuel and water, and Texaco has its own pipe-line on the same pier for their products.

STEVEDORES: Discharging and/or loading arranged by the West Indian Company Limited for account and risk of vessels.

Rates of discharging and/or loading dependent on vessel's equipment and stowage. However, following may be considered average:

General Cargo 6 weight tons per gang hour.
Bagged Goods 8/10 weight tons per gang hour.
Lumber 10/12 weight tons per gang hour.

Each stevedore gang normally consists of 12 stevedores (10 on board and 2 ashore), 2 winchmen, 1 signalman, 1 foreman.

FUEL: Bunkers are not available except for small craft.

FRESH WATER: Mostly rain water which when available is supplied by the West Indian Company Limited. This supply is limited and is on an emergency basis only. Water may also be requested from the Government of the Virgin Islands in cases of emergency only. Delivery effected by pipe alongside wharf. Water by barge can be delivered in St. Thomas.

MEDICAL: Local hospital is the Knud-Hansen Memorial Hospital, which is equipped with facilities for operations, etc.

TIME: Official St. Thomas time is Atlantic Standard Time, which is 4 hours behind GMT.

HOLIDAYS: The following are legal holidays in St. Thomas: Sundays; January 1st (New Year's Day); January 15th (Martin Luther King); January 30th (Roosevelt's Birthday); February 12th (Lincoln's Birthday); The third Monday in February (Washington's Birthday); March 31st (Transfer Day); Holy Thursday; Good Friday; Easter Monday; Whit Monday; The last Monday in May (Memorial Day); June 22nd (Organic Act Day); July 4th (Independence Day); July 25th (Supplication Day); The first Monday in September (Labour Day); The second Monday in October (Columbus Day); The fourth Monday in October (Veterans' Day); November 1st (Liberty Day); The fourth Thursday in November (Thanksgiving Day); December 25th (Christmas Day); December 26th (Christmas Second Day), and such other days as the President of the Government may by proclamation declare as holidays.

Whenever any holiday falls upon Sunday, the Monday following is a legal holiday.

REGULATIONS: The U.S. Coast Guard strictly enforces the Harbour Pollution Act of 1924, prohibiting discharge of refuse and oil in navigable waters of the U.S. Virgin Islands.

Local Port Regulations are similar to those applying in U.S. Mainland Ports.

HEALTH, CUSTOMS, IMMIGRATION: Refer to Frederiksted.

CONSULS: Following countries have consular representatives in St. Thomas:

Belgium
Denmark
Dominican Republic
El Salvador
France
Haiti
Netherlands
Norway
Panama
Sweden
United Kingdom

AIRPORT: Distance 2 miles. Connections with International flights from Puerto Rico and direct flights from New York, Dallas/Fort Worth and Miami.

GENERAL: *Gangway:* One aluminium gangway available which is 34 ft. long and 2 ft. 6 in. wide – made with skidding prevention strips only and therefore not recommended for use as a passenger gangway. There is a similar gangway that is owned and used on V.I. Port Authority facilities. Since these are the only gangways; they are made available to vessels on first-come-first-served basis.

Stores: St. Thomas should not be depended upon for large quantities of provisions or deck and engine stores, as practically all commodities are imported making prices higher than United States mainland ports and Puerto Rico. No regular Ship's Chandlers established in St. Thomas, V.I.

Storage Facilities: The West Indian Company Limited undertakes ordinary storage for a limited period of time in 8 transit warehouses, all 14 ft. high with a total floor area of 80,000 sq. ft., plus an additional 9,600 sq. ft. roof covered area. There is also a large uncovered area available for outside storage. Only limited cold storage facilities are available on The West Indian Company's Dock.

Ice: Small quantities may be obtained.

Laundry: Modern laundry service is available.

POLICE/AMBULANCE/FIRE: Police 915; Ambulance 774-1212; Fire 921. Port Authority 774-2250, 774-2333.

AUTHORITY: Virgin Islands Port Authority, Office of the Marine Manager, P.O.Box 2216, St. Thomas, Virgin Islands, U.S.A. 00801. *Tel:* (809) 774-2250. *Contact:* Harry Magras, Marine Manager.

Western Samoa

APIA: 13.50 S. 171.45 W. (See Plan)

PORT LIMITS: The Customs Act defines the port of Apia as follows: The limits of the said port of Apia shall be a circle of 2 miles radius from the Custom House now existing in Apia and the said port shall include all land, river, and sea included within that circle. The Shipping Act defines the limits of the port in similar terms using the Export Wharf as the centre of the 2 mile radius circle. Both of these features are shown on Chart 2211.

DOCUMENTS:

1 Clearance from previous port of call.
3 Crew Lists.
3 Passenger Lists.
2 Health Documents.
1 Manifest.
Bills of Lading.
Ship's Papers (stores and poisons).
List of Dangerous Goods.

PILOTAGE: 72 hours ETA is required, confirm 24 hours before arrival. Pilotage is compulsory for merchant vessels. Pilot boards 1.5 miles outside harbour on line of leading beacons. Pilot boards from harbour tug.

By night, in addition to usual navigation lights, Pilot boat carries standard identification, i.e. a red light on foremast with all-round visibility. Exemption from pilotage may be granted to Masters of vessels trading regularly to Apia, but pilotage dues are still payable.

ANCHORAGES: In 20 fathoms outside a line drawn between the 2 reefs and preferably on line of leading beacons. Bottom is coral.

RESTRICTIONS: No night-time or tide restrictions. Turning basin dredged to 36 ft. in 1972, extending to 1,200 ft. from each end of the wharf. Arrivals preferred during daylight hours.

MAX. SIZE: Shore bollards to take stern and bow lines for vessels up to 800 ft. in length. Max. draft 35 ft.

Buoy mooring for tankers up to 32,000 d.w.t. consists of 3 buoys with black and red vertical stripes, 1 ahead and 2 astern. Vessel also uses starboard anchor.

HEALTH: Doctor boards vessel on arrival alongside.

RADIO: ETAs should be sent 72 hours before arrival, and confirmed 24 hours before. Signals to incoming ships by radio or radio-telephone from Apia radio station 5WA. For radio, ships should call on 500 kHz and operate on 483 kHz. For radio-telephone, ships should call on 2182 and operate on 2162 or other available frequency as may be arranged once contact has been established. Call sign "Apia Radio" repeated.

Apia Radio maintains continuous service, and the Harbour Master can be called on Channel 16 during normal working hours. The tug and pilot launch also operate on Channel 16 .

TUGS: 2 tugs available, *Pualale,* 425 b.h.p. (7 ton pull) and *Savaii,* 175 b.h.p.

BERTHING: Export Wharf – reinforced concrete wharf 604 ft. in length on the East side of inner harbour. Max. depth alongside 36 ft. All loading and discharging is carried out with ship's gear. No wharf cranes available. This wharf and all surrounding areas enclosed by fence is Customs area and all vessels trading to or from places outside Western Samoa must depart from or arrive at this wharf.

New wharf 604 ft. long, vessels up to 800 ft. may be berthed.

There is 250 ft. of berthing alongside the inner face of the Southern arm of the wharf for small ships in deep water.

There are no special Ro/Ro facilities.

Shore equipment: One 15 ton mobile crane. 2×20 ton forklifts. About 10×3 to 5 ton forklifts.

STEVEDORES: Arranged by ship's Agents.

MEDICAL: Advance notice to Agents preferable. Doctors and good general hospital where seamen may be admitted.

There is a private medical clinic and a private dental clinic. Both high standard.

TANKERS: Shell, Mobil, and B.P. operating in Samoa, and have own discharging facilities. Tanker terminal situated on West Reef. Discharge line is 6 in. diameter. Launch service may be provided between ship and shore at a small charge.

DENSITY: 1025 – but may alter considerably during rainy season.

TIDES: Mean high water intervals 6 hours 27 minutes, Spring range 3.8 ft., mean range 2.6 ft. Tidal stream normally slight, but after heavy rain outflow from rivers and streams can cause it to become quite strong.

The current across the harbour entrance about 600 m. off the reef can be variable, but is predominantly Westerly and velocities up to 4 knots have been reported but this is not normal.

FRESH WATER: Available at wharf from shore installation.

FUEL: Only light diesel fuel available.

FIRE PRECAUTIONS: Fire services available on wharf, station is 0.5 miles distant.

GANGWAY/DECK WATCHMEN: Recommended and available.

OPENING/CLOSING HATCHES: Opened and closed by stevedores.

CUSTOMS ALLOWANCES: No enforcements.

IDENTIFICATION CARDS: Not needed.

CONSULS: The New Zealand High Commissioner represents all British subjects; French Consul, Australian High Commissioner, Embassy of the Chinese People's Republic, South Korean Consul, West German Consul, United States of America Consul.

REPAIRS: Minor repairs only.

SURVEYORS: None.

AIRPORT: 25 miles from Apia on Western side of Island. Regular and frequent mail and passenger services. Direct to Auckland or USA via American Samoa.

TIME: GMT minus 11 hours. No alteration to clocks.

HOLIDAYS: No cargo on Sundays between 0300 and 2100 hrs. The recognised holidays are Christmas, New Year, Boxing Day, Good Friday, Easter Monday, Whit Monday, Anzac Day and Independence holidays from 1st June to 3rd June.

TELEPHONES: Police and public telephones near wharf and provisions are available for telephone connection to tourist vessels berthed at the wharf.

POLICE/AMBULANCE/FIRE: Hospital 21.212; Police 22.222; Fire 999 emergency or 20.404.

EMERGENCY CO-ORDINATION CENTRE: U.S Coast Guard, Pago Pago, American Samoa, 80 miles East of Western Samoa.

SHORE LEAVE: No restrictions.

BANKS: Bank of Western Samoa, P.O.Box 189, Apia, Western Samoa. Tel: 22 422. Telex: 258.

Pacific Commercial Bank (Affiliate Bank of New South Wales and Hawaii), P.O.Box 192, Apia, Western Samoa. Tel: 22 781. Telex: PCB 231.

STORING: See "Prelims".

1. Truck only.
2. N/A.
3. Yes.
4. Yes.
5. No regulations.
6. Yes.

SHIP SUPPLY SERVICE: The Marine & Shipping Division of the Ministry of Transport provides tug-boat services which are available for ship-to-shore transport of personnel and/or essential ship stores, sick crew members, etc., on application to the Secretary, Ministry of Transport.

GENERAL: *Supplies:* Provisions available. Deck and engine room supplies can be obtained in limited quantities.

Divers: No divers other than scuba divers are available, and skin divers may be recruited for up to 50 ft. diving.

Oil Pollution: The pumping of bilges, etc., within harbour limits is not permitted and *heavy penalties will be imposed for any breach.*

Garbage Disposal: The dumping of refuse of any kind within harbour limits is strictly prohibited. Properly covered receptacles will be made available and rubbish disposal vans will clear them as necessary. A small charge will be made for this service.

Charts: BA 1730 – Samoa or Navigation Islands.
BA 1339 – Plans in Samoa.
BA 2211 – Apia Harbour.

AUTHORITY: Government of Western Samoa, Ministry of Transport, P.O.Box 1607, Apia, Western Samoa. *Tel:* 23 700, 23 701 and 23 702. *VHF:* Channel 16. *Telex:* 21 Malo Sx. *Cables:* Mot Sam Govt. *Contact:* The Secretary, Ministry of Transport. N. Vaaelua, Assistant Secretary Marine and Shipping, and Acting Harbour Master.

Yemen Arab Republic

GENERAL:

CIRCULAR: Extract from the Circular dated 21st June, 1975 from the Hodeidah Port General Corporation, Hodeidah, Y.A.R.

Information and General Condition:

1. *Payment of Tolls and Dues:*

All charges imposed herein are payable in cash, in advance except in the circumstances in which the General Manager of the Hodeidah Port General Corporation exceptionally agrees otherwise.

2. *Definition to Certain Terms:*

(a) "Vessels" shall deem to refer in the Regulations to every floating craft made to sail on water by its or without its own means, whether or not fit for navigation.

(b) "Working Day": Commences at 0600 hrs. and ends at 1800 hrs. Night: Commences 1800 hrs. ends 0600 hrs. following day. Weekend: Commences Thursday 1200 hrs. and ends Saturday 0600 hrs.

3. *Public Holidays:*

The following occasions are observed as Public Holidays, which commence from 1200 hrs. on the preceding day and end at 0600 hrs. following the holiday:–

1. Weekly Holiday: Friday.
2. Al-Hijra (Moslem New Year): *1st Muharram.
3. Maulid-El-Nabi (Prophet's Birthday): *12th Rabia Awal.
4. Al-Meiraj (Prophet's Ascension Night): *27th Rajab.
5. Al-Shaabania: *15th Shaaban.
6. Idd-El-Fitr (4 days): *1st to 4th Shawal.
7. Idd-El-Adha (5 days): *9th to 13th Dulhijja.
8. Revolution Anniversary: 26th September.
9. 13th June (National Holiday).
10. Labour Day (1st May).
11. Revolution Day (14th October).

*N.B.: For Hijra Calendar dates, the corresponding Georgian Calendar dates will be those proclaimed by the Government of the Yemen Arab Republic.

CIRCULAR: To Owners/Masters.

We quote below text of a Circular dated 21st January, 1979, issued by the General Corporation for Ports and Marine Affairs, Hodeidah, for your information and necessary compliance:

"No vessel, having no workable derricks or winches of her own, shall be received or accepted.

Agents shall be responsible for said obligations and without any liability to the Port General Corporation, in all Yemen Ports.

Due to non-availability of discharging means of floating cranes at anchorage and non-guarantee of available shore cranes, advisable you ensure that all ships calling under your Agency should be fully equipped as required."

PILOTAGE: Pilotage is compulsory on all vessels irrespective of their size, on entry and departure.

FINES:

1. A minimum fine of Rials 500/– and not exceeding Rials 2,000/– for failing to hoist the flag of the Yemen Arab Republic on the highest mast of the vessel.

2. Rials 160/– for arrival at outer harbour without prior notification (at least 24 hours' prior notice is required).

3. Vessels attempting to enter the Inner Harbour without prior permit and without Pilot will bear all responsibilities against that in addition to a fine of between Rials 5,000/– and 10,000/–. This is also applicable on sailing.

4. Rials 500/– to 1,000/– for draining water onto the quays in addition to the responsibility for whatever may be caused against that.

5. Rials 500/– to 1,000/– for throwing garbage overboard.

6. Rials 500/– to 1,000/– for immobilising/repairing engines without prior permission from the Authorities.

7. In case a Pilot is called to take the vessel out but she fails to sail for reasons of her own or her Agents, the following expenses will be charged in addition to Pilotage fees:

(a) Pilot detention.
(b) Tugs' assistance.
(c) Unmooring fees.
(d) Any other expenses.

8. The Corporation also reserves the right to impose any fine considered for violating its Rules and Regulations.

HODEIDAH: 14.48 N. 42.55 E. (See Plan)

Also see "General" before first port.

FLAG: It is essential that from the time they enter Yemen territorial waters all vessels fly the Yemen Arab Republic flag and this should be flown continuously until they leave these waters on sailing. Failure to observe this courtesy may result in a heavy penalty. The design of the flag is red, white and black horizontal stripes of equal size with green star in centre of white stripe.

DOCUMENTS: On arrival 16 copies of Manifests of cargo for discharge are required and each must be endorsed with the word *Correct* by the *Customs Authorities* at the Port of Loading. It is imperative that at least 2 of the 16 copies of Manifests on board the ship should be freighted copies, otherwise 2 additional copies, showing freight details should be airmailed to Hodeidah separately to arrive in advance of the vessel. The Master should also be in possession of 1 copy of each Bill of Lading and certificate to show vessel is not blacklisted.

PILOTAGE: Pilotage is compulsory and as the entrance of the Channel giving access to the Port cannot be observed from the port area itself it is essential that accurate ETAs be given to the Agent in order to avoid delays waiting for a Pilot.

Vessels will be piloted down a dredged channel of about 8 miles in length. The channel, which is buoyed with black starboard and red port buoys, is 7.5 m. deep and 100 m. wide.

Pilot boarding position: Lat. 14° 56′ N., Long. 42° 54′ E.

ANCHORAGE: Masters are also recommended to ensure that on arrival they anchor off the entrance to the new port to await the Pilot and do not anchor off the old port opposite the town some 5 miles to the South and which is still shown as being the Port of Hodeidah on some charts. Vessels anchoring in the wrong area may suffer some delay before they can be contacted and asked to proceed to the correct area. Masters should be advised to anchor at the outer anchorage in the following position: Lat. 14° 55′ N., Long. 42° 54′ E. Also see "Shipmaster's Report – May 1982".

RESTRICTIONS: The approach channel is dredged to 9.5 m.

MAX. SIZE: Max. draft 30 ft. Also see "Shipmaster's Report", dated May 1982.

Shipmaster's Report: January 1985.

Entrance channel is buoyed differently to that shown on B.A. Chart (See "Plan"). Pilot suggests that max. draft at LW is approximately 8.0 m., especially if there is a swell at the entrance.

HEALTH: All members of the crew must be vaccinated against yellow fever and cholera, otherwise permission will not be given to disembark.

RADIO: Masters should also ensure that a radio watch is kept to receive calls from the Port Authorities. The Hodeidah Radio station is operative between 0600 and 1800 hrs. daily, the call sign is: 4WD or 4WD3 (short).

TUGS: 6 tugs, 375 h.p. – 1,800 h.p. Pilot launch 250 h.p. also available to assist.

BERTHING: The quay is 540 m. in length with 4 berths, the first 70 m. long, depth 6 m., the second, third and fourth are of 150 m. length and 8.5 m. depth. *Officially, ships berthing are restricted in length to 180 m. and to a max. draft of 26 ft.*

The quay is of concrete construction and is well founded, vessels being secured to bollards in the normal manner. Use of rat-guards is recommended. The quay is equipped with 7 electric cranes having a max. capacity of 5 tons and one crane having a max. capacity of 10 tons. Floating crane of 75 tons capacity available.

There is also a dolphin berth for discharging of petroleum products, which is connected by submarine pipes to storage tanks near the port area. The depth alongside is 6 m.

Also see "Report" and "Developments".

STEVEDORES: All labour is provided by Agent's representative including winchmen and tally clerks, but winchmen are provided entirely at ship's risk.

Rates of discharge vary but are quite satisfactory and with bagged cargo the average obtained is 30 tons per hatch per hour. Night work is possible.

Vessels are expected to supply food on board to cargo supervisors, foreman, and tally clerks. It may be left to Master's discretion whether this is supplied, but if not the Agency will have to supply same and the cost will be debited to the vessels.

Working Hours: Normally from 0600 hrs. to 1100 hrs. and again from 1300 hrs. to midnight. Additional work outside these hours, including after midnight can usually be arranged if necessary, although this cannot be guaranteed. Any work after midnight is overtime.

MEDICAL: Hospitals at Hodeidah and Sanaa-Taiz.

FRESH WATER: Available; pumping rate 10 t.p.h.– 15 t.p.h.

FUEL: Small quantities of diesel oil available from Yemen Petroleum.

CONSULS: (and Embassies):

Algeria
China
Egypt
~~Germany D.R.~~
Germany F.R.
Ethiopia
France

Italy
Iraq
Korea
Kuwait
Lebanon
Libya

Saudi Arabia
Syria
U.S.S.R.
United Kingdom
U.S.A.
Yugoslavia

REPAIRS: Light repairs can be carried out.

SURVEYORS: Lloyd's Agency available.

AIRPORT: Flights to Sanaa. Also flights from the new Hodeidah International Airport.

TIME: GMT plus 3 hours.

HOLIDAYS: Friday is the weekly day of rest, Sunday being a normal working day. There are also a number of Moslem holidays. Work is usually possible on such days but cannot be guaranteed. Holidays for special occasions are also liable to be declared at short notice. Friday if worked 50% and public holidays 100% surcharge. During the Moslem fast period of Ramadhan lasting about twenty nine days, which again varies from year to year, work is slower.

Also see "General" before first port.

SHORE LEAVE: Allowed. The Master should prepare a list of persons wishing to go ashore as Agent has to issue I.D. cards.

REGULATIONS: It is strictly forbidden for crew and passengers on board to take photographs while a vessel is in the harbour approaches or secured to the jetty in harbour.

Any vessel which permits oil and/or water to be discharged into the harbour will be liable to a minimum penalty of US $500.

DEVELOPMENTS: A second container berth with length 300 m. and depth 11.0 m. and 1×40 ton container gantry crane has been completed.

Vacuators to be installed for grain handling, giving average daily discharge rate of 5,000 tonnes – 6,000 tonnes.

Also see "Report" below.

REPORT: August 1979 (Updated 1986).

Hodeidah Port is situated 5 km. away from the old town, built in 1961, the population of which is about 200,000. It was built on the Red Sea Coast, S.E. of Khour Ras Alkatheeb, 4 km. away from the town of Hodeidah.

Hodeidah port is built at a location safe from storms and strong winds. The port is under the administration of the Ministry of Public Works, managed by the Hodeidah Port General Corporation. It has a direct connection with the capital city of Yemen, Sana'a, by a modern highway and another connecting the twin capital Taiz.

The official characteristics of the port are given as an external pool, 10 m. in depth, where ships can anchor. A channel, minimum 45 m. wide, about one km. long and 7.9 m. to 8.3 m. deep, enters into the inner pool. Maximum draft allowed is 25 ft. at HW. Buoy markings and signals for safe entry and departure are available The dimension of the inner pool is irregular, about 500 m.×400 m. Overall depth is 7.6 m. at LLW, except for 100 m. wide strip along the 300 m. berth where the depth is 8.5 m.

The port consists of a quay for loading and discharging and one special jetty for tankers. The total length of the quay is 570 m. forming 4 berths of 120 m., 150 m., 150 m. and 150 m. respectively. The quay can receive vessels up to 180 m. in length with a draft of 25 ft. at HW. The quay is equipped with 4 electric shore cranes of 5 tons maximum lifting capacity each and two mobile cranes each of 30 tons capacity.

Discharging speed for bagged cargo is between 250 tons and 300 tons per hatch per day. For general cargo the discharging speed is about 150 tons per hatch per day.

At present, there are 21,660 sq.m. of cargo storage floor space:

Shed No. 1	45 m.×60 m.	2,700 sq.m.
2	96 m.×60 m.	5,760 sq.m.
3	50 m.×60 m.	3,000 sq.m.
4	50 m.×60 m.	3,000 sq.m.
5	25 m.×60 m.	1,500 sq.m.
6	45 m.×60 m.	2,700 sq.m.
7	50 m.×60 m.	3,000 sq.m.

and several open storage yards for heavy machinery and equipment. There are fuel tanks with a storage capacity of 16,000 cu.m. connected to the oil jetty by means of a pipe-line system. A wireless station for communications, from ship to shore and vice versa, is also available.

Future Development: The development of Hodeidah Port includes:

1. Dredging:
   a. Deepening of the approach channel to 9.0 m. below MLW (Mean Low Water) with the provisions of a passing bay and deepening of the port basin to 9.0 m. below MLW. (Completed 1980).
   b. Deepening to a depth of 9.5 m. MLW alongside Berth No. 2 and No. 6 (completed).
   c. An area to the West of Berth No. 1 to a depth of 4.0 m. MLW.

Hodeidah Port has the following:

Berth No. 1, length 110 m.,	dredged to 8.0 m.
Berth No. 2, length 150 m.,	dredged to 9.5 m.
Berth No. 3, length 150 m.,	dredged to 9.5 m.
Berth No. 4, length 166 m.,	dredged to 10.0 m.
Berth No. 5, length 195 m.,	dredged to 10.0 m.
Berth No. 6, length 195 m.,	dredged to 10.0 m.

Oil berth for 15,000 d.w.t tankers dredged to 10 m.

2. Berth No. 6: 195 m. long berth with a 40 m. wide apron. (Completed 1982). Berth No. 6 is designed for container ships of: 22,500 d.w.t., length 204.0 m., breadth 31.0 m., draft 9.2 m., container capacity 1,522 units.

One container crane of 30.5 tons capacity is installed on Berth No. 6 and is able to load and unload between 30/40 containers per hour.

3. Slipway (completed 1981): 500 ton slipway next to the mechanical workshop. Slipway able to handle vessels 32 m. in length, 10 m. wide and 3.2 m. draft.

4. Paved Storage Areas (completed/available 1981): The concrete paving of open storage areas behind the 40 m. wide apron has approximately 80,000 sq. m.

5. Buildings and Other Services (completed/available 1981): Construction of service buildings include offices of the Port Corporation, Customs, Labour, First-aid with canteens, wash places and toilets.

6. Oil Terminal (completed/available 1981): 2 new breasting dolphins and 2 mooring buoys for handling tankers up to 15,000 d.w.t.

7. Floating Craft (completed/available 1981): A new 75 ton self-propelled floating crane has been provided.

8. Cargo Handling Equipment (completed/available 1981): 4 high level boom cranes, 1 port type mobile crane, 10 forklifts, 10 tonne trailers with tractors, 3 Ro/Ro tractors with goosenecks and Ro/Ro trailers.

9. Grain Silo Complex: The project under construction in Hodeidah port consists of a 20,000 ton Silo and a 14 stall bagging plant which has a bagging capacity of 200 per hour. The whole installation has a through put of 160,000 tons per year.

10. Water Mains (completed 1982): Extended to Berth No. 6 and fire mains will be from sea water and maintained with a 70 m. head by hydraulic accumulator.

Special Uses:

Berth No. 4 – grain unloading (40% berth occupancy).

Berth No. 6 – containers (with 30.5 ton container crane).

Container capacity will exceed 300,000 tons per year but will depend on the capability to empty containers and create an equivalent to that of the shipping.

Cargo must be carried by ships with a draft less than 9.2 m.

Arrival at Hodeidah/Ras Alkatheeb Ports:

Vessels arriving at Hodeidah Roads should anchor in the following positions inside Buoy No. 2.

Lat. 14° 55′ 58″ N., Long. 42° 53′ 53″ E.

Masters should radio or cable Agent the following information at least 24 hours in advance:

(i) Exact ETA.
(ii) Draft – fore and aft.
(iii) Quantity of cargo on board and distribution.
(iv) GRT, NRT and LOA (When vessel is calling for the first time).

Through Hodeidah Radio Station, Calling Sign: 4WD 500 kHz. (Frequency from 0500 hrs. up to 1700 hrs. GMT). 72 and 48 hours prior notice of arrival can also be given through Aden Radio.

Pilotage on entry and departure is compulsory. Normally, no pilotage is allowed after 1630 hrs., or before 0600 hrs. Hence vessels arriving in Hodeidah Roads after 1630 hrs. may not be piloted in until 0700 hrs. the following morning. Likewise, vessels which do not sail before 1630 hrs. may not be piloted out until 0600 hrs. the following day.

Supply of fresh water and shipchandlering is available.

Documents:

4 copies of Cargo Manifest.
2 copies of Freight Manifest.
1 copy of Bill of Lading.
(These should be airmailed to Agent after departure of vessel from port of loading.)
11 copies of Cargo Manifest.
1 copy of Freight Manifest.
(To be handed over to Agent by Master on arrival of vessel.)

Port Formalities:

1. Doctor.
2. Immigration.
3. Customs.

FOLLOWING TO BE STRONGLY OBSERVED BY ALL MASTER/CREWS OF VESSELS CALLING AT HODEIDAH:

1. Sale of wines and spirits prohibited.
2. Discharging water onto quay and dismantling ships' engines at berth not allowed.

In addition to above, Masters/Crews should be advised to take serious note of all prohibitions stipulated in the Port Tariff, see "General" before first port – "Fines".

SHIPMASTER'S REPORT: May 1982.

I came in and berthed at No. 6 Berth at 8.5 m. draft and discharged via vacuvators direct into lorries and managing a rate of 3,000 t.p.d. Pilot reckoned 29 ft. maximum can be taken in.

Other points in "Guide" seem accurate, but with the Chart B.A. 3050 being too small I cannot see many Masters bringing a large ship into the recommended anchorage position. I anchored 3 cables N.N.E. of the No. 2 Buoy in better water.

PURSER'S REPORT: August 1982.

Requirements:

1 Maritime Declaration of Health. (Any country's (preferably Arab) is accepted suitably amended).
1 Vaccination List (ship's form).
10 Crew Lists (ship's form).
2 Bonded Stores Lists (ship's form).
1 Crew Effects List (ship's form).

Sundry Customs and Agent's forms were brought aboard on arrival. These required the usual information regarding draft, fuel, water, and tonnages, etc.

Customs and Port Authorities were very particular that cargo tonnages were accurate as per Manifest when completing forms.

Customs sealed both bond and beer rooms, but placed no restriction on quantities in bars and cabins with the proviso that alcohol was not sold or given to locals. An additional quantity of bonded items was allowed to be removed before sailing.

Courtesy Ensign: Supplied in the U.S.A. and not marked to show which was top. It should be flown with the red stripe uppermost.

Mail: The Agent advised that mail both in and out of the country was slow and unreliable.

Laundry and Chandlery: Both services available but not used.

Navigation: The Master advises that navigational marks could well change due to berth extensions and port improvements. A container crane is at present under construction.

SHIPMASTER'S REPORT: April 1984.

Pilotage: Ships can enter or sail out of harbour at anytime, if Agent makes strong request. All the buoys in the channel as well as the approaches including the Sea Buoy are lit.

Berthing: Observed a ship entering with 30 ft. draft and Pilot confirmed that vessels can enter up to 30 ft. draft.

Stevedores: Bagged cargo discharging rate increased to up to 30 t.p.h. provided that receivers are able to supply sufficient trucks in time.

The stevedores no longer request drinking water from the ship, as they drink bottled water supplied from shore.

AUTHORITY: Ports and Marine Affairs Corporation, P.O.Box 3183, Hodeidah, Yemen Arab Republic. *Telex:* 5565 Mawani Ye. *Contact:* Captain Ali H. Elhabory, Chairman, Captain Ali H. Sharaf, Director-General, Captain Abdullah A. Rajab, Harbour Master.

AGENT: The Hodeidah Shipping & Transport Co. Ltd., P.O.Box 3337, Hodeidah, Yemen Arab Republic. Tel: 2403/4/5. Cables: "Hodship". Telex: 5510 (Hodeidah) and 2218 (Sana'a). Answerback: "Hodship". Branches at Mocha, Saleef, Taiz and Sana'a.

MOCKA: 13.17 N. 43.10 E.

Mocka New Port opened in June 1979, with equipment for loading and unloading.

TUGS: 2 available.

BERTHING: 350 m. of quay for vessels of up to 26 ft. draft (Depth 27 ft). Vessels may berth simultaneously. Cargo is discharged direct onto trucks or onto open area. New sheds are under construction.

CRANES: 1×18 ton mobile crane.

FUEL: Not available.

TIME: GMT plus 3 hrs.

REPORT: August 1979 (Updated 1986).

The project of constructing Mocka Port has been in execution since April 1978. The construction was completed during April 1979 and the port was officially opened to International traffic in June 1979.

Location: Mocka is connected to Hodeidah by a road of 240 km. out of which 45 km. is asphalt surfaced. Mocka is also connected to the twin capital of the Republic, Taiz, by a road of 110 km.

Jetty: The port consists of a jetty of 150 m. in length and 35 m. wide with a draft of 8.5 m. during low tide. This jetty can accommodate 2 vessels at a time, each of 150 m. length, on both sides and a Ro/Ro vessel at the head. A protecting jetty for breakwaters is also constructed for controlling the force of strong waves. It is 750 m. in length and 15 m. wide with various depths from 5 m. to 3.5 m. This jetty is constructed for the purpose of protecting the main jetty and can receive coasters and lighters of aforesaid drafts.

Anchorage: The dimension of the manoeuvring area, for vessels securing at berth and departing from the main jetty, is 420 m. The length of the channel leading to the manoeuvring area is 2,000 m. with a draft of 28 ft. 5 in. during low tide, whereas the draft during high tide is about 30 ft. Vessels calling at Mocka should anchor at the following position: Lat. 13° 20′ 01″ N., Long. 43° 13′ 02″ E.

Storage of Cargo: The reclaimed area for storage of discharged goods consists of 300,000 sq.m. 4 storage sheds (60 m.×50 m.).

Future Developments: There are plans for building other jetties together with protecting jetties in the near future.

Bunkers: Bunkers, at present, are not available at this port. Any vessel calling at this port is required to supply fresh water for drinking purposes to all labourers during stevedoring operations.

Radio: Vessels calling at Mocka are advised to contact Agent through Hodeidah Radio Station, call sign, 4WD, 500 kHz (frequency from 0500 hrs. up to 1700 hrs. GMT), as, at present, this port is not equipped with a wireless station. It is proposed to establish one during 1979.

SHIPMASTER'S REPORT: August 1980.

Vessel: 6,000 d.w.t., 104.0 m. LOA. Discharged 2,000 tons of RBD palm oil.

Port Limits: None defined, however vessel is in port limits and 'arrived' once anchored within the anchorage marked on BA Chart 1955.

Documents: 1 copy Personal Effects Declaration, 1 copy Stores List, 1 copy Inoculations and Vaccinations and at least 10 copies of Cargo Manifests, 3 copies of Crew List.

Anchorages: Vessel anchored safely in a position with the North Fort Barge 103° True −1.74 miles. Vessel's max. draft was 20 ft. and there was 30 ft. of water below the keel at 1 hour before low water. It is inadvisable to proceed further South, especially at night due to the placing of unlit channel marking buoys by the port.

Pilotage: There are presently two berths, one on either side of a finger wharf. The Pilot boards at the anchorage and brings the ship alongside one of these berths. There are 3 Pilots in Hodeidah and 1 in Mocka.

Max. Size and Restrictions: Max. permissible draft is 26 ft. salt water and max. LOA permissible is 500 ft.

Radio: None. The port operates VHF on Channels 16 and 14. There are no fixed hours and the port radio is in operation only when the port wishes to communicate with the vessels.

Radar: None.

Tugs: 2 tugs assist vessels for berthing and unberthing. We were assisted by the 'Markaron' (2,000 h.p.).

Cranes: None. There are mobile cranes available with the prior arrangements of the ship's Agents. Otherwise ship's gear is mainly used.

Stevedores: None in the strictest sense. Labour is recruited by the Agents and made available on board.

Tankers: There is no facility for discharging petroleum cargo.

Density: 1025.

Fresh Water: Not available.

Fuel: Not available.

Fire Precautions: None.

Consuls: None.

Repairs: Not available.

Dry Docks: None.

Surveyors: None.

Watchmen: None.

Customs Allowances: Bonded stores are not sealed. Master is verbally informed not to make any issue from the bonded stores without the Customs permission. All officers and crew who declared their quota were allowed to keep same.

Repatriation: Possible, but local Agent has no knowledge of how to effect it.

Airport: None.

Time: GMT plus 3 hours.

Shore Leave: Allowed. The town is situated about 4 km. from the jetty. There is no entertainment that seamen can find in this town and it is not advisable to be ashore after dusk.

ID Cards: None are issued but ship's personnel going ashore have to carry their Seaman's Book or passport.

AUTHORITY: Ports and Marine Affairs Corporation, Hodeidah, Yemen Arab Republic. *Contact:* Abdelkader Abyadh, Manager of Mocka Port.

AGENT: See "Hodeidah".

RAS ALKATHEEB: 14.55 N. 42.53 E.

The Port of Ras Alkatheeb is situated 14 km. from the main city of Hodeidah and connected by a gravel road which is in the process of being resurfaced and broadened with two traffic lanes on the same alignment, thus providing a first class road transport link between Hodeidah and Ras Alkatheeb. Also see "Hodeidah".

BERTHING: The port has a berth 270 m. in length and 27 m. wide, pontoon type, with ships berthing on either side. This port can receive vessels with a max. draft of 26 ft. at high tide. Vessels can be secured to barges and coasters with a draft of 14 ft. which can be connected to the shore, thus enabling ships to discharge directly onto waiting trucks. Said pontoon is mainly used for bagged cargo on direct delivery basis.

Presently, this port does not have shore crane facilities and all unloading is done with ship's own gear.

Storage and Delivery: Due to lack of storage facilities at this port, delivery at present, is given directly under the hook.

GENERAL: The port is not a commercial port.

SHIPMASTER'S REPORT: November 1980.

1. Port does not accept Vessel's Registration until vessel is anchored between Buoy No. 1 and No. 2. This as per the Port Radio VHF station.
2. Buoy No. 2 is placed about 6 cables N.N.W. of charted position.
3. Do not attempt entry at night since buoys are unlit and there are many uncharted stranded wrecks visible only during daytime.
4. Tugs available: 4×700 b.h.p. and 3×1,800 b.h.p. Pilotage only during daytime.
5. Vessel berthed at Ras Khatib pontoon. Max. draft 8.0 m., total effective length of pontoon 270 m.
6. Port issues a directive to Agents giving estimated time to discharge. If not completed, port charges at the rate of 4 Rials/per metre/per hour of stay extended.
7. Distance from Ras Khatib berth to town 15 km. Only 10 to 15 shore leave passes given to vessel, regardless of number of crew.
8. No chipping and scraping permitted but painting is allowed.
9. Fresh water inside port is $4/– per ton, at Ras Khatib $20/– per ton by barge.
10. Provisions available but expensive.
11. Repatriation possible but very difficult due to having to obtain permission from Saana (Capital).
12. Cargo work is fast, 260 tonnes of cement per gang per day. Normal shift 0730 – 1200 hrs. and 1500 – 2330 hrs.
13. As per "Pilot", there will be dredging carried out soon and also lighted buoys will be placed.
14. Ras Khatib light Fl. 3 sec. of very low power.
15. Yellow fever inoculation not compulsory unless coming from infected area.

SALEEF (Salif): 15.18 N. 42.41 E.

Saleef Port is a natural port on the Red Sea, approximately 80 km. North of Hodeidah Port. Two routes, one round the North end of Kamaran Island and the other around the South end provide suitable access to the harbour.

As prevailing winds are generally Southerly or Northerly, vessels are able to approach the berth from downwind. This is important as vessels will probably have to berth without tug asistance. Initially, mooring facilities are designed for 50,000 d.w.t. vessels and consists of a wharf head 20 m. wide, 93 m. long with two dolphins. A 10 m. wide trestle connects the wharf head to the shore. Facilities are designed to absorb the berthing impact of a ship approaching with a velocity component of 15 cm. per second perpendicular to the berth face and for a 50 tons mooring line pull.

Future developments: A French consulting firm has been awarded the contract to submit a report on future developments of this port.

SHIPMASTER'S REPORT: December 1979.

Acknowledgements: Most of the information has been gleaned from local Agency representatives and Capt. A. Saeed, Harbour Master.

Reference has been made to Red Sea Pilot and various BA Charts. Local written information is unavailable for the area concerned.

General: Salif lies some 60 km. North of Hodeidah, it is a natural deepwater harbour sheltered by Kamaran Island.

Since 1976 the port has enjoyed moderate expansion and can now boast a modern jetty capable of berthing ocean going vessels; other pontoon type berths are available, these being linked to the shore by small stone jetties. At present the port can accommodate two vessels of up to 200 m. length with a draft of 12 m.

Salif is geared for the export of bulk salt and the import of grain and some general cargo. In the near future a further pontoon type berth is due to come into operation to be used solely for the import of bulk cement. A bagging plant and silo have been constructed to handle the additional cargo.

This report is mainly directed to the facilities associated with the import of grain, however where possible relevant information has been included which could prove useful to other vessels trading in the area.

Documents:

6 Crew Lists with passport numbers.
2 Bonded Stores Lists.
2 Personal Manifests.
2 Vaccination Lists.
3 copies Cargo Manifest.
Local inward forms made out on arrival.

Approaches: (BA Charts: 543 and 548). Recommend approaching around the North end of Kamaran Island, as mentioned in Red Sea and Gulf of Aden Pilot, page 390.

The lighthouses stand out well, but at night they are not lit (December 1979). The only difficulty in making Salif, in daylight, is passing to the South of N.W. shoal light, the channel at this point being about one mile wide. At night the lighthouses prove quite good radar targets, and the various islands etc. show up quite well. Once around the top of Kamaran Island course can be set down Kamaran Passage to the anchorage area off Ras el Salif. Charterers frequently advise that passage is possible South of Kamaran Island, however this is not advisable; the leads mentioned on the chart are very difficult to see and there is no room for error.

Anchorage: No specific area designated but anywhere in the vicinity of Salif Jetty. For vessels waiting for the wheat berth it is best to anchor about 0.75 miles West of Ras el Salif. Good holding ground in about 14 fathoms of water. For vessels with poor radar it would be best to anchor outside Kamaran Island until daylight, when passage can be made in safety.

Weather: See "Red Sea Pilot" for information. At Salif the wind usually picks up during the day and this can delay berthing if the strength is above Force 4.

Pilotage: Pilot boards in anchorage area from medium sized launch. Yemenese Pilot with limited English.

Daylight pilotage only.

Berthing: Vessels berth, at the bagging plant pontoon, head to wind. The pontoon consists of a flat topped barge made fast to a small stone jetty; it is well fendered with car tyres. The offshore anchor is used whilst coming alongside and a launch runs various ropes ashore to posts set on the land. Five ropes are required either end and it is necessary to join the first few together as considerable lengths are initially run. The bagging pontoon can only accommodate one vessel at a time. See "Shipmaster's Report – May 1982".

The general cargo and salt exporting jetty lies some distance to the South of the bagging plant. This pier can take one vessel of up to 200 m. in length. Facilities at this berth are an improvement over the pontoon, however for the import of grain type cargoes, it is not so efficient, it being necessary to bag the cargo by hand. Both berths can take vessels with up to 39 ft. draft.

Buoys are at present being laid to the North of the bagging pontoon and these could prove an obstacle for vessels berthing. The moorings are being laid to assist vessels making fast to the new cement pontoon (see "Projects").

Quarantine/Health Regulations: Doctor boards on arrival, either at anchorage or alongside. No health forms as such. Certificates not required unless vessel from infected area when Yellow Fever and Cholera certificates are needed. No derat facilities.

Customs: Usual Islamic laws in force. Bond not sealed and apparently no objection for crew to consume spirits/beer on board. On no account must alcohol be given/sold to local Yemenese.

Immigration: Passports are inspected on arrival. (Harbour Master acts as translator for Immigration Authorities.) Shore leave granted with passes for Salif area only. Special permission has to be given to proceed outside local area, i.e. Hodeidah.

For crew repatriation, passports are taken to Sanaa by Agent for necessary visas to be arranged.

Medical Facilities: One doctor resides in Salif, Yemenese and speaks English. He will attend the ship rather than the patient visiting him. The nearest hospital is in Hodeidah.

Port Operations (Bagging Plant): Foremen and workers are hard working. The foremen reside in caravans close to the bagging plant whilst most of the stevedores come from Salif.

The method of discharge is to load a number of diesel driven evacuators on deck and by various pipelines, these are connected to a storage hopper situated on the pontoon/barge. The hopper is connected to a small bagging plant and by means of conveyors the sacks are loaded onto road transport.

Discharge rates per 24 hours worked between 1,600 tonnes and 1,850 tonnes. Charter Party rate indicated about 750 tonnes per day. The takeaway rate from the hopper appears to be adequate with plenty of road trucks available. The grain is shipped immediately to different parts of the Yemen.

It is usual to carry sufficient bags to enable the complete discharge of the grain to go unhindered. The bags are baled and discharged onto the pontoon at regular intervals.

Ship's gear is required at each hold to sling the pipes that lead from the evacuators into the hatch. It is also required for discharging the gunnies and for loading the evacuators (1.5 tonnes). The evacuators appear reliable but spillage of diesel results during re-filling etc.

Fresh Water: Available but expensive. Supplied by road tanker at 15 tonnes a time, it is necessary to use ship's pump for pumping the water aboard. Agents require ample notice prior to supplying water.

Fuel: Heavy oil and diesel oil not available unless barged from Hodeidah.

Stores: Not readily available; fresh stores difficult to obtain.

Agency: The main Agency lies some 60 km. away by track, and the ship is attended by a runner who commutes between Hodeidah and Salif. Considerable delays result before ship's business can be completed and it is necessary for everything to be in writing; repatriation, in particular, is difficult for the organiser as well as the traveller.

Communications between Salif and Hodeidah are non-existent, a telephone line exists, but this is out of order. It is however possible to communicate directly through Portishead Radio and sometimes the only way to get messages out.

Local currency and American Dollars are obtainable from the Agents. It is difficult to obtain the money from the Agents and generally it is best to arrive with sufficient cash on board to cover any expenditure.

To arrange repatriation it is necessary to allow at least 6 days. Visas have to be obtained from Sanaa and tickets arranged. If pre-paid tickets have been sent from U.K., then they must arrive in ample time. The airport at Hodeidah has regular connections with Sanaa which in turn is linked into most air routes via Paris. Transportation from the ship to Hodeidah is by Land Rover or similar four wheel drive vehicle.

Port Regulations: Nothing in writing. The Harbour Master is the person to approach if anything required. Apparently Salif is designated a military zone and this is the reason no written information is available.

Gangway: The vessel only lies alongside for a distance of about 80 ft. amidships and consequently a pilot ladder is used instead of a gangway or brow. If this causes any difficulty, ship's lifeboat can be used as a ferry between gangway and shore.

Watchmen: Supplied by local Police/Army. They remain aboard during vessel's stay and keep pilferage to a minimum. They also keep close watch on any alcohol that may be obtained by local Yemenese.

Shore Leave: See "Immigration".

Garbage: No facilities for taking garbage away from the ship; best to dump waste food etc., whilst retaining cardboard boxes, and plastic containers.

Repairs: Possible to immobilise main engines, as once on the berth it is unlikely to shift. No repair facilities ashore.

Time: GMT plus 3 hours (no change).

Flag: Yemen Arab Republic Flag must be flown at all times. Red, white, black horizontal stripes with a black star in the white section.

Consuls: Situated in Hodeidah or Sanaa. Harbour Master available for Noting Protest, etc.

Tugs: None available for berthing though frequently tugs operate in the area towing barges, pontoons, etc.

VHF: Situated in port office but hours of working very flexible. The Harbour Master normally calls any vessel up shortly after anchoring.

Fire/Ambulance: None available.

Projects: A new pontoon berth, similar to the grain berth, is being constructed about 0.25 miles to the North. Silos have been erected close to the shore and are capable of storing 9,000 tonnes of finished cement. A bagging plant has also been constructed next to the silos. It is intended that cement be shipped, in bulk, and with evacuators discharged into the silos.

SHIPMASTER'S REPORT: May 1982.

I was in Saleef recently with 39,127 tonnes wheat – ship 182.08 m. long. The following are changes to information in the Guide.

The barge – pontoon berth with bagging plant no longer exists and apart from cement boats all ships now berth at jetty by Salt terminal.

Minimum water I found there in 18 days' stay was 18.5 m.

Ship's gear must be used and grain is dumped on wharf and bagged in situ, being taken away by lorries. Rate erratic, between 900 t.p.d. and 2,000 t.p.d.

Vessel has to vacate berth for car carriers and salt loaders.

No shore leave permitted.

Bond is now sealed. No restrictions on what is kept out.

NOTES

Please also advise Shipping Guides Ltd.

People's Democratic Republic of Yemen

ADEN, (including Little Aden): 12.48 N. 44.54 E.

DOCUMENTS:
5 Crew Lists for Ship's Agent, Police and Immigration.
5 Passenger Lists for Ship's Agent, Police and Immigration.
2 Lists of Bonded Stores.
1 Health Form to be shown to Pilot on boarding and handed to Ship's Agent.
Manifests, Bills of Lading if landing cargo only.
Ship's Register to be sighted by Pilot.
Arrival Declaration to be filled in by Ship's Agent after arrival.
Dangerous Material Declaration to be handed to Pilot on boarding.

PILOTAGE: Compulsory for all vessels proceeding to and from Inner Harbour and Oil Harbour at Little Aden which exceed 200 g.r.t. To call Pilot fly International Code Flag "G" or red/white/red lights at night. Call "Harbour Control" on VHF Channel 16, or R/T 2182 kHz. 48 hours' notice of ETA with draft to Harbour Office.

Pilot boat will meet ship at the Fairway Buoy in all weathers. Pilot boat is 50 ft. launch painted red, flying Pilot flag by day or white/red lights at night. Pilot will board on lee side of ship by pilot ladder only. Vessels waiting Pilot can anchor anywhere in Outer Harbour except in a Prohibited Area of 2,000 ft. around the Fairway Buoy. All Pilots are Yemenies with foreign-going Master's certificates.

ANCHORAGES: Ample anchorage area available with in Outer Harbour depths from 18 ft. to 54 ft.

(a) Anywhere North of Fairway Buoy clear of Main and Little Aden Channels and clear of Prohibited Area mentioned above.

(b) Deep water anchorage anywhere to S.W. of Fairway Buoy clear of Little Aden Channel and Prohibited Area mentioned above.

MAX. SIZE:

Aden:

(a) Max. length 900 ft., breadth no restriction, depth 38 ft. at datum for vessels taking bunkers from A.B.C. (Aden Bunkering Co.).

(b) Vessels taking bunkers from Y.K.T.C. (Yemen-Kuwait Terminal Co.), max. length restricted to tankers of 750 ft., breadth no restriction, depth 39 ft. at datum.

(c) Larger vessels can be considered on application to the Port Officer. Longest vessel to enter 940 ft.

Little Aden Refinery:

Max. length 760 ft., breadth no restriction, depth 40 ft. at datum and max. deadweight 65,000 tons.

A new jetty 45 m. in length has been constructed on the North side of the oil harbour by Agip Oil Company for use by oil rig supply tugs. Vessels up to 90 m. LOA and 6.1 m. draft can berth on the jetty.

Note: In both harbours vessels manoeuvring require 2 ft. water under keel, and vessels of draft 37 ft. and above require 4 ft. water under keel.

Ballast Draft for Tankers: All tankers when manoeuvring within the port shall be ballasted properly to a mean ballast draft which shall not be less than half the Summer draft and the trim by the stern not exceeding 6 ft. These figures are the minimum for normal conditions and may be increased when conditions necessitate at the discretion of the Pilot.

HEALTH: Vessels requiring Pratique fly International Code Signals or 3 red lights at night. This signal to be exhibited until Pratique has been granted by the Pilot or Port Health Officer.

Control of quarantinable and infectious diseases is direct responsibility of Port Health Officer. All passengers from infected local areas except children under age of one year are required to have valid international certificate of vaccination or revaccination against yellow fever and cholera.

RADIO: All ships landing passengers are boarded by Assistant Port Health Officer unless Radio Pratique has been given. Pratique may be obtained by radio to Port Health Authorities no earlier than 12 hours and no later than 4 hours before arrival, in accordance with international procedure. All landing passengers medically inspected and vaccination certificates checked on board before Free Pratique granted. Ships having infectious diseases on board are also boarded; after examining the case and taking any necessary precautions the Assistant Port Health Officer grants Restricted Pratique. Ships also inspected for issuing derat exemption certificates. Deratting carried out when necessary and derat certificate issued.

Yemen Telecommunications Company: Mercury House, Ras Boradi (Tel. 22223/5).

Wireless telegraphy:

	GMT	kHz

VHF: 24-hour watch on VHF Channel 16 (working Channel 13) and duplex working on Channel 26.

TUGS: Tugs for both harbours normally join just outside Breakwater. Ships' ropes always used in Aden Harbour, tugs' wires in Little Aden.

6 tugs available in Aden Harbour, maximum 2,000 h.p. In Oil Harbour at Little Aden 2 Voith Schneider tugs of 3,200 h.p. each are available.

BERTHING: (Also see "Tankers"). 24-hour service at all berths.

Berth		*Type*	*Normal maximum length of ship* (ft.)	*Datum depth in* (ft.)
1 (a)		2 buoys	350	30

6 In		Dolphin & breast buoys (oil)	800	38
7 In	T	Dolphin & breast buoys (oil)	750	39

The capital letters in column two denote alternative designation of mooring buoys/dolphins.

Home Trade Quay (H.T.Q.): 800 ft. long with depth of 18 ft. Max. size of ships that can berth there are restricted to 122 m. LOA and max. draft 5.5 m.

Free zone. Initial Stage 525,420 sq. ft. open space and 162,000 sq. ft. covered space. Import and export industrial facilities. No restrictions, no taxes. Transhipment storage free for unlimited period.

STEVEDORES: ETA advice to Ship's Agents at least 48 hours before arrival.

MEDICAL: Advance notice for medical attention not normally required except for serious cases requiring doctor's attendance on board, or ambulance cases. Vaccination certificate required for landing. Hospital facilities available.

TANKERS: Tankers carrying dangerous petroleum (flash point below 73° F) and those not gas free or carrying more than 3 tons of category one cargo (explosives) cannot enter Aden Harbour during hours of darkness. They can enter Little Aden day or night. Slop (residue) discharge facilities available at Little Aden. 4 tanker berths for discharge/loading at Little Aden with max. datum depth of 40 ft.

Berthing at Oil Harbour: Functions of Oil Harbour Little Aden to receive crude oil in bulk for oil refinery and to export refined petroleum products. Vessels carrying cargo for refinery, other than oil, discharge at Inner Harbour.

Oil harbour has finger jetty and 2 T-head jetties which provide berths for 4 tankers. Tankers of up to 65,000 tons Summer deadweight with 55,000 tons of cargo can be accommodated.

Berth	*Type*	*Normal maximum length of ship* (ft.)	*Datum depth in* (ft.)
1	Dolphin & mooring dolphins	750	40
2	Dolphin & mooring dolphins	750	40
3	Dolphin & mooring dolphins	750	40
4	Dolphin & mooring dolphins	750	40

Also see "Developments".

BALLAST: Notice: Port Authority require vessels arriving or sailiing in ballast to have mean draft 50% of Summer draft and maximum trim of 6 ft. by stern. However, should the vessel have segregated ballast tanks then ballast condition must comply with regulation 13 of International Convention for Prevention of Pollution 1973, Protocol 1978. Total deballasting time allowed being 6 hours only. Vessels should have maximum possible ballast clean and capable of being pumped overboard. Dirty ballast and slops can be received ashore at maximum rate of 500 t.p.h.

Signed: Marine Superintendent.
Aden Refinery Company.

DENSITY: Salt water at all times.

FRESH WATER: Ample available, delivered by barge in Aden at about 50 t.p.h. Ordinary water in Little Aden supplied by pipe-line at about 40 t.p.h. and condensate at about 2 t.p.h.

FUEL:

(a) A.B.C. (4 berths).
Marine fuel 2500 sec., 1000 sec., 600 sec., 200 sec.
Diesel oil and gas oil.

(b) Yemen-Kuwait Terminal Co.
Marine fuel – all grades below 3,500 sec.
Diesel oil and gas oil.
All supplies done on a Nomination basis through the Company's Head Offices, with the vessel giving at least 48 hours' notice to Aden.

FIRE PRECAUTIONS: As per the Refinery regulations (International Standard). Tug wires to be rigged and check list to be furnished.

GANGWAY/DECK WATCHMEN: It is recommended watchmen are employed; they can be supplied by Ship's Agent. Safety net to be rigged.

OPENING/CLOSING HATCHES: Normally carried out by stevedores, derrick-topping by ship's crew. Vessels not to move in harbour with beams off.

CUSTOMS ALLOWANCES: Tobacco/Wine, Spirit allowance. No restriction at the moment. Bonded stores not allowed to be supplied more than 1 hour before ship sails.

IDENTIFICATION CARDS: Shore pass to be carried at all times when ashore.

REPAIRS: Workshops are equipped to carry out: Boiler repairs; Plating and sheet metal work; Galvanising work/moulding work; Welding and blacksmith's work; Main and auxiliary machinery repairs; Carpentry and joinery work; Electrical and plumbing work; Refrigeration repairs; painting, cleaning and chipping. Repairs afloat to vessels up to 80,000 tons are undertaken; repairs to the largest vessels carried out mostly in Outer Harbour.

Radio engineering section with fully qualified personnel giving round-the-clock service of repairs and maintenance to radar and radio equipment.

During repairs, maintenance and painting – no rubbish to be thrown overboard, precautions to prevent pollution to be taken. No painting overside to be carried out without written permission from Port Authority. Chipping and/or scrapping overside strictly not permitted.

DRY DOCK: 1 sideways slipway taking 1,500 tons and floating dock lifting capacity 4,500 tons. Length 137 m., breadth 31 m. Max. draft 6.0 m.

REPATRIATION: Arranged through Ship's Agent and Immigration.

AIRPORT: About 5 miles from port. Flights to U.K. via Beirut (Middle East Airlines), Air France, Kuwait Airways, Air India, Ethiopian Airlines, Saudi Air and Alyemda also call.

TIME: GMT plus 3 hours. No alteration of clocks.

HOLIDAYS: Most holidays are religious which have movable dates. National holidays are 14th October and 30th November. Cargo work usually carried out during all holidays. Friday is a public weekend holiday.

POLICE/AMBULANCE/FIRE: Ambulance at Crater 53232; Harbour Police 22851; Port Health 22626/7; Fire 22222.

TELEPHONES: No connection to ships but link calls can be made on VHF through Yemen Communications using Channel 16 to call and working on Channel 26. Some Agents have private VHF Channels.

GENERAL: Outer harbour contains ample anchorage area for vessels requiring datum depths up to 54 ft. Inner harbour approached by 2.7 mile dog-leg channel, dredged to 38 ft., from Fairway Buoy in Outer Harbour where Pilots board. Inner harbour protected by breakwater at Steamer Point and by rubble mound. It provides 24 buoy or anchor-and-buoy berths, including 13 with oil bunkering facilities. Majority of these berths have a datum depth of 30 ft. or 38 ft., with max. length of ship ranging from 275 ft. to 750 ft. In addition 3 dolphin berths, with bunkering facilities, of 39 ft. datum depth and normally accommodating ships of 750 ft. – 900 ft. max. length; vessels of greater length can be accommodated with the approval of the Port Officer. Quays and wharves cater for shallower-draft vessels and lighters.

Oil harbour, serving refinery at Little Aden, reached by 38 ft. channel from Fairway Buoy, provides facilities for tankers of up to 750 ft. All berths and anchorages are under the jurisdiction of the Port Officer. In order to facilitate berthing arrangements for ships calling at Aden, Masters are requested to furnish the Port Authority with the necessary information, such as, LOA, max. draft, g.r.t., type of ship, object of call, dangerous cargoes on board and IMO Classes, ETA and any other information Master thinks may be useful.

SHORE LEAVE: Regulations: In accordance with Art. 8 of the Immigration Rule No. 28 of the year 1969, all crew members coming ashore will be excused from obtaining visa provided they surrender their passports to the Immigration Officer-in-Charge. These passports will be given back to the holders before they return to their particular vessels. Any crew member unable to comply with these instructions will not be permitted to visit the town.

Ships' crew are not allowed to stay ashore after 0000 hrs.

SHIP SUPPLY SERVICE: There are no firms specialised in this field in Democratic Yemen. However, the Yemen Ports Authority has a large fleet of tugs and launches at Aden, and will, in 1985, have 2 Voith Schneider propelled tugs, 1 fast pilot launch and 2 mooring launches at the newly constructed port of Mukalla-Khalf. These craft are available at all times for rendering assistance to sick persons on board ships in the vicinity of the ports and are also available for crew changes, mail and spare parts delivery.

As to helicopter services, the Democratic Yemen Army and Air Force make their helicopters available for rescue at sea whenever possible.

REGULATIONS: Vessels must fly the National flag of P.D.R.Y. at foremast. No movement of "dangerous petroleum" at night. Vessels must vacate oil berths on completion of bunkering. Main engines must not be immobilised in an oil berth. Sufficient crew must remain aboard vessel at all times to move her.

Ships carrying dangerous cargoes calling at Democratic Yemen Ports must inform the Port Authority concerned not less than 48 hours prior arrival. IMO Class I dangerous cargo to discharge at Outer Harbour Anchorage, if IMO Class I in transit vessel will manoeuvre during day time only.

Immobilisation of main engines should not be executed at any berth before obtaining written permission from Port Authority, through ship's Agent. Same procedure applies for overside hull painting. Application to be through ship's Agent in duplicate. Main engine immobilisation in oil berths and Home Trade Quay not allowed.

DEVELOPMENTS: The oil harbour is being deepened and widened in order that Berth No. 4 can accept vessels of 100,000 d.w.t. Completion expected late 1988.

New quay, length 750 m., for container vessels, and 150 m. for Ro/Ro vessels under construction. Depth at container quay 11.0 m. and at Ro/Ro quay 7.62 m. 1×40 ton gantry crane and 6×6 ton semi-portal cranes will be available. Also available 1×60,000 ton grain silo. Completion 1988/89.

SHIPMASTER'S REPORT: 1976

Documents:

Pilot: Sights Ship's Register to check tonnages.
Customs: 2 Crew Lists; 1 Bond List.
Immigration: 2 Crew Lists.
Doctor: 1 Health Form; 1 Vaccination List.

Note: Crew List should have consecutive numbers as well as Agreement numbers.

Agents: 2 Crew Lists; Arrival information sheet; Statement of Owners full address also Cable address; 2 Arrival Declaration for Yemen Ports Authority; 2 Aden Port Log; Charges sheet for Mail; 1 Sailing information sheet; 1 Currency refund sheet.

Agent brings these Forms on board and will assist with filling in the information.

Communications: It was found impossible to make Radio Contact with Aden prior to 5 days before arrival. Best time seems to be after Aden sends its Traffic List. VHF contact was made at 12 miles as the hills around Aden appear to blanket signals when further away. Channels 16, 13, 8 or 6.

Approach: This is straightforward. The BA Charts appear to be well up-to-date. The Fairway Buoy is easily seen at 8 miles. Pilot boards here. Pilot ladder required. Authorities will not allow the accommodation ladder to be used.

Mooring: There was a trainee Pilot with both the inward and outward Pilot.

Ship was swung using starboard anchor and 1 tug aft. Berthed at No. 4 Berth. Forward: 3 ropes to buoy on inside plus starboard anchor 5 shackles. Aft: 1 rope from port quarter and 1 from starboard quarter taken to outside buoy, then 2 ropes, 1 from each quarter taken to inside buoy. Ship then hove to be centred between the 2 after mooring buoys. When ship in position oil pipe-line, on floats is towed alongside.

Visit: Agent boarded with Doctor. At first Doctor was insisting all had to have Cholera vaccinations but is not really necessary. Immigration and Customs boarded. All pleasant and helpful. Bond was sealed.

Port Facilities: 2 fairly powerful tugs. Numerous mooring boats, 1 floating crane seen but as to lift capacity this was not ascertained. Port is run by The Yemen Ports Corporation. Like the Agency it is State owned.

Watchmen: Agents automatically provide 2 watchmen. Seemed to be alert.

Regulations: Masters are requested to assist the Port Authority by not allowing Bumboatmen or fishermen to board without written permission. The Port Authority advises Masters to be most careful if they do issue written permission. There were no bumboats about and no one seeked permission to come aboard to do business.

One half hour prior to sailing the Pilot signal red-white-red in a vertical line or "G" to be hoisted also call Port Control on VHF 16.

Use of ship's whistles or sirens is very controlled.

Bunkering: Ship's crane used to hoist pipe-line aboard. The bunkering operation went smoothly and the Oil people seemed co-operative.

Walport Film Exchange: Agents were cabled but it is necessary for an Officer to go with the Agent to make the exchange.

Mail: Mail posted in London on 22nd March or 23rd March was stamped as having arrived Aden 28th or 29th March.

General: It would seem that the Port Authority, State, etc., are very keen to build up a thriving Port. It would also seem that they endeavour to give a good efficient service. I gather there is a special duty free shop ashore for the purchase of souvenirs, goods, etc.

SHIPMASTER'S REPORT: March 1985.

Documents: See "Fuel".

Pilotage: Harbour Control was called on VHF Channel 16 two hours before arrival and again 4 miles off the Fairway Buoy. Information given from the Harbour Control regarding Pilot and berthing gave the impression of a well organised port. Night signal for a ship requiring Pilot is following: vertical lights, red-white-red.

Radio: From one week before arrival, radio messages were sent via Aden Radio (7OA) to Aden and Ethiopia. Radio Officer told me that Aden Radio proved to be easy and efficient to work with.

Fuel: Bunkering commenced immediately on arrival even before ship cleared by the Authorities. Authorities came on board just before departure to collect Crew Lists and Stores Lists. Crew's cabins were not searched and stores not sealed.

2 men from the Agents were on board to handle ship's matters.

Repatriation: 7 crew members were repatriated to Denmark, and 7 new crew members joined. Tickets for those to be repatriated were brought from Denmark with the joining crew. Crew change went smoothly.

Notices: Yemen Ports Authority – Port of Aden:

Masters are requested to assist the Port Authorities in controlling bumboat traffic as follows:

Bumboatmen and fishermen selling fish *may not* board ships without the written permission of the Master. Disregard of this rule renders the men liable to police action *after* the ship has left when evidence cannot be obtained from the ship. Masters can greatly assist the Authorities if they will ensure that they give written approval to bumboatmen and fishermen whom they have allowed to board the ship.
Port Officer, Aden.

To: All Masters of Vessels in Aden Port – From National Shipping Agency.

The undermentioned information is for your kind attention and guidance:

Immobilisation of Ship's Engines:

Please note that it is an offence to immobilise ship's engines WITHOUT written permission being obtained from the Yemen Ports Authority. To avoid heavy penalty, Masters are advised to forward their requests to us in duplicate, as ship's Agents, and should NOT immobilise ship's engines unless they are in possession of the written permission of the Yemen Ports Authority for the period approved.

Garbage Collections:

Appended below are extracts from Circular No. G/3/128 dated 25th January, 1984, of the Port Officer and Director of Marine Affairs, Yemen Ports Authority, Aden:

(a) Collection and removal of garbage from vessels is entrusted to persons authorised and licensed by the Yemen Ports Authority, Aden, and who work on a rota system.

(b) It is compulsory for a vessel staying in the harbour for a period exceeding 24 hours to avail itself of this service and fees will be collected per day **whether garbage has been collected or NOT.**

(c) Similarly it is compulsory for garbage collectors to call on vessels allocated to them daily unless other arrangements have been agreed with the Master of a ship. Any garbage collector who does not call on vessel allocated to him daily without prior agreement of the Master will not receive his fee that day if reported.

Note: Masters requiring special service for collection of extra garbage, i.e., refuse/wastes, etc., emanating from the cargo holds/engine room, etc., must put their written request in duplicate to us, as Agents, to arrange for the garbage collector to call on their vessel. The Master should also notify us in writing the charges agreed upon for the extra garbage with the Collector. This does not apply to U.S.S.R. vessels who are required to comply with the procedures below.

For Masters of U.S.S.R. Ships: Before applying for the collection of extra garbage, please first submit your written request in *4 copies* through the Agent for *approval* of the Resident Representative for U.S.S.R. ships. Please *do NOT* employ collection of the extra garbage before receiving this approval.

Scraping, Chipping and Painting in the Port:

Please note that as per instructions from Yemen Ports Authority, scraping, chipping and/or painting are *NOT ALLOWED* during vessel's stay in the port, unless prior permission is obtained from the Port Officer through us, as Agents. Any requests for the above must be forwarded to us in duplicate.

Shore Leave – Immigration Regulations:

All shore leave expires at 2300 hrs. and, therefore, all Masters, Ship's Officers, crew and passengers should be on board by this time. Overnight stay ashore is *not permitted.* Infringement of the above will be subjected to penalty and also delay to the ship.

Cash Advance to Master in Yemeni Dinars:

Cash advances required by Masters for payment to their crew in order to enable the crew to avail themselves of purchases from *Tax Free Shop,* require the following procedures to be complied with:

(a) Masters are required to render their requisitions in duplicate to the Agents during working hours together with 2 copies of Crew List.

(b) Either the Master or Chief Officer or Purser in person should have the requisition attested, stamped and signed by the Customs Officer before handing them to National Shipping Co. (the Agents).

(c) Together with the cash to Master the Agents will issue Purchase Certificates on Tax Free Shop.

(d) After completion of the purchases and 24 hours before vessel is due to sail, the Master should obtain *Purchase Clearance Certificate* from Tax Free Shop and hand it over to the Agents. This is most essential as against these Certificates only and after reconciling with the actual cash advanced, the Agents can accept the balance cash refund from Master.

Under the Exchange Control Regulations, it is an offence *not* to return the *UNUSED* Yemeni Dinars prior to sailing. Masters of vessels who received Cash Advance in Yemeni Dinars are advised to return *ALL* Yemeni Dinars remaining in their possession, to our representative who boards to clear the vessel, and ensure to obtain from him *on the spot* an official receipt of the National Shipping Company for the amount refunded, prior to departure of the vessel.

Victualling Allowance:

Free meals to Stevedores' Personnel/Watchmen.

Free meals are normally given by vessels by mutual arrangements between Masters and the Stevedores, to save time of the following persons who otherwise would have to go ashore for their meals:

One Tally Clerk per hatch working.
One Foreman.
One Cargo Supervisor.

It is left entirely to your discretion to supply free meals to the above mentioned personnel and the watchman or not. Kindly, therefore, note that we do *NOT* countersign or vouch expenditures.

Contacts on VHF: Masters of vessels can contact Agents on VHF (Channel 16) at any time during the *DAY* or *NIGHT* for any inquiries or services required. The Harbour Control also can be contacted on the same Channel.

Authorities: All in all the Port Organisation, Pilots, tugs and the Authorities gave us a good impression of the port.

AUTHORITY: Yemen Ports Authority, P.O. Box 1316, Tawahi, Aden, People's Democratic Republic of Yemen. *Tel:* 22666. *Telex:* 2278 Mawany Ad. *Cables:* Mawany. *Contact:* Director General.

MUKALLA (Khalf): 14.31 N. 49.09 E. (See Plan)

SHIPMASTER'S REPORT: August 1984. (Updated 1989).

PORT LIMITS: See "Gulf of Aden Pilot" (No. 64).

DOCUMENTS: See "Aden".

PILOTAGE: Compulsory for all vessels proceeding to and from the Port of Khalf. Call Pilot on VHF Channel 16. Vessels to display international signals day and night.

ANCHORAGES: Pilot Book as mentioned above gives sufficient information. A good practice during July each year (when S.W. monsoon is at its strongest) is to drop a second anchor in the morning and to heave it home again at about 1900 hrs. To keep second anchor out during the whole time of port stay is inadvisable as direction of turning on wind/tide is unpredictable and thus might end up with chains fouled.

APPROACHES: The lighthouse is visible at 18 miles.

RESTRICTIONS: Entering/leaving:

Anchorage: None.

New Port: Daytime only. During S.W. monsoon only between 0600 hrs. and 1100 hrs. and max. LOA 75 m.

MAX. SIZE: Ship's normally accommodated at Khalf Port up to 145 m., drawing max. draft of 8.5 m. Larger ships could be accepted if permission granted in advance by the Port Authority.

HEALTH: As ship arrived from Aden, no formalities whatsoever.

RADIO: All communication before arrival/after departure Aden and Mukalla via Aden Radio (70A). This radio station is working satisfactorily.

Once in port (either at anchorage or alongside) it is forbidden to use ship's radio and/or telex.

Sending cables/telexes via the Agency is time-consuming.

TUGS: At least 1 tug, and probably 2 when port is open for shipping.

BERTHING: 2 alongside berths for up to 10,000 Summer d.w.t. 3 alongside berths for coasters, depth up to 5.0 m.

CRANES: 14 mobile cranes, 3 – 10 tons capacity.

STEVEDORES: Work throughout 24 hours.

MEDICAL: Local hospital available but only a few facilities.

DENSITY: 1026.

FRESH WATER: Will be available in 1989.

FUEL: Will be available in 1989.

STORES: Not available.

REPAIRS: Not available.

CONSULS: None.

SURVEYORS: Available.

FRESH PROVISIONS: Not available.

GANGWAY/DECK WATCHMEN: Not required, no reports of pilferage of cargo and/or ship's stores.

HATCHES: Once open, not necessary to close again except for sailing. Climate: Warm/humid but no rainfall.

CUSTOMS ALLOWANCES: Bonded stores were sealed on arrival, no specific rules, no search parties of Customs.

On departure: No check of seals.

AIRPORT: Located at Rayan, 29 km. East of Mukalla.

REPATRIATION: *Crew Change:*

Out-going: Via Mukalla Airport to Aden (6 times a week except Fridays) then either via Jeddah or Dubai/Kuwait to ultimate destination.

In-coming: Very difficult as visa required and not easy to obtain.

Note: Flights Mukalla-Aden and vice-versa may differ from printed timetables.

BANKS: National Bank of Yemen. Local currency: Dinar.

On presentation of passport-receipt, US$ (and only this currency) can be exchanged for Dinars (approximately US$3 for 1 Dinar).

It is very difficult to obtain US dollars in exchange for Dinars.

SHORE LEAVE: In Mukalla (as well as in Aden) when passing Customs Gate, passport is exchanged for receipt by the Immigration Officer on duty. When returning from shore leave this receipt is again exchanged for passport.

Note: It is difficult to make Officials understand that crew members and/or visitors from abroad are not in possession of a receipt, which makes a crew change extra time consuming (Charterer had to wait 3 hours before he was allowed to proceed to the ship).

SHIP SUPPLY SERVICE: See "Aden".

DELAYS: At present congestion may occur during the S.W. Monsoon period.

In future congestion may occur as infrastructure of the new port leaves much to be desired (Roads to/in/from the port, direct delivery etc.).

GENERAL: *Transit Time Airmail Post:*

Mukalla-Europe: Minimum 2 weeks, maximum 3 weeks.

Europe-Mukalla: Minimum 2 weeks, maximum 3 weeks.

Agency: National Shipping Co., P.O.Box 8039, Mukalla, People's Democratic Republic of South Yemen. Cables: "Natship Mukalla" (via Aden Radio).

Importer: National Company for Home Trade, 5th Government Branch, Mukalla.

SHIPMASTER'S REPORT: April 1985.

PORT LIMITS: The port limits extend in a 270° direction from Ras Marbat for 2.5 miles, thence 000° along Long. 49° 07′ E. to the coast.

PILOTAGE: Pilot boards from launch, off the breakwater.

ANCHORAGE: For vessels over 10,000 d.w.t. all cargo is handled at the anchorage which may be closed from May to October due to its exposure to the S.W. Monsoon. Holding ground is reported to be variable. Reasonable anchorage obtained in 27 fathoms in position Lat. 14° 30.8′ N., Long. 49° 08.3′ E. approximately 5 cables due South of rocky projection on which part of town is built. Requests will be made to anchor closer to the shore to reduce barge transit time.

APPROACHES: Charts B.A. 3784 and 10.

Prominent terrain affords reasonable radar positions. Careful consideration should be given to night-time arrival if without radar due to the total absence of navigational aids at both the port and adjacent coastlines. The white house at Point Ras Marbat and the 4 tower ruins above the town are charted and conspicuous from seaward.

RESTRICTIONS: Berthing during daylight hours only.
MAX. SIZE: Max. size 10,000 d.w.t. Max. draft 8.5 m.
VHF: Channel 16 for Port Authority, call sign "Mukalla Harbour Master".
Agent can be contacted by calling Mukalla Harbour Office on Channel 16.
TUGS: One Voith Schneider tug of 2,000 h.p. Reportedly to be replaced by 2×1,000 b.h.p. tugs shortly.
BERTHING:

Berth	*Length* (m.)	*Depth* (m.)
No. 1	177.25	9.15
No. 2	184.00	9.15
Fisheries	160.00	4.50

Turning Basin: Width 250 m. Depth 10 m.
Harbour Entrance: Approx. width 200 m. Depth 11 m.
Lighters: 4×200 tonnes, 4×60 tonnes and 2×400 tonnes, all plus or minus 10% subject to swell conditions. Lighters are discharged either at Khalf Harbour or at town quay located on West side of town, rocky projection in position Lat. 14° 31.5′ N., Long. 49° 08.2′ E. Town quay is restricted in size and served by mobile cranes.
Stevedores: Labour is available 6 days a week, Saturday to Thursday inclusive.
Morning shift: 0700 – 1230 hrs. Afternoon Shift: 1300 until lighters are full.
The afternoon shift is unpredictable and subject to lighters being available.
Medical: Local hospital affords basic medical requirements.
Fresh Water: Not available.
Fuel: Not available.
Shore Leave: Restricted by curfew to between 0800 – 1200 hrs. and 1600 – 1900 hrs. All persons going ashore are required to exchange passport for local pass at Immigration.
GENERAL:
Harbour: Khalf Harbour, recently completed and as yet uncharted (see "Plan") provides 2 commercial jetties and a fisheries jetty.
Swell: Reportedly maximum 20 cm. in S.W. Monsoon.
Provisions: None available with the exception of individual purchases of fruit or poor quality vegetables available from market stalls ashore. Fishing good from ship's rail and crayfish, etc. obtainable from local fishing boats.
Launch: By prior arrangement with Agent only. Special dispensation can be obtained from Harbour Master to utilise ship's lifeboat. Barges can be used if other arrangements do not materialise.
Communications: By cable only. Telephone system is reported to be unreliable.
Port Officials: Immigration and Customs Officials board on arrival. Passports or Seaman's Cards are sighted. Bond Locker and Beer Room sealed but sufficient released for shipboard consumption.
Usual port papers required.
Agency: The National Shipping Co., Mukalla, Yemen. Cables: "Natship, Mukalla". Telex: None, but reported to be planned.

NISHTUN: 15.50 N. 52.12 E. (See Plan)

DOCUMENTS: See "Aden".
PILOTAGE: Compulsory. Manoeuvring during day time only. There is a lighthouse, range 28 miles, flashing 10 sec. in position Lat. 15° 49.0′ N., Long. 52° 12′ E. Also the breakwater tower has a flashing green light.
ANCHORAGES: Ships waiting for berthing normally anchor 4 – 5 cables S.E. of the breakwater tower and clear of the harbour entrance.
MAX. SIZE: Maximum size of ship that can be accommodated is up to 3,000 d.w.t., 90 m. LOA and 5.0 m. draft. For ships over such size special permission should be obtained from Port Officer and Director of Marine Affairs.
VHF: Vessels approaching Port of Nishtun can communicate with Port Authority by using Channel 16 for calling during official working hours 0700 – 1400 hrs. (local time) .
BERTHING: Length of quay 220 m.
CRANES: 2×3 tons – 17.5 tons mobile cranes.
MEDICAL: Limited facilities available.
FRESH WATER: Available in small quantities.
FUEL: Not available.
AIRPORT: Located at Al-Gaidah, 40 km. to the East of Nishtun.
WEATHER: *Monsoon:* During S.W. Monsoon waves may break over breakwater. Swell is created in basin so extra precautions by ships' Masters regarding mooring and securing the ship against the quay are required and extra ropes or wires are necessary.
AUTHORITY: See "Aden".

NOTES

Please also advise Shipping Guides Ltd.

Yugoslavia

BAR: 42.05 N. 19.03 E. (See Plan)

PORT LIMITS: Seaward limits of the port defines a line drawn between "Voluica" Light and Ratac Point.

DOCUMENTS:

On Arrival:

2 copies Health Declaration.
1 copy General Declaration.
5 copies Crew List.
5 copies Passenger List.
5 copies Crew Personal Effects.
3 copies Stores List.
1 copy Animal Pets Aboard.
1 copy Certificate of Financial Insurance on Civil Liability for Oil Pollution – only foreign ships carrying more than 2,000 tons of oil.
3 copies List of Hazardous Cargoes loaded on board and Cargo Plan for Hazardous Cargo (1 copy).

On departure:

5 copies Crew List, if any change.
List of Hazardous Cargoes, if loaded and Certificate of Stowage.

PILOTAGE: Advance notice 24 hours through ship's Agent. Pilot boat blue hull, white deck house, with letter "P" on each side. Pilot boards off West Breakwater. Use international signals to call Pilot. Pilot may be contacted on VHF Channel 16, working on Channel 6.

ANCHORAGE: Safe anchorage West and N.W. off West Breakwater. Anchoring not allowed nearer then 0.5 mile off Breakwater.

RESTRICTIONS: Vessels enter/leave port by day and night. Tankers allowed only during daylight. Depth entrance 14 m.

No restriction on LOA and beam. Foreign nuclear ships enter only with special permission. Leaving or entering port for foreign tankers not allowed if not having said Certificate.

MAX. SIZE: Fully loaded vessels up to 12.5 m. draft.

RADIO: Bar Radio, call sign YUW, 500 kHz and 447 kHz. Radio telephony on 2182 kHz on 2 metre band and on Channel 16.

Agents can be contacted through Bar-Radio on VHF.

TUGS: 2 tugs with twin 594 kW engine.

BERTHING: Berth assigned at Agent's request or Receiver's/Shipper's, both for liners or tramps, at the daily meeting of the Harbour Board.

3,500 m. of berthing space and able to accommodate up to 20 oceangoing vessels.

STEVEDORES: The Port Enterprise "Luka Bar" is the sole stevedoring company. Work is done in 2 shifts: first 0600 – 1400 hrs., second 1400 – 2200 hrs. Third shift can be ordered at daily meeting, paid as overtime.

MEDICAL: Medical care available at Medical Centre at Bar.

TANKERS: New oil berth can accommodate tankers up to 80,000 d.w.t., draft limit 12.5 m. Bunkers from local bunker station. Tank cleaning, pumping of slops and gas freeing not permitted in port.

Tankers must be ready to leave port at 30 minutes' notice, at any time and at request of Port Authorities.

CARGO HANDLING FACILITIES: Available for all kinds of general cargo, containers, pallets, Ro/Ro, bulk, fuel oil and chemical cargoes. Regular passenger service to Italy and from May – October to Greece.

Grain silos with 30,000 tons capacity with covered Vacuvator.

DENSITY: Sea water.

FRESH WATER: Available from hydrants on quay.

FUEL: Can be obtained from local bunker station. All grades available. A fuel barge may be available in the near future.

GANGWAY/DECK WATCHMEN: Available at Master's request.

OPENING/CLOSING HATCHES: Normally performed by crew, or as per Charter Party.

CARGO GEAR: Mobile Shore Cranes: 6×5 – 6 tons, 3×3 tons, 3×8 tons, 2×20 – 30 tons, 1×40 tons. Fork-lifts capable of handling containers, Vacuvators, 3 cranes for bulk cargoes. 1×40 ton container crane. If not agreed in C/P, loading and discharging is by shore cranes.

CUSTOMS ALLOWANCES: Yugoslav Customs Regulations apply.

IDENTIFICATION CARDS: Shore passes issued by local Police.

CONSULS: Same as "Rijeka".

REPAIRS/DRY DOCKS: Dry Docks at Shipyard "Veljko Vlahovic", Bijela, 36 miles from Port of Bar, capacity of about 130,000 d.w.t. and 35,000 d.w.t., available for all types of deck and engine repairs. Minor damage can be repaired while loading/discharging.

SURVEYORS: Representative of Yugoslav Register of Shipping at Tivat (80 km.). Bureau Veritas at Dubrovnik and Lloyd's Register at Split.

REPATRIATION: From Bar by bus, train (International Lines), and ship. From Airports Tivat, Titograd and Dubrovnik by plane.

TIME: Central European Time, GMT plus 1 hour. Summer time kept from March to October (date fixed annually).

SERVICES: Compass adjuster at Bijela (100 km.), RDF adjuster at Dubrovnik. Other electronics repairs via Split.

HOLIDAYS: January 1st and 2nd, May 1st and 2nd, July 4th and 13th, November 29th and 30th. Work can be arranged on Sundays and 2nd day of two-day holiday.

POLICE/AMBULANCE/FIRE: Police Tel. 92; Ambulance Tel. 94; Fire Tel. 93.

SHORE LEAVE: Allowed.

STORING: See "Prelims".

1. By truck.
2. Yugoslav Federal Regulations apply.
3. Yes.
4. Yes.
5. Yugoslav Customs Regulations apply.
6. Yes.

DEVELOPMENTS: See "Plan".

AUTHORITY: Lucka Kapetanija Bar, Obala 13, Jula 8, SRC Gora, 85000 Bar, Yugoslavia. *Tel:* (085) 27-384, (085) 27-733. *Telex:* 63188.

AGENT: Jadroagent – Bar. Obala 13, Jula 6, P.O.Box 10, 85000 Bar. Cable: Jadroagent Bar. Tel: (085) 22-195, 28-194. Telex: 63141 Yu Jadrag.

DUBROVNIK (Gruz Harbour): 42.38 N. 18.07 E. (See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".

PILOTAGE: Compulsory. Pilot boards at a point situated approximately in centre of triangle formed by Kolocep Island, Daksa Island and Grebeni Rocks. Pilot boat is painted blue with large while "P" on hull, Length of boat about 13.0 m. Pilot boat may be contacted on VHF Channel 16.

ANCHORAGE: In about 22 fathoms in channel between Daksa Island and mainland. This anchorage is exposed to strong N.N.E. winds in Winter time.

RESTRICTIONS: Only port of Gruz is open to commercial traffic, the old port of Dubrovnik (within the city walls) can accommodate only yachts and small craft drawing under 9 ft.

MAX. SIZE: Max. length 230 m., max. draft 32 ft., no limits on beam.

RADIO: Dubrovnik Radio: *Telegraphy:* call sign YUX, working on 500 kHz and 447 kHz, (working 24 hours). Traffic list 0030, 0430, 0830, 1230, 1630, 2030 hrs.

Telephony: Working on 2182 kHz and 2615 kHz, (working 24 hours). Traffic list every odd hour + 20 minutes.

VHF: Listening Channel 16 throughout 24 hours and working on all Channels. Duplex Channel 23 with connection to national and international telephone network. All times are GMT.

TUGS: No permanently stationed tug boats, but can be ordered when necessary from other ports.

BERTHING:

Berth No.	*Length* (m.)	*Depth* (m.)
7	100	3.50
8	100	7.00
9	100	7.20
10	100	7.50
11	100	6.50
12	90	6.80
13	95	7.00
14	110	7.00
15	119	7.50
16	180	11.00
17	54	4.50

CARGO HANDLING FACILITIES: The port handles some bulk cargoes (grain and bauxite) occasionally and in small quantities but is not specially equipped for handling these and other cargoes. 6 cranes with capacity 1.5 tons-25 tons.

STEVEDORES: The port enterprise "Luka Dubrovnik" is the sole stevedoring company. Work is done in 2 shifts: first 0600 – 1300 hrs., second 1400 – 2100 hrs.

MEDICAL: General hospital and medical facilities available.

FRESH WATER: Available from hydrants on quay, rate 20 t.p.h. Order through Agent.

FUEL: Not available. Only oil for diesel engines in limited quantities. Heavy fuel can be delivered by coastal tankers from Split.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Performed by crew.

CUSTOMS ALLOWANCES: About 40 cigarettes and limited amount wine/spirits per man per day.

CARGO GEAR: Operations are usually performed with ship's gear. Shore cranes with 25 tons SWL are available at Quay No. 16 only.

IDENTIFICATION CARDS: Issued by local police.

CONSULS: Sweden: Konzulat Kraljevine Svedske, Zeljarica 7, Dubrovnik. Tel: 23144. Cables: Svensk.

Netherlands (Vice-Consul): Vicekonsulat Kraljevine Holandije, Gruska Obala 46, Dubrovnik. Tel: 24947.

REPAIRS: Small repairs only.

SURVEYORS: Bureau Veritas, Rijeka. Tel: 051-39324.

At Dubrovnik Ing. Lasic Srdan. Tel: 25723.

Lloyd's Register Surveyor available from Split. Tel: 058-42773.

AIRPORT: Airport "Cilipi" 25 km. from the Gruz Port. Served by regular airlines.

TIME: GMT plus 1 hour. Summertime. GMT plus 2 hours.

POLICE/AMBULANCE/FIRE: Dial 985 for all emergency matters.

TELEPHONES: Can be placed onboard. 72 hours' notice required.

SHORE LEAVE: Allowed.

DEVELOPMENTS: A new berth is to be constructed on the site of Berth No. 17. The new berth will have a 25 ton multi-purpose crane and a depth of 15.0 m.

AUTHORITY: Lucka Kapetanija Dubrovnik, (Harbour Master's Office), Gruska Obala 38, 50000 Dubrovnik. *Tel:* 23386. *Telex:* 27623 Yu Luckap.

KARDELJEVO (Formerly Ploce): 43.03 N. 17.26 E.

(See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".
PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards vessel at entrance of the channel within a circle of 3 miles radius from Point Visnjica. Pilot station on VHF. Channel 16.
ANCHORAGES: Vessels are allowed to anchor West of the line which connects Kunova Cove on peninsula Peljesac with point Lat. 43° 03′ N., Long. 17° 24′ E. on land coast. Depth over 25 m.
RESTRICTIONS: Ship entering channel between Visnjica Point and embankment of right hand bank must keep in middle, leaving buoys to starboard. Recommended speed 5 – 8 knots. Also see "Tankers".
MAX. SIZE: Draft limited to max. 34 ft. 6 in. Length limited to 220 m.
RADIO: Nearest Radio Station Split Radio YUS – 2182 kHz and 2574 kHz. Radio station Dubrovnik Radio YUS – 2182 kHz and 2615 kHz.
VHF: Channel 14 and 16.
RADAR: No Port Radar service.
TUGS: One tug of 850 h.p., and one of 1,200 h.p.
BERTHING: Bosanska Obala (Berth Nos. 7 and 8): Length 227 m., drafts up to 31 ft. – no shore cranes.

Biokovska Obala No. 1 and 2 (Berth Nos. 4, 5 and 6): Length 368 m., drafts up to 32 ft., 7×5 ton cranes.

Gat Oslobodenja: North Side No. 3 (Berth Nos. 1, 2 and 3): Length 410 m., drafts up to 32 ft., 1×7 ton crane and 3×5 ton cranes. Head: Length 250 m. South Side No. 5 (Berth Nos. 20, 21 and 22): Length 507 m., drafts up to 34.5 ft., 5×10 ton cranes.

One floating crane up to 100 tons capacity.
BULK CARGO FACILITIES: Grain, ores and minerals by shore cranes equipped for grab discharge at Quay Nos. 3 and 5. Grain through feeders to railcars. Alumina silo (capacity 20,000 tons) at Quay No. 1 – length 140 m., draft 30 ft., with loading facilities. Coal handled by 5×10 ton travelling cranes, average discharge rate 250 tonnes p.h.
SPECIALISED CARGO HANDLING FACILITIES: No berth specially equipped for handling containers, only by floating crane.
BRIDGES: No bridges to pass through.
STEVEDORES: Port Enterprise "Luka Ploce" Kardeljevo, is the sole stevedoring company. Work in 2 shifts: 0600 – 1400 hrs. and 1400 – 2100 hrs. Overtime possible.
MEDICAL: Medical service available. Nearest hospital at Mostar (64 km.), Dubrovnik (110 km.) and Split (110 km.).
TANKERS: Oil Terminal – Channel Vlaska: one berth: vessel's length – no restriction, max. vessel's beam – 27 m., max. draft – 9.20 m. No slop/deballast facilities. When wind blowing over 10 knots direction North-South, and over 14 knots East-West, vessels are not allowed to sail through Channel Vlaska to oil terminal. Navigation through Channel Vlaska is allowed only during daylight with assistance of 2 tug boats. It is not allowed to berth or anchor vessels less than 41 m. out of marked line, while other vessels sailing through the channel.
Storage:

- 6 tanks × 10,000 tons each for crude oil and heavy fuel oil,
- 3 tanks × 5,000 tons each for natrium hydroxide,
- 1 tank for special chemical products,
- 2 tanks × 2,500 tons each and 2 tanks × 1,300 tons each for petrol.

DENSITY: 1010 – 1030.
FRESH WATER: Available from quay. Rate 15 t.p.h. – 20 t.p.h.
FUEL: Gas oil only. Delivery by tank trucks. Advance notice required.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: May be done by crew, otherwise by stevedores with extra payment.
CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount wine/spirits per man per day.
IDENTIFICATION CARDS: Shore pass issued by local Immigration Office.
REPAIRS: Only small repairs.
DRY DOCKS: None.
SURVEYORS: Lloyd's, A.B.S., B.V. and Yugoregister at Split (110 km. from Kardeljevo).
CARGO GEAR: Although the port is equipped with shore cranes and a floating crane of 100 tons capacity, ships must have efficient cargo gear and relative certificates.
REPATRIATION: Possible by train or bus. By plane from nearest airports, Split (110 km.), Dubrovnik (110 km.) and Mostar (64 km.).
TIME: GMT plus 1 hour. Summertime (from last Sunday in March till last Sunday in September) GMT plus 2 hours.
POLICE/AMBULANCE/FIRE: Police, Tel: 058/79006; Ambulance, 058/79702; Fire, 058/79143.
TELEPHONES: Not possible to place telephones onboard.
SHORE LEAVE: Allowed.
DELAYS: Only occasionally for bulk carriers.
DEVELOPMENTS: Terminal for grain cargoes with capacity of 40,000 tons to be completed by 1989 at Berth No. 5. Average rate 400 t.p.h., bagging capacity of 1,000 bags per hour, with possibility of automatic weighing.
GENERAL: Lloyd's sub-Agents: Jadroagent Kardeljevo.
AUTHORITY: Lucka Kapetanija Kardeljevo, Lucka Kapetanija, 58340 Kardeljevo, Yugoslavia. *Tel:* 058/79008. *Cables:* Lucka Kapetanija Kardeljevo. *Contact:* Captain Busurelo Aleksandar, Harbour Master.

KOPER: 45.31 N. 13.44 E.

(See Plan)

PORT LIMITS: The seaward boundaries of the port are between "Debeli Rtic" (Punta Grossa) and Rt. Vilizan.
DOCUMENTS:

- 5 Crew Lists.
- 5 Passenger Lists.
- 8 Cargo Manifests.
- 2 Freighted Manifests.
- 2 Bills of Lading.
- 2 Store Lists.
- 1 Crew Effects List.
- 1 Cargo Gear Certificate.
- 1 Derat Declaration.
- 1 Health Certificate.

PILOTAGE: Pilot station may be contacted on VHF Channels 16 and 20 throughout 24 hours. Pilot boards 1 mile from entrance in roads or at anchorage. Definite notice to be sent by telex 24 hours before vessel's arrival in port area through its Agent in Koper. In case of bad weather, ship must wait for a Pilot at anchorage.
ANCHORAGES: Port area, depth 17 m., sandy bottom. Safe anchorages in case of S.E. wind near Rt. Vilizan and in case of N.E. wind near Debeli Rt. (Punta Grossa).
RESTRICTIONS: Vessels enter port by day and night, tankers can also enter during daylight hours and at night.
MAX. SIZE: General cargo and container vessels drawing up to 32 ft. and tankers with 40 ft. draft. No length restrictions.
HEALTH: Ship must have Health Declaration and in this case Pratique is automatic. In the event of any suspected disease or fever on board, Master must advise Harbour Master or Agent by VHF Channel 16 or by telegraph. Harbour Master's Office on VHF Channel 16 continuously.
RADIO: Communication on MW and SW through Rijeka Radio.
VHF: Communication on Koper Roads on Channel 16, 20 and 12. On Channel 20 it is possible to telephone outside the country.
RADAR: No service available.
TUGS: In area of old port, 2 available, 750 h.p. and 1,500 h.p. equipped for fire fighting.
BERTHING:
Terminal for General Cargo: Quays 833 m., depth from 7 m. to 12 m. Number of Berths 6. Roofed warehouses 140,000 sq.m., of which: air-conditioned warehouses, with a possibility of moisture and temperature regulation from 0°C to 20°C, 7,500 sq.m. Refrigerated rooms (freezing to −20°C) 23,502 cu.m. Special warehouses for cotton and hides 12,500 sq.m. 2 shore cranes, 1×20 ton mobile crane, 1×30 ton mobile crane, 1×40 ton mobile crane, 170 forklifts. Terminal capacity 750,000 tons annually.
Terminal for Timber: Quays 250 m., depth 6 m.–12 m. Number of Berths 2. Terminal area 25 ha., sheltered storage area 36,120 sq.m., 1 shore crane, 1 bridge crane, 22 forklifts, 21 towing units.
Terminal for Container and Roll-on/Roll-off Traffic: Quays 480 m., depth 12 m. Two berths for container vessels, 3 Ro/Ro ramps. Terminal area 20 ha. Closed warehouses 10,800 sq.m. Railway tracks 2×562 m. 178 electric connections for reefer containers. 3 container cranes (450kN). 5 straddle carriers. 4 transtainers. 11 forklifts. 21 towing units. Terminal capacity 135,000 TEU annually.
BULK HANDLING FACILITIES:
Terminal for bulk and liquids:

Cargoes handled:
Ores, coal and coke
Cereals and oilseeds
Liquid cargo (wine, edible oils, molasses, latex, phosphoric acid, oil and oil derivatives)

Capacities for ores, coal and coke: (Max. granulate size 150 mm.) Length of quay 200 m., depth at the quay 17 m. Number of berths 1, open storage 300,000 tons, 2×20 tons capacity shore cranes (at outreach 36 m.). Yearly throughput of the terminal 1.5 million tons. Unloading capacity on the quay 1,000 t.p.h. Loading capacity from the ship or from depot 5,000 tons/day. Possibility of berthing vessels up to 130,000 d.w.t. Daily despatch per railway 5,000 tons.
Capacities for phosphates, fertilisers, borates and bauxite: Length of quay 273 m., depth at the quay 14 m. Number of berths – 1, sheltered warehouse (ground floor) 30,000 tons, 2×20 tons capacity shore cranes (15 tons at 24.0 m.). Silo for borates 1,100 tons and silo for bauxite 20,000 tons. The quay is equipped with moving belts and connected to the warehouse with a closed conveyor system.
Capacities for cereals, oilseeds and oilseeds after industrial output/silo: Length of quay 183 m., depth at the quay 14 m. Number of berths – 1, storage capacity (24×2,250 tons and 11×580 tons) 60,000 tons. Discharging/loading capacity for vessels 500 t.p.h., discharging/loading capacity for vehicles 500 t.p.h. The grain silo is a technological closed system with its own quay, rails, wagon loading/discharging station and the corresponding road connections.
Capacities for other bulk cargoes: Depth at the quay 7.0 m.-14.0 m. Number of Berths 3, open storage area 12,000 tons (2×6,000 tons). In addition to the special quay equipment with conveyor systems the Port of Koper has 3 additional berths for dispatching of bulk cargoes direct.
Capacities for liquid cargoes: Wine 2,492 cu.m., edible oil and molasses 24,500 cu.m., chemicals 12,350 cu.m., phosphoric acid 7,500 cu.m., latex 1,320 cu.m., oil and oil derivates 114,900 cu.m.
BRIDGES: None.
STEVEDORES: Gangs ordered from "Luka Koper" who are stevedores by Agents and forwarding Agents in Koper.
MEDICAL: Medical assistance and hospital available.
TANKERS: Tanker berth for crude oil with max. draft 40 ft., equipped with 3×8 in. arms.
FRESH WATER: Available from any pier. Rate of delivery about 15 t.p.h.
NOT
FUEL: None available.
FIRE PRECAUTIONS: Usual precautions.
CONSULS: Italy.

REPAIRS: Small repairs can be carried out at Koper. In Izola, 2 miles from Koper, is wharf "2nd October". The repair service for containers is in the Port.
DRY DOCKS: In Izola for vessels up to 16,000 d.w.t.
SURVEYORS: In Koper – Jugoregister. In Rijeka or Trieste all representatives.
GANGWAY/DECK WATCHMEN: Available at ship's request.
OPENING/CLOSING HATCHES: If not performed by crew, then by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes for each member of crew and 1 bottle of spirits per week and reasonable quantity of wine per man per day.
REPATRIATION: By bus, by railway from Koper or by air from the airports.
AIRPORT: Ljubljana (Brnik) – 120 km. Rijeka – 100 km. Pula – 100 km. Ronchi (Italy) – 80 km.
TIME: GMT plus 1 hour. Summertime kept.
HOLIDAYS: New Year's Days (1st, 2nd January), 27th April, May Days (1st and 2nd May), 4th July, 1st November, Republic Days (29th, 30th November).
POLICE/AMBULANCE/FIRE: Police No. 92, Ambulance No. 94, Fire No. 93.
TELEPHONES: From anchorage it is possible to telephone through VHF Channel 20. Telephones can be installed onboard at Berth Nos. 1a, 1, 2, 3, 4 and 5.
SHORE LEAVE: Allowed after clearing inwards (Free Pratique).
IDENTIFICATION CARDS: Shore pass issued by local police (without photograph).
REGULATIONS: None.
DEVELOPMENTS: *Bulk Terminal:* (2nd stage) Extension of the quay by additional 200 m., depth of the whole basin 18.0 m., 2 unloading bridges, capacity 2×1,200 t.p.h. Enlargement of depot also to be undertaken.

SHIPMASTER'S REPORT: October 1979.
Stevedores: Port works 5 days a week in 2 shifts; 1st shift 0600 hrs. to 1300 hrs.; 2nd shift 1400 hrs. to 2100 hrs.; a third shift may be worked from 2200 hrs. to 0530 hrs. Also possible to work 1st, 2nd and 3rd shifts on Saturdays and Sundays.
Pilotage: Pilot station contacted on VHF Channel 16 from 0600 hrs. to 2200 hrs. Vessels berthed alongside during these times. Pilots board about 1 mile from the entrance to the port or at the anchorage. Pilot vessel painted blue in colour and displaying large white 'P' on the bow. Pilots speak very good English.
General: The use of cameras is prohibited within the port area.

SHIPMASTER'S REPORT: June 1981.

According to Pilot they do not have VHF in their office but use the set in the Harbour Master's Office. We found we could not contact the Pilots until after anchoring and when the Pilot boarded he said it was only because he happened to be in the Harbour Master's Office at the time.

Tankers always berth port side to and do not normally sail after dark as they have to move out of the channel stern first and then swing.

Moorings usually 4 head ropes and 1 backspring with similar aft. After ropes go to 2 buoys and require lashings. After backspring and forward moorings go to bollards ashore.

There is a telephone, for local calls, in the office on the jetty.

Use tug's lines berthing and ship's lines sailing.

Vessel is inspected by Harbour Master and they are very particular about ship's documents especially the Certificate of Insurance or other financial security in respect of civil liability for oil pollution damage.

If wishing to visit Consul it is apparently easy to cross the border to Trieste but best to allow boarding Immigration Officer to examine your passport. A long gangway is required (no shore gangway) as jetty is low.

AUTHORITY: Luka Koper, Vojkovo nabrezje 38, Yu-66000 Koper. *Tel:* (3866) 34–141. *Telex:* 34-110 and 34-168 Yu Luka. *Contact:* Commercial Department.

AGENT: Jadroagent – Koper. Cesta JLA 27, P.O. Box 70, 66000 Koper. Tel: 23–262, 22–884. Cable: Jadroagent Koper. Telex: 34234, 34228 Yu Jadrag.

PULA: 44.52 N. 13.50 E.

DOCUMENTS/HEALTH/HOLIDAYS: Same as Rijeka.
PILOTAGE: 48 and 24 hours' notice of ETA must be given to Agent. Pilot boards vessel off the breakwater. Merchant vessels bound for Pula must signal their name and port of departure to the signal station at Muzil.
ANCHORAGES: Vessels waiting for berth or Free Pratique can anchor in the outer harbour at about 0.4 miles West of the island S. Andrija.
RADIO: Coastal station Rijeka-Radio (call sign "YUR").
VHF: Communications with Agents and Port Authority through VHF on Channel 16.
TUGS: Up to 600 h.p. available from shipyard "Uljanik", otherwise from Rijeka.
BERTHING:

Gat Rijeka: North side length: 138 m., depth 20 ft.
South side length: 150 m., depth 17 ft.
Obala Ugljen: Length 140 m., depth 26 ft.
Gat Ugljen: East side length: 160 m., depth 31 ft.
West side length: 140 m., depth 28 ft.
Obala Tv.Cementa: Length 146 m., depth 20 ft.
Obala Uljanik: Length 160 m., depth 22 ft., used only for discharge of steel plates.

CRANES: No shore cranes except one of 5 tons at Obala Tv.Cementa and one of 75 tons at Obala Uljanik.

A floating crane of 45 tons at shipyard "Uljanik".

Two mobile cranes of 17 tons and 20 tons respectively.

STEVEDORES: Port Enterprise "Luka" is the sole stevedoring company. Working 2 shifts: from 0700 to 1500 hrs. and 1500 to 2300 hrs. Saturdays, Sundays and holidays may be worked on overtime.
MEDICAL: Hospital and all kinds of medical assistance available.
FRESH WATER: Available from quay.
FUEL: Available by barge from Rijeka – advance notice required.
REPAIRS: Available from local shipyard "Uljanik" and "Crvena Zvijezda".
SURVEYORS: Lloyd's Register, Jugoregister, Norske Veritas.
GANGWAY/DECK WATCHMAN: Service available.
OPENING/CLOSING HATCHES: May be carried out by crew otherwise by stevedores on extra payment.
CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount of wine/spirits per man per day.
CARGO GEAR: Loading/discharging by ship's own gear.
REPATRIATION: Possible by train, bus and air.
AIRPORT: At Pula.
TIME: GMT plus 1 hour. Summertime kept.
POLICE/AMBULANCE/FIRE: Police tel. 92; Ambulance tel. 94; Fire tel. 93.
IDENTIFICATION CARDS: Shore passes issued.
REGULATIONS: Speed limit: Within a line joining Prostina Point (Point Kristo) and Kumpar Point vessels must proceed at a speed not exceeding 8 knots and within a line joining Andrija Island and Sv. Petar Peninsula at a speed not exceeding 5 knots.
GENERAL: Lloyd's Agents: Jadroagent-Rijeka.
AUTHORITY: Lucka Kapetanija-Pula, Obala Marsala. Tita 18, 52000 Pula. *Tel:* 220-37, 276-46. *Telex:* 25251. *Cables:* Luckap Pula. *Contact:* The Harbour Master.

AGENT: Jadroagent – Pula, Obala Marsala Tita 14, 52000 Pula. Cable: Jadroagent Pula. Telex: 25210 Yu Jadrag.

RIJEKA (including Bakar, Omisalj, Urinj, Sepen and Rasa): 45.19 N. 14.26 E. **(See Plan)**

PORT LIMITS: Outer line of Anchorage area.
DOCUMENTS:

- 5 Crew Lists
- 5 Passenger Lists
- 3 Manifest of Dangerous Cargo (send cable before arrival with description)
- 3 Store Lists
- 2 Private Declaration
- 2 Narcotics Lists
- 9 Cargo Manifests
- 3 Freight Manifests
- 2 Transit Manifests
- 2 Cargo Plans
- 2 Copies of Bill of Lading

Cargo and Freight Manifests and Cargo Plan with Hatch List if possible should be mailed to Agent from loading port.

PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards in the roads within anchorage area limit. Pilot on VHF Channels 8, 12 and 16.

For oil terminal at Omisalj, Pilot boards 5 miles south of Rijeka Main Light. On request, Pilot will board tankers over 200,000 d.w.t. in the Northern part of Kvarner at Lat. 45° 02′ N., Long. 14° 14′ E. approx.

Pilot available 24 hours. ETA to be sent 72 hours, 48 hours and 24 hours prior to arrival

ANCHORAGES: All vessels with exception of those loaded with dangerous or hazardous cargoes, must anchor in the zone enclosed by the following points:

a) Lat. 45° 20.0′ N., Long. 14° 22.7′ E.
c) Lat. 45° 15.1′ N., Long. 14° 27.1′ E.
b) Lat. 45° 17.5′ N., Long. 14° 20.0′ E.
d) Lat. 45° 18.4′ N., Long. 14° 28.5′ E.

Tankers and vessels with dangerous cargoes must anchor in the following zone:

a) Lat. 45° 17.8′ N., Long. 14° 28.0′ E.
c) Lat. 45° 14.1′ N., Long. 14° 29.4′ E.
b) Lat. 45° 15.1′ N., Long. 14° 27.1′ E.
d) Lat. 45° 16.1′ N., Long. 14° 31.8′ E.

APPROACHES: The access entrance to the Rijeka Port Basin is 270 m. wide and that of the Susak Port Basin is 45 m. wide.
HEALTH: To obtain Free Pratique 24 hours before arrival advise following details: number of crew and passengers, health conditions and possible infectious diseases. No person allowed to leave vessel until Free Pratique obtained.
RADIO: Rijeka Radio, call sign YUR 500 kHz, Radio telephone on 2 metre band covering area of North Adriatic or by VHF Channel 16.
VHF: Port Authority on Channels 16 and 20. Tugs on Channels 16 and 8. Pilot on Channels 16, 8 and 12.
TUGS: 1,400 h.p. to 3,000 h.p. available.
BERTHING: General Cargo Facilities:
Rijeka Basin:
Gat Otokar Kersovani (The Otokar Kersovani Pier):

East:	Length 150 m.
	Depth alongside 7.30 m.
Head:	Length 80 m.
	Depth alongside 6 m.
West:	Length 135 m.
	Depth alongside 6.30 m.

The 32 ton crane has been installed for loading/unloading heavy lifts with the possibility of using grab for loading/unloading smaller quantities of bulk cargo in direct operation.

Equipment: 1×32 ton "Ganz" crane (east side)
1× 3 ton "Ganz" crane (west side)
for handling small lots of general cargo.

Ljubljanska Obala (The Ljubljana Quay):
Length 246 m.
Depth alongside 9.60 m. (31 ft. 6 in.)

By fitting appropriate quay fendering, this quay can accommodate vessels with maximum length of 200 m. and maximum draft 32 ft. 10 in. It is mainly used for direct or indirect loading/discharge operations of larger lots of general or bulk cargo.

Equipment: 7 × 3 ton dockside cranes.

Gat Vladimir Nazor (The Vladimir Nazor Pier):
East: Length 195 m.
Depth alongside 8.50 m.

This quay is mainly used for direct or indirect loading/discharge operations of larger lots of bulk or general cargo.

By fitting appropriate fendering vessels of max. length 195 m. and max. draft 31 ft. 6 in. can be accommodated.

Equipment: 3×5 ton dockside cranes.

Pier Head: Length 84 m.
Depth alongside 7.5 m.
West: Length 169 m.
Depth alongside 8 m.

This quay is mainly used for direct or indirect loading/discharge operations of general cargo or smaller lots of bulk cargo by means of ship's cargo gear.

Gat Vladimir Gortan (The Vladimir Gortan Pier):
East: Length 120 m.
Depth alongside 7.30 m.
Head: Length 79 m.
Depth alongside 7.20 m.
West: Length 120 m.
Depth alongside 7.30 m.

The Pier is mainly used for direct or indirect loading/discharge operations of smaller lots of general or bulk cargo.

Equipment: 6 × 1.5 ton dockside cranes (three cranes on the East quay and three on the West quay).

Zagrebacka Obala (The Zagreb Quay):
East: Length 161 m.
Depth alongside 7.30 m.

This quay is mainly used for direct or indirect operations of general or bulk cargo lots.

West: Length 200 m.
Depth alongside 7.50 m.

This quay is normally used for loading/discharge of larger lots of general or small lots of bulk cargo by grabs (2×6 ton cranes). By fitting appropriate fendering a ship with max. length 180 m. and max. draft 31 ft. 6 in. can be accommodated.

Equipment: 4×3 ton and 2×6 ton "Ganz" dockside cranes.

Splitska Obala (The Split Quay):
Length 158 m.
Depth alongside 6.25 m.

This quay is mainly used for direct or indirect/discharge operations of smaller lots of general or bulk cargo.

Gat "1 Maj" and Gat "29 Novembar" (The "1 May" Pier and the "29 November" Pier): These two piers within the Rijeka Port Basin, with the total quay length 450 m. and max. depth about 6 m., are used for the accommodation of passenger ships, car-ferries, fishing vessels and other smaller craft.

Trscanska Obala (The Trieste Quay):
Length 189 m.
Depth alongside 6.50 m.

This quay is mainly used for loading/unloading smaller volumes of general cargo, and is used occasionally for berthing and handling smaller Roll-on/Roll-off vessels.

Lukobran Rijeka (The Rijeka Breakwater):
Length 1,768 m.
Depth alongside 5.50 m. – 7.20 m.

A 10,000 d.w.t. floating dock is berthed along the breakwater quay. On the quay there is a port control centre with pilot station. The operational part of the quay is 700 m. long and is used for loading/unloading smaller lots of general cargo and for direct operations with bulk cargo and timber. A part of the quay is used for ship derat and for occasional minor repairs on ships.

Equipment: 4 × 5 ton dockside cranes.

Note: Almost all the quays and breakwaters are rail and road connected.

Susak Basin:

Obala 10.Rujna (The 10 Rujan Quay):
Length 240 m.
Depth alongside 6.50 m.

This quay is mainly used for direct or indirect operations of general cargo and timber.

Equipment: 7 × 3 ton dockside cranes.

Supilova Obala (The Supilo Quay):
Length 132 m.
Depth alongside 7.50 m.

Mainly used for loading timber by means of the ship's own cargo gear.

Gat Barcic (The Barcic Pier):
North: Length 106 m.
Depth alongside 8 m.
South: Length 106 m.
Depth alongside 7.80 m.

This pier is mainly used for the loading/discharge of smaller lots of general cargo or timber and for unloading smaller volumes of liquid cargo (wine, latex, etc.).

CRANES: Shore cranes with lifting capacities from 1.5 to 5 tons available at respective berths except at Gat V. Nazor – West side, Splitska Obala, Trscanska Obala, Supilova Obala and Gat Barcic where vessel's own gear must be used. Floating cranes of 30 and 100 tons. At shipyard "3.Maj" berth (20 ft.) 1 bridge crane of 300 tons.

CONTAINER FACILITIES: *Kontejnerski Terminal "Brajdica" (The Brajdica Container Terminal):* The Brajdica Container Terminal is located in the Eastern part of the Susak Port Basin at the mouth of the river Rjecina. It includes a quay with 2 berths (244 m. and 163 m.) with depth alongside 12 m. and 10 m. respectively and a 60 m. wide Ro-Ro ramp. Max. draft 11.0 m.

Equipment: 2×40 ton container cranes, straddle carrier, side loader, trailers, tugmasters, fork lift trucks, etc.

The terminal has about 100,000 sq.m. stacking area and a special container repair workshop.

Total annual capacity of the terminal is 100,000 TEUs. The terminal area is being constantly extended.

Ro/Ro vessels handled at Bakar (see below).

BULK CARGO FACILITIES:

Rijeka Basin:

Beogradska Obala (The Beograd Quay):
East: Length 110 m.
Depth alongside 7.8 m.

The quay is mainly used for working vessels carrying general or bulk cargo.

West: Length 257 m.
Depth alongside 12.95 m.
Max. draft 42 ft. 6 in. (even keel).

The silo located on this quay has a 57,000 tons storage capacity for grain and oleiferous seeds and is equipped with 2 ship loaders/unloaders with a total capacity of 600 t.p.h.

Vessels of maximum length of 250 m. can be accommodated, provided that the ship lies 8 m.–10 m. distant from the quay, berthed by dropping port bow anchor, stern line being moored to the buoy.

Gat Lole Ribara (The Lola Ribar Pier):
Length 160 m.
Depth alongside 7.90 m.

This pier includes a covered storage for fertilisers, single storage capacity 15,000 tons, and is equipped with the handling and bagging facilities for all types of fertilisers.

By fitting appropriate fendering vessels with max. length 180 m. and max. draft 32 ft. can be accommodated.

Susak Basin:

Lukobran Susak (The Susak Breakwater):
Length 320 m.
Depth alongside 6.50 m.

The breakwater quay is mainly used for loading/discharge of dry bulk cargoes and ships with max. length 180 m. and max. draft 31 ft. 6 in. can be accommodated. The ship must be berthed at a distance of 5 m. – 6 m. from the quay by dropping the port anchor with stern line moored to the breakwater.

Equipment: 6 × 5 ton dockside cranes.

Bakar:

Obala Podbok (The Podbok Quay):
Length 400 m.
Depth alongside 18.50 m.

Vessels with max. length 300 m. and max. draft 17.50 m. can be accommodated (170,000 d.w.t.). The quay is used for loading/discharging bulk cargoes such as iron ore, bauxite, coal, etc., rate up to 2,000 t.p.h.

Equipment: 3 ship unloaders (1 × 45 ton and 2 × 16 ton capacity). The stockyard storage capacity is 400,000 tons. An additional area for 200,000 tons has been reclaimed from the sea. A special conveyor system connects the bulk cargo terminal with the nearby Coke Plant on the West coast of the Bay of Bakar for unloading and delivery of coal to the Coke Plant.

Obala Goranin (The Goranin Quay):
Length 84 m.
Depth alongside 9 m.

This quay is used for loading coke into smaller vessels and for loading/unloading operations with general cargo stored in the Back-up Storage Facility "Skrljevo".

Ships of 160 m. length and max. draft 29 ft. 9 in. can be accommodated. To the West of the quay a new Roll-on/Roll-off berth is being constructed.

Equipment: 2 × 5 ton dockside cranes.

Also see "Shipmaster's Report" dated November 1979.

SPECIALISED CARGO HANDLING FACILITIES:

Sepen:

New terminal for gas and liquid chemicals carriers at Sepen-Krk Island (about 8 nautical miles S.S.E.'ly from Rijeka port) operated by Dina-Petrokemija. It consists of three berths: 2 "T" concrete jetties and one concrete multi-purpose berth. Jetty "A" is for gas carriers up to 15,000 cu.m., max. draft 10.5 m. Jetty "B" is for chemical tankers up to 60,000 d.w.t., max. draft 15 m. Length of multi-purpose quay is 90 m., max. draft 6 m., no shore cranes. Loading arms (8 in.) for ethylene liquid, ethylene vapour, VCM liquid and VCM vapour are on Berth "A". Loading arms (8 in.) for fuel oil, caustic soda solution and EDC liquid (plus EDC vapour 3 in.) are on Berth "B".

Srsica: Near Urinj tanker terminal. At Srsica there is a berth for loading LPG. Length of berth 68 m., depth alongside 10.0 m. Max. size 4,500 d.w.t. Discharge rate 200 t.p.h. through 1×6 in. flexible hose.

Rasa:

Bazen Rasa (The Rasa Port Basin): The Rasa Port Basin is located some 30 nautical miles S.W. of Rijeka in the naturally protected bay of Rasa which is 5 km. long, with the navigable channel about 40 m. deep.

The port facilities in the Bay include:

165 m. long quay, with 11 m. depth alongside, used mainly for loading unloading sawn timber. The quay area includes about 150,000 sq.m. of open space and 40,000 sq.m. of covered storage space for timber.

Equipment: 3 × 5 ton dockside cranes.

Separate pier with a berth, 25 m. long and 7 m. deep enabling the accommodation of ships up to 100 m. in length; it is exclusively used for loading livestock. The livestock terminal also includes a stable for the acceptance of about 1,400 head of cattle at a time.

STEVEDORES: Port Enterprise "Luka" Rijeka is the sole stevedoring company. Working 2 shifts: 1st from 0630 to 1430 hrs., 2nd shift from 1430 to 2230 hrs. Saturdays, Sundays and holidays may be worked on overtime. Unloading of bulk cargo at the basin of Bakar during the first shift on Saturday is considered to be an ordinary working shift. Timber operations normally performed during first shift only.

MEDICAL: Three hospitals and all kinds of medical assistance.

TANKERS: At Bakar Basin, berths for tankers up to 80,000 d.w.t. stern to shore and up to 40,000 d.w.t. alongside quay (draft 32 ft.) loading refined oil products.

At Urinj – 5 miles East of Rijeka – 1 berth for tankers up to 200,000 d.w.t. discharging crude oil. Also used for loading of virgin naphtha shipments. Tankers moor stern to quay using both anchors. Depths of 17 m. marked by 2 buoys. Cargo hoses: 1 flexible floating hose of 20 in. with 2 ends of 12 in. each. For connecting hoses on ship's manifold a derrick or crane of minimum 5 tons S.W.L. required. Also see "Shipmaster's Report" dated February 1980.

At Omisalj (Krk Island) (Lat. 45° 13.4′ N., Long. 14° 32.2′ E.) – 7 miles S.E. of Rijeka – new oil terminal for tankers up to 350,000 d.w.t. (minimum size 40,000 d.w.t.) and with draft up to 27 m. Two "T" shape piers (steel platforms) for alongside berthing. Each berth is equipped with four unloading arms of 16 in. for crude oil discharge and 2 arms of 12 in. for bunker delivery. Fresh water available, rate 25 t.p.h.

DENSITY: 1020 to 1025 depending on place, season and weather.

FRESH WATER: Available from quay in any quantity.

FUEL: All grades of bunker available by barge – advance notice required.

FIRE PRECAUTIONS: If 2 tankers moored side by side in Bakar, tug required to stand-by. Tankers moored stern to quay must have towing line ready.

CONSULS: Netherlands, Sweden and Denmark. Others at Zagreb and Belgrade.

REPAIRS: All kinds available.

DRY DOCKS: 3 Floating Docks: 5,600 tons, 12,000 tons and 25,000 tons lifting capacities.

SURVEYORS: Lloyd's Register, Bureau Veritas, American Bureau, Jugoregister.

GANGWAY/DECK WATCHMEN: Service available.

OPENING/CLOSING HATCHES: May be carried out by crew, otherwise by stevedores for extra payment.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litre wine and a reasonable amount of spirits daily per man.

CARGO GEAR: Although operations usually by shore cranes, ship must have efficient cargo gear and relative certificates.

REPATRIATION: Possible by train, bus and air.

AIRPORT: At Krk Island (28 km. from Rijeka).

TIME: GMT plus 1 hour. Summertime is GMT plus 2 hours.

HOLIDAYS: January 1st and 2nd, May 1st and 2nd, July 4th and 27th, November 29th and 30th. Work can usually be arranged on Saturday, Sundays, January 2nd, May 2nd and November 30th from 0700 to 1400 hrs. on extra payment. If a holiday falls on Sunday the next working day becomes a holiday.

TELEPHONES: Connection possible upon special request.

SERVICES: Facilities for discharge of tank-washings at Bakar, compass adjusting.

IDENTIFICATION CARDS: Shore passes issued.

GENERAL: Lloyd's Agents, Jadroagent – Rijeka.

DELAYS: Waiting for some specialised berth occasionally experienced.

SHIPMASTER'S REPORT: Bakar: November 1979.

Approaches: Entry to Rijeka Bay is made between mainland (Istra) and the island of Otok Cres. A small ferry runs between the two from a landing stage just North of Rt. Prestenice and another connects with Rijeka. A very conspicuous, red and white horizontal striped 700 ft. high chimney is situated about 1.5 miles West of Bakarski Zaliv and makes a good steering guide for the run across as the actual entrance is difficult to pick out being very narrow and blending in with the hills behind.

Anchorage: Initially we were ordered, by Port Authorities, to anchor 1 mile S.W. of the chimney but later requested to move closer to Rijeka for convenience in servicing vessel. Second anchorage 1.5 miles South of main breakwater. Depth of water both places 32 fathoms and we used 10 shackles cable on port anchor. Bottom is glutinous mud and despite Force 8, gusting 9 winds we held our position although many cargo ships dragged quite alarmingly. The normal winds for this time of the year (November) are the "bora", a cold strong N.E. wind which funnels down the mountains and can develop suddenly to gale force. We had unusually strong and prevalent S.E. winds during 10 days at anchor.

Communications: Pilot station listens on VHF Channel 16 and works Channel 8. Rijeka Radio was very easily contacted on VHF and proved of great help in connecting with Agents, Owners and Charterers. Rijeka Radio not quite as good for contact on W/T as does not seem to follow the times for listening as laid down. R/T proved difficult as well, due to his frequencies being same as other main radio stations.

Port Officials: Agent and boarding party boarded morning after arrival and cleared ship with very little difficulty, only normal representation required. Shore passes, made out by Agent, sent on board later same day. Permission to immobilise engines and lower lifeboats given by Harbour Master on arrival although this later cancelled due to approach of storm after 24 hours.

Shore Leave: It is possible to arrange for shore launches while at anchor to give shore leave but the service can be curtailed due to bad weather and in Winter could result in crew being stranded ashore. Last boat from the port being 2200 hrs. At the berth, no restriction on shore leave exists and there is an excellent bus service into Rijeka from the village of Bakar. Prices are comparable with UK and quality of goods similar. In Bakar itself is an excellent restaurant, family owned, which serves first class food in very nice surroundings. The Owner speaks perfect English.

Fresh Water: At anchor, limited water is available by tug but very expensive. On the berth, good quality water is readily available in any quantity required.

Bunkers: Both intermediate and diesel oil is available by barge, price unknown but thought to be above average. Normally ships taking large quantities of bunkers would bunker at Augusta, Sicily.

Stores: Storing poses a problem due to several points. The access to the ship on the berth is difficult for large lorries as the extension to the wharf carried out over the past 3 years has wrecked the approach road to the face of the wharf and also the lorries if they make it to the wharf cannot get close alongside due to the conveyor belt and rails.

Storing at the anchorage also poses problems as there are no barges suitable for carrying large amounts and launches were used to bring the stores out to the ship but these can only carry a small quantity at a time. We had to load some large and heavy pieces of engine spares which had been sent from UK by lorry and these were transferred to a pontoon barge for delivery to the ship.

Crew Changes: Personnel were routed through Zagreb* mainly and this entailed a 4 hour drive from the airport to the ship, although it is possible to send people via Trieste which is a bit nearer. On arrival at Rijeka they have to see Immigration and are issued with shore passes. Wives and children should be entered on a passenger list and not included on the crew list as they get a special pass for 90 day entry.

*Whether this is normal routeing or was Company's choice is not known.

Cargo Handling: Berth has been extended and depth alongside increased to allow vessels drawing 17.5 m. to safely lie alongside although the 48 ft. 6 in. rock which was found previously at the Eastern end of the berth is still there according to the Pilot. (Approximate position of rock about 50 ft. off wharf and about 250 ft. from Eastern end). Berth is left in a very broken down looking state and lacks decent mooring posts at the Western end. Cargo is handled by 3 grabs (although only 2 were in use this call) 1 very large and the other 2 much smaller. Discharge rate on this call was averaging 30,000 t.p.d. with the major share being done by the larger grab which is at the Western end of the wharf. Cargo is either taken directly away by ore trains (if iron ore) or dumped onto back of wharf, or, if coke is taken direct to a coking factory on the other side of the bay by a covered conveyor belt. Storage or dumping facilities are very limited and this has a controlling effect on the discharge. When discharging iron ore, if insufficient trucks arrive and the stockpile is full, then discharge is on a stop/go basis and slow and also fully dependent on the trucks arriving regularly. This ship discharged 149,320 tonnes in 6 days as against a previous call experienced when 118,100 tonnes were discharged in 6.7 days. Maximum airdraft 16.5 m. on berth.

Stevedores were good and co-operation was good. Any damage caused was repaired before departure without causing any delay to the ship and the standard of repair was good.

Repairs: Besides the "3 MAJ" shipyard, there are quite a few smaller yards and workshops where repair work can be arranged.

Medical: There is a special clinic for seamen which opens at 1200 hrs. In attendance at that time is a general doctor who refers patients to the different specialists and usually entailed a visit next day to see those people.

Customs Allowances: On arrival, each man allowed 200 cigarettes and 0.5 litre wine/spirits during stay. Customs would allow an issue every 5 days of 200 cigarettes per man and 8 bottles of spirits for the ship.

SHIPMASTER'S REPORT: Urinj: February, 1980.

INA Petroleum Co. Berth: See "Plan".

Office: The Port of Urinj, telephone 761.011 ext. 250. Can be contacted via Rijeka Radio at any time.

Berth: The petroleum berth of Urinj (Lat. 45° 17′ N., Long. 14° 31.7′ E.) is situated 5 miles E.S.E. from the Port of Rijeka. Its position is marked by a buoy whose characteristic is Fl.W. 3 sec. It is open 24 hours a day for commercial activities. The depth of water at this berth varies from 45 m. to 20 m. below the level of mean tides. The bottom is mud. Because of this it can accept tankers up to 200,000 d.w.t.

Documents on Arrival: The following documents are required on arrival:

5 Copies of a Crew List (full personal data, including birth place, date of birth, etc., are necessary).
5 Copies of Passenger List – if any
2 Copies of List of Ship's Stores
2 Copies of Manifest of Dangerous Goods – if any
2 Copies of Customs Declaration List
2 Copies of Transit Cargo Manifest
1 Cargo Manifest with extra copy for Customs.

Notice of Arrival: Vessels should give notice of arrival to their Agents via Rijeka Radio 48 hours and 24 hours in advance.

Approaching Directions: After passing Cape Jablanac a course of 060° leads safely to the tanker anchorage. The Pilot will board at anchorage area from a tug if the vessel is to proceed to the berth immediately.

VHF: Vessels equipped with VHF radio telephone should contact "Rijeka Pilot" on Channel 8 or "Rijeka Radio" on Channel 16 for berthing instructions.

Tugs: For berthing of a vessel the use of tugs is obligatory.

Gangway: Vessels should use their own port side gangway.

Manoeuvring: When the Pilot boards the vessel and forward tug is secured, both anchors (with one shackle in the water) should be ready for use. The stern mooring lines are carried toward the shore by a mooring boat. Usually 9 to 10 lines are used (6 from the vessel, and 4 from shore).

Connecting Hoses: After mooring operations have been completed, the connecting hoses will be brought alongside the starboard side of the vessel by a workboat. There are 2×12 in. hoses available, one for crude oil and one for products. Connecting and disconnecting of the hoses will be done by INA personnel, supervised by the Port Captain. The assistance of the ship's crew in operating windlasses, winches, etc. is required.

Note:

a) A minimum S.W.L. of 5 tons is required for the 12 in. hoses.

b) The vessel is responsible for good condition and effectiveness of the equipment.

c) Vessels are required to keep main engine on stand-by all the time during their stay in berth, therefore no repairs to the main engine of the vessel may be undertaken during berthing. Power must be kept on for possible adjustments of mooring lines, anchors, and derricks.

Discharging: When the connecting of the hoses is completed, and the ullage report completed, Chief Officer will report the readiness of the vessel for discharging operations. The vessel is required to discharge the cargo as quickly as possible. Max. discharging rate is about 6,000 t.p.h.

Sailing: After the discharging operation is completed, the vessel should leave the berth as soon as possible. The Master should keep in touch with the Port Captain who will despatch a Pilot and Authorities on time.

Deballasting: After arrival at anchorage or berth and Free Pratique has been granted, the Loading Master will take samples of the ballast water for quality checks. Permission to discharge ballast water overboard will be granted by the Port Captain only. If laboratory analysis is not accepted by the Port Captain, vessel must shift to the slop-discharging installation at Bakar. The "not accepted ballast water" must be discharged there through stern discharge line only. After tank cleaning and line-flushing, vessel will be returned to Urinj with or without ballast at Master's option.

Loading: INA Refinery produces several kinds of products.

Cargo Loaded: Clean unleaded virgin naphtha.

Density at 15° Centigrade −0.74.

Loading rate – average 1,500 cu.m.p.h.

Documents on Sailing: The following documents are required on sailing:

4 Copies of Crew List.
4 Copies of Passenger List.
2 Copies of List of Ship's Stores.

Free Pratique: To obtain Free Pratique by radio, vessels should send the following information to their Agent 48 hours in advance via Rijeka Radio:

The number of crew and passengers,
Health conditions and possible infectious diseases.

Note: No one is allowed to leave the vessel until Free Pratique is granted.

Medical: There are 3 well equipped hospitals in Rijeka whose medical staff is capable of giving full medical protection.

Fresh Water: There is an unlimited supply of fresh water available. It is supplied by a floating pipe-line attached to the Eastern signal buoy.

Fuel: All grades of bunker are available. Order must be placed 48 hours in advance.

Laundry: Laundry service has to be ordered immediately after arrival in order to ensure delivery of the clean laundry in time.

General: All kinds of repairs available by shipyard "Viktor Lenac".

There is a floating crane capacity up to 100 tons.

Dry docks accepting ships up to 60,000 d.w.t. also available.

Ship Supplies: In order to ensure timely supply of food and groceries vessel should place an order through the authorised stores (ship chandlers) immediately after or before arrival by radio.

Shore Passes: Shore passes are required for personal identification and serve as an entry permit to the terminal. Shore passes must be returned to the Immigration Office before sailing.

Transportation: During the time at the berth transportation of the crew and passengers from the vessel to the terminal is arranged by a shore launch from 0800 – 2400 hrs.

Lights: Manifold and poop mooring areas should be adequately lit to enable night mooring and discharging operations to be carried out with safety. Sea area around the ship also has to be properly illuminated.

Deck Watch: Deck watch must be maintained at all times while the vessel is in berth. In addition to its normal duties, the watch must inspect the hose connections and area around the ship against oil spillage, pollution, and to prevent unauthorised persons from boarding the vessel.

Action in Case of Emergency: In the event of a fire, oil spillage, or other emergency on the vessel, the emergency signal is 3 or more blasts of not less than 10 seconds duration each on whistle or siren supplemented by a continuous ringing of the general alarm bells.

SHIPMASTER'S REPORT: Rasa: October 1984.

Location: Lat. 45° 01.6′ N., Long. 14° 03.2′ E.

Documents: Same as Rijeka.

Pilotage: 48 and 24 hours' notice of ETA must be given to Agent. Pilot boards vessel off Traget Point (Lat. 45° 01′ N., Long. 14° 03.5′ E.). Sometimes Pilot boards off Ubas Point (Lat. 44° 56′ N., Long. 14° 04′ E.) by special arrangement. Pilot on VHF Channel 16.

Approaches: For obtaining Pilot off Traget Point, necessary to navigate through Zaliv Rasa Strait. This passage is easy during daytime, using the middle of the channel.

Anchorages: Off Traget Point with good sandy bottom and depths from 10 m. to 12 m.

Tugs: Not available.

Berthing: For berthing Pilot uses the starboard anchor for turning the vessel. There are 2 berths, 1 for loading livestock and 1 for loading general cargoes and special lumber from Austria. This berth is about 200 m. long with a depth of 10 m.

Cranes: 3 shore cranes of 5 tons and other equipment is available.

Stevedores: Port Enterprise "LUKA" is the sole stevedoring company. Working 2 shifts from 0730 – 1400 hrs. and 1500 – 1900 hrs. Saturdays, Sundays may be worked on overtime. Loading rate 2,500 cu.m. of lumber per day. (approx.)

Fresh Water: Available from quay.

Cargo Gear: Stevedores use shore cranes and ship's gear together.

Repatriation: Possible by bus to Rijeka or Pula and then by air or train.

Airport: Nearest airport at Pula.

Time: GMT plus 1 hour.

Identification Cards: Shore passes issued.

Telephones: Near to the berth through telephone centre.

SHIPMASTER'S REPORT: Sepen: August 1987.

Port: Omisalj Products Terminal, Port Dina, Sepen Bay.

Chart: BA. Chart No. 2719.

Location: The Terminal is located at Pt Zaglau in Sepen Bay on Krk Island (near Rijeka).

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.
1 copy Arms and Ammunition List.
1 copy Drugs and Narcotics List.
1 copy Passenger List.
3 copies Cargo Manifest.
All passports.

Shore passes are issued and have to be returned before departure. The Stores Declaration is required on departure showing stores used during vessels stay in port. The bond is sealed.

Anchorage: Vessel anchored in the pilot boarding area in a depth of 20 fathoms.

Pilotage: Pilotage is compulsory and available throughout 24 hours. Pilotage outward is optional but has to be paid for even if not used. Terminal personnel advised us that pilotage is rarely used outward as vessel has to wait a long time.

Pilot boards from a mooring boat in approximate position Lat. 45° 12.4′ N., Long. 14° 31.6′ E. Pilot may be contacted on VHF Channel 8.

Approaches: Two red buoys mark the shallow water to the South of Omisalj Peninsular.

Two green buoys are positioned about 3 cables to the South of the red buoy marking a 13.0 m. shoal.

Approach is made between the 2 sets of buoys. Departure can be made between the berths and the green buoys.

Tugs: Tugs available from Rijeka, but not normally used.

Berthing: There are 2 product berths. Berth A handles gases, maximum draft 11.5 m. (12.5 m. CD) and Berth B handles products, maximum draft 15.0 m. This berth being the most Southerly.

There is also 1 general cargo berth with a depth of 6.0 m. Length of quay 90.0 m.

Berth A has a total flat face length of 60.0 m., being made up 45.0 m. of pier face and 1 dolphin. The pier is of concrete construction and has good fendering. The mooring arrangements are good with dolphins each side of the pier. Moorings consisted of 2 head lines/stern lines and 2 springs each end. Mooring boats are used to run the lines. The pier is some 10.0 m. above the water level so the gangway is steep.

Vessel always berths port side to at both berths. Ship's gangway used.

There is a shore hydraulic crane with 2 tonnes capacity which is available for handling stores, etc.

Berth A is about 2 years old and is an extension of Omisalj Tanker Terminal and can handle vessels up to 20,000 d.w.t. and a length of 110 m.

The berth is very exposed to Northerly winds.

Cargo: Vinyl Chloride Monomer (VCM) is exported. Two arms (most Northerly) are available (8 in. 300 ASA) for liquid and vapour. Arms are nitrogen purged on completion. Storage consists of 3 tanks with a total capacity of 10,000 tonnes. 2 pumps are available to load at a rate of 120 tonnes per hour.

VCM is produced on site in a new plant. Ethylene is mixed with chloride to produce ethylene dichloride, this is then used to produce VCM. Production is about 450 tonnes per day.

Ethylene is imported. The 2 arms for vapour and liquid (8 in. 300 ASA) are located to the South of the VCM arms. Arms are nitrogen purged on completion. Storage capacity is 16,000 tonnes in 2 tanks. The plant requires 1,000 tonnes every 2 days. Most ethylene comes from Porto Maguerra.

Vapour recovery is by 2 old compressors.

At present they require discharge temperature of −101° C. Vapour is also returned to the vessel for recovery on board.

Two new compressors are being installed which will enable plant to handle at around −98° C to −99° C.

First foot samples taken when loading VCM. Samples take at least 3 hours to analyse.

On completion of loading VCM it is normal to allow 5 hours before sailing.

Fresh Water: Fresh water is available at both piers. They can supply at 9 Bar pressure if required.

Stores: The State ship chandler in Rijeka has a good range of stores at moderate prices.

General: The airport at Rijeka is about 5 miles away. The village of Omisalj is about 30 minutes walk from the Terminal main gate (transport is compulsory to the gate from the pier). There is a bank in the village which is open late in the Summer. European currencies and dollars may be exchanged.

AUTHORITY: Lucka Kapetanija (Harbour Master's Office), Obala 10. Rujna 3, 51000 Rijeka. *Tel:* 37-917. *FAX:* (051) 38189 *Cables:* Kapetanija Rijeka. *Contact:* Mr. Ivica Simic, Operations Security Chief. *Tel:* 39-415.

AGENT: Jadroagent – Rijeka, Obala J.R. Mornarice 16, 51000 Rijeka. Cable: Jadroagent Rijeka, Telex: 24100Yu Jadrag, 24268 Yu Jadrag.

SIBENIK: 43.44 N. 15.53 E.

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".

PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards vessel at the entrance of St. Ante Channel, within a circle of 3 miles radius from Jadrija Lighthouse.

ANCHORAGE: Vessels waiting Pilot must anchor between Prvic Island and the shore if coming from the West, or between the South point of Zlarin and the shore if coming from the East, all in depths of 22 m.

In the Bay of Sibenik, vessels may anchor (in an emergency and with Harbour Master's permission) on the N.W. side of St. Ante Channel in depths of 30 m. – 40 m.

RESTRICTIONS: All vessels over 50 g.r.t. must apply for permission to enter St. Ante Channel by using International Code Signal "Z" by flag during daylight hours and a white light above a red light visible 2 miles all round or a sound signal (letter "Z" of morse code) during night hours. Vessels may enter channel only when authorised by a signal, 2 black balls vertically disposed by day or 2 green lights vertically displayed by night, made by the signalling station at Jadrija.

MAX. SIZE: Only draft limited. 33 ft. alongside in deepest berth.

VHF: Pilot has VHF available and maintains listening watch on Channel 14.

RADIO: None. Vessel may call Agent through Rijeka Radio and Split Radio.

TUGS: 1 of 750 h.p.

BERTHING:

Obala JRM: Length 274 m., draft up to 7 m. – no shore cranes.

Gat Vrulje: East side length 132 m., head 114 m., West side length 101 m., draft up to 9 m. – no shore crane. Equipped with conveyor belt for loading bulk fertilisers.

Obala Dobrika: Phosphate terminal, length 225 m., depth 10 m.

Obala Rogac: Length 432 m., depth 10 m. Cranes: 2×7 tons, 3×5 tons.

Obala Sipad: Length 294 m., draft up to 7 m. – no shore cranes.

Obala Crnica: Length 120 m., draft 7.5 m. – 1 shore crane – 8 tons.

Also see "Developments".

BULK CARGO FACILITIES: Ores and minerals (phosphate) at quays Rogac and Dobrika.

Obala Dobrika: Phosphate handling, capacity 400 t.p.h., storage capacity 1,000,000 tons.

STEVEDORES: Port Enterprise: "Luka" – Sibenik and timber stevedoring company "Sipad".

Port works in two shifts: 0700 – 1500 hrs. and 1500 – 2300 hrs. Overtime possible 2300 – 0700 hrs.

Timber operations normally performed during first shift only.

MEDICAL: Medical service available including hospitalisation.

DENSITY: 1010 – 1025, depending on place, season and weather.

FRESH WATER: Available from quay.

FUEL: Diesel and Gas oil in small quantities.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: If not performed by crew, can be done by stevedores at additional charge.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litre of wine/spirits per man per day.

CARGO GEAR: General cargo and timber are handled using ship's gear. Ore and minerals by shore cranes fitted with grabs.

IDENTIFICATION CARDS: Shore passes given by local police.

REPAIRS: Small repairs only.

REPATRIATION: By train or bus and by air from Split Airport nearby, or from Zagreb or Zadar.

TIME: GMT plus 1 hour. Summertime – GMT plus 2 hours (March-September).

POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.

TELEPHONES: No facilities for placing telephone on board.

GENERAL: Lloyd's Sub-Agents – Jadroagent Sibenik.

SHIPMASTER'S REPORT: July 1986.

Pilotage is compulsory and available day and night. Pilot boards the vessel in the vicinity of red pillar light buoy (RF. 12s. 4M.) in approximate position Lat. 43° 42.8′ N., Long. 15° 51.1′ E. Pilots operate on VHF Channels 16 and 14.

The best anchorage is inside the South part of Sibenski Canal. We anchored in approximate position Lat. 43° 40.7′ N., Long. 15° 53.1′ E. The bottom is gravel, sand and algae.

There is a phosphate pier with silos on the quay (only one pipe available at present, plans to build another pipe during the next year) whose capacity is 6,500 tonnes per day. Maximum permissible draft for this pier is 32 ft. but it is especially important for Master and Chief Officer to know that on this pier, owing to insufficient depth, a vessel even with a draft of 30 ft., cannot be berthed alongside. Vessel normally 2.0 m. – 3.0 m. from the quay. Berthed vessel is partly aground so draft survey will show signifiantly less cargo than that actually loaded. It is therefore recommended that draft is checked before Pilot boards and thereby check the actual quantity of cargo on board. Also Masters and Chief Officers must bear in mind that water is very brackish and density varies, so during draft survey density must be checked at various depths (recommended to check the density at depths 2.0 m., 6.0 m. and 9.0 m.) and at different locations.

Draft survey is made by official control house (Jugoinspekt or Jugokontrola or Zik) on arrival and on departure and is very rigorous.

Fresh water is available at the pier.

AUTHORITY: Lucka Kapetanija Sibenik, Obala Oslobodjenja 8, 59000 Sibenik. *Tel:* 059-24261, 22071, 22088. *FAX:* 27378. *Cables:* Kapetanija Sibenik. *Contact:* Captain Janes Lakos, Harbour Master.

AGENT: Jadroagent – Sibenik, Obala Oslobodjenja 9, 59000 Sibenik. Cable: Jadroagent Sibenik. Telex: 27323 Yu Jadrag. Tel: 22-570, 22-571 (After hours) 25-544.

SPLIT: 43.31 N. 16.26 E. (See Plan)

DOCUMENTS:

5 Crew Lists.
5 Passenger Lists.
2 Store Lists.
3 Personal Effects Lists.
3 Cargo Manifests.
3 Bills of Lading.
1 Health Declaration.

PILOTAGE: Compulsory for vessels over 500 g.r.t. If vessel bound for Split, Dugi Rat or Trogir, Pilot will normally meet vessel 0.5 miles off the City Port Entrance, day or night, but on request Pilot will board a vessel S.W. of Razanj Lighthouse (Lat. 43° 19′ N., Long. 16° 25′ E.).

A vessel bound for Trogir may also take a Pilot 0.5 miles off Galera Light (Lat. 43° 28.4′ N., Long. 16° 11.5′ E.).

It is advisable to contact pilot station on VHF Channel 12, or via Split Radio on Channel 16, prior to arrival.

A vessel awaiting a Pilot can anchor South of City Port Breakwater.

ANCHORAGES: Vessels can anchor S.E. of City Port Entrance, 0.5 miles off the breakwater, in 40 m. depth, muddy bottom.

In case of very strong S.E. wind it is recommended to anchor in Southern part of Luka Milna (Lat. 43° 20′ N., Long. 16° 26′ E.) in 25 m. to 30 m. depth, sandy bottom.

RESTRICTIONS: Large tankers are handled in and out of the harbour during day time only. LPG carriers also enter port in day time only.

MAX. SIZE: No restrictions except draft. Maximum permitted draft for passenger ships in City Port (Southern Basin) 8.8 m.; in Northern Port for general/bulk cargoes 10.6 m. but for grain (Silo Quay) 11.3 m. and for oil tankers 11.9 m.

HEALTH: To obtain Pratique, Health Declaration required. In event of any disease or fever contact Agents.

RADIO: All messages to Agent via Rijeka Radio (on HF), or via other Yugoslavian Coast Stations on MF radio telephony or MF radio telegraphy and VHF.

Answers to messages via Rijeka Radio only.

VHF: Split Radio on Channel 16 (permanent watch). Pilot station on Channel 12 (listening watch from 0700 hrs. to 2000 hrs. local time), Port Authority on Channel 10, tugboats on Channel 14.

TUGS: Only low power tugs available (500 KW declared by owner). Normally ship's lines used. If tug's lines used 10% extra is charged.

BERTHING:

Northern Basin:

Northern Port: Continuous quay of total length 870 m. divided into 5 berths with the following permissible ship drafts: Berth No. 1, 8.5 m., Berth No. 2, 9.7 m., Berth No. 3, 7.3 m., Berth Nos. 4 and 5, 10.3 m., where general and bulk cargoes handled, mostly by shore equipment.

Cement factory "Partizan", Kastel Sucurac, length of quay 222 m., draft 9.7 m., cement in bulk mostly loaded.

Cement factory "Prvoborac" Sv. Kajo, quay length 274 m., draft 8.2 m., cement in bags only loaded.

"Jugovinil" factory Kastel Sucurac, quay length (dolphins) 80 m., draft 9.7 m., for LPG carriers only.

Silo Quay, Vranjic, length 110 m., draft 11.3 m., discharging/loading grain by multiport.

A. Vucicic factory, Vranjic, quay length 262 m., draft 7.3 m., where discharging asbestos and loading asbestos products. Shore crane and ship's gear used.

Southern Basin (City Port):

Breakwater Quay, length 230 m., draft up to 8.3 m. Ro–Ro ramp available.

Gat Spanjolskih Boraca (ex-Sv. Duje), total quay length 465 m., draft up to 7.9 m.

Gat Proleterskih Brigada, total quay length 350 m., drafts from 3.9 m. to 7.0 m.

City Port serves passenger ships and car ferries only.

CRANES: *Northern Port:* 2×7 tonne bridge cranes and 4×5 tonne gantry cranes. Floating crane of 60 tonne lifting capacity also available.

BULK CARGO FACILITIES: One quay (Silo Quay, Vranjic), length 110 m., draft 11.3 m. Max. height of discharging gear above sea level is 8.0 m. Max. loading/discharging rates 3,000 – 5,000 tonnes.

SPECIALISED CARGO HANDLING FACILITIES: One berth for LPG carriers (Jugovinil Factory Berth).

STEVEDORES: "Lucki prekrcaj i skladista" is the sole stevedoring company. Work in two shifts from 0600 – 1300 hrs. and from 1300 – 2000 hrs.

MEDICAL: No advance notice except in case of serious illness to be included in arrival cable. Hospital facilities available.

TANKERS: Two discharging berths alongside the quay. Discharge lines 6 in., 8 in. and 10 in.

Berth for small tankers, length 80 m., draft up to 7.0 m.

The other quay, length 150 m. (dolphins) and permitted draft 11.9 m.

Depending on type of cargo, average load/discharge rate is from 300 – 600 tonnes per hour.

DENSITY: Average density 1025.

FRESH WATER: Available at all berths. Order through Agent.

FUEL: Obtainable. Advance notice required.

CONSULS: Denmark, Finland, Italy, Netherlands and United Kingdom.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: One floating dock at Trogir, length 180 m. and one at Northern Basin, length 116 m.

SURVEYORS: Jugokontrola, Jugoinspekt, Jadroinspekt (Cargo Inspectors).

Lloyd's Register, American Bureau, Bureau Veritas and Jugoregister representing DNV, NKK and GL, Panama, etc.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally by ship's crew.

CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount of wine/spirits for each crew member daily.

CARGO GEAR: Load/discharge mostly effected by shore gear.
REPATRIATION: All facilities available for crew changes.
AIRPORT: City centre to airport 23 km. 5 flights daily to Zagreb and 3 to Belgrade. Also direct flights to Rome, Paris, London, Munich, Hamburg and Zurich.
TIME: GMT plus 1 hour. Last Sunday in March clocks advanced 1 hour. Last Sunday in September clocks retarded 1 hour.
HOLIDAYS: January 1st, 2nd; May 1st, 2nd; July 4th and 27th; November 29th, 30th.
POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.
SERVICES: Compass adjusting, radio/radar services and calibration of DF, divers for surveys/repairs, Lloyd's Sub-Agents (Jadroagent-Split), ship's laundries.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Shore passes issued.
AUTHORITY: Lucka Kapetanija, Obala Lazareta 1, 58000 Split. *Tel:* Spilt 48-062. *Telex:* 26496 (Yu Kap St).

"Luka Split", Gat Spanjolskih Boraca, 58000 Split, Yugoslavia. *Tel:* Split 589-299.

ZADAR: 44.07 N. 15.14 E. (See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".
PILOTAGE: 48 and 24 hours' notice of ETA must be given to Agent. According these notices Agent arranges for Pilot to board on arrival. Pilot boat blue motor launch with large "P" on bow and "H" flag. Pilot contacted on VHF Channel 12 or 16.
ANCHORAGES: About 0.5 mile, 245° from green port light, (Fl. G. 2 sec.) on the North part of Zadar Peninsular. Average depth about 40 m.
MAX. SIZE: Zadar, old passenger port, permissible draft 6.25 m. (20.5 ft.) Zadar-Gazenica, port for dry cargo, max. draft forward 6.60 m. (21.7 ft.) Aft 11.0 m. (36 ft.). Also see "Tankers" and "Berthing".
RADIO: Rijeka Radio, "YUR" or Split Radio "YUS".
VHF: Zadar Radio listens on Channel 7, Port Captain on Channel 10 and Pilot on Channels 12 or 16.
TUGS: 1 tug 1,200 h.p. Large vessels use 2 tugs, with the additional tug coming from Split. Tugs normally join 200 m. – 300 m. from breakwater, vessel's lines usually used.
BERTHING: *Zadar Old Passenger Port:* Mainly used by coastal passenger traffic and cruise ships.

Zadar – Gazenica Cargo Port: Berth No. 1: Length 160 m. Draft from 6.6 m. fore to 11.0 m. aft.

Berth No. 2: Length 145 m. Draft 8.5 m.

Soya Bean Berth: Length 140 m. Draft 12.0 m. 1 berth for discharge of soya beans and grain, rate 400 t.p.h.
CRANES: Heavy lift shore crane, capacity 100 tons.
STEVEDORES: Number of gangs required to be stated in usual notice of ETA.
MEDICAL: Advance notice not necessary, hospital facilities available.
TANKERS: Gazenica Port: 1 tanker berth max. draft 10.35 m. (34.1 ft.) forward, 15.0 m. (49.2 ft.) aft. Length of the ship is not restricted.

Floating barriers/booms compulsory for vessels loading/discharging mineral oils.
DENSITY: Average density in the port – 1026.
FRESH WATER: Connections on piers, rate of delivery 8 – 15 t.p.h.
FUEL: Fuel available for coasters only.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally, but not compulsorily, carried out by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes per person. Tobacco and liquor sealed in bond.
IDENTIFICATION CARDS: Needed. Issued by police.
CONSULS: None.
REPAIRS: Deck and engine repairs possible.
REPATRIATION: Facilities exist for effecting crew changes and arranging necessary repatriations.
AIRPORT: Zadar Airport served by regular daily flight for Zagreb with connection on all international flights.
DRY DOCK: 2 floating docks, 8,500 and 2,000 tonnes lifting capacity on Ugljan Island.
TIME: GMT plus 1 hour. Summertime kept.
POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.
TELEPHONES: No facilities for placing telephones on board.

SHIPMASTER'S REPORT: September 1987.
Port: Gazenica
Charts: BA. Charts No. 2775 and 2771.
Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.
3 copies Cargo Manifest.

Shore passes are issued and have to be returned before departure.

A Stores Declaration is required prior to departure showing stores used whilst in port.

Approaches: Approaches are through deep water down Zadar Kanal.

Most of the island passages are well charted and the navigation aids are good. The depths are as shown on the chart.

There is a shallow bank off the North Breakwater Buoy off Zadar/Gazenica cargo port.

Anchorage: Vessels bound for the industrial port of Gazenica (2 miles South of Zadar City) normally anchor and wait for clearance or berth off the old city as per anchorage indicated on BA. Chart No. 2775 (position Lat. 44° 0.6′ N., Long.15° 12.6′ E.) in about 20 fathoms with mud bottom.

An alternative anchorage is off Gazenica in position Lat. 44° 05.2′ N., Long. 15° 15′ E.

Pilotage: Berthing is carried out in daylight hours only. Unberthing takes place between 0600 hrs. and 2400 hrs., depending on wind. Berthing does not take place if there is a southerly wind in excess of Force 5 blowing.

Pilot normally boards off the town from a launch. Pilot may be contacted on Channels 16 and 12, however VHF is not continously monitored.

Rimini in Italy also use VHF Channel 12 so some confusion can arise.

Tugs: Normally 1 tug is used for berthing using a ship's line from the stern. One tug comes from Japlenicki Shipyard on Ugljanisl Island. Additional tugs if required come from Split. Pilot advises that use of tugs is costly.

No tugs used on departure.

Berthing: Vessel berthed on No. 3 Berth in Gazenica which is on the South side of the harbour. Oil and VCM handled at the berth.

Vessel berths stern first with the aid of a tug. Occasionally anchor is required when berthing port side to. If it is very windy the starboard anchor is dredged along the bottom.

Berth No. 2, the most northern berth in the port, is for grain handling. The hulk indicated on BA. Chart No. 2775 is for storing soya bean oil. The products berth, Berth No. 3, and a small berth for oil rig supply vessels, Berth No. 4, are both on the South side.

Berth No. 3 (for VCM) has a flat face of 60 m. The fendering is fair but widely spaced. Maximum draft permitted if berthing head out, which is normal, is 38 ft. or 42 ft. if berthing head in. It is normal to berth port side to. The water depth shoals to 29 ft. on Berth No. 4. Moorings at No. 3 Berth consist of 2 head/stern lines, 2 breast lines and 2 springs forward and aft. The pilot boat assists with running of moorings.

Berth No. 3 is very exposed to southerly winds but pilot reports that the berth is fairly sheltered from Northerly winds (Bora).

Cargo: Vinyl Chloride Monomer (VCM): No discharge takes place between 2200 hrs. and 0500 hrs. due to Port Fire Regulations.

3 × 4 in. rubber hoses are used from the shore manifold to the "pig" bolted on to the ship's manifold. Rate of discharge about 250 tonnes per hour to 300 tonnes per hour. Generally speaking, the shore authorities do not allow the vessel to "hot gas" to shore upon completion of cargo.

There are 2 shore tanks numbered R301 with capacity of 4,038 cu.m. and R302 of 5,225 cu.m. The tank working pressure is −10° C to +50° C at 2 to 3 kg/sq.cm. Maximum pressure 4.9 kg./sq.cm.

Samples take 45 minutes per sample to analyse.

Shore personnel connect and disconnect hoses.

Fresh Water: Fresh water available from shore hydrant at a rate of about 30 t.p.h. Shore hose and meter are used. Cost of water is US$ 1.7 per tonne. The water man is ordered by the shore watchman and he attends quite quickly. Quality of water is good.

Ship Chandlers: The national chandler "Sour Brodokomerc" was used and prices were reasonable. Both the quality and attention given were good. Rijeka Telex No. 24365.

General: Gazenica is a picturesque tourist town. All commercial ships except ferries use this port.

There is a daily ferry service in the Summer to Ancona and a twice weekly service to Rimini and Trieste. In Winter there is a twice weekly service to Ancona and a weekly service to Rimini and Trieste.

The airport which is about 7 km. to the East of the town provides regular flights to Zagreb and Belgrade.

There is a new berth/basin at Gazenica for timber and oil rig vessels (position Lat. 44° 05.4′ N., Long. 15° 16′ E.). There is a new yacht/fishing harbour at Uvala Kalovare (position Lat. 44° 05.8′ N., Long. 15° 15′ E.).

The red buoy near Rt. Vitrenjak has been moved to position Lat. 44° 07.48′ N.,Long. 15° 12.69′ E.

AUTHORITY: Lucka Kapetanija – Zadar. Radnicka Obala 8, 57000 Zadar, P.P.182. *Tel:* 223-44, 433-778, 433-758. *Telex:* 27163 Yu Kap Zd. *FAX:* 437-825. *Cables:* Lucka Kapetanija Zadar.

AGENT: Jadroagent, N. Nodila b.b., 57000 Zadar. Tel. 23210, 23215. Telex: 27129 Yu Jadrag. Telegrams: Jadroagent Zadar. FAX: 430-464.

ZELENIKA: 42.27 N. 18.35 E.

DOCUMENTS/HEALTH: Same as "Rijeka".
PILOTAGE: Pilot boards at entrance of the Bay of Kotor, near point Punta Ostro. In bad weather Pilot boards at anchorage.
ANCHORAGE: Good ground for anchorage S.W. of Zelenika, about 0.25 miles off port light in about 27 fathoms.
MAX. SIZE: Port of Zelenika damaged by earthquake and temporarily closed, vessels berth at the passenger quay at Herceg-Novi.
HEALTH: Radio Agent requesting Free Pratique, 24 hours before arrival. For vessels over 500 g.r.t. Pratique is given at the anchorage. For small ships and yachts, Pratique is given at Herceg-Novi.
TUGS: None. In cases of necessity can be ordered from shipyard at Bijela.
BERTHING: The berth is assigned through the Agents giving notice 24 or 48 hours in advance. At present there is berthing for small ships only at the passenger port at Herceg-Novi.
STEVEDORES: State stevedoring company.
MEDICAL: Nearest hospital at nearby town of Herceg-Novi.
FRESH WATER: Available from hydrant on the passenger quay at Herceg-Novi.
FUEL: Nearest bunker station is at Bar.

OPENING/CLOSING HATCHES: If not performed by crew, can be done by stevedores.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litres wine/spirits per man per day.

CARGO GEAR: Loading, unloading performed with ship's gear.

IDENTIFICATION CARDS: Shore passes issued by local police.

CONSULS: None.

REPAIRS: Any kind of repairs including dry docking at nearby shipyard at Bijela.

DRY DOCKS: Floating dock lifting capacity 10,000 tons, LOA 184 m., length over keel blocks 165.6 m., inside free breadth 25.5 m.

Floating dock lifting capacity 33,000 tons. LOA 252 m., length over keel blocks 235 m., inside free breadth 44 m.

The yard is about 4 miles East of Zelenika. The yard has 1,300 m. of fitting pier.

REPATRIATION: By bus to Dubrovnik, and from there bus, plane or ship to main cities in Yugoslavia.

TIME: Central European Time. GMT plus 1 hour. Summertime kept.

HOLIDAYS: January 1st and 2nd; May 1st and 2nd; July 4th and 13th; November 29th and 30th. Work can be arranged on Sundays and on 2nd day of two-day holidays.

POLICE/AMBULANCE/FIRE: No direct connection, in case of necessity call Agency, Tel. (082) 81-456 Jadroagent or (082) 81-261 Jugoagent.

SHORE LEAVE: Allowed.

AUTHORITY: Lucka Ispostava Zelenika.

AGENT: Jadroagent, Medunarodna pomorska i saobracajna agencija, Poslovna jedinica, Bijela. Tel: (082) 81-456. Telegraphic address: Jadroagent Bijela.

NOTES

Please also advise Shipping Guides Ltd.

Zaire Republic

GENERAL:

ETA: It is essential that any change of vessel's ETA should be transmitted sufficiently in advance in order to avoid short shipments of cargo.

Matadi is only a transit port where cargo is not stored in order to avoid congestion.

Imported cargo is immediately re-forwarded to the interior while export cargo is only brought to Matadi a few days before the ETA of the vessel for which it has been booked.

Therefore, in order to make the cargo available at Matadi, shippers need a notice varying according to the cargo concerned, but which cannot be less than 2 weeks as is the case for coffee.

Agents at Matadi and Boma have been instructed to inform Port Authorities latest 4 days before berthing of inward cargo tonnages.

Non compliance with this provision may result in berthing delay.

PILOTAGE: Vessel should cable ETA 24 hours before arrival to the Harbour Master. Cable address: "Maritime Banana" via Banana Radio.

Pilotage compulsory for all vessels over 500 g.r.t. bound for Boma and Matadi.

Ships bound for Matadi and/or Boma must take a Pilot at the pilot station at Banana (at the mouth of the Zaire River). Pilot station at Banana can be contacted directly by radio (VHF).

In order to increase the safety and to facilitate the navigation on the river the Regie des Voies Maritimes have decided that in case a vessel is not equipped with a VHF installation the Pilot will bring one on board, for which a charge is made.

The following rules must be observed at the request of the Regie des Voies Maritimes for embarking and dis-embarking of Pilots.

If gangway is rigged astern on the port side it is compulsory to use the pilot ladder.

If gangway rigged amidships on port side it is recommended that the pilot ladder is used in combination with the gangway.

Pilots requesting only the gangway do so at their own risk.

Theoretically sailing from Matadi/Boma is only authorised if vessel can reach Banana by 1800 hrs. at latest since navigation on the Zaire river is normally limited to daylight hours.

With regard to the trim the pilotage services ask Masters to comply with following rules:

Maximum draft 13 ft. aft; 4 ft. forward.

DOCUMENTS: *Ship's Documents required on arrival:*

- Clearance from last port.
- 7 Crew Lists.
- 3 Lists of Arms and Ammunition.
- 7 Passenger Lists.
- 1 List of stowaways.
- 2 Crew Declarations.
- 3 Lists of Ports of Call.
- 2 Stores Lists.
- 1 International Tonnage Certificate.
- 1 International Load Line Certificate.
- 1 Derat Exemption Certificate.
- 1 Cargo Ship Safety Equipment Certificate.
- 1 Certificate of Registry.
- 1 Radiotelegraphy Certificate.
- 1 Construction Certificate.
- 1 Certificate Form on Board.
- Free Pratique.

Documents required for disembarking passengers and discharging cargo:

A. To be received by mail at least 8 days before ship's arrival:
  (1) Cargo:
    3 Freight Manifests
    8 Cargo Manifests
    5 Copies of Bills of Lading
    6 Copies of Stowage Plans.
  (2) Passengers:
    1 Accountancy
    3 Passenger Lists, for passengers for the port/or in transit.
B. To be received by ship's bag at ship's arrival at quay:
  (1) Cargo:
    1 Freight Manifest
    4 Cargo Manifests
    3 Copies of Bills of Lading.
  (2) Passengers:
    1 Freight Manifest
    4 Passenger Lists for passengers for the port and/or in transit.

It is most important that stowage plans be available before vessel's arrival. Vessel's operations are indeed delayed to the next shift if same are only remitted upon arrival.

DRAFTS AND CURRENTS: Drafts on River Zaire are presently as follows (January 1989):

Inwards: High Water: 18 ft. 00 in.
Outwards: High Water: 19 ft. 00 in.

The authorised drafts are notified regularly by the Port Authorities.

The currents of the river and from berth to berth as well as in Matadi and Boma vary and depend upon the high and low levels of the water sometimes with adverse currents and still waters.

For proceeding to Matadi and according to the season vessels must have a speed of at least 10.5 to 11 knots, especially to pass the "Devil's Cauldron" about 3 miles before Matadi. 12-13 knots or greater sometimes requested for a 10-15 minute period.

HEALTH: Ship's crew must have an International Certificate of Vaccination against yellow fever and cholera.

RADIO: Banana Radio 9PA.

Telegraphy – medium wave: 0430 – 2030 UTC.
500 kHz.
Working frequency: 489 kHz.
Listening frequency: 480 kHz.

512 kHz.
Traffic list each hour + 00 of each hour during service hours.

Telegraphy short waves: 0500 – 2000 UTC.

Traffic list at:

0500/0700/0900/1100/1600/1900	: 8445.0 kHz
0600/0800/1200/1400/1700	: 12660.0 kHz
1000/1300/1800	: 22431.0 kHz
1500	: 17184.8 kHz

Reserve frequency for medium wave: 6491.5 kHz

Remarks: This frequency is used for traffic when QRN appears on 489 kHz.

Reserve frequency: 8546 kHz.

Listening on 8, 12 and 16 MHz, Channels 5, 6 and 15. On 22 MHz, Channels 3, 4 and 9.

Each Channel is monitored during 1 minute in a scanning system and this, during 15 minutes following traffic list (same frequency band as traffic list) after 15 minutes, the receiver is blocked on Channel 6 (4 on 22 MHz) until next traffic list.

Telex on Request

Paired frequencies:

Code 34646 (This is not definite since it must be allocated by UIT).

9PA:	8714 kHz	Ship:	8353 kHz
	13078.5 kHz		12498.5 kHz

Telephony: 0430 – 2030 UTC

Listening:	2182 kHz	2182 kHz
	4125 kHz	4125 kHz
	6215.5 kHz	6521.9 kHz
	8257 kHz	8780.9 kHz
	12392 kHz	13162.8 kHz

Telephony Short Wave: 0430 – 2030 UTC.

Traffic list at:

0430/0630	on 6521.9 kHz	– listening 6215.5 kHz.
0530/0830/1030/1530	on 8753 kHz	– listening 8257 kHz.
0730/0930/1430/1930	on 4419.4 kHz	– listening 4825 kHz.
1130/1630	on 13162.8 kHz	– listening 12392 kHz.
1230/1730	on 17294.9 kHz	– listening 16522 kHz.
1330/1830	on 22658 kHz	– listening 22062 kHz.

Telephony VHF: 0430 – 2030 UTC.

Channel 16. Simplex Channels. Duplex Channels.

Remarks:

1. Telephone connections are possible and Agent accepts telegrams in telephony.

2. Other available frequencies for telephony:

Banana Radio/9PA	*Ship*
4357.4 kHz	4063.0 kHz
4382.2 kHz	4087.8 kHz
8777.8 kHz	
8762.3 kHz	8238.4 kHz
13181.4 kHz	12410.6 kHz
17350.7 kHz	16577.8 kHz

3. Radio beacon continuous.
Frequency: 315 kHz.
Call Sign: BAN.
Position: Lat. 05° 53′ 24″ S., Long. 12° 17′ 48″ E.
Power: 1kW.
Antenna: Omni-directional.
Range: 30 miles (daylight).

BRIDGES: *Bridge on River Zaire:* The Port Authorities and Bridge Constructors request vessels to whistle 3 times:

(a) when proceeding to Matadi at about 300 m. before passing the bridge.
(b) when sailing from Matadi at about 200 m. before passing the bridge.

This will enable constructors to stop work to avoid the falling of any kind of object on vessels when passing the bridge.

FUEL: Must be ordered from Petrozaire at least 48 hours before required. Normally supply of gasoil, light and heavy fuel is effected at Banana between buoys 12 and 14 ex-barges with: minimum quantity – 250 tons; maximum quantity – 800 tons (total barge quantity).

Smaller quantities can also be supplied in Matadi or Ango Ango.

STEVEDORES: The ONATRA (Office National des Transports) – public institution, has the monopoly of the handling, stevedoring and transit operations at the ports of Matadi and Boma.

At each berth the responsible "Pier Master" remains in constant contact with the Chief Officer during the whole operation.

Working shifts are as follows: 1st. shift: 0630 – 1430 hrs.; 2nd shift: 1430 – 2230 hrs. overtime; 3rd shift: 2230 – 0630 hrs. overtime.

Work must be ordered the day before vessel's arrival. However, if gangs are available, work can still be ordered the day of vessel's arrival but latest at 0930 hrs. during week days.

In principle no work is done on Sundays, holidays and during the night. If required same has to be ordered by writing 1 working day in advance before 1000 hrs. Port Authorities will then decide according to the situation at that time.

According to the situation of the Port, the Authorities can also order labour 24 hours per day Sundays and holidays included.

At Boma there is no third shift – however on special request, work can eventually be granted until 2400 hrs.

At Matadi work during third shift will only be ordered upon special request from vessel.

For all stevedoring operations the use of shore cranes/dock labourers is compulsory. It is only in particular cases such as handling of containers/"heavy lifts" or prolonged (electrical) breakdowns that Port Operators can authorise use of vessel's equipment.

GENERAL: *Quay Practices:*

The Zaire courtesy flag must be hoisted by foreign ships during daytime.

In view of the proximity of the town, the use of whistles, sirens and similar signals is forbidden.

Safety nets must be put between ship and quay at each of the working hatches and beneath the gangway.

No rubbish whatsoever may be thrown overboard.

Official Language:

The official language used by the Port Authorities and Administration is French.

Cargo plans:

According to ONATRA's instructions, stowage plans of ships calling at Matadi/Boma must be issued in such a way that they show clearly where all goods loaded for Matadi/Boma in several ports are located. This enables ONATRA to have, at once, a clear view of each vessel and to study, before ship's arrival, the discharging/loading possibilities.

Those stowage plans must reach Agent before ship's arrival.

Vessel's loading/discharging operations will only start during the next shift if stowage plans are remitted upon vessel's arrival. A request can be made to shift the vessel to a more convenient berth depending upon the cargo concerned.

With regard to cargo loaded, ONATRA does not issue stowage plans and Masters should consequently be instructed to draw up stowage plans themselves for transmission to corresponding discharging ports.

It is customary not to moor ships at Matadi/Boma between 2200 hrs. and 0600 hrs. They remain at anchor.

Important Notices:

In connection with manifests for Matadi/Boma cargo:

1. Liner Terms Cargo:

According to the General Rules and Tariffs stowing, unstowing, loading, discharging rates are applied on weight/measurement, whichever is the highest irrespective of the freight unit.

The Port Authority ONATRA instructs therefore that:

a) The Freighted Manifest remitted to them must show three columns detailing respectively weight and volume and freight unit (freight tons) of each cargo/bill of lading.

b) At the bottom of each page a summing up of tonnage/weight, tonnage/volume and freight units (freight tons) should be mentioned.

c) The last page of the manifest shall contain a separate recapitulation of weight tons, volumes and freight units (freight tons) showing thus the respective totals of each item.

Corrections or additionals added by the Agent at Matadi/Boma by hand or with typewriter are not accepted by ONATRA.

ONATRA is fully implementing the regulations and, for vessels whose manifests are incomplete or incorrect, a penalty, which may reach 1,000% of the stevedoring costs (or 10 times) is charged.

2. F.I.O. Cargo:

The same information is to be supplied as for Liner Cargo but, in addition, the manifest and B/L must clearly mention that cargo is carried on free out terms.

BANANA: 06.01 S. 12.25 E.

DOCUMENTS: See "General" before first port.

APPROACHES: In view of the strong current, and in view of the fact that the lights of the navigation buoys on the river do not always work properly, night navigation is practically impossible. Tankers, therefore, arriving at night, or in times of congestion, are recommended to anchor approx. 5 miles West of Moita Seca Light in approx. 10 fathoms, about 12 miles from Stella Buoy.

PILOTAGE: River can be entered direct from sea in deep water. Pilot (Not compulsory) will board vessel from 0600 hrs. with Authorities off Stella Buoy (Outer Navigation Buoy No. 2) located in position:

Lat. 6° 02′ 00″ S.
Long. 12° 22′ 30″ E.

The position of the flare of the SOCIR Refinery at Moanda is:

Lat. 5° 57′ 51″ S.
Long. 12° 25′ 07″ E.

The flare is visible during day and night and may be a good bearing for vessels approaching river.

Sailing from "Stella Buoy" at 0600 hrs. vessels with a speed of up to 14 knots must pass Bulabemba before 1400 hrs. and vessels with speed in excess of 14 knots by 1500 hrs.

MAX. SIZE: Tankers up to 35 ft. draft may discharge at buoy moorings. Also see "Berthing – Commercial Port".

HEALTH: Quarantine Officer boards at sea buoy. Free Pratique usually granted as soon as Maritime Health Declaration completed. Valid cholera and yellow fever inoculations required for all crew members.

RADIO: *Tankers:* At least 3 days' notice required to Agent (ETA and draft only) and to Harbour Master, "Maritime Banana" (ETA only). It is necessary to transmit these notices via another shore station (e.g. Cape Town Radio, Libreville Radio, etc.), as the Banana Radio Station can only be reached 2 days prior arrival. Close advice on changes in ETA necessary to prevent delays in waiting for Pilot and lighters.

Radio Banana (9PA) – see "General" before first port for details.

BERTHING:

Commercial Port:

The commercial port consists of a landing space of approximately 2,000 sq.m. in front of a warehouse with approximately 2,500 sq.m. storing room.

ONATRA, the Port Authority, has no cranes and the port equipment is extremely limited. Any discharging and/or loading must therefore be done by ships' gear.

With a draft of more than 17 ft. (indicative) cargo operations to be performed at anchor between Buoys No. 12 and No. 14. Barges and gangs are then supplied on request.

With a draft of less than 17 ft. (indicative) vessel can berth at ONATRA wharf inside Banana Bay.

Length of the wharf: 75 m.

DENSITY: Brackish to salt.

FRESH WATER: Not available.

FUEL: Must be ordered 48 hours in advance from Petro-Zaire. Bunkering takes place between Buoys Nos. 12 and 14. Gasoil, light and heavy fuel oil available. Barge capacity 800 tons, minimum order 250 tons.

MEDICAL: Doctor available for emergency only. No dental or hospital facilities.

TANKERS: Tankers remain at anchor between Buoys Nos. 12 and 16 on the river, anchorage being agreed upon by the Master and the local suppliers' representative who will have received the advice of the Pilot. Since there is no mooring buoy and in view of the strong currents it is recommended to use both anchors while main engine to remain on standby.

Cargo Operations: Tankers discharge into/load from cargo barges moored alongside either side. These barges (three in total) have a capacity of 1,650 long tons or 2,050 cu.m. and can receive the cargo at a rate up to 400 t.p.h. Under normal conditions the refinery will handle these barges per shift of 12 hours. Cargo operations are effected continuously day and night during Sunday and holidays, in shifts from 0600 – 1800 hrs. and from 1800 – 0600 hrs.

Sailing: Tankers sail without Pilot and may leave any time.

Moanda Terminal: To notify his arrival, Master to call M.V. "Afran Zenith" by radio. Vessel will then proceed to single buoy mooring berth with following particulars:

Depth: 57 ft.
Position: Lat. 5° 57′ 50″ S.
Long. 12° 08′ 19″ E.

where loading will take place.

The storage tanker is moored in position:

Lat: 05° 57′ 30″ S.
Long: 12° 06′ 00″ E.

No tank-cleaning facilities. Barge available for dirty ballast reception limited to 2,000 cu.m. per trip which occasionally and on special request can be put at disposal by the refinery.

Also see "Shipmaster's Report".

REPAIRS: No facilities.

HOLIDAYS: See "Matadi".

GENERAL: During stay of tankers at anchorage the discharge and/or loading operations are constantly supervised by representatives of the refinery, who are to be accommodated on board and to be provided with meals.

SHORE LEAVE: Shore leave is presently not allowed due to lack of communications; only in urgent cases a crew member may join one of the refinery tugs. There is no entertainment whatsoever ashore.

SHIPMASTER'S REPORT: September 1985.

Location: Moanda Oil Terminal is operated by the Zaire Gulf Oil Company. It is located about 10 miles offshore from Zaire. It consists of a SPM in position Lat. 5° 57′ 50″ S., Long. 12° 08′ 19″ E. in about 75 ft. of water. Crude oil is transferred to the export tanker at the SPM from the storage tanker "Afran Zenith" of 95,185 d.w.t.

Wind and Swell: Wind and swell are mostly from a Southwesterly direction with a heavy swell from March to September. The tidal range in the vicinity of the berth is 6.9 ft. The current in the area is a composite of the effect of the general Northwesterly drift and the outflow of the Zaire River. This results in a current of 3 – 4 knots or more in a Northerly at Westerly direction. In view of the foregoing, Masters of vessels calling at the terminal are advised that under no circumstances are engine repairs permitted within terminal limits.

Communications: Vessels bound for Zaire are required to advise their ETA:

(a) Via COMSAT to Master m.v. "Afran Zenith" GZOL 1242403; or

(b) Via telex or radiogram to the main office of the vessel's Agent in Kinshasa who will pass over the information to Zaire Gulf Oil Company (ZAGOC) and to their local office at Moanda.

ETA messages to be sent 72, 48 and 24 hours before arrival at the terminal and should contain the following information:

(a) Name of vessel.
(b) ETA in GMT (Zaire time is GMT plus 1 hour).
(c) Name of Master.
(d) Estimated arrival draft, fore and aft and displacement.
(e) Time for discharging clean ballast, if any.
(f) If vessel proceeding to any port(s) prior to Moanda and if so delays anticipated.

A 24 hour watch is maintained on VHF Channel 16 on "Afran Zenith" and contact is usually possible at a distance of 20 – 30 miles.

Dirty Ballast: No facilities exist for receiving dirty ballast and all tankers must arrive with clean ballast.

Cargo Information: Oil loaded at the Moanda Terminal is Zaire composite crude with an average API of 31.5. The loading temperature will vary from 80°F – 85°F and is fairly steady throughout the year. The loading rate is about 30,000 bbls.p.h.

Approach to Anchorage/Mooring Master Boarding Area: If vessel is required to anchor, the recommended tanker anchorage is within a circle 0.5 miles in diameter and its centre is located in a position 5 miles due West of the SPM. Owing to the presence of oil wells and submarine pipe-lines vessels should not enter into the area bounded by lines joining the following positions:

(a) Lat. 05° 46.5′ S., Long. 12° 12.5 E.
(b) Lat. 05° 49.5′ S., Long. 12° 09.0 E.
(c) Lat. 06° 00.0′ S., Long. 12° 09.0 E.
(d) Lat. 06° 00.0′ S., Long. 12° 18.0 E.
(e) Lat. 05° 53.5′ S., Long. 12° 18.0 E.

The ZAGOC Mooring Master Boarding Area is 3 miles due West (Lat. 05° 57.30′ S., Long. 12° 06′ E.) of the storage tanker "Afran Zenith" or boarding will be at the anchorage as appropriate.

Accommodation: During vessel's stay at the terminal the Mooring Master, Loading Master, Agent, Surveyor and 4 men for the hose gang will stay on board.

Mooring Arrangements: Mooring operations are only undertaken by day under normal weather conditions. Unmooring operations can be undertaken at any time. The following preparations are required on the export tanker:

(a) 4 mooring ropes, minimum length 220 m. and size 9 in., buoyant lines if possible e.g. polypropylene, in good condition.
(b) 2 suitable heaving lines of appropriate length.
(c) 2 mooring lines aft for securing a tug to realign the vessel to the buoy if necessary.

Hose Connections: 1×16 in. hose is connected to the ship's manifold.

Bunkers: Not available.

Fresh Water: Not available.

SHIPMASTER'S REPORT: April 1987.

Vessel discharged at Banana and Ango-Ango.

Approaches: Wide open with very deep water approach. Vessels can anchor at either side of the river mouth in 20 fathoms. Pirates do not appear to be a problem. The very small amount of traffic using the Congo indicates that there will be no problems with regard to crowded anchorage.

Pilotage: River passage is during daylight hours only. The Pilot boards off the Banana Creek Channel, and the lightening anchorage is between Buoys No. 12 and 14, however No. 12 Buoy is missing. A secondary anchorage is between Buoys No. 16 and 18, abeam of Crique Ariel Beacon. Both anchors with about 7 or 8 shackles will be used in either anchorage. The current is always out-flowing, so there is no fear of a fouled hawse on this visit. This vessel tried to anchor in the first anchorage, (vessels normally try the first anchorage, so as to be that much nearer to Banana for the lighters). Vessel started dragging anchors, so we hove up and moved into the second anchorage.

Officials: 14 officials boarded the vessel.

Documents:

8 copies Crew List.
6 copies Passenger and Mail List.
6 copies Stowaway List.
4 copies Cargo Manifest.
4 copies Ullage Report from Last Port.
6 copies Kroo Boy List.
6 copies Arms and Ammunition List.
6 copies Narcotics List.
6 copies List of Ports Visited.

Discharge: Lightering only at Banana.

The amount of lightering depends on the water available in the dredged sections further upstream, (all the cargo lightened has eventually to be taken up to Ango-Ango by the lighters).

On this occasion, we had to off-load into 5 lighters, to come up to 23 ft. draft (max. permissible draft up-river at this time). Only 1 tug was available so this meant 3 trips. No unloading took place between midnight and 0800 hrs. the next morning.

One pump was used, discharging to 1 barge each side simultaneously. The tug takes 2 barges at a time back to banana.

Passage to Banana and Ango-Ango: The passage to Banana takes 6 to 7 hours, and if vessel cannot arrive at Ango-Ango before 1700 hrs., then vessel will anchor at Boma. All passages take place during daylight hours.

The continuous outgoing river current can vary from 3 knots up to 6 – 7 knots, depending on rainy or dry season.

From Banana to Buoy No. 24, there is plenty of water and room to manoeuvre, etc. although it should be emphasised that here are very few aids to navigation which can be relied upon. The buoys throughout the river passage are very doubtful as to their position (they may have been moved as the channel moves, but no Notice to Mariners issued). The strength of the river current must make the mooring of these buoys very difficult, also many of them consist of oil drums fastened together.

There is a narrow channel section (dredged in parts) from Buoy position No. 46 to Buoy No. 78. Part of the new channel veers away from the dotted line on the chart, and goes off to the West of "Archipel des Tortues", up what appears on the chart to be a narrow creek. From here on there is no visual chart indication of where you are going. In the narrow parts there may be 2 buoys (oil drums) to go between, but even so there are quite a few severe turns. so there are quite a few severe turns.

From Buoy No. 86, you are back in soundings and there is plenty of water up to Boma. The Pilot changes at Boma.

We anchored overnight at Boma. The anchorage is opposite Boma town and is in a quiet stretch of water out of the current. Only one anchor is used (4 shackles), and as the current flow is always in the same direction, there is no reverse of heading, so although you are close to the South side of the river, the only problem will be if there is a sudden change of wind during one of the passing tropical downpours.

The passage from Boma to Ango-Ango is all in deep water, and is comparatively wide, although there is the occasional whirlpool, and navigation aids are sparse with a rocky shoreline.

Ango-Ango Berth Approaches: The approach is straightforward, although there are no mooring launches or tugs. The berth itself is in slack water. Normally, the vessel is put slightly ahead and off the berth, and the port anchor is dropped, with 3 shackles. The bow is then manoeuvred into the berth using engines and anchor, then head lines are sent ashore via shore messengers (the headlines may look like breast lines, and the breast lines like half springs), but be sure to get the correct lines as per plan (see "Plan"), they appear to have set messengers for each shore bollard, no springs are allowed on to the pontoon. The after lines are also sent via messengers, so be sure to organise with the Pilot as to which sequence is required, especially the springs being sent from aft, and the breast lines from the main deck.

Documents at Ango-Ango: The same number of documents as required at Banana are again required in Ango-Ango.

Discharge: The discharge is made via 2 sets of 2 × 6 in. lines connected via shore supplied "Y" pieces connected to ship's 8 in. manifolds. Both jet fuel and MOGAS were discharged simultaneously.

The departure is fairly straightforward, heaving off on the anchor, and there is plenty of room to swing vessel round in, especially with the bow being out in the current, and the stern in comparatively slack water.

The passage down river is, of course, much quicker with all the current with you.

AUTHORITY: Office National des Transports, ONATRA.

AGENT: See "Matadi".

BOMA: 05.51 S. 13.03 E.

DOCUMENTS: See "General" before first port.

PILOTAGE: Port is situated on the right bank of river, about 44 miles above pilot station at Banana.

Radio "Maritime Banana" 24 hours prior arrival giving ETA at Banana and requesting Pilot. Sailing for Banana from 0600 hrs. till 1500 hrs. Sailing for Matadi from 0500 hrs. till 1600 hrs.

RESTRICTIONS: Depth at bar 30 ft. Permissible draft for navigating river varies between 20 ft. to 27 ft. according to local conditions and should be checked with Port Authority in advance.

HEALTH: Quarantine Officer boards on arrival. All crew members require valid cholera vaccinations and yellow fever inoculation certificates.

TUGS: 2 tugs of 200 and 300 h.p. available to assist berthing.

BERTHING: Total quay length 450 m. with 3 berths alongside. Depth of water at the quay, 8 m. at low water. Maximum current at the berths is 3 knots.

STEVEDORES: See "General" before first port.

Port Equipment:

6 electric cranes on rails, capacity 3 – 6 tons.
2 steam cranes on rails, capacity 7.5 ton at 6 m. (5.0 ton at 10 m.).
5 banana conveyors.
1 electric crane, capacity 6 tons.
8 forklifts.
5 tractors and 40 trailers and carts.
1 Palm kernel elevator.
1 Automatic grab.
2 Hyster carry cranes.
7 barges, capacity 100 tons.
1 pontoon, capacity 75 tons.

FRESH WATER: Available from quays, not suitable for drinking.

FUEL: See "General" before first port.

MEDICAL: Doctors and hospital facilities available.

REPAIRS: No facilities.

HOLIDAYS: See "Matadi".

GENERAL:

Exports: Logs and timber, plywood, veneerwood, coffee, cocoa, rubber, bananas, palm kernels, oils, cakes, about 8.8% of the total exports of the Zaire.

Imports: Various. About 2.5% of the total tonnage imported into Zaire.

Current at Quays: The currents of the river vary from berth to berth and depend upon the low and high level of the water with sometimes adverse currents and still waters.

Maximum speed at high level: 3 knots.
Minimum depth at the lowest level: 8 m.

AUTHORITY: Office National des Transport – ONATRA.

MATADI, (including Ango-Ango): 05.49 S. 13.27 E. (See Plan)

DOCUMENTS: 7 days before arrival of vessel the following must be in the hands of the Agent:

4 Manifests (detailing explosives, general cargo, heavy lifts).
3 Stowage Plans.
6 Copies of Bills of Lading.
1 Freighted Manifest.

On arrival:

Maritime Declaration.
Ship's Register.
3 Crew Personal Effects Lists.
2 Stowage Plans.
1 Freighted Manifest.
3 Lists of Ports of Call.
7 Passengers Landed.
7 Passengers in Transit.
5 Crew Lists.
5 Kroo Boys Lists.
2 Provisions Lists.
4 Individual Manifests.

PILOTAGE: Compulsory for vessels over 500 g.r.t. Radio "Maritime Banana" 24 hours prior arrival giving ETA at Banana and requesting Pilot. Pilot boards at Banana Pilot station. Distance from Banana to Matadi about 75 miles. Sailing for Banana from 0600 – 1200 hrs. Sailing for Boma from 0500 – 1600 hrs.

RESTRICTIONS: Depth at bar 30 ft. Permissible draft for navigating Zaire River varies between 20 ft. and 27 ft. according to local conditions and should be checked with the Port Authority 3 days in advance. Berthing at Ango-Ango up till 1800 hrs. only.

MAX. SIZE: Controlled by draft in river. Max. draft Berth No. 1 is 23 ft. – 24 ft.

HEALTH: Quarantine Officer boards on arrival. All crew members require valid cholera and yellow fever inoculation certificates.

TUGS: "Inga" 850 h.p., "Boma" 250 h.p., "Banana" 600 h.p. and "Soyo" 220 h.p.

BERTHING: At Matadi. Total length 1,728 m.

Pier 1 – 149 m.
Pier 2 – 161 m.
Pier 3 – 155 m.
Pier 4 – 158 m.
Pier 5 – 156 m.
Pier 6 – 176 m.
Pier 7 – 188 m. For full container vessels
Pier 8 – 149 m.
Pier 9 – 167 m.
Pier 10 – 143 m.

Minimum depth at Piers 8 and 10 is 10 m.

In addition there is a berth length 400 m. for barges.

At Ango-Ango: Length of pier 150 m. Presently used for discharging and loading flammable goods and explosives.

UNLOADING RATE: 800 tons to 1,000 tons of general cargo per day of 3 shifts.

CRANES:

44 Cranes (Electric and hydraulic) on rails	3 – 6 tons
1 Derrick Fixed	*50 tons (Pier 4)
1 Bridge Crane	5 tons
6 Electric Cranes	3 – 6 tons
2 Electric Cranes	10 tons
3 Electric Cranes	6 tons
1 Floating Crane	14 tons

*Actual capacity 34 tons.

BULK HANDLING FACILITIES: Palm oil is stocked by 4 companies in Matadi, 3 of which have pipe-lines to a main quay. The palm oil installations of CCP are at Ango-Ango where ships must berth at Sep Zaire pier. Vessels handling Sep Zaire cargoes are given priority at this pier and in case of unavailability of berth, palm oil would be loaded by barge of 260 tons capacity at Matadi.

Palm kernel oil is also loaded at Berth Nos. 2 – 9 and Palm Oil at Berth Nos. 2 – 8 in Matadi.

P.L.Z. (Plantations Lever au Zaire) capacity	13,450 tons
AMATO-Freres	3,700 tons
MADAIL	2,340 tons
C.C.P.	3,627 tons

Cereals discharged by suction at No. 9 Berth. Rate 1,000 t.p.h.

BARGES/EQUIPMENT:

Barges:

2 Pontoons N.T. 41 tons each
8 Pontoons N.T. 75 tons each
1 Lighter N.T. 91 tons
2 Lighters N.T. 99 tons each
1 Tankbarge N.T. 279 tons
19 Lighters N.T. 339 tons each
1 Lighter N.T. 438 tons
11 Lighters N.T. 487 tons each
1 Lighter N.T. 514 tons
1 Lighter N.T. 522 tons
10 Lighters N.T. 557 tons each
2 Landing craft 875 tons each

Equipment:

28 Tractors and 242 trailers and carts
71 Forklifts with a maximum capacity of 2,500 kilos
2 Roller bridges 30 tons
3 Fork conveyors
34 Platforms × 20 ft.
6 Platforms × 40 ft. (Unilock)
1 Pushwagon tractor
Grain Elevators (Midema)

DENSITY: Fresh water.

STEVEDORES: See "General" before first port.

TANKERS: Discharge at Sep Zaire pier at Ango-Ango or Matadi. If lightening necessary before berthing, this can be effected at Ramler Buoy, 17 miles above Banana. No tank-cleaning facilities. No fresh water.

FRESH WATER: Delivery aboard the ship through valves and at each pier. Maximum daily capacity 200 tons. Delivery takes place according to the quantity asked for and usually during night.

Delivery cannot be done at the loading berth of Sep Zaire at Ango Ango.

Suppliers need 48 hours' notice. It is therefore highly recommended that Masters cable their needs well in advance to Agent and/or through Owners.

FUEL: See "General" before first port.

MEDICAL: Doctors and hospital facilities available.

GANGWAY/DECK WATCHMEN: Recommended.

Piracy: Acts of piracy have taken place in the port.

REPAIRS: Small repairs possible at railway workshop.

HOLIDAYS: *Legal Holidays in Zaire – 1986:*

1st January	New Year's Day
4th January	Memorial Day
1st May	Labour Day
20th May	Anniversary of the M.P.R.
24th June	Money Day
30th June	Independence Day
1st August	Relatives' Day
14th October	Zaire Youth Day
27th October	Zaire Day
17th November	Army Day
24th November	Revolution Day
25th December	Christmas

GENERAL: *Currents at the quays:*

The currents of the river vary from berth to berth and depend upon the high and low levels of the water with sometimes adverse currents and still waters. Difference between high and low level of the river is approximately 5.50 m.

Maximum speed at high level: 6 knots.

Minimum depth at lowest level: Minimum 8 m. at low water and minimum 10 m. at low water at the new Kala Kala quays.

Exports: Logs and timber (plywood, veneerwood), coffee, cocoa, rubber, copal, bananas, manioc, groundnuts, palm kernels, oils, cakes, fibres, cotton and copper.

Port Equipment and Accommodation: Matadi is the only Zaire port handling the despatch of export products originating from the interior and the import of products destined to Zaire (excluding Boma which is of minor importance and only serves the Mayumbe area).

About 90% of the tonnage in – and outward goes through Matadi at the head of the S.N.C.Z. railroad from Matadi to Kinshasa. The latter locality being a handling and concentration centre of the goods directed to or coming from Matadi.

SHIPMASTER'S REPORT: January 1981.

Documents and papers required on arrival Matadi:

7 Crew Lists.
2 Maritime Declarations of Health.
4 Passenger Lists (even if nil).
4 Ports of Call Lists.
4 Arms and Ammunitions Lists (even if nil).
4 Narcotic Lists.
3 Stores Lists.
2 Crew Customs Declarations.
1 Vaccination List (Cholera/Yellow Fever).
1 Animal List. (even if nil).

Following documents have to be shown to the Port Authorities:

Classification Certificate.
Ship's Register.
Derat Certificate.
Certificate of Tonnage Measurement.
Cargo Ship Safety Construction Certificate.
Cargo Ship Safety Radio-telegraphy Certificate.
Cargo Ship Safety Equipment Certificate.
International Load Line Certificate.
The official Log Book of the vessel and the Articles.

The number of crew written in the Crew Lists will be checked with the entries in the Articles.

Shore Leave: Each crew member receives a shore pass without particulars, which has to be returned before departure of the vessel. Fines will be imposed if shore leave pass is lost.

SHIPMASTER'S REPORT: August 1982.

As far as I could ascertain the only point in the Congo River where one can expect currents of 12 knots is in the "Devil's Cauldron" between Matadi and Ango-Ango. The rainy season is Jan./Feb. and the dry season June/July. The average current in the rainy season is 4 knots and in the dry 3 knots.

Tankers and other vessels who clear at Banana generally must go through the same procedure again at Ango-Ango or Matadi. A complete set of papers is expected as though it is the first entry into the country.

AUTHORITY: Office National des Transports – ONATRA, Port of Matadi. *Telex:* 21017 Onatra ZR. *Contact:* Port Director.

AGENT: Socopao Zaire, Avenue de la Fontaine 50, B.P. 338, Matadi, Zaire. Tel: 2109, 2111. Telex: 20361 Freight ZR. Cables: Freight Matadi.

Socopao Zaire, Avenue des Macons 1089, B.P. 5259, Kinshasa 10, Zaire. Tel: 77869, 77931, 78566. Telex: 20026 Freight ZR. Cables: "Freight Kinshasa".

BULLEN BAY

CURACAO OIL TERMINAL

THROUGHPUT:	Transhipment	1,200,000 barrels per day
	Refinery import	250,000 barrels per day

JETTIES:
- 1 – 500,000 DWT tanker jetty
- 1 – 350,000 DWT tanker jetty
- 1 – 250,000 DWT tanker jetty
- 2 – 100,000 DWT tanker jetties
- 1 – 70,000 DWT tanker jetty
- 2 – Tugboat jetties

TOTAL TANK CAPACITY – 17,750,000 barrels

1 –	1,000,000 barrels capacity –	1,000,000
16 –	750,000 barrels capacity –	12,000,000
6 –	375,000 barrels capacity –	2,250,000
38 –	Small tanks capacity –	2,500,000

PIPELINES: Main track consists of 5 strings of 36" pipe. The jetties carry 2 strings of 36" pipe in a loop. The loading rate is up to 12,000 tons per hour. Tankers' discharge rate is up to 25,000 tons per hour.

DEBALLASTING: Capacity 4,000 tons per hour per jetty. Ballast treatment produces affluent of less than 20 parts per million (20 ppm) oil content.

TUG SERVICE: Two tugs of 4,500 h.p. with 50 tons bollard pull each. One tug of 2,500 h.p. with 35 tons bollard pull.

REFINERY AREA

NOTE:

1 No anchors to be used within shaded area (Except in emergency situations)

2 Discuss method of approach with Harbour office (Channel 14)

POLLUTION: A submersible oil boom has been installed enclosing the oil pier. Normally, the boom rests on the sea-bed, but when needed it will be raised to the surface using compressed air.

The oil boom and its system of anchorage will be damaged by vessels' anchors. In order to ensure that the oil boom is operable at all times, and to avoid expensive repairs, which will be charged to the ship responsible for the damage, great care should be taken in connection with manoeuvres along the Slagen pier, which will require the use of anchors.

The drawing of the pier shows the position of the oil boom and the anchorage system. Except for emergency situations, anchors should not be used within the shaded area.

All manoeuvres to and from berths should be discussed with the Harbour office (Slagen Harbour Radio, Channel 14). The Harbour Office will give you information regarding current strength and setting.

Approach to Berth 2, and Berth 3 if Berth 2 is not occupied, is facilitated by the fendered sliding front shown on the drawing.

Before anchoring tankers should contact Fahal Control on VHF 12 for a designated anchoring position.

In all cases tankers are required to anchor at least 2 miles West of Fahal Island and at least 2 miles clear fo the Omani coastline.

Note 1. Pilot will advise boarding position on V.H.F. radio prior to arrival.

2. Vessels should not enter prohibited area unless accompanied by Pilot. If proceeding to anchorage pass northward of Fahal Island.

PUERTO ARMUELLES

STAINLESS STEEL SHACKLE FOR LINES WITH TAILS

Tails, if used, should preferably be made of nylon line (3 strand construction should not be used) about 11 m. long overall, and have a breaking strength at least 25% greater than the MBL of the wire to which they are attached. They should be replaced at least every 18 months unless experience and/or inspection indicates more or less frequent replacement is necessary.

CONTAINER GANTRY CRANES

TIDAL RANGE – FROM QUAY EDGE
J to Mean Low Water 4.31 m.
K to Mean High Water 2.55 m.

Cranes are self-sustaining i.e. fitted with electric generators
Cranes can be fitted with either 20 ft., 35 ft., or 40 ft. detachable spreaders.

A	Max. height of lift from quayside rail level to underside of 35 ft. & 40 ft. Spreaders 20.715 m. Rail level to underside of 20 ft. spreaders 19.624 m.
B	Max. outreach from waterside rail to centreline of spreader 35.000 m.
C	Max. travel from waterside rail to inside of rear rail 18.000 m.
D	Min. portal clearance above rail level 10.700 m.
E	Distance from waterside rail to quay edge 2.000 m.
F	Distance between rails 20.000 m.
G	Clearance between crane legs – waterside 14.300 m.
H	Buffer to buffer distance 22.000 m. Capacity under spreader 30.5 tonnes.

Cranes are fitted with telescopic 20 ft. to 40 ft. spreaders

No repairs to main engines allowed while vessels are alongside the pier.

Mooring ropes shown above are the safe minimum number for average weather conditions.

If necessary, additional mooring ropes may be required by the Pilot of ASESA Harbour Master.

Nylon ropes may be supplied by ASESA if any vessel does not have a sufficient quantity of suitable ropes for safe mooring.

Mooring ropes must be carefully tended to hold the vessel close to the dolphins at all times.

NOTES

1 Ropes number 1 & 4 forward and ropes number 1 & 2 aft are the main departure ropes. Ensure that these can be cast off last.

2 If ropes number 8 forward and number 7 aft cannot be used then rope number 4 forward and number 2 aft will have to be doubled up.

3 The mooring lay-out shown is the minimum requirement.

For vessels proceeding to Istanbul, or any other ports within the Sea of Marmara or Gulf of Izmit, pilotage is compulsory from the southern entrance. The same applies for vessels proceeding outwards. Pilotage is not compulsory for vessels proceeding from Gelibolu to Darica but is compulsory within the Gulf of Izmit. For through traffic pilotage is not compulsory for the Bosphorous and Dardanelles.

All pilot stations monitor V.H.F. channel 16.

MOORING PLAN — QUEEN'S DOCK

For 12,000 tons (and upwards) deadweight tankers berthed at Jetties 2,3,4,5

These are the minimum requirements which may be varied at the discretion of the Docks Supervisor/Berthing Master to suit the size of ship and existing or impending bad weather conditions.

Rope messengers are attached to the shore wires and are passed on board from the Jetty or attendant mooring boat.

Shore stern wire must not be shipped through the centre fairlead

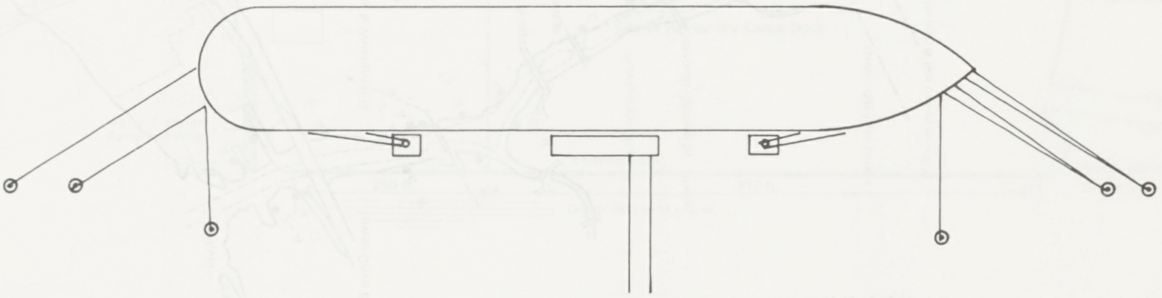
GATX



The dock is constructed of steel piles with a concrete floor and consists of a central platform and two breasting dolphins. Both the platform and the breasting dolphins have a wood faced steel pile fender system with moulded rubber impact energy absorber installed between the outer fender and the main dock structures.

MISSISSIPPI RIVER

KEY PLAN

Mississippi River Crossing Channels

The project depth for crossing channels is 45 ft. for a width of 500 ft. to mile 150 AHP and 40 ft. above.

The controlling depths are published in Navigation Bulletins issued periodically by The New Orleans District Corps of Engineers, New Orleans, Louisiana.

Crossing channels may be marked by buoys during Low Water.

Pollution Reports

Report all spills of oil and hazardous substances to The National Response Center via 800-424-8802 (toll free), or to the nearest U.S. Coast Guard facility if telephone communication is impossible (33 cfr 153).

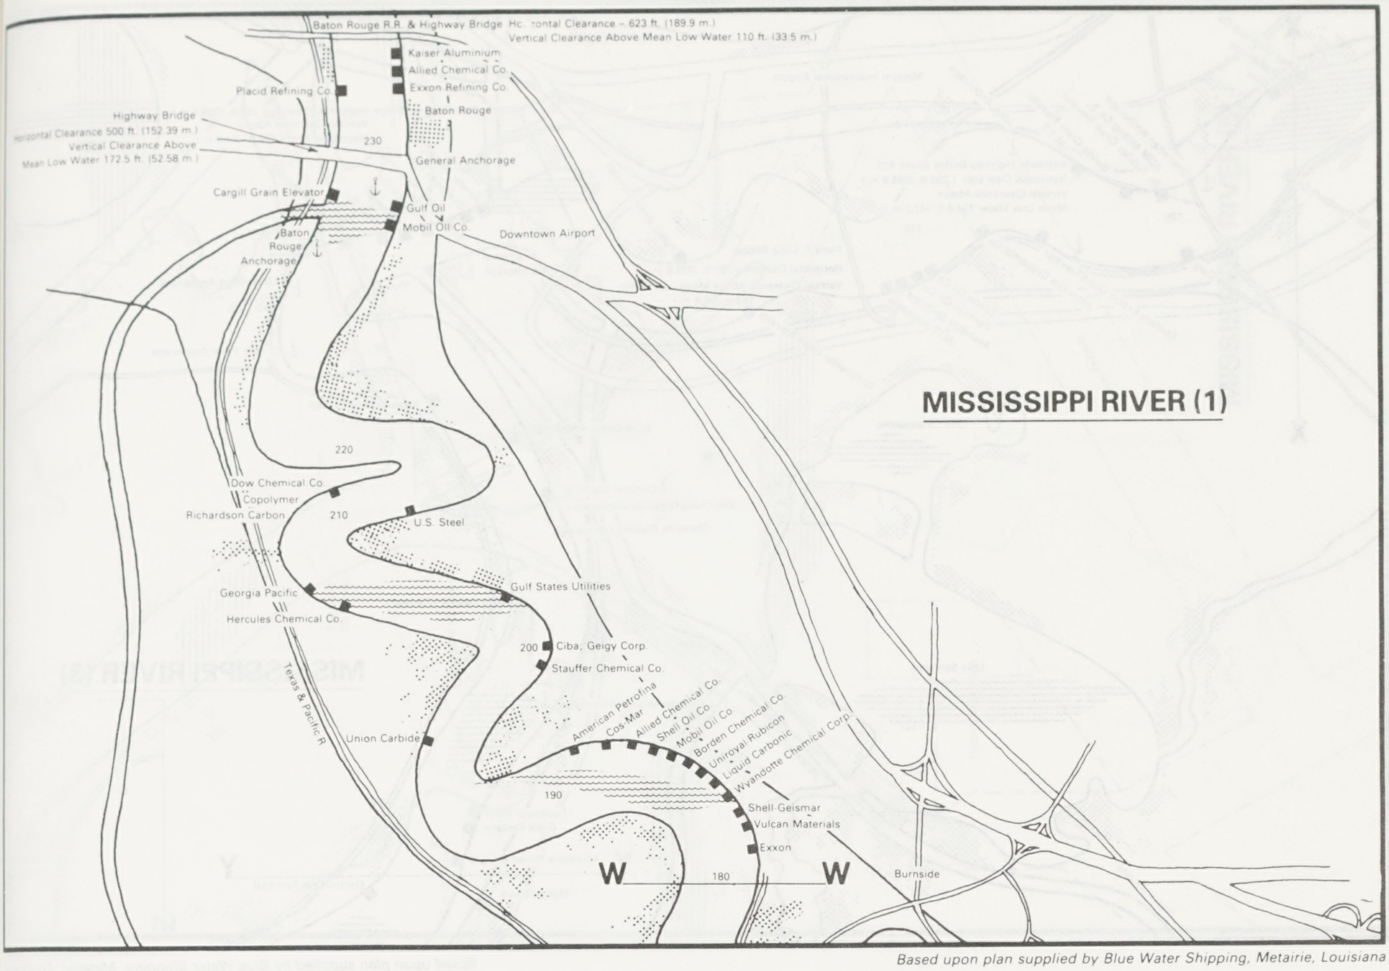
Warning

The Prudent Mariner will not rely solely on any single aid to navigation, particularly on floating aids. See U.S. Coast Guard Light List & U.S. Coast Pilot for details.

Caution

Mariners are warned that logs and other floating debris are constant dangers to navigations. Night travel by small craft is not recommended because of the hazard of floating obstructions.

Based upon plan supplied by Blue Water Shipping, Metairie, Louisiana



Baton Rouge R.R. & Highway Bridge Hc. :ontal Clearance – 623 ft. (189.9 m.)
Vertical Clearance Above Mean Low Water 110 ft. (33.5 m.)

VESSEL TRAFFIC SYSTEM

THE FOLLOWING VHF – FM FREQUENCIES ARE DESIGNATED AS VTS SECTOR FREQUENCIES:

Sector One – Channel 11 (156.55 mhz)
Sector Two – Channel 12 (156.6 mhz)
Sector Three – Channel 14 (156.7 mhz)
Sector Four – Channel 11 (156.55 mhz)
Sector Five – Channel 14 (156.7 mhz)

INFORMATION REQUIRED WHEN ENTERING THE VTS AREA

1. Type of vessel
2. Name of vessel
3. Point of entry
4. Destination & route
5. Length
6. Deepest draft
7. Speed of advance
8. Hazardous cargo – yes or no
9. Any equipment problems

FINAL REPORT

When a vessel anchors in, moors in, or departs from, the VTS area, the Master shall report the place of anchoring, mooring, or departing to the VTC.

MOORING ARRANGEMENTS FOR
50,000 DWT VESSELS & ABOVE

NOTE: Due to tidal currents, near proximity of passing vessels, and exposure of your vessel to Westerly winds, particularly in light condition, the following mooring arrangement is required.

Double spring lines to be used both forward and aft. Both forward and aft springs may lead through the same chocks at their respective locations, however, each spring line should be secured to a separate bollard on the dock.

The bow breast line deadman is approximately 137 m. from the vessel. A manila or synthetic line must be used as it is impossible to pull a wire to the shoreline here.

A shore messenger will be used to pull this line to the deadman.

45.7 m.

NOTE: Lines, numbered 1,2,3 from foremost isolated mooring cell and, lines, numbered 4,5,6 from the isolated mooring cell positioned southward of the jetty, are shore based polypropylene moorings. All other lines have to be provided by the vessel.

NIKISKI

UNION CHEMICAL DOCK

Flood and ebb currents are usually parallel to the dock at rates of 1.5 – 6 knots.

Gangway available on the dock.

Berth requires between 16 and 22 mooring lines. Extra lines can be hired from the Pilot Station if necessary.

- ● Quick release hook.

PALM BEACH

Legend:
The Port of Palm Beach is located on a saltwater sound known as Lake Worth and lies 1⅓ miles from the 37-foot contour of the Atlantic Ocean, to which it is connected by an artificial cut at the North end of Lake Worth known as Lake Worth Inlet.
(1) Entrance to the harbour is by a dog-leg channel running due West through the jetties and then turning Southwesterly to the terminals, 400 ft. wide, narrowing to 300 ft. in width as it continues across the lake another 3,000 ft., leading into a trapezoidal turning basin. (2) 1,400 ft. by 1,310 ft., adjacent to the port terminals on the West shore. Depth of the channel and turning basin is 35 ft. (3) Slip No. 1 is 690 ft. in length with water depth of 27 ft. (4) Slip No. 2 is 650 ft. in length with water depth of 35 ft. (5) Extension of turning basin with water depth of 25 ft. (6) Three Ro/Ro ramps and the New North Wharf, which together comprise 1,054 ft. in length.

RIVERHEAD

SUGGESTED MOORING PLAN — NORTH BERTH

The diagram above represents a suggested mooring arrangement for the North berth of the Northville Industries Corporation tanker platform at Riverhead, New York.

The ship plan represents a 30,000 to 40,000 d.w.t. handy size tanker with bridge amidship.

Mooring operations at Northville are conducted as follows:

1. With the vessel alongside the breasting dolphins, run spring lines fore and aft to maintain desired position. Spring line leads must provide adequate scope.
2. The launch will carry a messenger from the mooring dolphins to the bow or stern to run head, stern, and breast lines. The line crew will work one end of the ship at a time, as requested by the Master.
3. Each mooring line should be secured to an individual set of bitts. Placing two lines on one set of bitts by taking round turns should be avoided.
4. All lines must be tight, and the mooring plan adequate for all anticipated weather conditions before the transfer arms will be connected.
5. The ship's gangway is not used at this terminal.

RIVERHEAD

SUGGESTED MOORING PLAN — SOUTH BERTH

The diagram below represents a suggested mooring arrangement for the South Berth of the Northville Industries Corporation tanker platform at Riverhead, New York.
The ship plan represents a 30,000 to 40,000 DWT handy size tanker with bridge amidship.

Mooring operations at Northville are conducted as follows:

1. With the vessel alongside the breasting dolphins, run spring lines fore and aft to maintain desired position.
2. The launch will carry a messenger from the mooring dolphins to the bow or stern to run head, stern, and breast lines. The line crew will work one end of the ship at a time, as requested by the Master.
3. Each mooring line should be secured to an individual set of bitts. Placing two lines on one set of bitts by taking round turns should be avoided.
4. All lines must be tight, and the mooring plan adequate for all anticipated weather conditions before the transfer arms will be connected.
5. The ship's gangway is not used at this terminal.

INTERNATIONAL REGULATIONS FOR PREVENTING COLLISION AT SEA, 1972

RULE 10

Traffic Separation Schemes

(a) This Rule applies to traffic separation schemes adopted by the Organisation.

(b) A vessel using a traffic separation scheme shall:

- (i) Proceed in the appropriate traffic lane in the general direction of traffic flow for that lane.
- (ii) So far as practicable keep clear of a traffic separation line or separation zone.
- (iii) Normally join or leave a traffic lane at the termination of the lane, but when joining or leaving from the side shall do so at as small an angle to the general direction of traffic flow as practicable.

(c) A vessel shall so far as practicable avoid crossing traffic lanes, but if obliged to do so shall cross as nearly as practicable at right angles to the general direction of traffic flow.

(d) Inshore traffic zones shall not normally be used by through traffic which can safely use the appropriate traffic lane within the adjacent traffic separation scheme. However, vessels of less than 20 m. in length and sailing vessels may under all circumstances use inshore traffic zones.

(e) A vessel other than a crossing vessei or a vessel joining or leaving a lane shall not normally enter a separation zone or cross a separation line except:

- (i) In case of emergency to avoid immediate danger.
- (ii) To engage in fishing within a separation zone.

(f) A vessel navigating in areas near the terminations of traffic separation schemes shall do so with particular caution.

(g) A vessel shall so far as practicable avoid anchoring in a traffic separation scheme or in areas near its terminations.

(h) A vessel not using a traffic separation scheme shall avoid it by as wide a margin as is practicable.

(i) A vessel engaged in fishing shall not impede the passage of any vessel following a traffic lane.

(j) A vessel of less than 20 m. in length or a sailing vessel shall not impede the safe passage of a power-driven vessel following a traffic lane.

(k) A vessel restricted in her ability to manoeuvre when engaged in an operation for the maintenance of safety of navigation in a traffic separation scheme is exempted from complying with this Rule to the extent necessary to carry out the operation.

(l) A vessel restricted in her ability to manoeuvre when engaged in an operation for the laying, servicing or picking up of a submarine cable, within a traffic separation scheme, is exempted from complying with this Rule to the extent necessary to carry out the operation.

1 Off Feistein
2 In the approaches to the River Elbe
3 Off Terschelling & in the German Bight
4 In the approach to the River Jade
5 Deutsche Bucht Lightvessel Western approach
6 Off Texel
7 In the approaches to Hook of Holland
8 At North Hinder
9 At West Hinder
10 In the Strait of Dover and adjacent waters

12 Off Land's End, between Seven Stones & Longships
13 South of the Scilly Isles
14 West of the Scilly Isles
15 Off Smalls
16 Off Chicken Rock, Calf of Man
17 Off Skerries
18 In the North Channel
19 Off Tuskar Rock
20 Off Fastnet Rock
21 Off Casquets
22 Off Ushant
23 Off Berlenga
24 Off Cape Roca
25 Off Cape San Vicente
26 At Banco Del Hoyo

DEEP WATER ROUTES

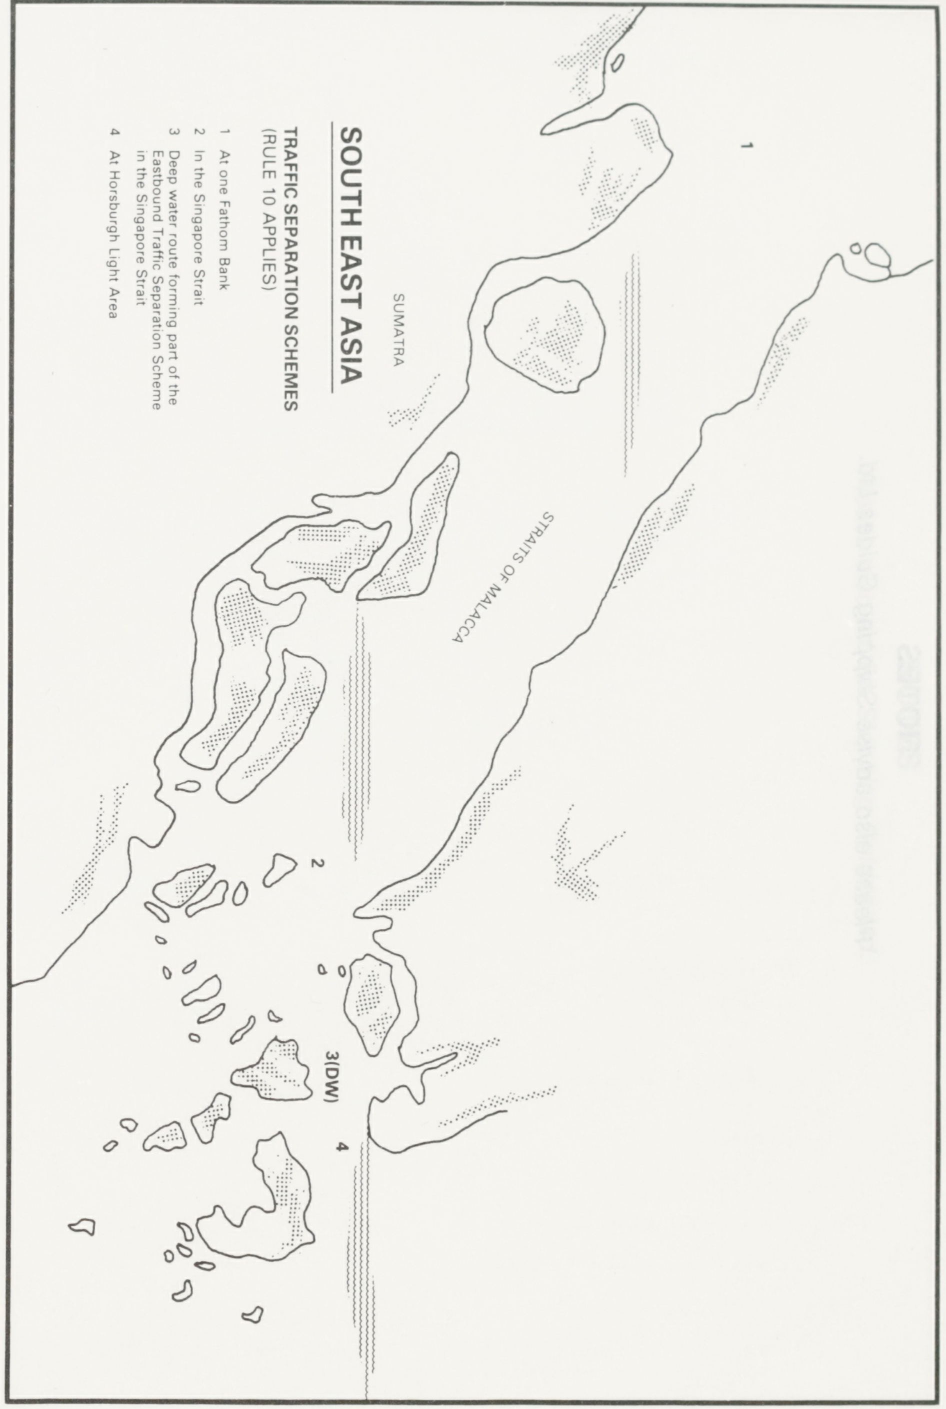
1DW From North Hinder to Lightbuoys TW/1 & TW/2 via S2 Lightbuoy

2DW From North Hinder to Lightbuoys TW/1 & TW/2 via DR1 Lightbuoy

3DW Leading to Europort

4DW Part of NE bound traffic lane of the Strait of Dover and adjacent waters traffic separation scheme

5DW Leading to Port of Antifer



SOUTH EAST ASIA

TRAFFIC SEPARATION SCHEMES
(RULE 10 APPLIES)

1 At one Fathom Bank
2 In the Singapore Strait
3 Deep water route forming part of the Eastbound Traffic Separation Scheme in the Singapore Strait
4 At Horsburgh Light Area

ALGIERS: (Also see page 2)

SHIPMASTER'S REPORT: September 1988.
Documents: Vaccination List only required if vessel arriving from an infected area.

All money must be declared, but need not be locked up.
Restrictions: Entry possible day and night.
Officials: As soon as vessel is anchored, Customs and Coast Guard board the vessel.

Beer and wine are not sealed.

Coast Guard inspects Load Line Certificate, Safety Construction Certificate, Safety Radio Certificate and Safety Equipment Certificate (including Liferaft Certificates).
Fresh Water: Fresh water available at anchorage at short notice by barge of 80 tonnes capacity.

SHIPMASTER'S REPORT: February 1989.

There are no buoys marking the Northern limits of the anchorages. Ships anchor as they please, regardless of size of vessel.

Pilotage is available around the clock.

The Unknown Soldier Monument is very conspicuous and is a good landmark for finding the head of the South Entrance Breakwater if, by any chance, it is impossible to distinguish it, due to congestion at the anchorage.

Angola

CABINDA: (Also see page 12)

SINGLE BUOY MOORING (LPG): LPG Berth.

Please note that the "Berge Sisar" (75,680 cu.m.) is to be replaced by the "Berge Troll" (71,300 cu.m.).

QUINFUQUENA: (Also see page 19) (See Late Plans)

PILOTAGE: *Delete 1st paragraph and substitute:* Pilotage is compulsory. The pilot boarding area is inside the anchorage circle North of the loading points (See "Anchorage" and "Late Plans").
ANCHORAGE: *Delete and substitute:*

Vessels awaiting mooring are requested to anchor inside an imaginary circle of 2 nautical miles diameter centred on Point "A" (See "Late Plan") where:

SPM bearing is 225°
RMD bearing is 135°
Essungo flare bearing is 327°

This will place all anchoring vessels at a minimum of 1.5 nautical miles from each of the surrounding sea lines.

At times the pilot may alter the anchorage location for one reason or another.

The pilot's requests will always overrule anything written therein.

The sea bottom in the area is sand and mud. Strict attention must be paid to all of the offshore installations in the area.

In addition to the loading points, these installations include the Essungo and Cuntala Platforms, the 18 in. oil sealine from Essungo to shore, the 20 in. oil sealine from shore to the R.M.D., the 30 in. oil sealine from the R.M.D. to the S.P.M., the 8 in. oil sealine from Cuntala to shore, the 16 in. oil sealine between the S.P.M. and Essungo Platform and the 16 in. sealine from the Southern Block Two Fields to the S.P.M.

These facilities are all marked on the British Admiralty Charts and all vessels bound for Quinfuquena Terminal must have on board the British Admiralty Charts No. 3206 and No. 638.

Anchoring is prohibited within a distance of 1.5 nautical miles from any of the offshore installations. All traffic is prohibited within a distance of 1 nautical mile of the loading points.
MAX. SIZE: *Add:*
Characteristics of Acceptable Vessels:

	S.P.M.	R.M.D.
Deadweight tons – maximum.	250,000 tons	150,000 tons
Distance – Bow to Manifold – maximum.	160 m.	150 m.
Draft at Loaded Condition.	72 ft.	47 ft.
Segregated Ballast Tanks.	Required	Required
Inert Gas System.	Required	Required
Derricks – minimum SWL.	10 tons	10 tons

RADIO: *Delete and substitute:*
Initial Message: Companies intending to lift crude oil from Quinfuquena Terminal will have to notify Fina Petroleos de Angola – Operations by telex (Telex No. 3246 Petrol An), 7 days prior to the anticipated arrival date.

This notification shall contain the following information:
Name of tanker.
Flag.
Gross tonnage.
Nett tonnage.
Deadweight tons.
Distance – bow to manifold.
Anticipated draft at loaded condition.
Nominated cargo quantity.
Shippers.
Agent.
Consignee.
Destination.
ETA QQ Terminal.
Deballasting time, if required.

Subsequent Updated Messages: Vessels bound for Soyo Quinfuquena Terminal must give their ETA 72 hours, 48 hours and 24 hours before arrival, addressed to Fina Petroleos de Angola, Soyo.

This can be transmitted via Portishead Radio (GKB) if addressed to M/V "Oil Panther, call sign GYEM for Fina Marine Superintendent Soyo".

Alternatively, ETA can be sent through INMARSAT to M/V "Oil Puma" or by telex to Fina Petroleos de Angola – Operations (Telex No. 3246 Petrol An).

The message should contain:
Vessel's name and Flag.
Master's name.
ETA at loading Terminal.
Arrival draft.
Last port of call.
Deballasting time, if any.

48 hours before arrival, radio contact can be made with Fina Petroleos de Angola Marine Office in Soyo on S.S.B. 8,291.1 kHz between 0900 hrs. and 0930 hrs. GMT.

A 24 hour radio watch is maintained on VHF Channel 11 at the Mooring Master's Office, call sign "Quinfuquena Pilot".

Ships are usually able to make VHF contact at a distance of 30 miles from the loading buoy.
VHF: *Add:* A 24 hour radio watch is required on VHF Channel 11.
MOORING: *Amend:*

Notice of Readiness accepted between 0600 hrs. and 1700 hrs.

The bitts are to be located not less than 3 m. and not more than 10 m. from the centre Panama Lead and capable of handling 56 mm. diameter wires.

Once the vessel is moored to the loading point, the floating hose is brought alongside and connected to the manifold by the ship's crew. The floating hose is equipped with a 12 in. Camlock connection. The floating hose at both the R.M.D. and the S.P.M. is 16 in. The bow to manifold distance should not exceed 150 m. for the R.M.D. or 160 m. for the S.P.M.
LOADING: *Add:*

As the oil to be loaded may contain hydrogen sulphide, it is recommended to keep breathing apparatus and resuscitators readily available during cargo operations.

Australia

BARROW ISLAND: (Also see page 62)

MOORING EQUIPMENT (TANKER):
Bow Anchors: Delete and substitute:
The anchors shall:

- (a) be located one each port and starboard bow;
- (b) have a minimum of 10 shackles (shots) of chain in tankers up to 50,000 tonnes load displacement and a minimum of 12 shackles in tankers over 50,000 tonnes load displacement;
- (c) comply with a classification society recognised by the Australian Department of Transport and Communications.

LOADING EQUIPMENT:
Note: During the first quarter of 1989 the Operator intends to change the hose connection method from the indirect method, using adaptors, deck hose and overside working platform, to the direct method, where the tail hose of the submarine hose string is bolted to the ship's manifold.

The Operator has incorporated a quick release coupling, to enable the hose to be disconnected and dropped quickly in the event of an emergency. It is felt that this method will be easier to use on a common-user basis.

(See "BALLAST – REPORT")

MELBOURNE: (Also see page 99)

DOCUMENTS: *Shipmaster's Report:* October 1988.
4 Crew Lists.
1 Ship's Stores Consumed.
1 List of Crew's Possessions.
4 Ports of Call Lists.
1 Animals in Cargo List ("Nil" return not required).
1 Ship's Pets List ("Nil" return not required).
2 Shipmaster's Bond.
2 Health Reports.
All Ship's Certificates required.
All the above to be filled in on Australian forms.

SYDNEY: (Also see page 122)

DOCUMENTS: *Add:*
Shipmaster's Report: October 1988.
First Port: See "Melbourne".
Second Port: 3 Crew Lists.
2 Ports of Call Lists.

Chile

GENERAL (Also see page 319)

DOCUMENTS: *Add:*
Ship's Officer's Report: The following documents are required at the second and subsequent ports:
4 copies Crew List.
4 copies Crew Personal Effects List.
4 copies Ship's Stores Declaration.

The following information supersedes the information on pages 319-339 for the specific ports and headings mentioned hereunder.

ANTOFAGASTA: (Also see page 321)

DOCUMENTS:
Customs:
General Ship's Manifest.
Cargo Manifest for the port.
Crew and Passenger List.
Personal Effects List.
Stores List.
General Declaration.
Maritime Authority:
Ship's Clearance from Last Port.
Crew List.
Passenger List.
Weapons Declaration.
Dangerous Cargo Declaration.
National Health Service:
Health Declaration.
Derat Certificate.
Agriculture Department:
Stores List.
General Declaration.
Interpol:
Crew List.
Passenger List.

PILOTAGE: Compulsory. Vessels calling at Antofagasta and willing to berth on arrival must proceed to the pilotage boarding station. Vessels that are to wait because of congestion or any other reason, are to anchor in the anchorage zone. Pilot will travel to and from the vessel in a launch specially assigned for this purpose. The launch is also used for mooring, and has VHF radio.

In order to have the vessel authorisation for manoeuvring, the ship must have:
(a) Two bower anchors with not less than 7 shackles of chain on each.
(b) Four mooring lines and two springs.

For vessels and port safety, in all berthing and/or unberthing, the assistance of one tug is compulsory. Vessels of less than 75 m. LOA do not need to comply with the above mentioned rule.

Two tugs wil be required for ships over 220 m. LOA.

Two tugs will also be required under the following special situations:
(a) Pier No. 4: Berthing of ships starboard side to, when other ships are docked at Piers No. 3 and No. 5.
(b) Pier No. 5: Unberthing of vessels docked starboard side to with no anchor in water.

Because of other ships in port, weather conditions or any other special situation, it is up to the Pilot to request a second tug.

All ships manoeuvring must request permission 4 hours in advance. 24 hours before arrival, vessels must inform the Maritime Authority their ETA, name, call sign, nationality, draft, last port of call and if there is any sickness on board.

Pilot Boarding Station:
The boarding area is within the following geographical points:
(1) Lat. 23° 37′ 37″ S., Long. 70° 24′ 37″ W.
(2) Lat. 23° 37′ 37″ S., Long. 70° 24′ 18″ W.
(3) Lat. 23° 38′ 07″ S., Long. 70° 24′ 18″ W.
(4) Lat. 23° 38′ 07″ S., Long. 70° 24′ 37″ W.

APPROACHES: *Traffic Separation Scheme:* A separation scheme exists at the entrance to the port, one mile wide, covering following geographical points:
(a) Lat. 23° 37′ 52″ S., Long. 70° 25′ 31″ W.
(b) Lat. 23° 37′ 52″ S., Long. 70° 28′ 50″ W.

There is one-way traffic for ships sailing West, located between the mentioned separation scheme and a line between the following geographical points.
(a) Lat. 23° 36′ 23″ S., Long. 70° 25′ 31″ W.
(b) Lat. 23° 35′ 30″ S., Long. 70° 26′ 58″ W.

There is one-way traffic for ships sailing East, located between the mentioned separation scheme and a line between the following geographical points:
(a) Lat. 23° 39′ 22″ S., Long. 70° 25′ 32″ W.
(b) Lat. 23° 40′ 22″ S., Long. 70° 26′ 30″ W.

Principal traffic course is 090° – 270°.

ANCHORAGE: Located outside the harbour between Paita Rocks and Cobre Norte Cove, with a depth from 25 m. to 40 m., with a good sand and mud seabed.

MAX. SIZE: Max. LOA 220 m. Max. draft 30 ft. With pontoon (10.0 m.) between vessel and quay max. draft of 35 ft. 09 in. is permitted.

Also see "Tankers".

RADIO: Antofagasta Radio Station, call sign CBA-3, attends 24 hours on following frequencies:

Service	*Emission*	*Maritime Zone*
500 kHz	A1A A2A	A1 A2
518 kHz	F1B	
2182 kHz	H3E J3E	
8461 kHz	A1A	
C – 421	J3E	
C – 16	G3E	
C – 26	G3E	

Emission of urgent messages for ships (NURNAV) and meteorological information are provided on following frequencies and hours.

Service	*Emission*	*Times*
476 kHz	A1A	1405 & 0205
2738 kHz	J3E	1415 & 0215
C – 14	G3E	1430 & 0230

Security frequencies are attended as follows:

2182 kHz	Night Service	2200 & 1200
C – 421	Day Service	1200 & 2200

Navtex international emission:
Covering "A" Zone:
Time table (UTC) 0000 – 0010 0400 – 0410 0800 – 0810
1200 – 1210 1600 – 1610 2000 – 2010

Traffic list emission on 476 kHz and C – 401, will be H+50 of every even hour.

HF telephonic frequency in bands of maritime mobile service will be attended via Playa Ancha "CBV" Radio.

VHF: Harbour Master and Pilot on Channel 16 throughout 24 hours.

TUGS: 3 tugs available, 970 h.p., 1,440 h.p. and 4,100 h.p.

Also see "Pilotage".

Tankers: Vessels in excess of 75 m. LOA mooring at the buoys will require the assistance of 1 tug.

BERTHING:

Pier	*Length* (m.)	*Max. Draft* (ft.)	(in.)
Fishing zone	205	24	00
Pier 1	220	30	00
Pier 2	165	30	00
Pier 3	165	30	00
Wharf zone	130	16	00
Pier 4	185	28	07
Pier 5	185	28	06
Pier 6	100	Under repair	
Pier 7	250	Under repair	
With separation raft at 10.0 m. from the pier.			
Pier 4	185	34	08
Pier 5	185	35	09

CRANES:
Pier No. 1, 2 and 3: 6×12 tons and 4×5 tons. Pier No. 4 and 5: 4×7 tons. Pier No. 6 and 7: Under repair.

TANKERS: There are 3 tanker terminals in the North part of Antofagasta Bay.

Esso Terminal:
Owner: Esso Standard Oil Co., Chile.
Max. Length: 235 m.
Max. Draft: 60 ft.
Products Handled: Petroleum and clean products.

Mooring Facilities: The terminal has 3 buoys, painted white, buoys are named "North Buoy", "South Buoy" and "Manoeuvring Buoy".

General: For positioning of anchors there are leading marks on the shore. They are 2 metal circles, painted orange with black crosses in the centre.

Vessels must have at least 2 mooring lines of 220 m. each for sending to each buoy.

All buoys have slip hooks.

When mooring, the vessel will be berthed on a heading of 235°. Vessels are to use both anchors, with 8 shackles on the starboard anchor and 6 shackles on the port anchor.

Vessels cannot moor when the swell covers the tops of the rocks or if the wind is Force 4 or over.

The assistance of a tug is required for mooring.

Mooring is only carried out during daylight hours. Unmooring is possible at night, weather permitting.

Hoses: 3×12 in. flexible hoses are used for unloading.

Codelco Terminal:
Owner: Codelco Chile Div. Chuquicamata.
Max. Length: 235 m. Max. Draft: 60 ft.
Products handled: Petroleum and clean products.

Mooring facilities: The terminal has 3 buoys painted yellow. Mooring operation is similar to the "Esso Terminal" above.

Hoses: Diesel and petroleum products are discharged through flexible hoses. Length of hoses 670 m.

Shell Terminal:
Owner: Shell Chile Ltda.
Max. Length: 235 m.
Max. Draft: 40 ft.
Products handled: Clean products and lubricating oils.

General: The mooring facilities consist of 3 buoys, painted yellow.

On the shore there are 3 metallic circles painted orange to assist with lining up of vessel.

For mooring, vessels must have at least 2 mooring lines of 220 m. for each buoy. All buoys have slip hooks.

Mooring in daylight only. Unmooring possible during night time, weather permitting.

When vessel is in the moored position the heading is 235° True. Both anchors used for mooring, 8 shackles used on starboard anchor and 6 shackles used on port anchor.

Hoses: Clean products are discharged through 12 in. flexible hoses.

Chimba Cove:

Emalco Gas Terminal:
Owner: Empresa Nacional de Petroleo.
Operator: Emalco.
Max. Length: 110 m.
Max. Draft: 27 ft.
Product Handled: LNG.

General: Vessels moor using 2 anchor, 2 buoys and 1 bollard on the shore on Guaman Island.

There are two orange circles on the shore which are the leading lines for dropping the anchors.

Vessels moor with 2 mooring lines, length 220 m. each, to each buoy and 2 mooring lines from the port side to the bollard on Guaman Island.

When moored, the vessel is on a heading of 330°.

Vessels can only moor during daylight.

Both anchors required for mooring, each with 6 shackles out.

Hoses: Gas is discharged by 8 in. diameter flexible hoses.

FRESH WATER: Fresh water available at all berths at approximate rate of 25 t.p.h. Vessels at anchor and vessels at buoys can obtain small quantities of fresh water from tugs.

FUEL: Fuel oil and diesel oil, in small quantities, can be supplied at all berths by tank trucks. Large orders can be tendered through the oil terminal, rate of delivery for fuel oil 80 t.p.h. and for diesel oil 300 t.p.h.

GANGWAY/DECK WATCHMEN: Supplied by Agent.

OPENING/CLOSING HATCHES: By ship's crew.

CERTIFICATES:
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
Oil Record Book.
Light Dues.
Tonnage Register Certificate.
Oil Pollution Certificate.

CUSTOMS ALLOWANCES: Each crew member is allowed 400 cigarettes per week and 2.5 litres of wine or spirits per week.

IDENTIFICATION CARDS: All crew are supplied with a shore pass. These passes are collected prior to sailing.

CONSULS: Argentina, Belgium, Bolivia, Denmark, France, Germany F.R., Greece, Italy, Jordan, Netherlands, Peru and Yugoslavia.

REPAIRS: There are 3 workshops for minor repairs:
Castro: Tel. 225501.
Ljubetic: Tel. 251547, 223268.
Corssen: Tel. 222331.

DRY DOCKS: None available.

SURVEYORS: Lloyd's Register, Societe Generale Sourveyance (S.G.S.), International Inspection Service (I.I.S.) and Centro de Estudios, Medicion y Certificacion de Calidad (CESMEC).

TIME: GMT minus 4 hours. Clocks are advanced one hour on the second Saturday in October until the second Saturday in March.

EMERGENCY CO-ORDINATION CENTRE: Search and Rescue Service: Antofagasta Maritime Authority. Tel. 222294, 221908, 223587.

POLICE/AMBULANCE/FIRE: Police: Tel. 133. Ambulance: Tel. 222370. Fire Brigade: Tel. 221212.

SERVICES: Compass adjusting, radar repair, radio repairs, gyro compass repairs and all other types of electronic repairs possible.

HOLIDAYS: New Year's Day (January 1st), Holy week (April 1st and 2nd), Labour Day (May 1st), Iquique's Fleet Action (May 21st), Corpus Christi Day (September 11th), Saint Peter and Paul (June 29th), Ascension del Senor (August 15th), Freedom Day (September 11th), National Day (September 18th and 19th), Discovery of America (October 12th), All Saints Day (November 1st), Immaculate Concepcion (December 8th), Christmas Day (December 25th).

AUTHORITY: Empresa Portuaria de Chile, Av. Grecia S/N, P.O. Box 190, Antofagasta, Chile. *Tel:* 223171, 251737, 223176. *Telex:* 225232.

ARICA: (Also see page 321)

PORT LIMITS: Seaward limits are:
Lat. 18° 28.6′ S., Long. 70° 19.9′ W.
Lat. 18° 27.2′ S., Long. 70° 20.5′ W.
Lat. 18° 26.7′ S., Long. 70° 19.6′ W.
Lat. 18° 28.1′ S., Long. 70° 18.9′ W.

DOCUMENTS:

Port Captain:
1 copy General Declaration.
1 copy Last Port Clearance.
1 copy Passenger List for the port, and in-transit, (even if nil).
1 copy Crew List.
1 copy Dangerous Cargo List for the port, and/or in-transit.

Customs:
2 copies General Declaration.
6 copies Cargo Manifest for the port.
10 copies Cargo Manifest in-transit to Bolivia.
10 copies Cargo Manifest in-transit to Tacna, Peru.
2 copies Crew List.
2 copies Crew Effects List.
2 copies General Stores List.
2 copies Bazaar List.
2 copies Mail List.
2 copies Passenger List for the port, or in-transit.
1 copy General Chilean Cargo Manifest, which is stamped by Customs and returned on board.

Immigration:
1 copy General Declaration.
2 copies Passenger List for the port and/or in-transit.
1 copy Crew List.

Health Department:
1 copy Sanitary Declaration.
1 copy General Declaration.
1 copy Passenger List for the port and/or in-transit.
1 copy Crew List.

Agriculture Department:
1 copy General Declaration.
1 copy Cargo Manifest for the port.
1 copy Cargo Manifest in-transit to Peru and Bolivia.
1 copy General Stores List.

Agency:
10 copies Cargo Manifest for the port.
10 copies Cargo Manifest in-transit to Peru and Bolivia.
1 set of Bills of Lading for the cargo to Arica, Peru and Bolivia.
1 copy General Declaration.
3 copies Passenger List for the port, or in-transit.
3 copies Crew List.
1 copy Dangerous Cargo List for the port and/or in-transit.
1 copy General Stores List.
1 copy Bazaar List.
1 copy Mail List.

If the ship does not take cargo, passengers or mail for the port or in-transit to Peru and/or Bolivia, the Master must in all cases present the same "negative" documents.

PILOTAGE: Pilotage is compulsory for all vessels, except vessels of Chilean flag under 1,000 Gross Register Tons.

Ships approaching port should fly international signal flag "G" to request Pilot. Pilot boat is a small craft, painted red or white, with "H" flag on the mast.

Pilot boards incoming vessels within the following area:
(1) Lat. 18° 27.2′ S., Long. 70° 20.5′ W.
(2) Lat. 18° 26.7′ S., Long. 70° 19.5′ W.
(3) Lat. 18° 27.1′ S., Long. 70° 19.3′ W.
(4) Lat. 18° 27.7′ S., Long. 70° 20.3′ W.

Pilot Station maintains VHF watch on Channel 16. Telex No. 221084.

ANCHORAGE: Safe anchorage for vessels arriving during the day and after sunset can be found to the North West of the Pilot boarding area in depths of 9 – 10 fathoms.

RESTRICTIONS: Ships docked and undocked at any time, weather permitting, if application presented in advance to Port Captain.

MAX. SIZE: In the Port Area the maximum permissible draft is 34 ft. and max. length 700 ft.

Bolivian Export Buoy: Vessels up to 60,000 d.w.t. Max. draft 43 ft.

San Martin Cove Buoy: Vessels up to 54,000 d.w.t. Max. draft 45 ft.

HEALTH: In case of fever or suspected diseases on board, Master must send a telex or radio message to Port Captain advising the situation. Upon arrival, vessels will be anchored and inspected by Health Department according to international procedures and will be declared in quarantine if necessary. If arriving from another Chilean port, pratique is automatic.

RADIO: Use "Maritgob Arica", telex No. 221084. Coastal Radio Station CBA2, permanent listening watch on VHF Channel 16 and 2182 kHz and 421 kHz (HF) listening watch in daytime between 0800 hrs. and 1800 hrs.

VHF: Call "Arica Radio". Listening watch on Channel 16. Vessels approaching the port must advise Arica Pilot Station of the ETA. Arica Radio has radio telephone service on Channel 26 (duplex). Request this service by Channel 16.

When manoeuvring within the port area, the Pilot will advise which channel to use.

RADAR: No Port Radio Service.

TUGS: 1×550 h.p. and 1×850 h.p. Tugs normally join vessels at the end of the breakwater.

Tugs are compulsory for berthing and unberthing in the following cases:
One tug for vessels over 90 m. length.
Two tugs for vessels over 140 m. length.
Not compulsory for vessels of 90 m. length or less.

BERTHING:

Berth No.	*Length* (m.)	*Max. Permissible Draft at LW* (ft.)
2	314	18.0
3		28.0
4	514	32.0
5		34.0
6		34.0

Loading and discharging normally by ship's gear.

CRANES: Berths No. 4, 5 and 6: 2×3 tons and 2×5 tons.

BULK CARGO FACILITIES: Four conveyor belts and loaders for bulk ores, grain, coal, etc., at approximate rate of 100 t.p.h. per conveyor.

SPECIALISED CARGO-HANDLING FACILITIES: Containers are handled with conventional gear, the port has a container yard of 115,936 sq.m., served by railroad and a bridge crane capable of lifting 40 tons. Service for containers includes 10 ton fork-lift trucks, mobile cranes with 12 tons' capacity, and specially designed wagons for their proper transportation.

BRIDGES: None.

STEVEDORES: The stevedores are nominated the day before ship arrives, according to ETA, by the Agent. Also nomination can be made during the day. Working in the port is in three shifts: 0800 hrs.–1530 hrs., 1530 hrs.–2300 hrs. and 2300 hrs.–0630 hrs.

MEDICAL: Medical assistance can be obtained at any time without advance notice.

TANKERS: *Bolivian Export Buoy:* Belongs to Yacimientos Petroliferos Fiscales Bolivianos; position 039° True, 6 cables from breakwater light. Can handle vessels up to 60,000 d.w.t., 43 ft. maximum draft; 12 in. hose connection. Loading rate 9,000 bbls./hr. No deballasting facilities. Mooring in daylight. Vessels moor to 3 stern buoys.

San Martin Cove Buoy: Used for discharge of Bunker C and clean products for the city services. 45 ft. maximum draft, 54,000 d.w.t., 8 in. hose connection, vessels moor to 3 stern buoys. No wires may be used.

FUEL: Diesel oil available by tank truck, advanced notice to Agent required.

FIRE PRECAUTIONS: No special fire precautions at the tanker terminal, only those that are internationally required.

CONSULS: The following countries are represented in Arica:

Argentina
Belgium
Bolivia
Costa Rica
Denmark
El Salvador
Germany F.R.
Great Britain
Italy
Norway
Peru
Spain

REPAIRS: Only small repairs can be performed in Arica, mechanical and electrical.

DRY DOCK: There are two dry docks intended for fishing boats, maximum capacity 800 tons and 45 m. length.

SURVEYORS: Naviera Portuaria Arica represent Lloyd's Register.

OPENING/CLOSING HATCHES: This service will be attended by the stevedores. Nomination is by number of hatches working.

CUSTOMS ALLOWANCES: Two and a half cartons of cigarettes per man, two and a half bottles of wine/spirits per man.

CARGO GEAR: Normally load/discharge effected by ship's gear.

AIRPORT: Distance to airport 7 miles. One flight to Miami weekly, two flights to Bolivia weekly. Domestic flights are available at the rate of two per day, to Iquique, Antofagasta, Santiago; from Santiago to other cities in the South of Chile.

TIME: GMT minus 4 hours. Clocks advanced one hour from September to March.

HOLIDAYS: January 1st; First Friday and Saturday of April; May 1st and 21st.; June 2nd and 29th; August 15th; September 11th, 18th and 19th; October 12th; November 1st; December 8th and 25th. Cargo can be arranged at all holidays, except December 24th, from 1800 hrs. to December 25th, 1530 hrs. and December 31st from 1800 hrs. to January 1st, 1530 hrs.

EMERGENCY CO-ORDINATION CENTRE: Call Arica Radio: See "Radio" and "VHF".

SERVICES: Supply of Chilean charts and nautical publications.

BANKS:

Banco de Credito e Inversiones	Bolognesi 221	32086	221004

SHIP SUPPLY SERVICE: All supplies can be obtained through the Agent.

DELAYS: No delays under normal conditions. Port congestion causes ships to wait at anchorage 24 hours or more, depending on unusual factors such as heavy swell, or lack of room to bring vessels alongside when 5 ships are docked.

AUTHORITY: Empresa Portuaria de Chile, P.O. Box 923, Arica. *Tel:* 32284. *Telex:* 221012. *Contact:* Domingo Ormazabal Gonzalez, Port Administrator.

BARQUITO: (Also see page 322)

Delete entry (See "Chanaral").

CALDERA: (Also see page 323)

DOCUMENTS:

Quarantine: Completed Declaration of Health (Q.S.I.).
Valid Derating Certificate.
International Vaccination Certificates.
Customs: Crew Declaration (Y.14).
Ship's Stores (E.1), 3 copies.
Inward Report (A.6).
Complete copy of each Manifest for goods to be discharged in Caldera/Calderilla.
Port Captain: Clearance from Last Port.
Crew List, 3 copies.
Copy of Manifest, Transit Cargo.
Immigration: Crew List, 2 copies.
Passenger Manifest for passengers not disembarking.
Immigration Control Cards for each person.

PILOTAGE: Compulsory. The owner, Master or Agent of a vessel must report via any coast station, by R/T or W/T, the vessel's ETA, 24 hours and 12 hours in advance of ETA. ETAs must be confirmed or corrected not less than 3 hours prior to arrival. Time in ETA message must be GMT. The following information must be included in the message:

(1) Name and call sign of vessel.
(2) Nationality.
(3) Length, draft and G.R.T.

Pilot Boarding Station: All vessels must wait for the Pilot in position Lat. 27° 03′ 00″ S., Long. 70° 50′ 13″ W. between Point Fuerte and Pointe Caleta.

Caldera Radio on standby on VHF Channel 16. Tel: 276.

ANCHORAGE: Vessels anchor with the Iron Ore Quay bearing 220°, 5 shackles in the water is sufficient.

MAX. SIZE: Vessels up to 44 ft. draft with a max. length of 240 m. can moor at the Ore Quay.

TUGS: 1×1,800 h.p. and 1×1,400 h.p.

BERTHING: *Dicaser Pier* (Ex-Fiscal Mole): Small vessels with max. LOA 110 m. and max. draft 3.5 m. berth alongside.

Vessels of any length, and draft of less than 8.0 m. can berth with stern to the mole, using 4 lines to bollards at a distance of 80 m.

Vessels with a draft of 10.0 m. will moor 120 m. off the mole.

In both cases, 6 or 7 shackles of cable is required on the starboard anchor. Vessel's head will be 360° when moored.

This position is recommended for loading general cargo transferred from the pier by lighters to the ship.

BULK HANDLING FACILITIES: *Iron Ore Berth:* (Out of order since April 1981).

Max. length 240 m. Max. draft 44 ft. The loading arm is fixed, hence vessels must shift to position each hatch under the tower. All cranes or derricks must be swung out to starboard prior to mooring. Vessels berth port side to, using 7 mooring buoys for head and stern ropes, and 2 dolphins for springs. Loading rate 1,200 t.p.h.

TANKERS: *COPEC Terminal:* Tankers moor to 2 stern buoys, using both anchors. Water depth 39 ft. Max. length 200 m. Hose connection 12 in. Day time and night time berthing.

Leading lights are installed to assist with dropping of anchors.

DENSITY: 1025.3.

FRESH WATER: Available from tugs.

CALDERILLA: (Also see page 323)

Vessels bound for Calderilla must first call at Caldera for pilot and official clearance.

DOCUMENTS: See "Caldera".

PILOTAGE: See "Caldera".

ANCHORAGE: Vessels less than 150 m. in length can await a berth 2 cables N.N.E. of the Mechanical Pier in 45 ft. of well sheltered water. Larger vessels must anchor in Caldera Bay.

MAX. SIZE: 60,000 d.w.t. Max. LOA 240 m. Max. draft 40 ft. Also see "Berthing".

BERTHING: "*Sademi*" *Mechanical Pier:* A mechanical loading belt has been built to the N.E. of the Peninsula. There are 2 loading arms each 50 m. long that can load at 1,000 t.p.h. The arms are fixed and vessels must shift to place each hatch under the tower. Vessels moor to 7 buoys, 3 forward and 4 aft. Entry can be made by day only.

Playa Blanca Terminal:

(a) A small pier for fishing boats, length 40 m., is installed on the N.W. side of the bay, for discharge operations and supply to the factory.
(b) Pontoon "URO", length 90 m., bearing 340° from the pier and anchored with 6 anchors and chains (3 forward and 3 aft). Vessels alongside the Pontoon head 215° or 035°. Max. draft: 30 ft. Max. length 200 m. Max. d.w.t. 35,000.
(c) 4 Mooring buoys for the ships berthing alongside (2 North side and 2 South side).

MEDICAL: First aid available in Caldera (5 km.). Hospital at Copiapo (80 km.).

FRESH WATER: Only available by tug.

CHACABUCO: (Also see page 323)

PORT LIMITS: A line joining Punta Weste and Peninsula Fontaine (North West point).

DOCUMENTS:

1 Clearance.
1 Light Dues Certificate.
7 Port Cargo Manifests.
4 General Cargo Manifests.
7 Transhipment Cargo Manifests.
3 Passenger Lists for the Port.
3 Passenger Lists for in-transit passengers.
18 Crew Lists.
1 Personal Effects List.
Passenger Baggage Declaration (2 per passenger).
1 Fumigation Certificate.

PILOTAGE: Compulsory for foreign vessels. Pilotage can be done by the Channel Pilot who is on board the ship.

Not compulsory for Chilean vessels.

ANCHORAGES: Anchorage point is Lat. 45° 28′ 45″ S., Long. 72° 50′ 10″ W.

RESTRICTIONS: Vessels over 70 m. LOA berth in daylight hours only.

MAX. SIZE: Max. LOA 165 m. Max. draft 25 ft. (forward), 32 ft. (aft). Max. displacement 15,000 tons.

HEALTH: If from a Chilean port, Free Pratique is granted by the Port Captain.

If arriving from overseas, Free Pratique can be granted by the Port Captain after the inspection of the Health Inspector, International Police, Customs and Agriculture Inspector.

RADIO: Naval radio station of Aysen at Aysen Port. Call sign CHY-2. Station receives and transmits on 2182 kHz and VHF Channel 16.

VHF: Chacabuco Naval Radio Station on Channel 16.

BERTHING: New quay: Length 52 m. Depth alongside 7.7 m. – 9.2 m. Fresh water available at a rate of 20 cu.m.p.h.

CRANES: 2×5 tons, 1×20 tons.

BULK CARGO FACILITIES: 1 conveyor belt belonging to "Minera El Toqui".

SPECIALISED CARGO HANDLING FACILITIES: To the N.W. of the new quay, there is a Ro/Ro terminal for coastal car ferries.

TANKERS: *Fuel Terminal:* Vessels of 10,000 tons displacement discharge fuel via a submarine pipeline. Pilotage compulsory for foreign vessels. Daylight berthing and unberthing.

Gas Terminal: Vessels in the range 750 – 1,000 tons displacement discharge liquid gas via submarine pipeline. Pilotage compulsory for foreign vessels. Daylight berthing and unberthing.

STEVEDORES: 3 stevedoring companies with 50 persons each.

MEDICAL: There is a hospital at Puerto Aysen.

FRESH WATER: Available, no restriction on amount.

FUEL: Fuel is available from Copec S.A. and Shell Chile.

GANGWAY/DECK WATCHMEN: Available and required by law.

OPENING/CLOSING HATCHES: To be carried out by the stevedores.

CUSTOMS ALLOWANCE: No unusual restrictions.

IDENTIFICATION CARDS: Required.

CONSULS: None.

REPAIRS: No repair facilities available.

DRY DOCKS: None.

REPATRIATION: Facilities available.

AIRPORT: Balmaceda National Airport is 120 km. from Chacabuco, national flights. Coyhaique Airport is 80 km. from Chacabuco, flights to Puerto Montt.

TIME: Local time: October to March, GMT minus 3 hours and March to October, GMT minus 4 hours.

HOLIDAYS: See "General" before first port.

SERVICES: Charts can be obtained from Naval Radio Station Aysen.

SHORE LEAVE: Allowed.

PORT REGULATIONS: It is strictly prohibited to dismantle the main engine or effect repairs to the engines without previous notification and authorisation from the maritime authorities. Also, to deballast petroleum, pump bilges, throw overboard waste or refuse in the port.

CHANARAL (including Barquito): (Also see page 323)

DOCUMENTS:

Health:
Completed Declaration of Health (Q.S.I.).
Valid Derating Certificate.
International Vaccination Certificates.

Customs:
Crew Declaration (Y.14)
3 Ship's Stores (E.I.).
Inward Report (A.6).
Complete copy of each Manifest for goods to be discharged in Chanaral, and Transit Cargo.
Clearance from Last Port.

Immigration:
2 Immigration Crew Lists (200).
3 Passenger Manifests for Passengers not disembarking.
Immigration Control Cards or Passports for each person.

PILOTAGE: Compulsory. To avoid a delay in obtaining a Pilot, the owner, Master or Agent of a ship, must report via any coast station by R/T or W/T the vessel's ETA, 24 hours and 12 hours in advance of arrival. ETA must be confirmed or corrected not less than 3 hours prior to arrival. Time must be GMT.

The following information must be included in the ETA message:
(1) Name and call sign of vessel.
(2) Nationality.
(3) Length, draft and G.R.T.

Pilotage is compulsory for shifting and unberthing. Port Captain and tugs require 2 hours notice through the local agent.

Pilot Boarding Station: Lat. 26° 21′ 18″ S., Long. 70° 41′ 20″ W. Chanaral Radio stands by on VHF Channel 16 and 2182 kHz for giving information to the port authorities.

ANCHORAGE: In position Lat. 26° 20′ S., Long. 70° 40′ W. with Point Piedra Blanca bearing 118° – 1.5 miles. Depth of water 78 ft.

MAX. SIZE: LOA 250 m. Draft 40 ft.

Also see "Tankers".

TUGS: 2 tugs available.

BERTHING: *Codelco Pier:* New structure at Chanaral for loading general cargo. Length 39 m., width 39 m. Depth alongside 40 ft.

Codelco Mechanised Quay: At Point Piedra Blanca there is a mechanised pier, property of Codelco, for loading bulk iron ores. 60 m. long by 10 m. wide, with 14.5 m. depth; sand and mud bottom. Ores transported by means of a conveyor belt to a loading tower from which it is loaded direct to ship's hatches. At present, loading tower is fixed so that vessels have to be moved to change hatches. Loading rate is 1,000 t.p.h. Vessels up to 250 m. length, 40 ft. draft have loaded. Vessels moor at head of quay, which has 7 buoys (3 forward and 4 aft). In addition the quay is provided with bitts to secure mooring ropes, fore and aft.

Barquito:

Buoy No. 4: Suitable for mooring large vessels for loading of lighters only (general cargo). Vessels moor stern onto the buoy and discharge into lighters, which in turn discharge at the Pier Head (Barquito Pier).

Position of Buoy: Barquito Pier bearing 046° – 850 m.

Lines: 2 lines × 150 m. each required.

TANKERS: Buoys No. 1, 2 and 3 at Barquito are for the Oil Terminal.

The hose marker buoy is in position – Barquito Pier bearing 182° 400 m. Vessel's use starboard anchor to pivot onto the 2 stern buoys. The hose connection will then be made on the port side. Max. draft 50 ft. Max. length 250 m.

Lines: Forward: 2 lines × 150 m. length.
Aft: 4 lines × 200 m. length.

FRESH WATER: Available from tugs only, rate 30 t.p.h.

FUEL: Small amounts of diesel oil available by tug, rate 2.5 cu.m.p.h.

GANGWAY/DECK WATCHMEN: Usually ship's crew.

OPENING/CLOSING HATCHES: By ship's crew or stevedores, whichever to ship's advantage.

CERTIFICATES:
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Lights and Beacons Certificate (Chilean coast).
Pollution Certificate.

CUSTOMS ALLOWANCES: No fixed limits.

REPAIRS: No facilities for major repairs. Two shipyards to repair tugs and lighters only.

AIRPORT: The airport for small planes is located 2 km. North of Chanaral. Commercial airport 150 km. away.

TIME: GMT minus 4 hours between March and October. From October to March GMT minus 3 hours.

POLICE/AMBULANCE/FIRE: Maritime police, Tel: 80047 or VHF Channel 16 or 2182 kHz.

AUTHORITY: Codelco Chile, P.O. Box No. 48, Chanaral, Chile. *Tel:* 80031. *Cables:* Codelco Chile. *Contact:* Rene Acevedo Ginstinianovic, Maritime Agent, Codelco.

COQUIMBO: (Also see page 324)

PORT LIMITS: An area limited by parallel of Latitude 29° 56′ S., meridium of Longitude 71° 20′ W., and the shoreline of Peninsula Coquimbo.

DOCUMENTS: Documents required from a vessel are:
8 copies Crew List.
4 copies Passenger List.
1 copy Vaccination List.
2 copies Personal Effects List.
1 copy General Manifest.
5 copies Manifests for the Port.
4 copies Dangerous Cargo List.
3 copies Stores List.
1 copy Sanitation Certificate.
3 copies General Information.
1 copy Clearance from Last Port.
Ship's Documents and Certificates.

PILOTAGE: Pilotage is compulsory for all vessels proceeding to quay. Service is requested through Agent. Pilot boarding point is about 1 mile East of Punta Tortuga Lighthouse. Pilot boat is a small commercial motor boat or launch. As vessels approach heading South, boarding is effected on the port side.

ANCHORAGES: Good anchorages can be found N.N.E. to E.N.E. from the quay at distances from 0.6 miles to 1.2 miles, with depths varying from 10 m. to 23 m. A forbidden zone, surrounding the quay, is shown on charts.

RESTRICTIONS: No night time or tidal restrictions for mooring. Vessels can berth and unberth 24 hours a day.

MAX. SIZE: No restriction on length or breadth, unless other vessel at the quay. Draft restrictions are 27 ft. 6 in. for Berth No. 1 (the Southernmost) and 29 ft. 6 in. for Berth No. 2. Some allowance may be permitted in special cases, according to tide height.

HEALTH: Vessels must obtain Pratique in every port of call in Chile. Pratique is requested and coordinated by the Agent. In case of any suspected disease or fever onboard, proper and timely notice must be sent to Port Captain and Agent.

RADIO: The main coastal station is Playa Ancha Radio, call sign CBV. The Station is connected to the other coastal stations and is provided with a Telex system for ships, No. 01860. Vessels can also contact their Agent by satellite system, on the telex.

VHF: There is a local VHF station, operated by the Port Captain, call sign is "Coquimbo Radio". It can be contacted through Channel 16. It also broadcasts local weather reports.

RADAR: No Port Radar Service.

TUGS: There are 2 tugs for assisting with berthing. Assistance is compulsory under certain conditions, these are stated in the Port Regulations. Ship's or tug's lines may be used, no additional charge if tug's lines used.

BERTHING: There is one quay 378 m. long, having 2 berths of approximately 180 m. usable length each. Permitted drafts are 27 ft. 6 in. for Berth No. 1 and 29 ft. 6 in. for Berth No. 2, both in salt water.

Loading and discharging operations can be performed either with ship's gear or shore equipment, depending on conditions.

Grain cargoes are handled at Berth No. 2, while general cargo can be handled at any berth.

CRANES: There are 6 electrical, rail mounted cranes, with 5 tons lifting capacity and 17 m. reach, that can operate through both berths. There also exists a heavy lift truck crane, with 27 tons capacity at 3.5 m. reach. At greater outreach the capacity decreases.

BULK CARGO FACILITIES: Berth No. 2 and adjacent yards and warehouses are scheduled for bulk cargo handling. Max. permitted draft is 29 ft. 6 in., with some allowance in tidal height for special cases.

Shore equipment for bulk cargo handling consists of 2.0 cu.m. grabs, 3.0 cu.m. trays and 2 movable electrical conveyor belts with a max. airdraft of 8.5 m. on ship's side.

Handling rates are approximately 60 t.p.h. for grabs and trays, and 200 t.p.h. for conveyor belts. These rates vary according to nature of product being handled.

Bulk cargoes normally handled at this port are manganese, copper ore, copper concentrate, coal, fishmeal and wheat grain.

SPECIALISED CARGO HANDLING FACILITIES: No facilities. However, spacious yards are available for the storing of containers.

STEVEDORES: Stevedore services are arranged by Agent, based on customary ETA notice and ship's needs.

Labour time is 24 hours a day, with a 3-shift system, for general cargo as well as for bulk cargoes.

MEDICAL: Advance notice to obtain medical care is not normally required, unless some urgency arises. Medical and dental care is available, as well as hospital facilities, both in Coquimbo and La Serena, a city nearby.

Normal vaccination required is International Yellow Fever. No vaccinations available in Coquimbo.

TANKERS: No oil piers in Coquimbo.

DENSITY: Average density is 1025.5.

FRESH WATER: Fresh water is available for ships alongside from shore connections. Ship's hoses must be used. Approximate delivery rate is 7 t.p.h. at a cost of US$0.25 per ton.

FUEL: Vessels alongside can take diesel oil only, from trucks. 72 hours notice to Agent is required.

FIRE PRECAUTIONS: Normal precautions to be taken.

CONSULS: Sweden, Spain, Italy, Peru.

REPAIRS: Minor mechanical and electrical repairs only. Diver services available.

DRY DOCKS: No dry docks for merchant vessels. A landing ramp for fishing and special craft is available.

SURVEYORS: Independent cargo surveyors available. No surveyors from classification societies, but they can be appointed from Valparaiso, with an advance notice.

GANGWAY WATCHMAN: Available, at Master's option and request.

HATCHES: Opening and closing by ship's crew.

CUSTOMS ALLOWANCES: Reasonable amounts of tobacco and spirits for personal use permitted out of bond.

CARGO GEAR: Loading and discharging operations can be performed by ship's gear or shore equipment.

REPATRIATION: Crew changes and repatriations can be effected through Santiago International Airport, 450 km. to the South.

AIRPORT: 20 km. from Coquimbo is located La Florida domestic airport, served by daily flights. In Santiago, the capital, international connections can be found to different countries.

TIME: Official time zone is GMT minus 4 hours. Summertime (GMT minus 3 hours) is kept from October to April.

HOLIDAYS: January 1st; Holy Week (Friday, Saturday and Sunday, at the end of March or beginning of April); May 21st; June 29th; August 15th; September 18th and 19th; October 12th; November 1st; December 8th and 25th.

POLICE/AMBULANCE/FIRE: Telephone numbers are:

Police	311111
Ambulance	311101
Fire	311371

EMERGENCY COORDINATION CENTRE: Port Captain. Tel: 311055. VHF Channel 16.

TELEPHONES: No ship connections.

SERVICES: No special services or specialised nautical supplies. Some minor electronic repairs and compass adjusting available.

BANKS: A number of Chilean banks are established in Coquimbo.

STORING: Available. In small quantities, supplies can be delivered by motor boat. Mainly, storing is carried out by trucks alongside, shore personnel and fork lifts available to assist.

Customs Regulations are ship chandler's matter.

SHIP SUPPLY SERVICE: There are ship chandlers in Coquimbo. They can be appointed through Agents.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Every crew member going ashore must carry his shore pass, issued by Immigration.

DELAYS: Some delays can be expected during Summer season, as traffic is greatly increased by fruit exports. During the rest of the year there are no delays.

DEVELOPMENTS: No developments planned in the near future.

GENERAL: As a result of the increase in fruit exports, reefer warehouse capacity has been increased.

CORONEL: (Also see page 324)

BERTHING: *Mechanical Pier:* Depth 40 ft. Max. LOA 220 m. There are 3 mooring buoys, and the vessel berths starboard size alongside. Port anchor is used with up to 8 shackles. Loading rate 200 t.p.h. Vessel will be required to shift so that each hatch is under the loading arm. Vessel will berth alongside 4 dolphins and head lines and stern lines will be made fast to 2 pylons. The berth is exposed to Northwesterly winds and vessels should be ready to sail at short notice.

FRESH WATER: Available at a rate of 140 tons per day.

GUAYACAN: (Also see page 325)

PORT LIMITS: A line joining Punta Miedo on Northern side of entrance and Punta Herradura on Southern side.

DOCUMENTS: See "Coquimbo".

PILOTAGE: Compulsory. All foreign vessels must pick up Pilot in Coquimbo. Chilean vessels can proceed to Guayacan and pick up Pilot inside the port limits. Pilotage service is requested through Agent.

ANCHORAGES: The bay is well sheltered and has good holding ground. Best place to anchor can be found heading on the entrance leading marks (140° True) and dropping anchor in 33 m. depth. Nevertheless, vessels awaiting berth must proceed to Coquimbo for an anchorage.

RESTRICTIONS: No night-time or tidal restrictions. Vessels can moor 24 hours day.

MAX. SIZE: *Ore Pier:* LOA 315 m., beam 50 m., draft 16.20 m. and 200,000 d.w.t.

Oil Pier: LOA 190 m., draft 12.0 m. and 41,000 d.w.t.

HEALTH: See "Coquimbo".

RADIO: See "Coquimbo".

VHF: See "Coquimbo".

RADAR: No service available.

TUGS: No tugs available.

TANKERS: There is an oil terminal with 2 mooring buoys for the discharge of clean products. Max. permitted draft is 12.0 m. Discharge is performed with ship's pumps.

Hose connection to the oil terminal is 8 in. diameter and is connected on the starboard side. Max. working pressure is 80 p.s.i., which makes an approximaste average delivery rate of 450 cu.m./hr.

No slop or ballast storage capability. No special equipment for spill control.

Vessels use both anchors and 2 buoys on the port and starboard quarter.

MEDICAL: See "Coquimbo".

DENSITY: 1025.5.

FRESH WATER: Not available.

FUEL: Diesel oil available at the Ore Pier by truck. Agent required 72 hours' prior notice.

FIRE PRECAUTIONS: Usual precautions for tankers.

CONSULS: See "Coquimbo".

REPAIRS: See "Coquimbo".

DRY DOCKS: None.

SURVEYORS: See "Coquimbo".

GANGWAY/DECK WATCHMEN: Available, at Master's option.

HATCHES: Opening and closing by ship's crew.

CUSTOMS ALLOWANCES: See "Coquimbo".

CARGO GEAR: Shore gear used at Ore Pier.

REPATRIATION: See "Coquimbo".

AIRPORT: See "Coquimbo".

HOLIDAYS: See "Coquimbo".

POLICE/AMBULANCE/FIRE: See "Coquimbo".

EMERGENCY CO-ORDINATION CENTRE: See "Coquimbo".

TELEPHONES: No ship connecitons.

SERVICES: See "Coquimbo".

BANKS: See "Coquimbo".

STORING: See "Coquimbo".

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Issued by Immigration.

DELAYS: Usually no delays.

AUTHORITY:

Ore Pier: Cia. Minera de Pacifico, Pedro Pablo Munoz 675, La Serena, Chile. *Tel:* 215505. *Telex:* 220022 CMP LS CL.

Oil Terminal: Cia. de Petroleos de Chile, Camino La Herradura s/n, Coquimbo, Chile. *Tel:* 312424. *Telex:* 240048 COPEC CL.

HUASCO: (Also see page 325)

DOCUMENTS:

Amend:	6 Passenger Lists, or 3 No Passenger Lists. 3 Per Passenger, Baggage Declarations.
Add:	2 Cargo Manifests of Dangerous Elements.

PILOTAGE: Compulsory for every vessel mooring at Guacolda I and at Guacolda II.

Vessels wait for Pilot within area below:

(1) Lat. 28° 26′ 59″ S., Long. 71° 14′ 34″ W.
(2) Lat. 28° 26′ 52″ S., Long. 71° 14′ 10″ W.
(3) Lat. 28° 27′ 13″ S., Long. 71° 14′ 02″ W.
(4) Lat. 28° 27′ 20″ S., Long. 71° 14′ 20″ W.

ANCHORAGES: Large vessels' anchoring ground is 2.0 cables N.N.E. of Cayo Isle in 24 m. – 26 m., sandy bottom. Small vessels can anchorage 2.0 cables 090° from Cayo Isle in 12 m. of water, sandy bottom.

Depth is generally moderate and level with a sand and shell bottom. While at the maritime terminals of Guacolda I and II it is quite deep, around 16 m. to 50 m., which has to be taken into account when anchoring. The bottom at these terminals is mud, offering good holding ground.

Vessels can anchor without Pilot in the "Pilot Waiting Area". Pilot is compulsory for anchoring in the anchorage.

RADIO: *Amend:* Category – H3E.
Schedule – H24.

VHF: Vessels can communicate with the Port Captain to advise their arrival and must call the Pilot Station 2 hours before arrival through Channel 16.

BERTHING: There are 2 cargo terminals in service, Guacolda I for general cargo and Guacolda II, the mechanised one, for loading iron ore and "pellets", both are the property of Compania Minera del Pacifico. The particulars of these installations are:

	Guacolda I	*Guacolda II*
Max. LOA	260.0 m.	315.0 m.
Max. Draft	13.5 m.	25.0 m.
Max. Air Draft	—	23.6 m.
Max. Loading Rate	—	6,000 t.p.h.
Loading Arm Reach	—	42 m.

The cargo terminal of Santa Barbara is at present out of order.

Guacolda I Terminal: Normally used to discharge fuel, coal and general cargo for the Pellet Plant of Huasco.

The installation of the old mechanised system is being dismantled and only part of the shiploader is left standing.

Guacolda II Terminal: Used for loading iron ore in "pellets".

Warping the Vessels: Vessels docking at Guacolda I must have at least 8 lines of 260 m. and 7 lines of 220 m. For docking at Guacolda II, vessels must have 12 lines of 260 m. and 6 lines of 220 m.

STEVEDORES: There are 86 stevedores for doing the work on board. Working hours are 0800 – 1530, 1530 – 2300 and 2300 – 0800.

MEDICAL: Hospital at Huasco with specialist services. 2 dentists and 2 doctors also available. There is a more specialised hospital in Vallenar, about 50 km. from Huasco.

DENSITY: 1026.

TANKERS: Tankers berth at Guacolda I, see "Berthing".

FUEL: Diesel oil available at Guacolda I.

OPENING/CLOSING HATCHES: By crew or stevedores.

IDENTIFICATION CARDS: Passport or Seaman's Book.

CONSULS: None.

CERTIFICATES:
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate (1969).
Oil Record Book.
Responsibility for Pollution of Water Certificate.

Gas Free Certificate: Compulsory for OBO type vessels when the last cargo was fuel. The inspection must be requested from Port Captain, who sends an inspector and makes the certification.

REPATRIATION: Crew changes and repatriation possible.

EMERGENCY CO-ORDINATION CENTRE: Capitania de Puerto Huasco. VHF Channel 16; HF 2182 kHz. Telephone No. 11.

HOLIDAYS: New Year's Day, Christmas, Hispano America's Day, Independence Day, Army Day, Navy Day, Saint Peter and Paul's Day, September 11th, Assumption Day, November 1st, Memorial Day, Corpus Christi and Immaculate Conception.

CUSTOMS ALLOWANCES: Tobacco: Each man 500 cigarettes per week. Wine and spirits: Each man 2 bottles of wine or spirits per week.

STORES: It is possible to obtain provisions in limited form. Requisition must be made in advance.

AUTHORITY: Armada de Chile, Direccion General del Territorio Maritimo y de Marina Mercant, Capitania de Puerto Huasco, Chile.
Contact: Capitan de Puerto de Huasco.

IQUIQUE: (also see page 326)

PORT LIMITS: The area inside the following geographical points:
(1) Lat. 20° 11′ 10″ S., Long. 70° 09′ 30″ W.
(2) Lat. 20° 11′ 10″ S., Long. 70° 08′ 09″ W.
(3) Lat. 20° 12′ 05″ S., Long. 70° 09′ 30″ W.

PILOTAGE: Compulsory. During the day, the Pilot cutter displays the "H" flag of the International Code, and at night the lights prescribed by the International Regulations.

There is a pilot boarding area between the following geographical points:
(1) Lat. 20° 11′ 10″ S., Long. 70° 09′ 30″ W.
(2) Lat. 20° 11′ 10″ S., Long. 70° 09′ 11″ W.
(3) Lat. 20° 11′ 25″ S., Long. 70° 09′ 11″ W.
(4) Lat. 20° 11′ 25″ S., Long. 70° 09′ 30″ W.

There is no restriction on berthing and unberthing. Manoeuvres take place 24 hours.

The telegraphic address for the Pilot is "Maritgob Iquique TLX 323156 IQQ CK". It is necessary to give prior notice of Pilot requirement 72 hours and 24 hours ahead of arrival, indicating maximum draft.

Channel for calling the Pilot is VHF Channel 16, working is on Channel 8. The Pilot Boarding Area is beyond the port limits.

ANCHORAGES: *Access:* Access to the bay is not difficult. The entrance and/or exit of the port has intense fishing boat traffic.

Anchorages: There are 3 established anchorages which can be used without a pilot onboard.

The anchorage locations are as follows (bearing and distance from lighthouse Molo de Abrigo).

Anchorage	*Demarcation*	*Distance* (cables)	*Depth* (m.)
A	325°	7.0	42
B	303°	9.5	45
C	290°	5.0	26

Note: Anchorage "C" has a draft limitation due to a near sounding line of 12.7 m.

To the West part of these anchorages, vessel may anchor freely, as the depth varies from 20 m. – 60 m.

MAX. SIZE:
Berths No. 1 and 2: Max. draft 8.5 m.
Berths No. 4 and 5: Max. draft 8.6 m.
Berths No. 6 and 7: Max. draft 9.0 m.
Also see "Berthing" and "Tankers".

RADIO: *Amend Line 3:* Via Playa Ancha Radio – CBV.

VHF: "Iquique Radio" controls the maritime traffic and there is VHF equipment to facilitate communications between vessel and Pilot, calling up on Channel 16. The Pilot and tug use walkie talkies which have Channel 16 and Channel 8.

TUGS: 1×1,200 h.p. and 1× 620 h.p.

BERTHING: Inside the breakwater are Berths No. 1, 2 and 3. No. 3 is permanently used by deepsea fishing vessels. On the mooring pier on the West side are Berths No. 4 and 5, and on the East side Berths No. 6 and 7.

Loading and discharging is by cranes and/or ship's derricks.
Berths No. 1 and 2: Length 270 m.
Berths No. 4 and 5: Length 330 m.
Berths No. 6 and 7: Length 270 m.

Patillos Cove: It is situated 33 miles South of Iquique. Vessels berth to 5 buoys, but must move to present each hatch to the port loader. Mooring and unmooring operations must be carried out during daylight hours.

The use of Pilot is compulsory.

The loading of salt is carried out by means of a mechanical, stationary conveyor with capacity of 550 t.p.h.

Max. Size:

Max. LOA:	200 m.
Max. beam:	30 m.
Max. draft:	12 m.
Max. d.w.t.:	40,000 tonnes

Port Limits: Comprise a limited area between a line joining Point Cotitira and Point Patillo.

Waiting Zone for Pilot:
Comprised of an area within the following geographical points:
(1) Lat. 20° 44′ 18″ S., Long. 70° 11′ 56″ W.
(2) Lat. 20° 44′ 20″ S., Long. 70° 11′ 43″ W.
(3) Lat. 20° 44′ 38″ S., Long. 70° 11′ 46″ W.
(4) Lat. 20° 44′ 36″ S., Long. 70° 11′ 59″ W.

CRANES: *Delete 2nd line.*

MEDICAL: In the event of any serious case or an emergency it is necessary to advise the Agent, otherwise advice should be by VHF Channel 16. Iquique port has a modern hospital and clinics with sufficient medical resources where crew members can be treated.

STEVEDORES: Gangs of stevedores for ship and shore must be requested from the Port Authority who will give the final instructions.

The port works 3 shifts, in the following schedules:

1st shift:	0800 hrs. – 1530 hrs.
2nd shift:	1530 hrs. – 2300 hrs.
3rd shift:	2300 hrs. – 0630 hrs.

TANKERS: Loading and discharging is by submarine line. There are no deballasting facilities in the Port. In front of El Colorado Beach there are three groups of buoys, each with 3 buoys, for mooring tankers.

The North group is for the Esso Terminal, for loading or discharging clean or dirty products, and the South group is for the Copec Terminal for loading and discharging clean or dirty products.

Esso Buoy: Located to the North, and with the following limitations:

Max. draft allowed:	10.0 m.
Max. LOA:	170.0 m.
GRT:	15,000
DWT:	26,000

Copec Buoy: Located to the South part, and with the following limitations:

Max. draft allowed:	12.6 m.
Max. LOA:	228.0 m.
GRT:	40,000
DWT:	70,000

Vessels which moor at the tanker buoys, either Copec or Esso, must berth with the bow heading 270°. Mooring must be made in daylight, unmooring anytime.

FRESH WATER: Small quantities available by truck.

FUEL: Quantities of less than 300 tonnes can be delivered by truck. If greater quantities required, vessel should proceed to the Esso or Copec buoys (see "Tankers").

CONSULS: *Add:* Netherlands.

SURVEYORS: *Add:* Bureau Veritas and A.B.S.

GANGWAY/DECK WATCHMEN: It is necessary and compulsory for all vessels to have secuirty guard at the gangway, and in case of hazardous cargo the Maritime Authority requires a second guard.

OPENING/CLOSING HATCHES: Crew or stevedores.

DRY DOCKS: *Amend:* 1 dry dock.

HOLIDAYS: 1st January (New Year's Day); 1st May (Labour Day); 21st May (Navy Day); 2nd June (Corpus Christi); 29th June (Saint Peter and Paul); 15th August (Assumption); 11th September (Liberation National Day); 18th September (Independence); 19th September (Army Day); 12th October (Race Day); 1st November (All Saints' Day); 8th December (Immaculate Conception) and 25th December (Christmas).

There is also Holy Week which is a movable holiday between end March and middle of April.

LOTA: (Also see page 328)

PILOTAGE: Compulsory. The Pilot should be requested at Talcahuano.
MAX. SIZE: Max. LOA 110 m. Max. draft 27 ft.
BERTHING: Vessels moor to 4 buoys, using both anchors, and lie with their bows heading 190°. The pier is 227 m. long, depth varies from 29 ft. at the head to 23 ft. at the 149 m. mark.

Loading rate for coal 300 t.p.h. – 400 t.p.h.

FRESH WATER: Available at a rate of 65 tons per day.
CONSULS: At Concepcion.

PUERTO MONTT: (Also see page 328)

PORT LIMITS: Between the meridian that crosses the head of "Muelle del Frigorifico" to 72° 59′ W. and from the parallel 41° 29′ 42″ S. to the North coast in Reloncavi Bay.
DOCUMENTS: The documents to be presented to the Authorites are:
General Declaration.
Crew List.
Personal Effects Declaration.
Cargo Manifest.
IMO Goods Manifest.
Safety Radio Certificate.
Safety Equipment Certificate.
PILOTAGE: Pilotage is compulsory and must be ordered by Agent on receipt of vessels's ETA at least 24 hours in advance. Otherwise request directly to Port Captain, cable address "Capitania de Puerto de Puerto Montt". Vessels should anchor as indicated below and exhibit code flag "G". Pilot boards from a motor boat at the anchorage. Pilot boat equipped with VHF.

If vessel is arriving without a channel Pilot, then Pilot must be requested at least 48 hours in advance and Pilot boards from a motor boat at the Ancud Port Anchorage, Pilot boat equipped with VHF.

ANCHORAGE: Vessels of any size can anchor in the outer roads of the port. Recommended positions are at 4 cables 172° of the light on the head of "Muelle de Pasajeros" (Lat. 41° 28′ 50″ S., Long. 72° 56′ 52″ W.). and 7 cables 085° from point of Tenglo Island. (Lat. 41° 29′ 42″ S., Long. 72° 56′ 45″ W.). Anchorage is 35 m. deep and bottom is sand.
RESTRICTIONS/MAX. SIZE: Vessels must turn inside "Canal Tenglo" before leaving. Vessels less than 120 m. in length are not restricted. Vessels over 120 m., but less than 172 m. in length must turn inside "Canal Tenglo", during daylight hours only and with the flood tide. Vessels over 172 m. but less than 200 m. enter the port and leave during daylight hours only. Vessels over 200 m. can enter the port and leave, but during the flood tide in daylight hours only. All manoeuvring is effected in favourable weather. Max. draft permitted is 8.0 m. plus the minimum height of the low tide, during vessel's stay in port.
HEALTH: All ships are boarded by the Authorities on arrival, unless they are coming from another Chilean port.
RADIO: Puerto Montt Coastal Station operates 24 hours on HF (H3E/ J3E0) and VHF channels.

Telex Address: VTR 370064 CBP/CK.
Tlxch: 270038 CBP/CL.

VHF: Port Captain VHF Station operates on VHF Channels 16 and 14 between 0730 hrs. and 2400 hrs.
TUGS: There is a tug of 720 h.p. owned by Sud Americana Agencias Aereas y Maritimas (SAAM), and another small tug of 360 h.p. owned by Agemar.
CRANES: 4×3 tons capacity.
OPENING/CLOSING HATCHES: Ship's crew or stevedores.
POLICE/AMBULANCE/FIRE; Police Tel: 252240. Fire Tel: 252222. Ambulance Tel: 253991.
AUTHORITY: Gobernacion Maritima de Puerto Montt, Diego Portales Av. 2300, Puerto Montt, Chile. *Tel:* 252389-253051. *Telex:* 270007. *Contact:* Sergio Swett Soto, Maritime Governor.

PUNTA ARENAS: (Also see page 329) (Including Lenadura, Cabo Negro, Clarence Cove, Gregorio, Pecket).

DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory for foreign vessels. Vessels entering from Pacific will usually embark Pilots in Valparaiso or Ancud or Laitec. Vessels coming from the Atlantic embark Pilots in Bahia Possession, 30 miles to the West side of the Eastern entrance of Magellan Strait, Pilot boats have radio telephone frequencies of 2,182 kHz and 2,638 kHz and VHF Channel 16. Four hours before arrival of the vessel, the pilot boat keeps watch on Channel 16. Pilot boat carries International Pilot lights; ETA at Bahia Possession has to be given at least 24 hours in advance. In bad weather, vessel has to anchor and wait in a circular area of one mile of radius with the centre placed at 216° – 2.7 miles off Possession Lighthouse.

Pilots usually board and disembark off the lighthouse of Punta Delgada.

The Pilot for West-bound vessels travels to Bahia Possession by air from Valparaiso. It is therefore important to order the Pilot through Valparaiso Agent with as much advance notice as possible, and keep Agent closely advised of vessel's ETA.

For vessels transitting Magellan Straits Westbound, the Pilot will disembark at Valparaiso or Ancud or Laitec. Pilot's travelling expenses from and to Valparaiso are included in pilotage charges.

It is advisable to have accommodation ladder rigged as the Port Authorities will board prior to berthing if cargo work is to commence immediately.

ANCHORAGE: Anchor berths A – G are situated East and Southeast of Muelle Prat. Anchorage is prohibited within 1,300 m. of the Fiscal Quay. Vessels should be ready to leave the anchorage on orders from the Port Captain, or in the event of bad weather from the East.
RESTRICTIONS: No tidal restrictions, vessels can come alongside day or night. Max. length 170 m.
MAX. SIZE: *Delete last sentence.*
HEALTH: At first Chilean port, doctor will come aboard with Authorities. In other Chilean ports, there is no need to ask for Pratique or hoist the "Q" flag as Pratique is automatic.
RADIO: The Radio Station Magallanes Radio (CBM) keeps a permanent watch on 500 kHz (A1A, A2A), 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

All the communication services are included in the List of Coast Stations and List of Radio determinations and special services of the ITU.

To the West of the Magellan Strait there are 2 Radio Stations:

Radio Station Evangelista (CBM-3) has permanent watch on 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

Radio Station Felix (CBX) has permanent watch on 500 kHz (A1A, A2A), 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

All ships must give identification on request of the Radio Stations, Chilean Warships or merchant vessels operating with Chilean Pilots.

To the East of the Magellan Strait exists Radio Station Punta Delgada which keeps permanent watch on 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

It also has a Radar Control System which assists with safety of all ships operating from Dungenes to First Narrow.

TUGS: Used to go alongside in Punta Arenas tanker terminals, ship's lines used.
BERTHING: A berth should be requested 24 hours before arrival. The pier is 372 m. long with 27 ft. – 26 ft. on the North side and 22 ft. on the South side (depth at the seaward end). Depth reduces on both sides towards the land. Vessels berth bow first and care must be taken to avoid the shallow patches on both sides of the jetty about 120 ft. off. Normally, 4 head lines, 4 stern lines and 2 or 4 springs are used.

Rest of text unchanged.

BULK HANDLING FACILITIES: *Pecket:* (Coal). Position Lat. 52° 56′ S., Long. 71° 13′ W. Max. length 220 m. Max. draft 14 m. Displacement 80,000 tonnes, final heading 260° T. There are 2 buoys; 4 lines sent to forward buoy and 3 lines to stern buoy. Starboard anchor will be used. Vessel port side alongside to the jetty and 2 lines to the Duke of Alba No.1; 2 lines to the Duke of Alba No. 2; 4 spring lines to the Duke of Alba No. 3 and 4 lines to the Duke of Alba No. 4. Tug assistance is compulsory for mooring and unmooring. Ship's loader rate is 2,000 tonnes p.h.
TANKERS:
Lenadura: Amend size: Max. length 175 m., draft 23 ft. displacement 20,000 tons.
Cabo Negro: Position Lat. 53° 01′ S., Long. 70° 51′ W. Max. length 200 m. Draft 42 ft. Vessels berth port side alongside, using the starboard anchor. The manifold hose is 10 in. Gas is loaded at 1,000 t.p.h. A tug is compulsory for berthing.

Cabo Negro Pier has been improved to handle ships up to 45,000 d.w.t.

Clarence Cove: Amend Size: Max. length 250 m.
Gregorio: Amend Size: Max. length 250 m. Max. draft 49 ft. (subject to tidal conditions). 75,000 tons displacement.
MEDICAL: No advance notice to Agent required. There is a hospital with all facilities.
CONSULS: *Delete:* France, Greece, Italy, Norway, Paraguay and Spain.
REPAIRS/DRY DOCKS: "Asmar" (Astilleros de la Armada) has a shipyard for small vessels up to 1,500 tons as well as a good workshop to effect floating repairs. Some marine spares can be obtained.

Asmar Ovalle Moore have a small dry dock, maximum capacity 4,000 short tons and 130 m length.

DEVELOPMENTS: Berths No. 1 (North) and No. 1 (South) are being dredged to 33 ft.

QUINTERO: (Also see page 330)

PILOTAGE: *Delete:* Pilot usually boards between 0700 hrs. and 2200 hrs.

SAN VICENTE: (Also see page 332)

RESTRICTIONS: Berthing or unberthing from 0000 hrs. to 2400 hrs., weather permitting. For tankers, daylight only.
BERTHING: *Amend:*
Cap Pier: North, draft 32 ft. 06 in. ....
South, draft 26 ft. ....
General Cargo Berths:
Pier 1: Length 215 m., draft 37 ft. ....
Pier 2: Length 225 m., draft 39 ft. at any time, 1 crane for bulk cargoes, ...
ENAP Berth "B": 1 hose with 18 in. connection.......
ENAP Berth "C": ....8 shackles starboard side.......
2 hoses with 12 in. and 16 in. connections.......
FUEL: Diesel available by truck.
CARGO GEAR: Ship's gear. 1 crane for bulk cargoes, rate 200 t.p.h. Heavy lift crane with 50 tons' capacity.

TALCAHUANO: (Also see page 332)

PILOTAGE: Compulsory. Pilot boards 3 cables off Belen Lighthouse.
ANCHORAGES:
Anchorage Positions:
(1) Lat. 36° 42′ 00″ S., Long. 73° 05′ 14″ W.
(2) Lat. 36° 42′ 00″ S., Long. 73° 04′ 51″ W.
(3) Lat. 36° 42′ 18″ S., Long. 73° 04′ 51″ W.
(4) Lat. 36° 42′ 18″ S., Long. 73° 05′ 14″ W.
Explosives Buoy: Lat. 36° 06′ S., Long. 73° 05′ 14″ W.
Quarantine Anchorage: Vessels in quarantine must anchor 182° from Belen Lighthouse and 7 cables off.

Vessels that transport explosives are anchored in the same direction but 9 cables from Belen Lighthouse.

MAX. SIZE: Vessel that arrives with a draft of 29 ft. and length 180 m. can dock on the East side of the Government Pier.

RADIO: Talcahuano Radio, call sign CBT (Category S).

Frequency MHz	*Type*	*Receives* kHz	*Transmits* kHz	*Remarks*
5	A-1	500	500	24 hours
5	A-1	512	512	Working frequency
2	A3J	2182	2182	24 hours
4	A3J	4043.6	4143.6	Vessel request
	A3J	4063.0	4357.4	
	A3J	4125.0	4419.4	
6	A3J	6218.6	6218.6	

TUGS: 2×1,500 h.p. and 1×900 h.p.

The shipyard (Asmar) has 3 tugs; 2×285 h.p. and 1×1,000 h.p.

BERTHING: *Amend all before Passenger Mole:*
Government Pier: Berth No. 1 – Length 156 m. Berth No. 2 – Length 205 m.
Berth No. 1 – Max. draft 20 ft., Berth No. 2 – Max. draft 22 ft. Max. LOA 100 m.
Mole 500: (Naval base) Max. length 230 m., max. draft 27 ft.

Vessels moor with 4 head lines, 4 stern lines and 2 springs. Loading and discharging by ship's gear.

FRESH WATER: Available at Berths No. 1 and No. 2

VALPARAISO: (also see page 334)

PILOTAGE: Compulsory. Waiting area is with Punta de Angeles Lighthouse bearing 095°×2.02 miles.

ANCHORAGES: Outside the harbour and close by, vessels find good anchorage in 25 – 15 fathoms of water. it is always prudent to secure a good anchorage, owing to possible strong winds during all periods of the year which cause heavy swells.

In Winter, vessels anchor with one anchor with full chain and have another ready for emergencies. During Winter, it is not convenient to anchor near the coast due to the risk of dragging, during Summer the near to coast, the better.

The anchorge is marked on Chart No. 511, with Pier Baron bearing 168°, at a distance of not less than 600 m. Vessels under 100 m. LOA can anchor between Pier Baron and the breakwater head, position also indicated on chart.

RADIO/VHF: *Amend 1st paragraph to read:*
Maritime Radio Station of Valparaiso in Playa Ancha which attends the public maritime service. Coastal Radio Service (SRC) with its station situated in the Port Captaincy Building, attends the maritime service to receive information regarding arrival and departure and also provides information on safety of navigation, (call sign CBV-20).

TUGS: *Amend:* .....6 tugs.....

REPORTING: *Delete and substitute:*
Shipmaster's Report: January 1989.
The following telex was received whilst on passage to Ecuador.

REPORTING SYSTEM IN ECUADORIAN WATERS

Re: Resolution 088-87 – Comando de Guardacostas (COGUAR).
As per 1st July 1987, all vessels have to comply with Resolution 088-87, published Registro Oficial 8/6, i.e.:
– to report to Coast Guard (COGUAR) via coastal station "Guayaquil Radio" (HG) on international frequencies MF and HF:

Arrival (FR), Position (PR), Sailing (SP), Passing (Paso Inocente) (WP) with following formats:
ARRIVAL:
Shiprep
(a) FR (for arrival).
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour. (6 figures)
(d) Last port.
(e) ——
(f) Actual course. (3 figures)
(g) Speed in knots. (2 figures)
(h) Next port. (Ecuador)
(i) ETA Ecuadorian Port. (Day/Hour/Min. – 6 figures)
SAILING:
Shiprep
(a) SP. (for sailing)
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour. (6 figures)
(d) Next port.
(e) 4 figures for Lat. (N or S) + 5 figures for Long. (E or W).
(f) Actual course. (3 figures)
(g) Speed in knots. (2 figures)
(h) Last port.
(i) ETA next port.
POSITION:
Shiprep
(a) PR. (for position)
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour (6 figures)
(d) ——
(e) 4 figures for Lat. (N or S) + 5 figures for Long. (E or W).
(f) Actual course. (3 figures)
(g) Speed in knots. 2 figures)
(h) ——
(i) ——
PASO INOCENTE:
Shiprep
(a) WP. (for paso inocente)
(b) Vessel's Name/Flag/Call Sign.
(c) Date + Local Hour. (6 figures)
(d) Last port.
(e) 4 figures for Lat. (N or S) + 5 figures for Long. (E or W).
(f) Actual course. (3 figures)
(g) Speed in knots. (2 figures)
(h) Next port.
(i) ETA next port.

The timing for the messages has to be done as follows:
FR – Entering the national waters, latest 12 hours before arrival at the port.
SP – Immediately after sailing.
PR – Twice daily, at 0800 hrs. and 2000 hrs.
WP – 3 hours before entering and 3 hours before leaving Ecuadorian waters.

Scope/area involved according Resolution 088-87:
Entering the 200 miles of territorial seas and the waters between the mainland and the Galapagos Islands.

NON-COMPLIANCE WILL PROVOKE FINES

Egypt

HAMRAWEIN: (Also see page 468)

SHIPMASTER'S REPORT: January 1989.
Location: Lat. 26° 15.5′ N., Long. 34° 12.2′ E.
Hamrawein Phosphate Terminal has a single jetty of 67 m. length and belongs to Misr Phosphate Company, Hamrawein. There are 2 mooring buoys. There are no leading beacons as mentioned in NP.64. All mooring operations and pilot are arranged by the shippers (Misr Phosphate).
Port Limits: 4 nautical miles off the coast.

Documents: Register, Safety Construction Certificate, Load Line Certificate, I.O.P.P., Safety Equipment and Safety Radio Certificates. 4 copies Crew List. 2 copies Stores List. 2 copies Crew Declaration. 2 copies Currency Declaration.

Free Pratique is usually granted after berthing when vessel boarded by Quarantine Officials.

Pilotage: Pilot is compulsory and boards 2-3 cables North of the North Mooring Buoy. The vessel is then turned around and re-approaches the North Mooring Buoy.

Approaches: Vessel should approach from sea, heading for the North Mooring Buoy. Vessel sets South towards the dangerous reefs which can be visually seen or picked-up on radar when at close range. The reefs are not marked by buoys, etc., but can be recognised by change in water colour.

Anchorage: The only anchorage available is one mile East of Kossier, as marked on B.A. Chart 3043.

Maximum Size: Vessels drawing 33 ft. can be accommodated.

Radio: Kossier Radio, call sign SUK, is recommended for all communications with agents, shippers, etc.

There is no VHF or WT station at the Terminal. There is no contact with pilot as pilot boat is not equipped with a radio. The pilot boarded from a rowing mooring boat with the pilot flag hoisted. The pilot boat was out of order.

Tugs: Not available.

Berthing: Vessel heads for the North end of the breakwater, keeping close to the North Mooring Buoy on the starboard side. When 30 m. off the breakwater, starboard anchor is let go to 4 shackles in water and vessel is swung around to make fast port side alongside. Mooring boat is used for sending lines ashore. A line is also made fast to the South Mooring Buoy. This assists when leaving the berth.

Loading: Two chutes are available with a good outreach, but only one can be used at a time. Vessel has to be shifted fore and aft frequently to place holds in position for the fore and aft chutes. Loading rate is high and a maximum rate of 7,000 tonnes per day can easily be achieved.

Medical: Seamen can be sent to doctor at Kossier or Safaga, after special permission granted by Immigration. Advance notice required.

Density: Average 1029.

Fresh Water: Not available at berth. Water has to be ordered from Safaga by barge. Rate US$22.00 per tonne, with minimum supply of 200 tonnes.

Fuel: Not available locally. Any requirements to be obtained from Safaga.

Repairs: No facilities available.

Customs Allowance: 200 cigarettes. Beer allowed. No liquor except wines allowed.

Watches, clocks, radios, cassette recorders, cameras, T.V. and videos are placed under seal by Customs.

Repatriation: Facilities exist for repatriation and for crew changes.

Airport: Nearest airport at Hurghada, which has regular flights to Cairo.

Time: GMT plus 2 hours. Daylight saving time, GMT plus 3 hours from March to September.

Shore Leave: Generally no shore leave allowed. If permitted, shore passes required.

Provisions: Fresh provisions and meat available and supplied by ship chandler from Kossier. No bonded items available.

Authority: Misr Phosphate Company, Hamrawein (Red Sea), Egypt. Tel: (Kossier) 39. Cables: Hamerpho, Kossier.

Agent: Damanhour, Safaga. Cables: Canal Shipping Safaga.

SUEZ CANAL: (Also see page 473)

DOCUMENTS: *Add:*

Shipmaster's Report: October 1988.

The following documents are required for Suez Canal transit:

Agent: 1 copy Crew List.
State Agent: 1 copy Vessel Information Form.
5 copies Crew List.
1 copy Navigability Form.
1 copy Cargo List.
1 copy Shipping Agency Inward/Outward Form.
1 copy Liferaft Certificate.
1 copy CO2 Certificates.
Vessel's Safety Certificates.
Customs: Free Zone Certificate.
Quarantine: Quarantine Questionnaire.
1 copy Crew List.
1 copy Clearance from Last Port.
1 copy Vaccination List.
Suez Canal Authority: 1 copy Crew List.
1 copy Vessel Information Form.
1 copy Double Bottoms Tank Capacity Form.

The following documents are required for vessels berthing at Port Said:

Agent: 1 copy Crew List.
Immigration: 2 copies Crew List. (Shore passes and Passports obligatory).
Quarantine: 1 copy Clearance from Last Port.
1 copy Quarantine Questionnaire.

MAX. SIZE: Last line: *Delete:* 5,000
Insert: 5,500

Suez Canal – Southbound Second Convoy

For your guidance, vessels carrying chemicals in bulk respectively radio-active substances under IMDG Group 2 are now allowed to transit with the second Southbound Convoy (which makes fast at Ballah Loop) under conditions stated in S.C.A. Circular No. 154506 dated October 30th 1988.

CLARIFICATION TO ARTICLE 49 REGARDING VESSELS CARRYING CHEMICALS IN BULK.

Reference to our Rules of Navigation, edition January 1986, Article 49, concerning:

A. Vessels carrying chemicals in bulk.
Allowed to join N.2 Convoy, if having double bottom tanks.
B. Vessels carrying radio-active substances.
1. Allowed to join N.2 Convoy, if carrying IMDG group two.
2. Not allowed to join N.2 Convoy, if carrying IMDG group one.

With regard to para (A) above, we have received the following clarification concerning chemical tankers carrying liquid bulk chemicals:

Not allowed: to join N.2 Convoy if flash point is below 23°.

Allowed: to join N.2 Convoy if flash point is above 23° provided vessel has complete double bottom tanks and vessels must cable SCA Ismailia (via their agent) of their wishes to join the 2nd Convoy, giving details of cargo on board and flash point.

NOTICE: *Suez Canal Authority Circular No. 434150:*

Reference S.C.A. Rules of Navigation Article 50 and Circular No. 433659 dated 1/4/87.

In order to reduce ship's waiting time to a minimum, the following arrival times at anchor will be applied:

A. **Port Said**

1. Southbound Convoy (N.1):
As per Rules of Navigation, limit time of arrival is 1800 hrs.
Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 1900 hrs.
As an additional facility, vessels arriving from 1900 hrs. to 2100 hrs., may join first Southbound Convoy (N.1), against an additional charge of 10% of the canal dues.
2. Southbound Convoy (N.2) – vessels fulfilling No. 2 specifications.
As per Rules of Navigation, limit time of arrival is 0200 hrs.
Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 0300 hrs.
As an additional facility, vessels arriving from 0300 hrs. to 0400 hrs., may join second Southbound Convoy (N.2), against an additional charge of 10% of the canal dues.

B. **Suez**

1. Tanker Group (i.e. LPG and LNG loaded or NGF, third generation containerships, vessels over 38 ft. draft and loaded tankers):
As per Rules of Navigation, limit time of arrival is 0000 hrs.
Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 0100 hrs.
As an additional facility, vessels arriving from 0100 hrs. to 0300 hrs., may join tanker group against an additional charge of 10% of the canal dues.
2. Other Vessels.
As per Rules of Navigation, limit time of arrival is 0200 hrs.
Above mentioned time was extended by Circular No. 433659 dated 1/4/1987 to 0300 hrs.
No time extension is permissible due to the formation of the convoy.

Note:
1. The limit time of arrival is the actual time of anchoring at the respective anchorage area stated in the Rules of Navigation.
2. This circular will be in force as from 1st December 1988.

Also see Article 49 (page 486), Notices (page 486) and Article 50 (page 488).

NOTICES:

Circular No. 93/88:

We append hereunder, free translation of Circular letter dated 2.10.1988 No. 434128 issued by the Director of Transit, Suez Canal Authority, Ismailia, which reads as follows:

> "Please ask Owners to advise Masters of vessels proceeding to transit Suez Canal to be kind enough and let us know directly and soonest possible of any ship carrying Waste Chemicals or if they observe any sign of Pollution, so that we may act accordingly for their own safety and the safety of the region."
>
> The above is commended to your kind attention.

Circular No. 94/88:

With reference to our Circular No. 11/86 of February 13th 1986, concerning the necessity of ensuring the efficiency of vessel's gear and derricks used for heaving and lowering mooring launches and searchlights.

We now wish to advise that a letter from the Canal Mooring and Lights, copied to the Director of Transit, Suez Canal Authority, was received on 17.10.1988 to the effect that it has been recently noticed the repetition of accidents sustained to mooring boats and their crew which are due to:-

- The high speed of vessels whilst heaving up or lowering the mooring launches.
- The necessity of ensuring the capability of vessel's wires and winches before such operations are done.

Therefore, the Canal Mooring and Lights Co., draw your kind attention to the above, and request your goodselves to put these operations under the supervision of an officer, and to be kind enough to report any negligence on the part of mooring men in putting on Life Jackets while heaving up or lowering their boats, avoiding such incidents for the sake of protecting their lives.

France

DUNKIRK: (Also see page 542)

SHIPMASTER'S REPORT: December 1988.

Pilotage: The pilot cutter cruises South of Dunkirk light-float when vessel is expected. The pilot boards from a small launch. Alternatively the pilot can board at Calais. Pilot on VHF Channels 16, 6 and 72. Pilot Office Telex No. 820902.

If vessel wishes to order a pilot for leaving, a minimum of 2 hours notice is required.

The transit time, including lock time, from time of pilot boarding until alongside in Stocknord (Mardyck Basin) is about 3 hours. Only one pilot used.

Anchorage: The anchor is 1.2 miles N.W. of Dunkirk light-float. The anchorage is exposed and the holding ground is poor. Vessels are to report to Dunkirk Pilot befcre anchoring.

Approaches: The approaches to the East Port are well buoyed. For large vessels the entrance is narrow, especially when swinging to starboard to enter Charles de Gaulle Lock.

Maximum size for entering the Lock: LOA 285 m., beam 45 m. and max. draft 14.2 m.

Tugs: Compulsory. Number of tugs required depends on size of vessel. Tugs meet vessel outside the breakwaters. Tugs require 4 hours notice and 2 hours cancellation notice at night, otherwise a charge is made.

Berthing: Stocknord and C.R.D. Berths for handling LPG in Bassin de Mardyck.

Stocknord is the Western of the 2 piers. The berth is capable of accepting the largest gas and product carriers. Vessel berthed head in.

Ethylene is handled at Berth No. 4 at the North West end of Stocknord Pier. A mooring boat is available for running lines. Vessel berthed with 2 headlines and 2 springs, fore and aft.

Cargo: Ethylene storage 5,000 cu.m. C2, C3 and C4 are imported and exported. The shore liquid arm is 8 in. (150 ASA) with automatic disconnect coupling fitted with a 6 in. (300 ASA) reducer. The vapour return line is a 6 in. (150 ASA) flexible hose. Shore supply the reducer and connect/disconnect the lines. The rate of discharge varies according to what the plant is doing with production. Sometimes one pump is used and at other times 5 pumps are used.

The shore plant places a telephone on board for communication with the Loading Master.

The surveyor, who came from Terneuzen, stays on board most of the time.

Fresh Water: Available.

LE HAVRE: (Also see page 548)

SHIPMASTER'S REPORT: December 1988.

The following is an update of Shipmaster's Report, dated June 1987, on page 552.

Anchorage: Waiting Area No. 1 is a small area for a port the size of Le Havre. The anchorage runs into Rouen Anchorage. Do not anchor within 1 mile of Le Havre Fairway which is radar controlled. The anchorage is exposed to all winds.

Pilotage: Small vessels without tugs are allowed to berth in very low visibility, dependent on Pilot/Master and vessel's radar. Vessels requiring tugs must have 250 m. visibility.

Tugs: Tugs not required in or out for smaller vessels, except if there are high winds. The tugs are powerful and the tug wire is used. One hour's notice required.

Locks: Vessels can also proceed to Gonfreville by way of the old locks at Rochemont/Vetillart (max. LOA 160 m., max. beam 22 m. and max. draft 8.0 m.) and Canal du Havre. The time taken from Buoy LH05 to Berth ATO2 via the old system is 3 hours.

Berthing: Vessels can also berth starboard side to at Berth AT02, but landing gangway is difficult.

Chemical Chicksans also available on berth. Max. loading rate 250 t.p.h.

General: Telephone: Nearest public telephone is at Sogestrol Office or at the car loading facility, about 1 mile down the road towards the lock.

It is possible to telephone the agent or the chandler from the jetty office.

Airport: Le Havre Airport is about 30 minutes by road from the berth. There are daily flights to and from Gatwick.

Rail Link: There is a good rail link with Paris, time of journey about 90 minutes.

MARSEILLES: (Also see page 554)

(b) PORT DE BOUC: (Also see page 556)

SHIPMASTER'S REPORT: December 1988.

The following is an update on Shipmaster's Report, dated October 1987, on page 558.

Berthing: Good fendering at both berths, except at A1 Berth, one fender aft has a steel face which can cause damage.

At A1 Berth vessels berth head-in starboard side alongside. At A4 Berth vessels usually berth starboard side alongside.

Cargo: At A1 Berth, the VRL for ethylene is now a 6 in. flexible steel hose.

Fuel: Gas Oil available from shore line at A1 Berth. Bunkering not allowed during cargo operations, but may be allowed during cooling down, depends on Shift Supervisor.

(c) FOS: (Also see page 558)

DOCUMENTS: *Add:*

Shipmaster's Report: October 1988.

1 copy Inward Declaration.
1 copy Outward Declaration.
1 copy Cargo Manifest.
1 copy Ship's Register.
6 copies Crew List.
3 copies Passenger List.
1 copy Maritime Declaration of Health.
2 copies Personal Effects Declaration.
2 copies Stores List.
2 copies Transit Cargo List.

SETE: 43.24 N. 03.42 E. **(See Late Plans)**

THE FOLLOWING INFORMATION SUPERSEDES THE ENTRY ON PAGE 568.

PORT LIMITS: The seaward boundaries of the Port within which a vessel is considered to be an "Arrived Vessel" are indicated as follows: To the South by a line with the red light of Eastward end of breakwater bearing 257°; to the East by a line with the church tower of Frontignan bearing 005°; to the North by coastline.

A second zone is a circle of 1 mile radius centered on a point located on the bearing 310° and at 2.8 nautical miles from Eastward end (Red Light) of breakwater. This zone is connected from a landing buoy (Lat. 43° 14.9′ N., Long. 03° 53.7′ E.) by a channel 1 nautical mile wide steering 326°. This channel is compulsory for tankers and chemical carriers who must report to French Navy (Toulon) before entering or leaving.

DOCUMENTS:
Cargo Manifest or Manifest of Ballast.
Certificate of Cargo Space.
Bills of Lading.
Ship's Register.
3 Crew Lists.
4 Passenger Lists.
Health Declaration, eventually vaccination list.
Derat Certificate or Exemption.
Declaration of Crew Personal Effects.
2 Provision Lists.
IOPP Certificate – National Certificate of Insurance for Oil Pollution Damage for tankers and "Fitness Certificate" for chemical carriers.

PILOTAGE: Request Pilot by international signals (sound, flags, light signals) or telephone through Marseilles Radio or VHF Channel 19, Tel: 91.25.26.24 (or pilot boat VHF Channel 12). Description of pilot boats; motor launch with black hull, white band, white anchor on hull at bow. Pilot embarks between 1 and 2 miles South of breakwater in good weather. In bad weather he embarks in the shelter of l'Epi Delon (Eastern Entrance). In any case, permission to enter is to be requested by VHF Channel 12 to "Sete Port Traffic".

ANCHORAGE: In Roads from 0.5 miles to 3 miles to South of breakwater. (See "Port Limits" and "Tankers").

RESTRICTIONS: *Commercial Harbour:* In the Canal Maritime, length max. 145 m., breadth 20 m., draft 7.0 m. (23 ft.).

Bassin a Petrole – see "Berthing".

MAX. SIZE: C.B.M.: Tankers up to 100,000 d.w.t., lightened draft 13.1 m. (43 ft.).

Bassin a Petrole: New Tanker Berth (P2) – 35,000 d.w.t., length 225 m., draft 11 m. (36 ft.) P1 – length 140 m., draft 33 ft. P3 – Barges.

Darse No. 2 for ore carriers 225 m. length; 13.18 m. draft (43 ft. 2 in.)

Commercial Harbour up to 11.0 m. draft (36 ft.).

Commercial Harbour in the Canal Maritime: max. length 140 m.; breadth 20 m., draft 6.85 m. (22 ft. 6 in.).

HEALTH: Pratique given by Health Officers or by Custom's Officers who board on arrival. If any case of suspected disease on board or any reason why vessel should not receive Free Pratique, Master should radio Agent before arrival, advising full details.

RADIO: Marseille Radio VHF Channel 19. Sete Port Traffic on VHF Channel 12. Port Authority Telex No. 480220.

TUGS: 3 tugs (2×1,200 h.p. and 1×2,200 h.p.) to be ordered from Compagnie Setoise de Remorguage. Tel: 67.74.64.49 or VHF Channel 12. Tow line to be furnished by ships. Vessels taken in tow near the breakwaters on the North side.

BERTHING:

Bassin du Midi:

North Quay: Berths No. 16, 17, 18, 19 and 20
Draft 6.50 m. (21 ft. 04 in.)
Cranes: 4 Fives Lille, 7.5 tons at 22 m. with scoop and hook.
All berths: Ore.

South Quay: Berth No. 14 Draft 7 m.
15 Draft 6.10 m. Ro/Ro
Cranes: 2 Fives Lille, 7.5 tons at 22 m.
All berths: Livestock and general cargo.

Canal Maritime:

Quai Paul Riquet: Berth No. 10 Draft 5.50 m.
11 Draft 6.40 m.
12 Draft 6.40 m.
13 Draft 6.10 m.
All berths: Wine and general cargo.
Cranes: Nil.

Quai Vauban: Berth No. 24 Draft 3.70 m.
25 Draft 4.60 m.
26 Draft 4.10 m.
Berths No. 25 and 26: Wine.
Cranes: Nil.

Quai Francois Maillol: Berth No. 27 Draft 5.80 m.
28 Draft 5.20 m.
29 Draft 5.20 m.
All berths: Wine.
Cranes: Nil.

Quai d'Orient: Berth No. 7 Draft 5.50 m.
8 Draft 5.50 m.
9 Draft 5.50 m.
5 Draft 5.00 m.
6 Draft 4.60 m.
Restriction:
Berths No. 5 and 6: Breadth = 15 m.
All berths: Wine and general cargo.
Cranes: Nil.

Quai de la Republique: Berth No. 30A Draft 5.20 m.
30B Draft 4.30 m.
All berths: Wine.
Berths No. 31 and 32 – Tugs.
Berth No. 33 – Fishing repairs.
Cranes: Nil.

Quai d'Alger (Algier Quay): Berth No. 34 Draft 8.20 m.
35 Draft 8.20 m.
36 Draft 8.20 m.
All berths: Wine.
Passenger Quay:
Length 200 m., draft 8.20 m.
For example: German m.v. Europa.

Quai du Maroc (Morocco Quay): Berth No. 37 Draft 7.60 m.
(Ro/Ro) Length 130 m.
Passengers and wine.
Line: Morocco.

Bassin Orsetti: Max. Length: 170 m.
Berth B1 Draft 8.25 m.
B2 Draft 8.25 m. Ro/Ro
B1 and B2: Passengers
General cargo.
B2 Ro/Ro Gare Maritime Orsetti.
Line: Baleares (Spring and Summer).
Cranes: 1 Fives Lille, 6 tons at 22 m.
Berths: D1 Draft 8.55 m.
D2 Draft 8.55 m.
D3 Draft 8.25 m. Length 152 m. Ro/Ro.
All berths: General cargo.
Cranes: 4 Caillard 6 tons at 22 m.

Mole Masselin: Cereals
1 berth on 180 m. of quay.
Draft: 10.36 m.
1 loading gantry of a capacity of 550 t.p.h.
2 storage silos of 22,000 tons capacity. (annual 100,000 tonnes).

Dock No. 1 or Colbert Dock: Berth E3 Draft 10.40 m. Ro/Ro.
E2 Draft 10.40 m.
E1 Draft 11.00 m.
All berths: Containers – general cargo. Wood pulp and sawn timbers.
Cranes: 3 Caillard 6 tons at 22 m.
9 tons at 19 m.
7.5 tons at 22 m.
1 container gantry crane 35 tons at 35 m.
Berth G1 Draft 7.50 m. Ro/Ro.
G2 Draft 11.00 m.
G3 Draft 11.00 m. Ro/Ro.
All berths: Sawn timbers – logs and general cargo.
Cranes: 3 Callaird and 2 Peiner
7.5 tons at 22 m.; 8 tons at 30 m.

Dock No. 2 or New Dock: Berth H2 Draft 13.18 m. Ro/Ro.
No crane.
Berth I3 Draft 13.18 m. Ro/Ro.
Named berth for all ponderous bulk cargoes.
Max. length 235 m. (Panamax).
Cranes: 1 Delattre Levivier 20 tons at 44 m., 2 Peiner 12 tons at 30 m. – all with scoop and hook.

Also see "Developments".

TANKERS: Frontignan Sea Line Terminal North Berth (C.B.M.) 1 berth for tankers up to 100,000 d.w.t. lightened draft 13.1 m. (43 ft.). 2×12 in. hoses for crude oil discharge. Submarine pipe-line 28 in. diameter.

Commercial Port: 1 berth for tankers up to 35,000 d.w.t. draft 11 m. (36 ft.). 3 loading/unloading arms for refined products, 1 unloading arm for methanol and 1 unloading arm for slops and dirty ballast. 1 old berth for tankers up to 140 m. length or 10,000 d.w.t., draft 10.1 m. (33 ft.). Slop disposal facilities available up to 1,000 cu.m.p.h. Also see "Max. Size".

Shipmaster's Report: March 1985.
Berth: Vessel berthed at C.B.M. berth which is a multiple buoy mooring just outside the East Harbour Entrance in position: Lat. 43° 24.3′ N., Long. 03° 44.6′ E.

Pilot boards just S.E. of the yellow light buoy (Lat. 43° 22.2′ N., Long. 03° 46.8′ E.), together with Mobil Representative, Cargo Surveyor and a mooring gang of 7 men. At the same time, 3 slings of equipment are placed on board on the port side, including chain stoppers for mooring aft and discharge monitoring equipment.

One tug is used, through the centre lead aft; using ship's lines (2). Vessel approaches the berth on course of approximately 030°; ship's log was used for assessment of ship's speed, the Pilot preferring to drop the first anchor at a speed of between 1.0 – 1.5 knots.

Starboard anchor is dropped first and allowed to run to 10 shackles on deck as the vessel is canted to starboard to a heading of 045°. When about 10 shackles have run, the port anchor is let go and then engine and tug used to manoeuvre the stern towards a group of 3 mooring buoys. 3×42 mm. diameter wires are picked up from these buoys, then 2 further wires from submerged clumps and finally 2×42 mm. wires from submerged clumps are secured forward. Both anchors are then hove in to about 8.5 shackles each to tension the moorings aft, vessel's head being finally 135°. Moorings, distances and dimensions are as per the berth drawing in *Guide to Port Entry* – "Plans". Mooring was very competently accomplished, the anchors being very accurately placed close to 2 small marker buoys (not on chart).
Discharge: The berth has very recently been converted to clean products only. 2×12 in. hoses are connected to the port side manifolds. Each of these is fitted with a butterfly valve, however, a noticeable amount of the previous cargo ran into the drip trays while the hoses were being connected. Connection of hoses was made by the mooring gang.

The sea bed line is 28 in. and maximum pressure permitted is 9 bar. This line has previously received crude oil at rates of up to 5,000 tonnes/p.h. so it was not surprising when vessel did not make this pressure, even at full speed. Discharge of 30,000 tonnes took a total of 15.8 hours, giving a final rate of 1,900 tonnes/p.h. This included approximately 2 hours slow pumping at the start and all the stripping time.

A 30 minute water plug was requested before discharge commenced. Mobil normally expect a vessel to be ballasted within 6 hours of completion of discharge; on this occasion, extra ballast was taken as the vessel would be unmooring in a 30 knot wind.

The Mobil Representative, Cargo Surveyor, Pilot and the 7 man mooring gang all remain on board until after completion of unmooring. Meals and accommodation should be provided.
General: Charterer's Agent, Mobil Oil Francaise, is in Paris (Telex: 610417). Agent attended on berthing and for remainder of stay contact was maintained by portable VHF which proved to be quite satisfactory.

Up to 6 boats per day for shore leave, etc. can be provided; if all 6 boats are taken the cost is high – 7,000 francs. However, for vessel's requirements some boats were required in any case.

Port Health, Immigration and Customs did not attend at any time, all their paper work being carried out by the Agent.
BRIDGES: To proceed to or leave, the Bassin du Midi bridges have to be opened. Request to be made to Capitainerie du Port (Tel: 67.74.88.20/67.46.00.81) before 1700 hrs. Friday, when arrival or departure is expected during weekends.
FRESH WATER: Available on most quays or by lighter of 140 tons capacity during working hours. Advance notice required for Saturdays and Sundays.
FUEL: All qualities available subject to advance notice given.
REPAIRS: Claverie: Tel: 67.48.62.52 – Mechanical workshop for heavy repairs and boiler repairs.
Di Biase: Tel: 67.74.32.12 – general repairs.
C.R.M.: Tel: 67.74.06.83 – Electronic and radio aids to navigation repairs.
Touat: Tel: 67.48.62.37 – Electrical and generator repairs.
Farre: Tel: 67.53.41.28 – Under water work.
CONSULS:

Denmark	Tel: 67.74.30.20	Norway	Tel: 67.74.31.83
Finland	Tel: 67.48.63.16	Sweden	Tel: 67.48.63.16
Netherlands	Tel: 67.48.63.16		

Others at Marseilles.
WATCHMEN: Service necessary for ships loading or unloading dangerous merchandise. Optional for other ships. (Tel: 67.80.22.02).
CUSTOMS ALLOWANCES: 40 grammes tobacco per day per man (calculated in accordance with the length of voyage undertaken by the ship). Amount of alcohol fixed by Customs in accordance with the crew, and length of ship's stay in port. It is a matter of tolerance and not of right.
REPATRIATION: Repatriation and crew changes are easily arranged.
AIRPORT: Airport (Class B) at Montpellier-Frejorgues, located 30 km. from Sete, (30 minutes by car on the motorway), and has services to Paris, Nice, Bordeaux, Clermont-Ferrand and London. The international airport of Marseilles-Marignane is 160 km.
IDENTIFICATION CARDS: Crew men going ashore should carry passport or identity card.
TIME: GMT plus 1 hour – alteration from end of March to end of September to GMT plus 2 hours.

HOLIDAYS: No labour days: 1st May and St. Louis Day (late August). Days with possibility of labour at overtime rates: 1st January, Easter Monday, Ascension Day, Whit Monday, National Day (14th July), Assumption Day (15th August), All Saints' Day (1st November), Armistice Day (11th November), Christmas Day (25th December). N.B. Every Sunday and days with possibility of labour at overtime rates can be worked at the rate of 100%.

DEVELOPMENTS: Berth J in Dock No. 2, for oil products, will be available in September 1989 (length 130 m. depth 9.0 m.)

A signal mast is to be erected near the Eastern Entrance and is expected to be operational late 1989.

AUTHORITY: Capitainerie du Port de Sete, Quai du Maroc, 34207 Sete, France. *Tel:* 67.74.88.20. *Telex:* 480220. *Contact:* Commandant Pierre Guillard, Commandant du Port de Sete (Harbour Master).

Gabon

OVENDO: (Also see page 579)

SHIPMASTER'S REPORT: February 1989.

PILOTAGE: 2 pilots (French) available for berthing and unberthing.

On arrival, Pilot boards at the Fairway Buoy position. This has to be arranged by the Charterer or Owner. Many ships, shallow draft or regular traders, do not take the Pilot at the Fairway Buoy position.

APPROACHES: All the buoys in the Channel, including the Fairway Buoy, are missing and they are unlikely to be replaced, according to the Pilot. During the transit to the berth all positions are by radar, due to lack of visual points. Arrival and departure should be in daylight.

Great care must be taken on arrival off the Fairway Buoy position as some of the points of land do not show up well.

The sailing draft of 10.4 m. is governed by the depth in the channel. There are several 9 m. patches and banks. The best plan is to leave the berth at LW, in order to avoid the 5 knot current during unberthing, then anchor off the berth until about 1 hour before HW, then proceed outward. This gives the vessel the benefit of 1.7 m. – 2.0 m. rise in tide.

TUGS: One tug assists with berthing and unberthing.

BERTHING: *New Ore Berth:* This is a single "T" jetty with dolphins. We were the second vessel to berth here. There is a single loading arm that covers the whole 6 hatches, without ship having to shift. Loading rate is about 3,000 t.p.h. when in full operation. During our stay, technicians were still working on varous items. Manganese Ore is either supplied ex-stock or directly from wagons.

Vessel berths port or starboard side to, with one tug assisting. Moorings consisted of 3/2/2 each end and no wires if possible. One anchor is let go on approach.

The berth is situated just down river from the Port of Ovendo. The port itself handles large vessels and has a depth alongside of about 8.0 m.

FRESH WATER: Not available ex-berth.

FUEL: Not available ex-berth.

REPATRIATION: Possible. One crew member landed ashore for medical treatment and repatriation.

SHORE LEAVE: Difficult, as launches are required and they are expensive. The town of Libreville is some distance from the port.

GENERAL: *Officials:* Boarding party boarded on arrival. Usual paperwork required. The bond was not sealed.

Communications: The telephone and telex service to the Agent's office was good.

Draft Survey: This is undertaken by ship's staff. The shippers require a loading plan prior to arrival. The Bill of Lading figures were the same as the ship's figures.

Supplies: There is no ship chandler at the port. There is an excellent supermarket in Libreville which is of European standard but items are very expensive.

Federal Republic of Germany

HAMBURG: (Also see page 597)

DOCUMENTS: *Add:*

Shipmaster's Report: October 1988.

Customs: No documents required as port is a Free Port.

Water Police: 2 copies Crew List.

1 copy Maritime Declaration of Health.

Agent: 1 copy Crew List.

Ghana

GENERAL: (Also see page 611)

DOCUMENTS: On 15th November 1988 the Ghana Ports and Harbours Authority announced that all Cargo Manifests must be received by the GPHA 7 days prior to the arrival of vessel, failing which there will be no berthing for the vessel.

Republic of Guinea Bissau

BISSAU: (Also see page 650)

SHIPMASTER'S REPORT: December 1988.

Vessel proceeded from Las Palmas to Bissau. Speed 13 knots. Draft 5.8 m.

Report on the River Entrance to Bissau: Steer true course 177° until vessel crosses the 100 fathom line at position Lat. 12° 26′ N., Long. 17° 30′ W. From this point steer true course 148° until the vessel again crosses the 100 fathom line at position Lat. 12° 11′ N., Long. 17° 20′ W. From this position steer true course 124° to Buoy Geba-A (Fairway Buoy).

From position Lat. 12° 11′ N., Long. 17° 20′ W. vessel's position was ascertained by radar, using Cabo Roxo which was visible on the radar up to 40 miles; the Baixos do Rio Grande light, which was visible on radar up to 30 miles; Ilha da Jeta which was visible up to 30 miles and the Buoy Geba-A (Fairway Buoy) which was visible on radar at 12 miles.

On reaching the Fairway Buoy, vessel alters course towards the pilot station at Caio Island. The minimum depth by echo sounder under the keel was 4.5 m. Strong currents of up to 5.5 knots were experienced.

The pilot station at Caio Island has no means of communication with either the vessel or the Port of Bissau. River Pilots are therefore never advised of vessel's arrival in advance.

When the vessel arrives at the pilot station, the vessel's lifeboat/rescue boat, is to be used to pick-up the pilot as the pilot boat has frequent engine breakdowns. The approach to Caio Island is very dangerous due to many breakers, wrecks and strong currents.

The River Pilot only speaks "Crioulo" (Creole), which is a local dialect, and a very few words of Portuguese. He is therefore unable to give proper orders to the helmsmen.

All navigation in the Canal do Geba has to be done by the ship's Master. The pilot does not assist in any way.

Entry and departure from Bissau is dangerous, especially at night, as the East Cardinal buoy off Banco do Meio is missing and most other buoys are unlit.

On arrival, vessels anchor at Bissau Inner Roads, which are 4 cables Northeast of the jetty, and await the harbour pilot.

The harbour pilot was able to communicate in English but was unable to show on the chart where the vessel was to berth.

Berthing/unberthing is preferred on the flood tide.

Vessel anchored in the Roads at 1930 hrs. and berthed alongside at 2300 hrs.

All jetties are unlit, so vessel had to use Suez Canal searchlight when approaching the berth.

Minimum depth under the keel when approaching the berth was 2.0 m. Currents alongside the berth are up to 3.5 knots and range of tide up to 5.0 m.

The vessel has to provide a cabin for the River Pilot as he stays on board the vessel during the whole time alongside.

When vessel was due to leave, the Harbour Pilot was standing-by on another vessel so we left port without a Harbour Pilot. On approaching Caio Island we again had to use our lifeboat/rescue boat to land the River Pilot.

Pilotage: Compulsory. Request for pilot to be made to the vessel's local agent. The pilot station is located at Ilheu do Caio which is about 50 nautical miles West of Bissau.

Anchorage: The Canal do Geba has good holding ground and plenty of room.

Restrictions: Night navigation is not recommended as most of the lights are either missing or unlit.

Tugs: None available.

Berthing: The old cargo jetty is 131 m. in length and has a minimum depth alongside of 6.3 m.

The new cargo jetty, which is soon to be operational, has a length of approximately 280 m.

Cargo Handling Facilities: Ship's cranes or derricks are to be used. 1 forklift of low capacity available. General cargo can be loaded on to the quay but all containers must be loaded direct on to trucks.

Stevedores: The working hours are from 0800 hrs. to 2300 hrs. Night work is possible, but pilferage increases considerably during night time.

Repairs: Not possible.

Agent: Messrs. Guinemar S.A., Rua Guerra Mendes 4/4a, Bissau. Tel: 213022/3. Telex: 0969-276.

Note: Only the agent has VHF in Bissau (range up to 30 nautical miles).

Guyana

GEORGETOWN: (Also see page 651) **(See Late Plans)**

SHIP'S OFFICER'S REPORT: September 1988.

During vessel's stay in Georgetown I was able to gather the following information:

In a major step towards promoting the export of Bauxite, the Guyanese government has charted the Panamanian flag vessel M.V. "Arrowcane II", for an initial period of 5 years. This vessel will be a silo ship for transhipment of Bauxite.

She will be permanently moored in position Lat. 06° 49′ N., Long. 58° 10.5′ W. (approximate), heading North (see "Plan").

The "Arrowcane II" has been converted into a self-loading/discharging silo ship. She has an arrangement for discharging barges on her port side using on-board grabs, and then loading larger ships on her starboard side using a conveyor belt. She also has "Yokohama type" fenders on her starboard side.

Initially there was a draft restriction for vessels loading Bauxite at Linden (06° 01′ N., 58° 18′ W.) (up the Demerara River), so it was not possible for large vessels to take a full load. With the establishment of this silo ship at the mouth of the river it will be possible to load vessels to a deeper draft.

It was not possible to get other details about the loading draft restrictions, loading rates, etc., as the silo ship was still not operational when we left Georgetown. The 4 buoys have been laid and M.V. "Arrowcane II" was to carry out the "mooring operation" within a few days and become fully operational after 2 weeks.

Hong Kong

HONG KONG: (Also see page 662)

DOCUMENTS: *Add:*
Shipmaster's Report: October 1988.
To be sent from last port of call before Hong Kong:
1 Hong Kong Official Crew List.
1 List of Ports of Call.
Copies of: Ship's Register
Safety Equipment Certificate.
Safety Construction Certificate.
Safety Load Line Certificate.
Safety Radio Certificate.
Derat Exemption Certificate.
Agent: All Certificates.
1 Safety Manning Certificate.
Clearance from Last Port.
1 copy ordinary Crew List.
1 copy Stores List.
Quarantine: 1 Maritime Declaration of Health.
1 ordinary Crew List.
Immigration: On arrival: 1 set of Hong Kong Crew Lists.
5 copies ordinary Crew Lists.
On departure: 2 copies ordinary Crew Lists.
Police: 1 copy Arms and Ammunition List.
Customs: 2 copies Stores List.

Indonesia

LHOKSEUMAWE: (Also see page 739)

RADIO: *Add:* Lhokseumawe Radio Station, Telex No. 51696.
SHIPMASTER'S REPORT: September 1983.
Radio: Amend: Send ETA to Lhokseumawe Radio Station, Telex No. 51696 (Station operated by Pertamina).

Iran

BANDAR ABBAS: (Also see page 767)

SHIPMASTER'S REPORT: February 1989.
Port: Bandar Abbas (Shahid Rejaie).
Arrival: On arrival at the anchorage, contact Port Control on VHF Channel 16 and give arrival information. Port Control are of little assistance with regard to berthing information. The agent is the best person to supply this advice. The State Shipping Agents "ShippingCo" maintain a watch on VHF Channel 16.

The vessel may also be contacted by the Iranian Coast Guard on entering the outer anchorage.

Boarding Party: The boarding party of Customs and Immigration Officers boarded at the anchorage 24 hours after arrival. Normal paperwork is required.

All cabins were searched for alcohol, etc. and the bond was sealed. The vessel is also searched for stowaways prior to departure by Customs Officials.

Communications: The radio room is sealed. VHF telephone calls can be made via Bandar Abbas Radio or Muscat Radio.

Berthing: The vessel berthed at Shahid Rejaie which is about 1 hour from the outer anchorage. There is no suitable Admiralty Chart for this area.

Shahid Rejaie is a large, modern and well planned port with about 30 berths. The maximum draft is probably in excess of 12.0 m.

This vessel discharged barley in bulk at a rate of approximately 3,400 tonnes per day, utilising evacuators and lorries ashore. The ship's cranes are required for suspending the suction hose.

There are no shore cranes or grabs for discharge of bulk cargoes. Container vessels use small mobile cranes.

Fresh Water: Available.
Fuel: Available.
Repairs: Mechanical, radar and navigation equipment repairs are possible. However, no spares are available.
Repatriation: Possible.
Shore Leave: Not allowed.
General: Mail: It is possible to send mail. The vessel received courier mail from overseas.

Spares: It is not advisable to receive spares, due to delays at Customs and paper work, etc.

Supplies: Fresh provisions available but quality was poor and they were very expensive.

Fumigation: Hatches with grain cargoes require fumigation. Crew have to stay on board. If only a few hatches require fumigation they are sealed and stevedores continue to work on other hatches.

KHARG ISLAND: (Also see page 774)

RADIO: *Add:*
Kharg Island – Arrival Information:
We quote below text of the letter dated October 24th 1988, received by Gulf Agency Co. (Iran) Ltd., Tehran, from NIOC, Crude and Product Operation Division, Tehran.

"Further to our previous instructions, please note all the vessels under that agency which are intended to load at Kharg Island have to give information below, 36 hours before their arrival to the Area Manager of Kharg Island. Otherwise we shall not be responsible for any delay and demurrage or any other costs and expenses occurred to those vessels in this respect.

Required information:
1. Cargo requirements and supplier.
2. Deballasting time.
3. Loading rate.
4. ETA Kharg Anchorage.
5. Arrival and departure drafts.
6. Radio Free Pratique by quarantine message addressed to Port Health, Kharg, Iran.

Please also note the following:
(a) There are oil pollution patrols by launch around Kharg, ensure clean ballast and pipelines. No oily discharge from any source allowed.
(b) All cargo tank openings must be closed while tugs alongside.
(c) Port safety regulations rigorously enforced.
(d) After anchoring telex/cable anchoring time and position.
(e) If loading two grades of oil, indicate which necessary to load first.
(f) Note that diesel bunkers are not available at Kharg Island.
(g) Early Departure Procedure is available.
(h) Vessels using EDP to telex/cable ship's figures within 12 hours of sailing.
(i) Ensure that all exhausts and uptakes are clean before berthing to prevent funnel sparking alongside.
(j) Propeller turning alongside berth to be kept to minimum and must be strictly watched.
(k) Intership VHF traffic to be kept clear of Channels 16, 12, 10 and 77 while in Kharg Anchorage and alongside."

LAVAN ISLAND: (Also see page 782)

RADIO: *Add:*
14 Point Questionnaire:
A 14 point questionnaire has to be completed and sent to NIOC by principals prior to appointment of a vessel for loading cargo at Lavan Island as follows:
1. Overall length of vessel.
2. Moulded depth of vessel.
3. Mean draft in light condition, ready to load (i.e. with only permanent ballast on board).
4. Can vessel discharge permanent ballast concurrent with cargo loading?
5. If any clean ballast is carried in the cargo tanks, can this be segregated and discharged concurrent with cargo loading?
6. If answer to (5) above is "Yes" what will be the mean draft with permanent ballast and clean cargo tank ballast on board?
7. What will be the maximum loading draft? Is this Summer or Tropical mark?
8. What is required "Owners Clearance" under keel in loaded condition?
9. Height of loading valve manifold connections above the deck.
10. Distance of loading valve manifold centre from the bow.
11. What is spacing (on centres) between loading valve manifold connections and how many connections are available for this loading?
12. Distance of loading valve connection from side of ship.
13. Advise if Lavan Island is first or second loading port.
14. If second loading port, how much cargo will be on board on arrival and what will be the arrival draft, fore and aft?

SIRRI ISLAND: (Also see page 786)

RADIO: *Add:*
14 Point Questionnaire:

A 14 Point Questionnaire has to be completed and sent to NIOC by principals prior to appointment of a vessel for loading cargo at Sirri Terminal as follows:

1. Overall length of vessel.
2. Moulded depth of vessel.
3. Mean draft in light condition, ready to load (i.e. with only permanent ballast on board).
4. Can vessel discharge permanent ballast concurrent with cargo loading?
5. If any clean ballast is carried in the cargo tanks, can this be segregated and discharged concurrent with cargo loading?
6. If answer to (5) above is "Yes" what will be the mean draft with permanent ballast and clean cargo tank ballast on board?
7. What will be the maximum loading draft? Is this Summer or Tropical mark?
8. What is required "Owners Clearance" under keel in loaded condition?
9. Height of loading valve manifold connections above the deck.
10. Distance of loading valve manifold centre from the bow.
11. What is spacing (on centres) between loading valve manifold connections and how many connections are available for this loading?
12. Distance of loading valve connection from side of ship.
13. Advise if Sirri is first or second loading port.
14. If second loading port, how much cargo will be on board on arrival and what will be the arrival draft, fore and aft?

DOCUMENTS: *Add:*
Shipmaster's Report: November 1988.
3 copies Crew List.
3 copies Passenger List.
2 copies Stores List.
1 copy Parcel List (if any).
1 copy Cargo Manifest.
1 set Bills of Lading.
Oil Record Book.
Ship's Certificates.
1 Statement of Amount of Lubricating Oil on board.

SALERNO: (Also see page 843)

DOCUMENTS: *Add:*
Shipmaster's Report: November 1988.
5 copies Crew List.
2 copies Ship's Information.
1 copy Application for Ship's Clearance.
1 copy Stores List.
1 copy Cargo Manifest.
1 copy Maritime Declaration of Health.
Oil Record Book.
Cargo Gear Certificates.

TARANTO: (Also see page 845)

SHIPMASTER'S REPORT: December 1988.

The following Information Sheet was supplied to the Master by the Agent on vessel's arrival.

VHF:

Commercial calls	:	Channel 16 via Bari Radio.
Harbour Master/Pilot	:	Channel 12.
Launch service	:	Channel 10.

All vessels anchored in the roads must keep watch on Channel 12 from the 15th to the 20th minute of each hour for the purpose of receiving orders, or news of their interest, if any, from the Harbour Master.

Pilotage/Linesmen/Towage: Pilotage and linesmen service are compulsory for all vessels over 500 g.r.t.; however vessels up to 2,000 g.r.t. may avail themselves of VHF Pilot service at a 60% reduced rate.

Towage service is compulsory for all vessels over 20,000 g.r.t. (at least 3 tugs up to 40,000 g.r.t. and then 4 tugs) whilst, for tankers, tugs are compulsory as follows:

2,000 to 5,000 g.r.t.	:	1 tug (minimum)	
5,000 to 15,000 g.r.t.	:	2 tugs	"
15,000 to 30,000 g.r.t.	:	3 tugs	"
over 30,000 g.r.t.	:	4 tugs	"

Towage of vessels with inactive engines is subject to 40% increase.

Towage lasting more than one hour (two if canal crossing involved) is subject to 30% increase for each subsequent half an hour or portion thereof.

Safety in Roads: When a vessel is anchored in Mar Grande Roads, it should be borne in mind that the nature of bottom is mainly clay/mud and offers very bad holding ground; therefore, under strong S./S.E. winds (which occasionally blow in Taranto) the anchors may drag and consequently, danger to the vessel arises.

Robbery/Pilferage: Night watching service by crew members or authorised sworn watchmen is recommended in view of robberies having occurred in the past on board vessels berthed or anchored, especially concerning paints and ropes.

Bonded Goods: Upon arrival in port, Customs grant for crew consumption purposes, 50 cigarettes for each crew member and 1 bottle of spirits for every 10 crew members, which should be used within 48 hours of vessel's arrival.

Crew Lists: According to IMO International Convention 19/10/1971, upon arrival and departure, Harbour Master requires an updated Crew List on IMO approved forms.

Ship's Documents: We take the liberty to remind the Master that Outward Clearance granting, is subject to following certificates being valid:
Safety Equipment.
Safety Radio.
Safety Construction.
Load Line (including annual survey).
Deratting Exemption.

Launch Service: Vessel's launches cannot be used for connection with shore. Boat service is made available by an authorised firm at an official rate, which is increased by 70% from 1700 hrs. to 2400 hrs. weekdays and from 1200 hrs. to 1700 hrs. on Saturdays; by 100% from 0700 hrs. to 2400 hrs. on holidays and 1700 hrs. to 2400 hrs. on Saturdays; and by 200% from 0000 hrs. to 0700 hrs. any day.

Bunkering: Bunkering operations may be carried out only by barge. While bunkering, an engineer and a fire watchman (sent onboard by the Harbour Master on signing the bunkering authorisation) must stand-by and hose area must be properly lighted during night-time.

Any spillage on deck must be immediately cleaned up.

Water Pollution: Port Authority closely watches this matter and Masters are kindly invited to take all necessary steps to avoid any possible pollution. Also vessels discharging ore/coal are not allowed to wash decks in port (including roads).

Should any pollution be caused and vessel's responsibility proved, all expenses involved in carrying out the cleaning will be for vessel's account (to be paid for prior to departure) or Master shall be sued by Court.

Garbage Collection: Daily collection of garbage from vessels is compulsory and is carried out by the authorised firm (Nigromare) by means of a motorboat, and a supporting slip must be signed each time, even if no garbage is given.

Note: The service covers only galley and crew garbage collection. Disposal of other ship's waste is subject to a charge, to be agreed each time.

Water Supply: Water is only available by barge (except Pier No. 1 in Commercial Port). Minimum charge is for 25 tons. At least 24 hours notice should be given to Agent.

Provisions/Stores: Provisions and stores to be delivered by barge only.

Cash Money Request: Cash must be requested 24 hours prior to being needed.

No foreign currency available unless remitted directly to Master from abroad and sufficient notice is given to Agent to arrange collection in due time.

Repairs: Authorisation to carry out repairs of any kind is subject to an application to Harbour Master, on forms obtainable from Agent.

Hot work (involving naked flames) in the engine room, is always subject to Port Chemist's attendance.

Tankers, including OBO/OOC vessels, must also obtain a "Gas-free Certificate" for the area affected by the repairs (even if carrying iron ore/coal). When above vessels are performing loading/unloading operations, authorisation is also subject to Master's Declaration that vessel is always ready to shift with her own engines at any time.

Landing Spares: Any landing of spares for repairs and/or shipment must be authorised by Customs, through Agent.

Seamen Signing-off for Repatriation: Please note that, according to Italian law, seamen signing-off for repatriation are not allowed to take any bonded goods out of the harbour area. Inspection of baggage is usually carried out by Customs Officers when landing. Furthermore, owing to Italian Money Exchange Regulations, a crew member leaving the country, is not allowed to take abroad more than 200,000 Italian lire, while no limitation exists on foreign currency exportation, if crew member can provide valid evidence of how currency obtained.

Japan ✓

E

NAKANOSEKI: 34.00 N. 131.34 W. (See Late Plans)

SHIPMASTER'S REPORT: December 1988.

DOCUMENTS:
Ship's Register.
Last Port Clearance.
5 copies of Crew List, including Passport Numbers.
3 copies of Lists of Ports of Call.
1 copy Stores List.
1 copy Through Cargo Manifest.

Please note that Nakanoseki was not the first Port of Call in Japan. If such is the case then at least one Declaration of Crew's Baggage and one Maritime Declaration of Health will probably be required.

Officials:

Customs:	Stationed in Nakanoseki.
Maritime Safety Office:	Stationed in Nakanoseki.
Quarantine:	Not stationed in Nakanoseki. Free Pratique is to be obtained through Tokuyama, Ube and/or Mutsure Quarantine Station prior to proceeding to Nakanoseki.
Immigration:	Officials stationed at Tokuyama Office.
Port Authority:	Stationed in Nakanoseki.

Port Status: Open Port (Mitajiri – Nakanoseki Port).

PILOTAGE: Available, but not compulsory.

According to information received by the vessel prior to arrival off the port, Harbour Pilot boards in the vicinity of a 250 m. radius circle (true bearing 159°, 1,590 m. from Nakanoseki Lighthouse), depth of water approximately 11.10 m. This boarding area is used for vessels with a deadweight in excess of 10,000 tons or if the LOA exceeds 150 m.

Information was also received from the vessel's Agent prior to arrival regarding the pilot boarding area. They advised me that the Pilot would board in position Lat. 33° 58′ N., Long. 131° 33′ E. (090°, 2.0 miles from Saba Shima Lighthouse). In my opinion this is the more practical of the 2 boarding areas as it keeps the vessel well clear of the numerous fish havens in the vicinity of the channel entrance and allows plenty of room to manoeuvre to seaward should the vessel have to drift and await the Pilot during periods of high winds.

If required, Inland Sea Pilotage service is available either from Sekisaki, Kobe, Hesaki, Tokuyama and/or Kadamatsu Pilot Station.

The Pilot boarded the vessel using one of the local tugs.

The Pilot advised me that during flood tide a current of up to 1.2 knots can be experienced across the channel entrance, flowing from East to West. During ebb tide the flow is in the opposite direction.

ANCHORAGES: There is no suitable waiting anchorage for vessels of this size (PCC/Lumber Carrier, 33,000 g.r.t.). Vessels are requested to adjust their ETA so that they arrive at the Pilot Station without having to anchor. I questioned the Pilot as to why it was not permissible to anchor in the vicinity of the Pilot boarding ground and he advised me that it was because of the numerous fishing havens in the area and objections received from local fishermen.

Should the vessel be compelled to anchor for any reason, the Pilot advised a position 138°, 3,000 m. from Ryugu Saki Light. Care must be taken when anchoring in this position due to the close proximity of underwater cables.

RESTRICTIONS: Berthing is carried out between sunrise and sunset.

Unberthing is carried out between sunrise and one hour before sunset.

MAX. SIZE: Dependent on height of tide. Vessel must have 10% under keel clearance in the approaches, where the depth of water is 10.50 m.

VHF: During the early morning approach to the port the vessel was unable to contact the Pilot by VHF.

TUGS: Available as required. Stationed at Tokuyama Port. This vessel used 2 tugs for berthing and 1 tug for unberthing. Vessel is equipped with bow thruster and was berthed starboard side to, head out.

BERTHING: Nakanoseki Wharf No. 3 (Owned/Controlled by Yamaguchi Prefecture).

The berth is used exclusively for Mazda vehicles/CKD but occasionally for Log/Plant carriers.

Depth of water in approaches:	10.50 m.
Depth of water alongside:	12.00 m.
Length of Wharf:	240 m.
Side alongside:	Basically port side to, but starboard side to is also acceptable.

The berth is very exposed to the W/N.W. and strong winds blowing from this direction could prove to be a problem for high-sided PCC type vessels.

STEVEDORES: For loading Mazda cars/CKD.

Nippon Express Company Limited, Hofu Branch.
Mazda Logistics Service Company Limited, Hofu Branch.
Naigai Unyu Company Limited, Hofu Branch.

Loading Rate: Approximately 80 units per gang hour, subject to stowage.

Labour: Basically 3 or 4 gangs, but a maximum of 6 gangs are available.

FRESH WATER: Available from shore hydrant, rate approximately 10 tonnes per hour. The basic charge is 275 Yen per tonne. Barge supply is also available, but this must be brought up from Tokuyama Port.

GENERAL: *Charts:* There is no large scale BA. Chart of the area available at present. For the purpose of our visit, Japanese Chart No. 1134 was purchased.

Jordan

AQABA: (Also see page 950)

DOCUMENTS: *Add:*

Shipmaster's Report: November 1988.

Customs: 3 copies Crew List.
1 copy Bonded Stores List.
1 copy Crew Declaration.

Agent: 3 copies Crew List.

Quarantine: 3 copies Crew List.
1 copy Maritime Declaration of Health.
2 copies Vaccination List.

Immigration: Photograph for shore passes (compulsory).

Republic of Korea

BUSAN (Pusan): (Also see page 964)

DOCUMENTS: *Add:*

Shipmaster's Report: November 1988.

3 copies Transit Cargo Manifest.
8 copies Crew List (Customs).
10 copies Crew List (Immigration).
8 copies Passenger List, (if any).
2 copies Arms/Narcotic List.
2 copies Currency List.
2 copies Stores List.
2 copies Crew Personal Effects List.
2 copies Ports of Call List.

Quarantine:
1 copy Maritime Declaration of Health.
1 copy Vaccination List.

Immigration: Keep record of times of departure and returning to the ship of all crew members for handing over to Immigration.

Socialist People's Libyan Arab Jamahiriya

BOURI: 33.54 N. 12.39 E. (See Late Plans)

LOCATION: The position of the AGIP NAME FSO "Sloug" is:
Lat. 33° 54′ 32.94″ N., Long. 12° 39′ 19″ E.

The FSO is moored to a single point mooring structure by a rigid bracket. The water depth is 166 m.

FSO "Sloug": LOA 348.9 m.; Length between perpendiculars – 330.7 m.; Moulded depth 25.5 m.; Moulded breadth 51.8 m.; Max. draft 20.012 m. and Minimum draft 10.0 m.

DOCUMENTS: Documents required to obtain clearance are as follows:

5 copies Crew List.
5 copies Passenger List.
2 copies Tobacco/Spirits Declaration.
2 copies Personal Effects Declaration.
2 copies Stores Declaration.

Following certificates will also be inspected by the Libyan authorities:

Clearance from Last Port.
International Maritime Health Declaration.
Animal List, with proper Health Declaration.
Entering and Leaving Territorial Waters Certificate.
Report Inwards Certificate.
Report Outwards Certificate.
Boycott Certificates.
Tankers Characteristics Certificate.
Certificate of Discharge, signed by the discharge port authorities, of the last port (cargo) loaded in Libya.
Tovalop Certificate.

Port Entry: Offtaking Vessel's Free Pratique, Customs Entry and Clearance, Immigration inspection and documentation for the loading operation will be arranged by vessel's agents.

Agency: An Agency representative is stationed on the FSO for ship's Clearance.

PILOTAGE: The Mooring Master will board the Offtaking Vessel in the "Waiting Area" which is located 2 miles South of the FSO. Depth of water 166 m.

Also see "Mooring/Unmooring".

APPROACHES: Two production platforms (DP4, DP3) are situated respectively in position Lat. 33° 55′ 23.38″ N., Long. 12° 40′ 50.96″ E. and Lat. 33° 53′ 39.45″ N., Long. 12° 36′ 23.83″ E.

Subsea lines run between the 2 platforms and the FSO. All ships are warned that it is strictly forbidden to anchor within 0.5 miles of the line joining the two platforms. Furthermore it is forbidden to steam across the same line.

No ship should approach any of the structures closer than 0.5 miles and should proceed to the "Waiting Area" (2 miles South of the FSO) adhering strictly to this regulation, and await for further instructions from the FSO.

RESTRICTIONS: Mooring operations normally take place during daylight.

MAX. SIZE: 35,000 d.w.t. – 150,000 d.w.t. Max. LOA 283.0 m. Max. beam 44.0 m. Draft – no limit.

RADIO/VHF: *ETA:* Vessels will inform "Agip Name Tripoli", through their local agents, of their ETA at the designated "Waiting Area" located about 2 miles South of the FSO "Sloug" Terminal.

Notices Procedure: All vessels destined to load Crude Oil at the Bouri Field are requested to inform "Agip Name Tripoli" of their ETA 72 hours, 48 hours and 24 hours prior to their arrival at the "Waiting Area".

The "72 hour notification" must include the following information:

1. Firm ETA (local time and date).
2. Name of tanker and Master's name.
3. Flag.
4. Gross tonnage.
5. Nett tonnage.
6. DWT.
7. Quantity of cargo required.
8. Confirm 2×16 in. connections (ASA 150) on port side manifold.
9. Confirm existence of a Smit Bracket forward.
10. LOA and Draft.
11. Distance from bow to manifold and stern to manifold.
12. Minimum vessel's speed and equivalent RPM.

13. Confirm availability of at least 6 mooring lines forward and 6 mooring lines aft (mooring lines should be suitable for the intended service).
14. Shipper.
15. Agent.
16. Consignee.
17. Destination.
18. Last port of call.
19. Any requirements needing early attention.
20. Confirm inert gas system operating correctly and that vessel will maintain a maximum oxygen content of 8% in the tanks throughout berthing, deballasting, loading and unberthing operations.

The 48 hour and the 24 hour notification shall specify only the latest ETA, plus any amendments to the details already advised under the "72 hour Notification".

After the initial notification has been made, any change in ETA of more than 12 hours must be immediately communicated to "Agip Name Tripoli" through the ship's agent.

Radio Contact with the FSO "Sloug": Vessels in VHF range of the FSO will call "Bouri Terminal" on Channel 16, working on Channel 17. Once in contact, a mutually agreed upon channel will be used.

A private channel will normally be used between the FSO and the Offtaking Vessel during operations. The Mooring Master will supply portable sets equipped with this channel for operations use.

Communications during Loading Operations: Medium and high frequency radio systems are to be shut down during cargo transfer and deballasting.

Communications Failure: Should communications fail during any part of the operation (mooring, cargo transfer, unmooring), the party affected shall sound the International Code Signal "K" on her whistle and cargo operations, if in progress, will be stopped until normal communications are re-established.

MOORING/UNMOORING: To ensure coordination between the FSO and Offtaking Vessel, a Mooring/Loading Master will be in attendance to advise the operational procedures necessary to ensure a safe, accident and pollution-free operation.

Mooring Master: The Mooring Master will board the Offtaking Vessel at the "Waiting Area" by a tug that will remain in attendance. Necessary mooring gear (when applicable) will be transferred to the Offtaking Vessel.

Lifting Gear: The Offtaking Vessel must have her own lifting gear rigged and ready for use on her port side *but not swung out.*

Accommodation Ladder: The Offtaking Vessel must have her accommodation ladder and pilot ladder, rigged in combination, on her starboard side and lowered to about 1.5 m. above the water level. Crews in attendance should be in radio contact with the vessel's bridge.

Lee Side: The Offtaking Vessel shall manoeuvre in a way to make a lee on her starboard side, to allow the Mooring Master and other Terminal personnel to board the vessel.

Mooring Master's Station: The Mooring Master shall be stationed on the bridge of the Offtaking Vessel and advise the Master on the mooring procedures. Safety Check List(s) must be signed by the vessel's Master prior to the beginning of any operation.

Aborting of Mooring Operation: The Mooring Master will always be prepared to abort the mooring operation, either on his own initiative or upon instructions of the Master of the Offtaking Vessel. The decision should be taken in ample time whilst the situation is still under control. If, for any reason, the Operations Head on the FSO requires to abort the operation, he will inform the Offtaking Ship immediately.

Mooring Master's Duty: The advisory service of the Mooring Master will continue until the Offtaking Vessel is safely secured to the FSO, either alongside or in tandem and will resume during the unmooring and departure operations, until the Offtaking Vessel is at a safe distance from the FSO (i.e. in the Waiting Area).

Mooring Monitoring on the FSO: A second Mooring Master, based on the FSO, will monitor the mooring of the Offtaking Vessel until vessel is securely tied-up and preparations for loading have begun. At that time he will assume the advisory control of the operation, including the rigging and connection of the FSO loading arms/hoses.

Fenders: The fendering system of the FSO consists of 5 "Yokohama" rubber fenders, secured to the FSO's side prior to the beginning of the operation. Offtaking Vessel must be ready to use her own secondary fenders.

Mooring Operations Hours: Mooring operations will normally take place in daylight hours only. In special cases the Terminal Superintendent may authorise the Operations Head to perform mooring operations during night hours.

Mooring Manoeuvre (Side to Side): The Offtaking Vessel will manoeuvre in a safe way so as to approach the FSO's starboard side, making use of her engines and *if necessary* utilising the services of the tug in attendance, under the Mooring Master's advice. A rope suitable for towing should be made ready and lowered from the starboard bow to the water level when approaching the FSO until securely moored, to be used by the tug *if necessary.*

Caution: No anchors must be used. Anchors must be secured in such a way as to avoid accidental release.

Line Throwing Device: A pneumatic line throwing apparatus will be, *if necessary,* used by the FSO to establish contact with the Offtaking Vessel.

Number of Mooring Lines (Side to Side): A minimum of 6 suitable lines will be secured fore and 6 aft, 2 of them must be spring lines at each end.

Unmooring Manoeuvre (Side to Side): The unmooring manoeuvre will again be monitored by one of the Mooring Masters, stationed on the FSO. The tug will be in attendance. A rope suitable for towing should be made ready and lowered, from the Offtaking Vessel's starboard bow, to the water level, to be used by the tug *if necessary.*

Mooring Manoeuvre (Tandem): The Offtaking Vessel will manoeuvre in a safe way so as to approach the FSO's stern, making use of her engines and, *if necessary,* utilising the services of the tug in attendance under the Mooring Master's advice.

Caution: No anchors must be used. Anchors must be secured in such a way as to avoid accidental release. A rope, suitable for towing, should be made ready and lowered from the stern central fairlead to about 1.0 m. from the water level, but *no further,* unless so instructed.

The tandem mooring assembly floating pick-up rope will be heaved up from the Offtaking Vessel's bow Panama Fairlead by a polypropelene messenger rope of 1.5 in. diameter and at least 300 ft. long, that must be made ready while approaching. The Mooring assembly will then be heaved up and the chafing chain stoppered in the bow Smit Bracket. In case no suitable Smit Bracket is available, the chafing chain will be stoppered by 2 wire snotters made fast on the ship's bollards (wire snotters and necessary gear will be supplied by the FSO when the vessel is at the "Waiting Area").

Immediately after the chafing chain is made fast, the tug will pick-up the stern towing rope, which should be paid out until ordered to be made fast to one of the stern bollards.

Care should be taken not to move the propeller during this operation. The towing rope must be of a "floating" type.

The tug will remain in attendance during the whole time the vessel is in "tandem", in order to avoid any contact between the Offtaking Vessel and the FSO's stern.

Caution (Tandem and Side-to-Side Mooring): Offtaking ship's main engines must be ready to manoeuvre on 10 minutes notice during the whole time spent moored at the FSO.

Tandem Mooring Assembly Composition: The system is composed of:

1. About 30 ft.×3.5 in. diameter chafing chain, stoppered by a Smit Bracket on the FSO

   connected to

2. About 200 ft.×20 in. circumference nylon rope

   connected to

3. About 30 ft.×3.5 in. chafing chain that will be stoppered on the Offtaking Vessel by a Smit Bracket or by 2×2.75 in. diameter (approx.) wire snotters. The chafing chain is held afloat by a metalic buoy connected by a 1 in. "O" Chain, about 9 ft. long, to the extremity of it

   connected to

4. About 600 ft.×15 in. polypropelene floating pick-up line.

LOADING: Max. loading rate 9,000 cu.m.p.h. (56,610 bbl.p.h.).

Crude Oil:	Name: Bouri.	Pour Point: About 21°C.
	API: 23.5.	Loading Temp: +40°C. or more.

Hydrogen Sulphide: Masters are warned that Bouri Crude might contain Hydrogen Sulphide (H_2S). Crew members involved in cargo operations should be warned of the hazard that can be faced and how to deal with it.

Loading Operations at the FSO: Loading operations will be carried out either:

1. Side-by-Side: Export tanker moored to the FSO's starboard side by her own mooring lines (minimum 6 lines forward and 6 lines aft, of which 2 must be spring lines each end)

   or

2. Tandem: Export tanker moored to the FSO's stern by the FSO's mooring assembly. Export tankers should have a Smit Bracket fitted. In case no Smit Bracket is available, suitable wire snotters and ancilliary equipment will be supplied by the FSO to allow the mooring.

Check List: Before commencing any loading operations a Check List will be completed and signed by the Offtaking Vessel's Master and retained by the Mooring Master.

Mooring Arms or (alternative) Hoses: The FSO is equipped with 2×16 in. (150 ASA) loading arms and alternatively with 2 suspended 16 in. (150 ASA) hoses strings. The Offtaking Vessel could be requested to use her own lifting gear to connect and hold suspended the (alternative) cargo hoses.

Stern Loading Hose: The FSO is equipped with 1×16 in. hose floating string, about 950 ft. long, connected to the stern for "Tandem loading". The string end will be picked-up after the completion of stern mooring, by the ship's own lifting gear and connected to the port side manifold.

Deballasting: The Offtaking Vessel must be able to load while discharging ballast from her clean ballast tanks to the sea. In case the Offtaking Vessel could not load while discharging ballast, she should be prepared to load part cargo before discharging ballast, in order to maintain a proper draft and trim, while always ensuring that no oil pollution could arise.

Commencement of Loading: Loading operations will start as soon as the mooring arms (or hoses) are connected and as soon as agreed between the Offtaking Vessel's Master/Chief Officer and the Mooring Master, who will assist with the whole operation.

Loading Rate: Loading will start at low pumping rate to ensure the tightness of the system and will then be brought to the maximum *previously agreed upon* rate.

Watches during Loading: Manifolds and mooring line watches will be continuously kept on the Offtaking Vessel during the whole loading operation.

Lack of Communications: Communications between the Offtaking Vessel and the FSO will be ensured by means of portable radio sets supplied by the Mooring Master. In no case should there be a breakdown in communications during the loading operations. In event of such breakdown, the International Morse Signals, letter "K", will be blown by the Offtaking Vessel or by the FSO whistle. Loading operations will be stopped until communications have been re-established.

Completion of Loading: As soon as the loading operation is completed the loading arms/hoses will be disconnected and the Offtaking Vessel will be unmoored and sailed to a safe distance from the FSO, with the advisory services of the Mooring Master. Cargo documents will be brought to the vessel later by the tug, unless an "Early Departure Procedure" has been agreed upon.

Early Departure Procedure: Masters will be asked to agree to the "Early Departure Procedure". Should they accept they will be requested to sign in advance all "Bills of Lading" and other shipping documents, in blank. Cargo figures and other entries to be filled in the cargo papers will be communicated later, either by VHF, telex or radio message. This procedure will expedite ship's departure.

BALLAST: There are no facilities for receiving clean/dirty ballast at the Terminal. Only clean ballast can be discharged overboard.

MEDICAL: In case of need of medical attention, the following information should be sent to the Agents:

1. Name, rank, nationality and passport number of the crew member.
2. General symptoms and/or any particular requirements.

FRESH WATER/FUEL: Available in cases of emergency only.

SHORE LEAVE: Crews are not allowed shore leave, however sick crew members can be repatriated or go ashore for medical attention. In case of repatriation, the Master must agree the correct procedure with his agents.

WEATHER: *Winds:* Radial distribution shows an increase of wind blowing from N.W. and a decrease when blowing from E.S.E. Maximum observed wind speed can reach gale Force 8 (sometimes more) from N.W. during Winter time.

Waves: Waves are mainly from West to North and from East to S.E.

Waves generated by cyclonic disturbances come from N.W. to S.E. across the Thyrrenean Sea. High pressure in the Bouri area direct waves from E.S.E. to North.

Currents: The prevailing current is flowing Eastward with a maximum rate of about 1.5 knots.

Miscellaneous:

Max. sea surface temperature:	31°C.
Min. sea surface temperature:	7°C.
Max. air temperature:	33.5°C.
Min. air temperature:	5°C.

Rain:

Annual average is about 381 mm. Significant periods are January – February with 68 mm. and November – December with 80 mm.

Max. tide range: 0.95 m.

Bottom conditions: 18 m., thick top silty carbonate sand.

GENERAL: *Flag:* All ships calling at Bouri Field must fly the Libyan flag and the Quarantine signal must be displayed upon the authorities visit.

Gangway: Normally no gangway will be rigged between the FSO and the Offtaking Vessel. Should one be used, a safety net must be fitted underneath.

Visitors: Unauthorised personnel are not allowed to visit the FSO or the Offtaking Vessel.

OPERATOR: AGIP, Tripoli. *Telex:* 20282 Agip Ly.

Malaysia

BINTULU, Sarawak: 03.16 N. 112.59 E.

(See Late Plans)

PORT LIMITS: Following the arc of a circle with a radius of 10 nautical miles radiating from Tanjong Kidurong Point in position Lat. 03° 16.1′ N., Long. 113° 03.20′ E.

Fairway Buoy: Lat. 03° 16.35′ N., Long. 112° 59.0′ E.

DOCUMENTS: The required documents are:

4 copies Last Port Clearance/Shipping Arrival Report.
1 original Maritime Declaration of Health.
6 copies Crew List.
4 copies Voyage Memorandum.
6 copies Passenger List.
3 copies Vaccination/Cholera List.
3 copies Personal Declaration.
1 original Bonded Stores List, Ex-Customs.
5 copies Provisions List.
3 copies Engine Stores List.
3 copies Arms and Ammunition List.
3 copies Transit Manifest.

PILOTAGE: Pilotage is compulsory and available day and night.

Notification of Arrival: 24 hours notice of ETA required.

LNG/LPG/Ammonia vessels to give 72 hours notice.

Pilot Boarding Ground: Lat. 03° 18.0′ N., Long. 112° 58.5′ E.

VHF: All vessels shall contact Port Control by VHF Channel 12 at least 3 hours before arrival at the Pilot Boarding Ground or as soon as VHF contact can be established.

APPROACHES: The approach channel is a dredged channel 5.7 km. long, 240 m. wide with a depth of 15.0 m. at Chart Datum and is provided with leading lights and buoys. All navigational aids are reliable. For prominent points refer to B.A. Chart 2100. Current runs at 2 knots and tidal range is 2.2 m.

ANCHORAGE: Depth at anchorages varies from 12.0 m. to 26.0 m.

There are different anchorages within the Bintulu Port water limits:

Areas	*Depths*
(a) General Cargo Anchorage	5.0 m. – 22.0 m.
(b) Waiting Anchorage	24.0 m. – 28.0 m.
(c) Gas Tanker Anchorage	24.0 m. – 26.0 m.
(d) Petroleum Anchorage	21.0 m. – 25.0 m.
(e) Explosives Anchorage	7.0 m. – 21.0 m.

RESTRICTIONS: Depth at General Cargo Wharf is 10.5 m. Depth at Bulk Cargo Wharf is 13.5 m. Depth at LNG Jetty is 15.0 m.

No berthing after sunset at LNG Jetty.

MAX. SIZE: Max. draft for general cargo vessels is 10.0 m.

HEALTH: Maritime Declaration of Health is to be completed on arrival in accordance with International Sanitary Convention, 1944.

VHF: Receiving channels used within Bintulu Port are as follows:

Channel 12 – Working channel.
Channel 14 – Port Operations.
Channel 16 – International calling.
Port offers 24 hours service.

Vessels are required to establish contact with Port Authority Control Tower, call sign "Mike Kilo" (MK) on Channel 12 for pilots, etc., at least 3 hours before the expected time of arrival and departure from the port.

TUGS: Use of tugs is compulsory and depends on the size/length of the vessel:

Particulars of 3 Steerable Thruster Tugs:

LOA:	37 m.
Length of Design Waterline:	35.5 m.
Breadth (moulded):	11.0 m.
Depth (moulded):	4.20 m.
Main Engines:	MWM TBD 441 V12 2×1,956 h.p. @ 900 RPM each. Engine couple to Liaaen CP compass thruster type TCN 92/68-230.
Auxilliary Engines:	3×MWM D232V8 85KW/415V/50 HE.
Speed	13.5 knots.
Bollard pull:	42 tonnes.

Particulars of 2 Twin-Screw Tugs:

LOA:	27 m.
Length of Design Waterline:	26.5 m.
Breadth (moulded):	8.00 m.
Main Engines:	2×MWM TBD 440-6. 2×929 HP @ 900 RPM.
Auxilliary Engines:	2×MWM TD 232 V8.
Speed:	11.5 knots.
Bollard pull:	23 tonnes.

BERTHING: 3 berths with a total length 514.5 m. for general cargo.

1 berth of 270 m. for bulk cargoes.
1 Ro/Ro Ramp of 25.5 m.
1 LNG Jetty for LNG vessels only.
1 Jetty for petroleum products.

The wharf apron for the General Cargo Wharf is 24 m. and for the Bulk Cargo Wharf it is 30 m. The depth alongside the General Cargo Wharf is 10.5 m. and alongside the Bulk Cargo Wharf it is 13.5 m.

CRANES: 1 Gottwald mobile crane with 100 tonnes lifting capacity and 2 mobile cranes with 30 tonnes lifting capacity at 10 m. radius.

STEVEDORES: Stevedores and cargo handlers are obtainable from the Port Authority Traffic Department.

TANKERS: There is a Petroleum Jetty which could accommodate vessels of 30,000 d.w.t. With the present depth of 9.0 m. it can only accommodate vessel of 10,000 d.w.t. However, the area can be dredged further to accommodate 30,000 d.w.t. vessels.

Also see "Bintulu Terminal", page 1031.

DENSITY: Average 1009 – 1025.

FRESH WATER: Available at berth. No limitation as to vessel's requirement. Rate approximately 35 – 40 tonnes per hour.

FUEL: High speed diesel available. Price varies from time to time. The supply is by bunker barge and tank trucks at all berths. Other fuel as well as marine lubricants can be obtained through suppliers.

REPAIRS: Deck and engine not attended. Minor repair facilities exist.

SURVEYORS: Kinabalu Adjusters and Surveyors Sdn. Bhd., Mr. Mathews G. Ingan. Tel. 086-34620. Kinabalu Adjusters and Surveyors Sdn Bhd., includes insurance for cargo and cargo claims, etc.

Class survey – available by special arrangement.

GANGWAY/DECK WATCHMEN: Usually ship's crew and ship's gangway.

OPENING/CLOSING HATCHES: Stevedores or ship's crew, whichever to ship's advantage.

CUSTOMS ALLOWANCES:

25 sticks cigarettes per day per man.
1 quart beer/stout/wine per day per man.
One-eighth quart spirit per day per man.
8 sticks cigars per day per man.
1 oz. tobacco per day per man.

CARGO GEAR: Cargo gear is available for loading/discharging, etc., for heavy lifts up to 100 tonnes.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Distance 20 km., served by Malaysian Airline System (MAS).

TIME: Local time is GMT plus 8 hours.

HOLIDAYS:

(a) First Day of Chinese New Year.
(b) First Day of Hari Gawai (1st June).
(c) First Day of Hari Raya Puasa.
(d) National Day (31st August).
(e) Christmas (25th December).

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.

TELEPHONES: Connecting points available at berth.

BANKS:

1. Bank Bumiputra Malaysia Bhd., Bangunan BDA, Bintulu. Tel: 086-31320.
2. Bank Utama Malaysia Bhd., Jln. Sommerville, Bintulu. Tel: 086-31133.
3. Hock Hua Bank Bhd., 23 Jln. Sommerville, Bintulu. Tel: 086-31433.
4. Malayan Banking Bhd., 24 Jln. Abang Galau, Bintulu. Tel: 086-31635.
5. Standard Chartered, 89 Jln. Keppel, Bintulu. Tel: 086-31272.
6. Malayan United Bank Bhd., 186 Taman Sri Dagang, Bintulu. Tel: 086-32393.

DELAYS: Vessels generally berth on a "first come first served" basis, irrespective of day or night. No delays experienced so far at Bintulu Port.

SHIP SUPPLY SERVICE: Pau Chiong Tai is the local ship chandler. Prices are reasonable.

SHORE LEAVE: Shore leave is normally allowed up to 1800 hrs., according to Immigration bye-law.

GENERAL: The port is an "all weather port" and the most modern port in Sarawak. When a vessel is within the port limits, extra precautions must be taken to avoid oil spillages, etc.

When vessel is lying at berth no rubbish should be thrown overboard.

The Port Safety Officer will board vessel, under normal circumstances, to inspect the ship prior to loading.

Preventive measures must be taken to avoid the risk of fire whilst at Bintulu Port Authority's wharf.

AUTHORITY: Bintulu Port Authority, P.O. Box 296, 97007 Bintulu, Sarawak, Malaysia. *Tel:* 51001/5 (5 lines). *Telex:* Biport Ma 73179. *FAX:* 086-52929. *Contact:* En. Ramli Abu Samah, General Manager.

Martinique

FORT DE FRANCE: (Also see page 1066)

SHIPMASTER'S REPORT: December 1988.

Belle Fontaine: (See "Late Plans").

Vessel: LOA 150 m. Beam 21.0 m. Summer draft 9.05 m. 10,330 g.r.t. 5,584 n.r.t. 3 hatches.

After completion of cargo operations at Fort de France, the pilot boarded and vessel sailed for Belle Fontaine.

The Master takes command from Fort de France pilot station to about 1.5 miles before the berth at Belle Fontaine, when the pilot again assists. The regular pilot boat follows with additional crew from Fort de France and assists in taking the ropes to the dolphins and the jetty. Usually, and preferably, the pilot berths the vessel port side alongside against a slight current. The berthing is also done, preferably, in the early morning, due to absence of wind. The starboard anchor is dropped to 2 shackles on deck when the vessel is about 4 to 3 cables from the berth and is slacked away as required. The anchor is not of use for berthing but is for assisting unberthing. Under normal condition the vessel makes fast with 2 long headlines and 2 stern lines to the dolphins and 2 springs each, forward and aft.

The berth is built of concrete on a solid foundation, the sea bottom is rock covered with boulders. The berth is very well fendered with 8 large tube-type rubber fenders of about 1.20 m. diameter and 1.50 m. length. Both corners of the berth are additionally protected with 4 smaller tube-type fenders on each side.

The berth is fitted with 2 modern loading arms for receiving fuel for the power station, to which the berth belongs. The berth is also used to receive equipment and spares for the power station, as well as shipping used parts. We loaded 150 tons of general, consisting mainly of oversized and heavy material, also some 40 ft. containers of up to 30 tons each. The space on the berth is limited and if the vessel has to work on a second hatch it has to shift. There is sufficient room to manoeuvre with 40 ft. trailers. The stevedores come from Fort de France.

If vessels are berthing at Belle Fontaine and come directly from overseas, the customs broker takes all documents to Fort de France to obtain Clearance. Usually the authorities do not come on board.

The pilot has to be ordered from Fort de France, and will await the vessel 1 mile Northwest of the berth. All regulations valid for Fort de France are valid for this berth. The official name of the berth is: Fort de France, berth Belle Fontaine.

If repairs or stores are requested it has to be organised through Fort de France companies. In an emergency small amounts of fresh water can be taken by a 1 in. pipeline.

The position of the berth taken by bearings and from official sources (B.A. Chart No. 371) differs slightly from the position taken from the satellite. The latitude shows no difference but the longitude obtained by satellite is 61° 10.47′ W., whereas the position on the chart shows 61° 08.7′ W.

600 m. inshore of the berth is a new power station with 2 conspicuous chimneys. They are illuminated at night by white lights and make a good landmark by day and night. The chimneys are in line 055°.

Morocco

MOHAMMEDIA: (Also see page 1099).

SHIPMASTER'S REPORT: December 1988.

The following is an update of the Shipmaster's Report, dated April 1988 on page 1099.

Tugs: An additional tug of 2,500 h.p. is available.

Large tankers berthing at the Outer Harbour may require the assistance of an additional tug from Casablanca.

Berthing: Additional spring lines required if there is a large swell.

Daylight berthing only for LPG carriers. Product carriers berth between 0500 hrs. and 2200 hrs. Time depends on draft, but usually at or near HW.

Vessels at Berth No. 6 can sail at any time, depending on draft, but generally 3 hours either side of HW.

Pilot often unavailable between 2200 hrs. and 0600 hrs. (in December 1988 we sailed at 0100 hrs.).

Berth No. 1 used for chemicals and refined products.

Berth No. 2, inside of Berth No. 1, is used for refined products and loading salt. Depth about 7.0 m.

Cargo: Chicksan cooled with ship's condensate.

Watchman: Onboard throughout vessel's stay.

Officials: No Clearance at anchorage. In rare cases, crew changes are permitted at the anchorage.

Time: Summertime, GMT plus 1 hour, from June to September.

Airport: About 30 minutes by motorway to airport which is S.E. of Casablanca. West Europeans need "Negative Visas".

Netherlands

ROTTERDAM: (Also see page 1117)

DOCUMENTS:

Shipmaster's Report: November 1988.

River Police: 2 copies Crew List on arrival, and 2 copies Crew List on departure.

Agent: 1 copy Stores List.
1 copy Personal Effects List.
Customs: copy Personal Effects List.

SHIPMASTER'S REPORT: September 1988, (received January 1988).

Berth: Akzo Zout Chemie, Botlek.

Pilotage: Call "Maas Pilot" when approaching pilot boarding ground. The Pilot boards from a small boat which is sent from the large pilot cutter, or from a yellow launch in the vicinity of the Maas Centre Buoy.

Anchorage: The anchorage used by small vessels is to the South of the Maas Centre Buoy, outside the separation zone.

Tugs: Tugs not used.

Berthing: Akzo Zout Chemie, Botlek, is located in Chemiehaven. This is the South arm within the Botlek complex, on the East side. The berth is well fendered and low and is mainly used by small vessels and barges. Good leads for mooring lines are available.

The vessel is swung off the berth using the port anchor and berths starboard side to. Care should be taken when berthing as ships/barges are berthed at the Stolt (Panocean) Berths on the opposite side of the dock. Mooring usually consists of 2 head/stern lines and 1 spring at each end.

Cargo Operations: Initially the vessel had to purge with nitrogen. This was done on the berth, but with the nitrogen being supplied by Hoek Loes from trucks. The nitrogen was heated, both within the truck and by a heater at the manifold, to approximately 50°C. They can supply at 80°C if they can get trucks nearer to the ship. The nitrogen was supplied at 700 cu.m.p.h., but they can supply at up to 2,000 cu.m.p.h. if requested, but with corresponding drop in temperature.

Vessel loaded VCM through 4 in. (300 ASA) liquid line and 3 in. (300 ASA) vapour line (flexible hose attached to side of liquid arm). Shore supply and connect all reducers. Initially they required 1 ft. to be loaded into the tank, after which samples are taken. Analysis of each tank takes approximately 1.5 hours. As soon as first tank is cleared, vessel can commence loading, but only into that tank. Once all tanks are cleared, it is required that each tank is loaded individually so that the inhibitor can be added in the correct quantities. This takes approximately 2 minutes for each tank.

The maximum rate that shore can supply is 220 t.p.h. Cargo can be supplied at ambient temperature from pressure storage, or fully refrigerated.

Due to a mix-up between Charterers, cargo was initially supplied at ambient temperature and final 30 minutes at ambient temperature, due to the lack of refrigerated cargo. Refrigerated cargo was loaded at −15°C at the manifold and the final tank temperatures were −11.8°C.

Vapour is returned ashore and is passed through a scrubber before being vented. However, due to the size of the line (2 in. on the jetty) throughput is low. To increase this and reduce the tank pressures from 2 Bar down to 300 mb. prior to sailing, for the last 3 hours of loading, 2 compressors blowing ashore were used.

There is a control room at the head of the jetty which may be contacted by radio. Most communications were by word of mouth.

Caleb Brett have a surveyor permanently stationed within the plant. He handles all surveys and samples and the adding of inhibitor. In addition to taking samples at commencement of loading (first foot), samples are also taken when each tank is completed.

A telephone is placed on board the vessel.

Fresh Water: Available by barge.

General: Stores have to be manhandled along the jetty, but shore crane can be used to place large items aboard the vessel.

SHIPMASTER'S REPORT: December 1988.

Moerdijk:

The following is an update on Shipmaster's Report, dated June 1987, on page 1127.

Berthing: Max. draft 7.8 m. (not 9.0 m.)

Vessels with a draft of 7.5 m. (not 6.5 m.) can navigate at any state of the tide.

Normally vessels berth starboard side to at Berth No. 2 and port side to at Berth No. 3 without use of tug. Vessels can berth starboard side to at Berth No. 3 if a tug is used.

Cargo: Rate of discharge for ethylene is 110 t.p.h.

Generally, there is no surveyor. The terminal will not sign ullage sheet.

Make sure that the Loading Master signs the Statement of Fact on completion.

Time between completion and sailing is over 3 hours.

General: Lay-by berth at Shell is suitable for vessels 100 m. LOA and 8.0 m. draft.

Developments: Loading/discharging facilities to be upgraded in 1989 with extra ethylene lines for faster turnarounds.

Norway

AAHEIM: 62.02 N. 05.32 E.

SHIPMASTER'S REPORT: January 1989.

LOCATION: Aaheim, a small ore exporting village, lies in the Vanelvs Fjord. The berth is well sheltered by the islet of Torvhl in the West and the mainland to the South and East.

DOCUMENTS:

Ship's Register.
Stores List, 2 copies.
Private Property List, 2 copies.
Crew List, 2 copies.
Maritime Declaration of Health.

PILOTAGE: Give 24 hours notice of ETA to Kristiansund Pilots. (See "Notice"). When approaching from the South, the Pilot boards in position Lat. 62° 12′ N., Long. 05° 18′ E. When approaching from the North, the Pilot boards off Runde Island.

ANCHORAGE: None available outside. If due to strong winds vessel is unable to berth, then it is possible to anchor about 0.5 miles West of Fiskaahl Light (North of Slagnes).

MAX. SIZE: Max. permissible draft 13.5 m.

TUGS: One tug is available at all times. If a second tug is required, it may be called from Alesund.

BERTHING: Vessels normally berth port side to. The length of the quay available for loading is limited. Hence one shore fibre line has to be picked up and made fast at the stern. This acts as a stern line. As the stern extends outside the jetty, the remaining lines are all back springs. At least one breast line should be given due to the possibility of strong offshore winds.

LOADING: For loading lump olivine, only one shore loader is available, which runs on rails over a length of 75 m. The loader has an outreach of 16 m. The vessel has to be shifted frequently to enable loading at all hatches. The rate is claimed to be 1,000 tonnes p.h. but averages about 800 tonnes p.h. due to frequent conveyor breakdowns. For the finer grades (0 – 3 mm.) a rate of 2,500 tonnes p.h. can be achieved.

DENSITY: 1025.

FRESH WATER: Excellent drinking water available. No charge. Shore hoses available.

FUEL: Not available.

REPAIRS: Only minor repairs possible.

REPATRIATION: By taxi to Alesund and a 45 minute flight to Oslo.

CUSTOMS ALLOWANCE: 1 bottle spirits and 200 cigarettes per person.

GENERAL: Olivin (Magnesium Silicate + 7% Iron Ore). The world's largest deposit is found in Norway.

The annual world consumption of olivin is about 5 million tonnes and 2.1 million tonnes is shipped every year from Norway, thereby meeting almost 40% to 45% of the world's needs.

Holds/Tunnel Wash: No restrictions. Possible to wash down cargo holds and tunnel when alongside. However, the Agent has to be informed.

Stores: Not available.

NOTICE: Dated: July 1988.

INFORMATION ABOUT THE PILOT SERVICE IN MORE AND TRONDELAG:

The Coast Directorate has established new Regulations regarding ordering of pilot services.

As it will take some time before an official translation into English language is ready for distribution from the central authorities, we give below some information about the main points:

Vessels approaching from the sea, and vessels in port, which desire a pilot or due to national regulations are enjoined to use pilot in restricted areas, shall order the pilot with at least 24 hours notice.

The order shall be confirmed 6 hours before arrival/departure and a final confirmation should be given 2 hours before arrival at the pilot station (boarding ground) or departure port.

When ordering a pilot the following information should be given about the vessel:

(a) Name.
(b) Call sign.
(c) Nationality.
(d) LOA and beam, or gross registered tonnage.
(e) Draft.
(f) Type of cargo.
(g) Destination.
(h) Purpose of call.
(i) ETA pilot station (boarding ground)/ETD port.
(j) Whether one or two pilots are required.

If the pilot has been ordered to report to a certain place at a certain time, but has to wait for the ship, waiting money has to be paid according to the Regulations for Coastal fees.

If long waiting time occurs, the pilot may be called back, due to lack of available pilots. A new pilot must then be ordered.

The new Regulations are implemented 1st August 1988.

More and Trondelag Pilot District include the pilot stations Trondheim, Kristiansund N., Aalesund and Runde. The office is situated in Kristiansund and ordering of pilots from the stations mentioned should be given to Kristiansund.

Post address: Losoldermannen i More og Trondelag,
Kaibakken 1,
6500 Kristiansund N.,
Norway.

Telephone: 073 – 70800.

Out of office hours the pilot cutter, if the cutter is in port, receives orders for pilot on the same telephone number. If she is at sea, mobile telephone number 090 – 32997 may be used.

For direct communication between vessels and pilot cutter, maritime VHF radio-telephone may be used.

Signed: Pilot Master.

HEROYA: (Also see page 1201)

SHIPMASTER'S REPORT: December 1988.

Pilotage: Pilot boards about 2 miles South of Langoytangen Lighthouse (near Langesund), from a fast sea cutter painted orange. Call "Brevik Control" on VHF Channel 80, working Channel 13.

One pilot is used for the complete passage into Frierfjord, which serves Rafnes, Porsgrunn and Heroya.

When unberthing or sailing from the inner anchorage, the pilot and tugs require 2 hours notice through "Brevik Control".

Anchorage: The anchorage is located in Frierfjord off Versvik, in a depth of 20 fathoms. The anchorage is sheltered.

It is difficult to anchor outside the Pilot Limits as the water is deep and the coast is exposed to the prevailing winds.

The pilot advised that the only suitable anchorage outside is at Sasteinflak Bank, about 2.7 miles S.W. of Langoytangen Lighthouse. This anchorage is exposed to S.W. winds and swell. If vessel anchors at this location it is to report to "Brevik Control" prior to anchoring.

Approaches: The pilotage time to Rafnes via Brevik Fjord for vessels with a draft of less than 32 ft. is 1 hour. Due to restrictions at Kjortingen Passage and Brevik Bridge, vessels in excess of 32 ft. draft use Kalven Passage to the East of Brevikfjord. However, vessels can only go as far as Brevik.

The Pilot reports that the waters never ice over as the water is salt and currents are always running.

Tankers which are not gas free must have a minimum visibility of 1.0 nautical miles in order to make a passage.

Tugs: A safety tug is compulsory for all tankers which are not gas free. Large vessels require 2 tugs.

Tugs join vessels off Aroy Island and make fast astern with 2 ship's lines from the centre lead.

Fire wires are required, forward and aft, when proceeding from the pilot station to Rafnes, and vice versa.

There are 4×3,500 h.p. tugs available and one is always on stand-by at Rafnes when tankers are alongside. When vessels are alongside and not loading or unloading (cooling down does not count as loading) a charge of about £60.00 per hour is made for the stand-by tug and this is for the vessel's account.

Berthing: There are 3 berths for gas and product tankers at the Norsk Hydro Refinery at Rafnes, on the West side of the Fjord.

Largest vessel handled 32,000 cu.m. (gas vessel).

The main imports are propane and butane and the main exports are ethane, sodium and sulphuric acid.

The berths are No. 1, No. 2 and No. 3, from North to South. Berths No. 2 and No. 3 have a depth of 12.0 m. The berths are well constructed and have good fenders. The berths are 'T' shaped jetties with mooring dolphins connected by catwalks either side of the jetty.

Vessels normally berth port side alongside. Shore gangway provided.

There is a fairly strong South flowing current along the line of the jetties.

Cargo: Ethylene is loaded at Berth No. 3 from ethane Chicksan, at about 150 t.p.h. at −100°C.

The liquid and vapour Chicksans are 6 in. (150 ASA).

As handling of ethane and ethylene is through the same Chicksans, a period of 18 hours is required for shore line purge between products.

Ethylene is stored at −95°C. and is further cooled through expansion valves to −100.5°C. in order to arrive at the ship's rail at −100°C.

Stoppages for "First Foot" and "75% samples" varies due to shore loading requirement. We did not stop, due requirement for cold product and in order to avoid line heating.

Vapour return by ship's compressor, mainly at 100% compressor loading.

Ethylene is not normally exported, although it is sometimes imported. It is used for VCM, but not at the present time due to VCM cracker explosion.

Vessels are not normally allowed to stay alongside for cooling down as other vessels are usually waiting and there is a charge for a stand-by tug.

General: VHF: Whilst at anchor Tjome Radio, VHF Channels 25 and 62, was used.

Stores: Stores are expensive.

STURE: 60.37 N. 04.51 E. (See Late Plans)

LOCATION: The Sture Crude Oil Terminal is located at Hjeltefjorden on the East side of Alvoy in the position Lat. 60° 37.2′ N., Long. 04° 51.5′ E.

The terminal is owned by a consortium of companies, and is operated by Norsk Hydro a.s.

The Sture harbour area is defined as the terminal's jetties with facilities, and the total sea area inside the seaward safety zone.

DOCUMENTS: See "Mongstad".

PILOTAGE: Pilotage is compulsory for all foreign vessels calling at the terminal. The pilot will embark in the vicinity of Fedje or Holmengra.

The terminal recommends that all Norwegian and NIS vessels also use a pilot.

ANCHORAGE: There is no safe anchorage in the vicinity of the terminal. If the jetties are occupied, arriving vessels must wait outside the pilot area. Further particulars may be obtained from the pilot station.

APPROACHES: Two approach channels with very deep water, give good access to the Sture Terminal. The main approach is through Fedjeosen, South of Fedje. The other approach is North of Holmengra.

RESTRICTIONS: Berthing and unberthing during daylight only. All ships shall comply with IMO and Terminal Regulations. All ships calling at the terminal must confirm that they are fully I.T.F. approved.

The following ship types can be accepted:

1. Conventional tankers and product/crude combination carriers in the range from 30,000 d.w.t. to 300,000 d.w.t.
2. Combination carriers of O.B.O. and O.O. type which have used same tanks and lines for bulk liquids as will be used at the Sture Terminal, for the last three voyages.

The vessel shall be able to accept a minimum bulk loading rate per hour:

For vessels of up to 89,999 tons s.d.w.t.: 7.5% of s.d.w.t. per hour.

For vessels of between 90,000 tons s.d.w.t. and 179,999 tons s.d.w.t.: 6.6% of s.d.w.t. per hour.

For vessels of 180,000 tons s.d.w.t. and above: 5.8% of s.d.w.t. per hour.

Traffic Regulations: No vessel, regardless of size, is permitted to move inside the Sture Harbour Area, unless authorised by the terminal.

MAX. SIZE: The terminal's berthing facilities consist of 2 jetties for handling of crude oil.

Jetty No. 1:	DWT min/max:	30,000 d.w.t. – 300,000 d.w.t.
	Depth alongside:	26 m.
	Max. allowed draft:	23 m.
Jetty No. 2:	DWT min/max:	50,000 d.w.t. – 150,000 d.w.t.
	Depth alongside:	26 m.
	Max. allowed draft:	23 m.

~~Jetty No. 2 is expected to be in operation from 1st September 1989~~.

HEALTH: See "Mongstad".

RADIO: An arriving vessel must give proper notice through the agent or directly to the terminal by cable or telex.

The vessel must have received approval from the terminal to proceed inside Fedjeosen or Holmengra to the dedicated jetty.

Vessels proceeding inwards should be in constant communication with the terminal on VHF Channel 14.

During berthing operations, the vessel is in communication with the Shift Supervisor on VHF Channel 14 through the pilot's radio.

Pre-Arrival Information: 72 hours before arrival, the Master shall inform the terminal about the following, either via his agent or direct to the terminal on Telex No. 40192.

(a) Ship's name and call sign.
(b) Flag.
(c) Name of Master.
(d) Cargo number.
(e) Gross registered tonnage.
(f) Summer deadweight.
(g) Draft, fore and aft.
(h) Last port of call.
(i) Confirm ETA (local time and date).
(j) Whether loaded/part loaded or in ballast. If loaded, nature and quantity of cargo, if ballasted, type (segregated/oily) and quantity to be discharged ashore and estimated deballasting time.
(k) Quantity of cargo to be loaded, and requested loading rate.
(l) Length overall and beam, number, size, distance from bow to connections and position (above water line and from ship's side) of vessel's manifold connections.
(m) Defects in vessel or equipment affecting discharging/loading performance or manoeuverability.
(n) Confirmation that an Inert Gas System is fitted, fully operational, and that the oxygen content of all tanks does not exceed 8% by volume.
(o) Last three cargoes.
(p) Mooring equipment.

Also see "VHF".

VHF: The Sture Crude Oil Terminal will be manned 24 hours a day and can be contacted on VHF Channel 14.

V.T.S. in operation on Channel 9.

When moored alongside the jetty, a vessel will communicate with the terminal by means of a UHF radio handset provided by the terminal.

The Terminal Control Building is equipped with coin-operated telephones for public use. The agent can supply mobile telephone if required.

Each jetty is equipped with two telephones for internal use.

Communications: A portable radio hand set will be supplied by the terminal to the vessel for use during loading operation. A receipt will be required for the radio hand set. The radio will be used for contact with the Jetty Operator during normal loading operations and for notification of an emergency condition. The radio must be returned to the terminal operator when the documents are delivered onboard.

TUGS: There are 2, stern drive type, tugs available for handling berthing/unberthing operations at all times. Each tug has a bollard pull of approximately 50 tons. Under normal circumstances, tugs towing hawsers will be used. Both tugs have fire fighting and oil recovery equipment.

Two mooring boats are available for handling of mooring lines.

BERTHING: *Mooring Facilities:* The loading platforms and mooring dolphins are equipped with (high capacity) mooring hooks and pulleys. The hooks and pulleys have quick release facilities and capstans to haul in mooring lines. The release can be done locally or remotely from the control room.

The jetties are equipped with monitoring systems comprising:

(a) Wind and sea current sensors, detecting speed and direction.
(b) Berthing aid system, monitoring the tanker's approach velocity, distance to jetty and angle of approach during the final stage of berthing.
    Approach velocity max. 0.10 m./sec.
    Approach angle max. 7°.
(c) Sensor in the mooring gear to detect mooring line loads.
(d) Measurement of tanker surge movements and sway, when the loading arms are connected.
(e) Closed circuit television cameras.
(f) Area radar display.
(g) VHF/UHF radios.

All data from the monitoring systems are routed to the control room.

The berthing aid data becomes available when the ship is at a distance of approximately 100 m. from the jetty.

Mooring Arrangements: It is of the utmost importance for safe operation that ships are securely moored and maintained in the correct position at all times.

The Master of the vessel shall ensure that his vessel's moorings are closely watched and tended as required to prevent undue movement of the vessel. Ensure that all moorings on self-tension winches are secured with winch brakes in locked position. Use of self-tension winches in automatic position is strictly forbidden.

All mooring lines in the same direction shall be of the same type and have the same working strength.

All mooring wires shall have rope tail ends, with minimum the same working strength as the wires.

Mooring diagrams for small, medium and large size vessels are shown in the "Late Plan Section".

Safety Towing Wires: Vessels, while secured alongside the jetty, must provide and rig towing wires with sufficient length and strength on seaward bow and quarter, with eyes maintained just above the water level, ready for emergency towing.

The wires must be securely fastened to the ship's bollards.

LOADING: *Jetty Details:* Each jetty has 4 loading arms which can be either locally operated from a fixed jetty head console or from a portable remote control panel.

Each loading arm is equipped with the following facilities:

(a) Loading arm stripping pump with 30 cu.m.p.h. design capacity.
(b) Hydraulically operated valves, couplings and quick release ("PERC") arrangements.

Loading Arms Flange Sizes and Safe Working Ranges:

Loading arms are equipped with adjustable flanges in the range of 12 in. – 16 in.

Ship's manifold connection must meet loading arm envelope configuration and must provide space and support on which to place loading arm support legs.

	Min.	Max.
Unencumbered distance from ship's side:	1.145 m.	8.145 m.
Height of centreline to deck or suitable working platform:	1.3 m.	2.4 m.

Min./Max. Loading Rates:

Loading rates:	Min.	800 cu.m.p.h.
	Max.	15,000 cu.m.p.h.
Loading arm design capacity:		3,750 cu.m.p.h.

Also see "Restrictions".

Pre-Operational Meeting and Inspection: Before any operations commence, a Pre-operational Meeting will take place between the terminal representative and the Master or the officer-in-charge of cargo operations. They will:

(a) Complete and sign the Ship/Shore Safety Check List.
(b) Discuss any deficiencies shown up by the above Check List and agree on any additional precautions required.
    The terminal reserves the right to refuse to load a vessel if the requirements are not met.
(c) Discuss and agree on procedures for taking ballast tank samples (see "Ballast"), and inert gas samples (see "Inert Gas Systems").
(d) Agree on a loading/discharging programme that includes:
    Quantities of cargo to be loaded.
    Loading rates.
    Deballasting procedures and rates.
    Procedures for emergency shut-down of operation.
(e) Discuss and agree on the means of communication to be used during the operation.
(f) Discuss and agree on connecting/disconnecting procedures.
(g) Discuss actions to be taken in the event of an emergency. This should include both communication and emergency procedures.

Operational Procedures: Loading/discharging will not commence until all the safety checks have been carried out to the satisfaction of the terminal representative and the Master or the officer-in-charge.

(a) Before any operation is carried out, the ship will be earthed.
(b) The jetty operator will be responsible for connecting the loading arms to the vessel's manifold as indicated by the officer-in-charge.
(c) The jetty operator and the ship's officer-in-charge must agree that systems are correctly lined up before operations can begin.
(d) Loading operations will be closely watched from the terminal control room.
(e) The vessel must give at least 10 minutes notice if required to stop or start any operation, unless under emergency conditions.
(f) The jetty operators will empty the loading arms onboard before disconnecting.
(g) A representative from the terminal and/or independent surveyors will witness the ship's dip/ullage/water dip/temperature/samples and quantity loaded according to ship figures.
(h) Preferably the ship must give notice to the terminal control room before any shut down operation is carried out.

Cargo Quantity Calculations: The cargo loaded will primarily be calculated according to the shore metering system, and the same figures will be entered on cargo documents.

Emergency Shut-down: If the vessel is loading, and it becomes necessary to manually initiate an emergency shut-down, the jetty system should, if possible, be used.

In the event of an emergency, jetty personnel should immediately be alerted to the situation, and the emergency stop, which is placed on the gangway, activated.

Manifold valves should not be closed until so advised by jetty personnel.

Inert Gas Systems: All vessels calling at the Sture Terminal must have a fully operational Inert Gas System. Prior to arrival, the vessel must confirm that all empty cargo tanks and those containing dirty ballast have been fully inerted and have an oxygen content of 8% or less by volume.

Random samples will be taken, and provided these are found to have an oxygen content of no more than 8% by volume, the vessel will be permitted to commence operations.

If the random samples indicate an oxygen content in excess of 8% by volume, then the oxygen content of all tanks will be checked.

If it is established that the vessel does not comply with these regulations, then she will be required to vacate the berth without delay and return to sea until an assurance can be given to the terminal that the required oxygen level has been achieved.

In such an event, Notice of Readiness will have to be re-tendered prior to re-entering the port.

Weather Precautions: Operations shall be stopped during severe electrical storms and all cargo valves and valves in the gas line riser shall be closed.

During periods of high winds and on the instructions of the Terminal Manager or Shift Supervisor, operations shall be stopped and loading arms disconnected.

BALLAST: Only clean ballast water contained in segregated ballast tanks will be permitted to be discharged into the waters in the terminal area. Random samples can be taken from segregated ballast tanks.

Contaminated ballast water, defined as such according to Norwegian law, will not be permitted to be pumped overboard in the vicinity of the terminal or into Norwegian waters, but will have to be pumped ashore to the terminal ballast tank. In order to minimise the de-ballasting time, Masters are requested to arrive with minimum ballast on board for safe navigation.

MEDICAL: Only limited services are available at the terminal. Any medical requirements for ship's personnel upon arrival should be arranged through the vessel's agent prior to arrival. Emergency medical services while berthed at the terminal may be arranged through either the vessel's agent or terminal operating personnel.

DENSITY: 1025.

FRESH WATER: Potable water can be delivered at a rate of 30 tonnes p.h. Ship's hoses are to be used.

FUEL: No bunkers of any kind are obtainable at the terminal.

FIRE PRECAUTIONS: In case of fire on board, the ship's responsible officer should:

1. Activate the ship's fire alarm.
2. Notify the terminal by UHF/VHF or other established line of communication.
3. Make a signal in the form of a series of prolonged blasts on the vessel's whistle.

In case of fire on the jetty or the terminal, the jetty operator will inform the ship's responsible officer accordingly.

In all events of fire, whether on board or onshore, all jetty operations will cease and loading arms be prepared for disconnection.

Fire Fighting Equipment on Jetties: Each jetty is equipped with 4 infra-red detectors which will automatically stop loading pumps on the outbreak of fire. These monitors are electrically powered and remotely controlled, either from the main jetty fire fighting control panel, or a local control panel located on the jetty causeway.

Additionally each jetty is equipped with 4 remotely controlled fire foam/water monitors. Fire hydrants for water/foam with international ship/shore connection, and dry powder extinguishers both 12 kilos and 50 kilos are available.

CONSULS: At Bergen, 60 km.

REPAIRS: Hot work or any other repair work including tube cleaning, chipping and scraping, hull painting, testing or servicing of electrical equipment (including radar, radio and domestic electrical equipment), is prohibited on the vessel unless a written application, specifying the repair work to be carried out, has been submitted to the Terminal Manager and written permission granted.

If permission is granted, a list of specific repairs and a list of shore workmen employed on the vessel, must be given to the Terminal Manager before work commences.

Repairs and other work which may immobilise the vessel, must not be commenced without prior approval, in writing, from the Terminal Manager.

In all cases, adequate fire fighting equipment should be ready for immediate use.

SURVEYORS: S.G.S. Surveyor based at the terminal.

CUSTOMS ALLOWANCES: See "Mongstad".

REPATRIATION: Possible.

AIRPORT: Bergen, 60 km.

TIME: Norway uses Central European Time, therefore local time is one hour ahead of coordinated universal time (UTC). During the Summer period Norway uses local Summer time, which is 2 hours ahead of UTC.

STORING: Stores must preferably be handled before or after cargo operations. Only small items of ship's stores, if carried by hand, may be taken on board during cargo operations.

Vehicles will only be allowed on the jetty approach roadway or jetty head after permission from the terminal.

Close to the jetties there are designated parking areas for visiting vehicles.

SHORE LEAVE: *Access to Restricted Area:* The Master shall arrange for a current Crew List to be deposited with the terminal representative on arrival, and shall, when possible, include the names of all persons expected to visit the ship.

Only authorised persons, ship's crew, visitors or others with entry permits issued by the Terminal Manager, shall be allowed access to the external restricted area, and they must comply with any restrictions imposed upon them.

The terminal also reserves the right to require that unannounced visitors, or persons whose sobriety or conduct present a hazard to the terminal's property be personally identified by a responsible officer and escorted while in the restricted area.

WEATHER: *Tides:* Tide is semi-diurnal.

Normal tidal variance is of the order 0.9 m. – 1.0 m.

Max. astronomical tidal difference is in the order of 1.6 m.

Highest difference between extreme high and extreme low water is 2.6 m.

Tidal Currents: Tidal-generated currents in Hjeltefjorden have a maximum rate of 1.2 knots. The average rate is 0.4 knots. The dominant directions of the current are from South-Southeast and North-Northwest.

Wind: Prevailing winds are from South-Southeast and North-Northwest.

GENERAL:

Movement of Tugs and Other Craft: During operations, no vessel or small craft shall be allowed alongside the vessel unless authorised by the Terminal Manager or Shift Supervisor and agreed by the Master.

When tugs or authorised craft are alongside or assisting a vessel, all cargo system openings must be closed unless all tanks are gas free.

Damaged Vessels: The Master of an arriving vessel:

(a) which has sustained damage outside the entrances to Hjeltefjorden that affects or is likely to affect her seaworthiness;

or

(b) from which petroleum or any dangerous or flammable substance is escaping or is likely to escape;

shall give notice thereof to the Sture Terminal and the vessel shall not enter the entrances to Hjeltefjorden except with the permission of the Terminal Manager/Shift Supervisor and in accordance with his directions.

AUTHORITY: Sture Crude Oil Terminal, 5330 Tjelsto, Norway. *Tel:* (05) 386000. *Telex:* 40192 Hydro N. *Contact:* F. Werner Johansen, Terminal Manager.

010-47

Sultanate of Oman

PORT QABOOS: (Also see page 1221)

SHIPMASTER'S REPORT: December 1988.

Pilotage: Inward pilot boards from a tug. The pilot ladder must be 2.0 m. from the water. According to local Regulations, the vessel's freeboard should not be greater than 8.0 m. if pilot ladder only is to be utilised. If the freeboard is greater than 8.0 m., the gangway should be rigged in conjunction with the pilot ladder.

Shore Leave: If ship's crew are granted permission to leave the port area (this permission is not automatically given) in order to visit the town or city, this permission is restricted to the hours between 0700 hrs. – 1900 hrs. These times are strictly enforced.

Each individual officer and rating must present himself, with passport, at the Immigration/Police desk in the Port Quarantine Office, for written approval to issue a pass. This initial authority can cover more than one person.

The Authority for Approval is then taken to a Marine Police Station at the main gate, where the Authority of Approval and passports are handed over and the crew member is given a Royal Oman Police Coast Guard Pass to complete. This pass is retained by the crew member until the day of departure and must be stamped and signed at the main gate, each day before leaving the port. All passports are retained by the police until such time as an individual makes his final return to the vessel from ashore, at which time the pass is exchanged for the passport.

If individuals are unable to leave the vessel to exchange their passports for the Gate Passes the agent will usually do this on their behalf.

The wearing of shorts of any description (i.e. showing bare legs) is not permitted outside the port enclosure.

Smoking is not permitted in any area where cargo is worked either ashore or aboard vessels.

Crew members are not permitted to wear "Seaman's Knives" whilst on deck.

Stevedores: The official cargo working hours are 0700 hrs. – 1500 hrs., with a 1 hour break for a meal, not always taken, and 1500 hrs. – 2300 hrs.

Telephones: Not placed on board.

Departure Pilotage: The Pilot requires 2 hours Notice of Departure via the vessel's agent. Vessel is to call pilot 30 minutes prior to departure on VHF Channel 16/12. At this time the pilot will wish to know the vessel's Outward Customs Clearance Number.

Pakistan

PORT MUHAMMAD BIN QASIM: (Also see page 1227)

NOTICE:

Notice to Mariners: 173(T) – Port Muhammed Bin Qasim – Permissible Draft from 1st October 1988 – 31st December 1988.

Maximum permissible drafts for ships calling at Port Muhammed Bin Qasim between 1st October 1988 and 31st December 1988 will be as follows:-

Period	*Berths*	*Max. Draft* (m.)	*Max. LOA* (m.)	*Max. Beam* (m.)
1st October 1988 to 31st December 1988.	IOC Berth	11.0	225.0	32.2
	M.W. Berth 1	9.5	183.0	25.0
	M.W. Berth 2 – 4	10.0	183.0	25.0
	M.W. Berth 5 – 7	10.5	183.0	25.0

2. Ships on arrival at outer anchorage to intimate drafts and specification of the vessel.
3. Cancel PNM No. 150(T)/88 on 30th September 1988.

Peru

GENERAL: (Also see page 1257)

SHIP REPORTING: The following is a copy of a telex received by a vessel in December 1988 and supersedes information on pages 1257 and 1258.

Re: Shiprep Rules in Peruvian Waters:

Following revised rules re "shiprep" messages are immediately effective, applying to all national vessels above 350 g.r.t. and to all foreign vessels irrespective of tonnage and type, as per Circular 102/87 from Peruvian Naval Authorities.

"ALL PREVIOUS CIRCULARS ON THIS MATTER ARE OBSOLETE"

SHIPREP messages are now required as follows:

EPW – On entering Peruvian waters.
PR – Position Report twice daily – 0800 hrs. and 2000 hrs. local time.
FR – Final Report – 1 hour prior to arrival at port (anchorage or port jurisdiction area).
DPW – On departing Peruvian waters.

The details to be given are as follows:

(a) The abbreviation applicable (EPW/PR/FR or DPW).
(b) Name/Call sign/Flag of vessel.
(c) Date/Hour/Minutes – 6 figures group.
(d) Last Port.
(e) Position – Lat. – 5 figures/Long. – 6 figures.
(f) True course – 3 figures.
(g) Speed in Knots – 2 figures.
(h) Port of Destination.
(i) ETA – Date/Hour/Minutes – 6 figures.

EPW – Message requires all points above.
PR – Message requires A/B/C/E/F/G/H/I.
FR – Message requires A/B/C/H (point C give ETA group).
DPW – Message requires A/B/C/E/H.

Coastal Radio Stations to be used:

Station	Call Sign	Transmits	Receives	Emission	Hours of Service
Paita	OBY2	8527	8363.2-8366.4	A1A	24
		2182/2738	2182	H3E/J3E	
		156.70	Ch.14	F3E	
		156.80	Ch.16	F3E	
Callao	OBC3	460 – 500	500	A1A	24
		8546	8363.2-8366.4	A1A	
		13015.5	12544.8-12549.6	A1A	
		2182/2738	2182	H3E/J3E	
		156.60	Ch.12	F3E	
		156.70	Ch.14	F3E	
		156.80	Ch.16	F3E	
Mollendo	OBF4	8290	8363.2-8366.4	A1A	24
		2182-2738	2182	J3E/H3E	
		156.70	Ch.14	F3E	
		156.80	Ch.16	F3E	

Remarks:

If you cannot make contact with any of these 3 stations, which handle messages free of charge, you may use any foreign coast station, addressing message:

"Costera Callao, Telex 26069 PE" (reserve Telex 20143).

Or, for ships with satellite telex, transmit directly to that number your "Shiprep" message through any acceptable channel. The main objective is to pass the message through any channel to avoid the stiff fines of U.S.$1,000.00 – 5,000.00. If all methods fail, a detailed explanation should be made in the ship's radio log and a copy hereof given to the Port Captain on arrival in port.

Additionally a Sailing Plan has to be prepared by Master prior to departure from Peruvian ports.

The local agent will provide the form and then present it to the Port Captain.

CALLAO: (Also see page 1258)

SHIPMASTER'S REPORT: December 1988.

The following is part of the telex received with the above ("SHIP REPORTING").

Re: Port of Callao

The Port Captaincy of Callao has appointed the following official anchorage places for arriving vessels:

	Latitude:	Longitude	
1.	12° 02′ 00.0″ S.	77° 11′ 49.5″ W.	(These are the corner
2.	12° 02′ 11.3″ S.	77° 10′ 41.5″ W.	points of Anchorage "A",
3.	12° 01′ 10.0″ S.	77° 11′ 41.5″ W.	as per B.A. Chart
4.	12° 01′ 21.0″ S.	77° 10′ 33.5″ W.	No. 1853)

NON-FULFILLMENT OF THESE INSTRUCTIONS WILL BE HEAVILY FINED.

Vessel's Certificates:

All vessels arriving at Callao must have updated certificates, this refers especially, and as per MARPOL agreement, to Oil Pollution Certificate and Engine Log Book.

In case these certificates are not in order, the vessel will be heavily fined.

Philippines

VILLANUEVA: (Also see page 1297)

SHIPMASTER'S REPORT: December 1988.

The vessel arrived at Villanueva for loading Iron Ore Sinter for discharging at Sparrows Point, Baltimore, U.S.A. The information pertaining to port facilities and conditions have been collected and compiled during this call.

General: The Philippine Sinter Corporation (PSC) is one of the biggest single foreign investments in the Philippines today. This industrial joint venture between Kawasaki Steel Corporation of Japan and PSC was incorporated in 1974. Sinter production started in April 1977.

Mindanao Sinter Plant – Product and the Process:

The "Sintering" consists essentially of mixing fine iron ore with solid fuel, normally coke and flux such as limestone, and burning the mixture under controlled conditions to produce hard but permeable lumps which are ideal blast furnace feed. The mixture is spread evenly over a continuous train of pallets of the sinter machine in a uniform bed thickness and ignited under induced pressure provided by huge blowers. The blended material is agglomerated into big blocks of sintered ore. A hot crusher breaks these blocks into 150 mm. lumps, which are then cooled. The rest of the process involves screening to remove mediums and fines which are recycled.

PSC is diversifying into a new project which involves construction of drying plant to treat pineapple pulp into suitable cattle feed. The drying plant is located adjacent to existing sinter plant and will utilise the recovered waste heat from the sinter plant.

The Mindanao Sinter Plant has three main components.

1. The Ore Yard.
2. The Sintering Facilities.
3. The Port Facilities.

1. THE ORE YARD:

The 18 hectare ore yard is made up of 4×45,000 sq.m. yards with an aggregate storage capacity of 1,500,000 tons. The yards are equipped with a Wing stacker and reclaimer, etc.

The ore yard facilties are:

4 Ore yards, (50 m.×900 m.), for iron ore, sintered ore, limestone and coke breeze.
2 Stacker-Reclaimers, 3,600–6,000 t.p.h. and 3,600–1,500 t.p.h., rail mounted.
1 Wing stacker, 800 t.p.h., single wing and rail mounted.
8 Bulldozers.
6 Mobile truck cranes.

2. THE SINTERING FACILITIES:

These consist of one sinter machine with a 450 m. grate area, rated at 5 million tons per year and other ancillary equipment for limestone crushing, screening, coke grinding, materials blending, mixing, storing, feeding and processing.

The equipment of the sintering facilities is:

14 Blending Hoppers, 600 cu.m. capacity.
1 Sinter Machine, 450 sq.m. grate area, Dwight-Lloyd type (90 m.×5 m.).
1 Sinter cooler, 400 sq.m. bed area, 15,000 cu.m./minute circular type.
2 Main blowers, 18,000 cu.m./minute, double suction type.

In addition other facilities include:

a. Dedusting system equipment.
b. Power equipment.
c. Fuel tanks and deepwell.
d. Maintenance shop for mechanical, electrical and instrumentation works.
e. Laboratory for physical, chemical, bacteriological and environmental analysis.
f. Instrumentation and control facilities.
g. Communication facilities.

3. THE PORT FACILITIES:

The port has a main berth and a cargo berth. The 351 m. long main berth has a depth of 25 m. It can easily accommodate 300,000 d.w.t. bulk carriers and is equipped with 2 bulk unloaders with a capacity of 1,800 t.p.h. each and 1 shiploader with a capacity of 6,000 t.p.h. The cargo berth is 230 m. long with a depth of 5.5 m.

The following floating equipment is available:

2 tugs of 3,200 b.h.p., twin screw Z-peller.
2 tugs (pusher boats) of 3,200 b.h.p., twin screw.
2 barges each 6,000 d.w.t.
1 lineboat, 390 b.h.p., twin screw.

PORT INFORMATION:

Location: The Port of Villanueva is situated on the North coast of Mindanao Island, in Macalajar Bay, on the Eastern side in position Lat. 08° 34′ 45″ N., Long. 124° 44′ 22″ E.

Charts:

B.A. Chart No. 3811 – this chart is small scale for approaches.

U.S. Chart No. 92290 – this chart is fairly large scale and more useful.

Philippine Charts No. 4648 and 4649 – these charts were published by PC&GS in 1976 and are available from Philippine Sinter Corporation and may be obtained through Villanueva or Manila agents.

Port Limits: There is no specific demarcated port limit. Southern half of Macalajar Bay could be considered within port limits. However, entire bay is under control of Harbour Master of Cagayan De Oro Port, which is located on the Western side of the bay.

Pilotage: The Pilot and at times Quarantine Officers board vessels in position Lat. 08° 35′ N., Long. 124° 40′ E., by launch from Cagayan De Oro. Pilotage of Villanueva is carried out by pilots of Cagayan De Oro and is controlled by its Harbour Master.

Presently, there are 4 pilots at Cagayan De Oro for both ports. Usual arrival messages to be sent to Agent. VHF station at Cagayan De Oro keeps 24 hours' watch on VHF Channel 16. At least 6 hours prior to arrival, contact should be made with Port Authorities, calling "Cagayan Pilot Station" and give ETA, etc. Pilot boards vessel anytime, day or night, unless weather is bad, due to strong wind and rough seas hampering motor launch manoeuverability. Anchoring, berthing and unberthing at Villanueva is carried out anytime day or night on a 24 hour basis.

Anchorage: The Bay of Macalajar is a deep water bay. A strip of shallow water extends generally less than 0.5 miles off the coast. The Villanueva Anchorge is about 3 miles to the North of the berth, along the Eastern side of the bay. The recommended anchorage is in the vicinity of approximately 8 to 9 cables due West of position Lat. 08° 37′ N., Long. 124° 45.5′ E. In this area there is room for only 3 large vessels from Panamax size to 300,000 d.w.t. for safe distances whilst at anchor. The depth of water in this area is from 70 m. to 150 m. Anchoring is carried out by pilots anytime, day or night, however, it is preferable to anchor in daylight hours. On account of close proximity of coastline, during Northerly or North-Westerly winds, added precautions and vigilance would be needed to remain safely at anchorage.

While approaching the anchorage area, starboard anchor was lowered to 4 shackles in the water and the windlass was kept in gear. Vessel approached to within 1.15 miles of the coastline in position Lat. 08° 38′ N., Long. 124° 44.5′ E., ship heading 093° True, when echo sounder showed depth of 157 m. When vessel reached 0.77 miles off the coastline, cable was gradually lowered in gear up to 8 shackles in the water and subsequently was brought up when 0.68 miles off the coastline and water depth was 140 m. After swinging around with vessel heading on a Westerly bearing, water depth showed about 90 m. Holding ground was found to be good. There are no lights or buoys for checking anchor bearing. One has to improvise, using certain landmarks and conspicuous shore objects for ascertaining position by radar.

Approaches: Passage from East through Surigao Strait is safe as there is deep water. Most of the lights are either not working or are on low power. The passage through these waters can be made with good radar for night transits and impaired visibility periods during rain squalls. Numerous fishing vessels are encountered throughout the area, as well as coastal traffic. Also large vessels make use of Surigao Strait to and from Pacific.

Documents: The following documents were required and prepared by vessel:

10 copies Crew Lists.
4 copies Personal Declaration.
4 copies Stores List.
2 copies Vaccination List.
1 copy Maritime Declaration of Health.

In addition, there were other documents and Philippine forms which Agent had prepared in advance for Master's signature.

Vaccination List was not required by the Quarantine Officer.

Visaed Crew List: As informed by Agent, Visaed Crew List is a requirement. Prior to arrival at previous port, a telex message was received from Manila Agent advising that Crew List should be visaed by Philippine Embassy or Consulate. Therefore, 3 copies of Philippine Crew List forms were obtained from Philippine Embassy through Agent, which were then duly completed and sent for Visa. The visaed Crew List was forwarded by Agent to Villanueva in due course. Although it did not reach Villanueva when vessel arrived, Immigration authorities issued shore passes to crew without difficulty. Visaed Crew List reached Agent's office on day of departure (sent from Japan).

Health: Usual Radio Pratique message to be sent to Agent for presenting to Quarantine Officials. However, Pratique was granted by Quarantine Officer who boarded the vessel upon anchoring.

Boarding Formalities: Upon anchoring, 23 persons boarded the vessel, which comprises agents and representatives of various authorities:

Quarantine	1
Agents	3
Immigration	4
Customs	7
Plant and Animal	4
Coast Guard	4

Agent requested lunch and refreshments for all above officials.

Restrictions: There are no restrictions. Vessels up to 300 m. LOA and 250,000 d.w.t. are berthed at Villanueva for discharging iron ore and loading iron ore sinter. Maximum draft alongside berth is 25 m.

Radio/VHF: There is no radio or VHF station at Villanueva. Cagayan De Oro has a VHF station which keeps continuous watch. Vessels should send ETA messages through Manila Agent or directly by telex to Villanueva Agent.

At least 6 hours prior to arrival, contact should be made with "Cagayan Pilot Station" (Channel 16) for ETA notices and instructions.

Berthing Facilities: There are 4 motor launches for pilots at Cagayan De Oro which are painted red and are numbered "M.L. Pilot No. 2". "M.L. Pilot No. 3", "M.L. Pilot No. 4" and "M.L. Pilot No. 5". Launch No. 1 has been scrapped. There are 2 tugs of 3,200 b.h.p. and 2 pusher tugs of 3,200 b.h.p. There is 1 line boat of 390 b.h.p.

The main berth is 351 m. long with berthing capacity for vessels up to 300,000 d.w.t. and water depth of 25 m.

The main berth is used for discharging and loading operations. Berth is in position Lat. 08° 34.45′ N., Long. 124° 44.22′ E. and is aligned 050°/230°. The berth is protected by 7 "Yokohama" balloon type fenders. For discharging vessels there is no preference for docking starboard side to or port side to, whereas for vessels loading, docking with port side to is required due to location and movement of shiploader. Mooring lines are usually 4-2-2 at each end.

Cargo Facilities: For discharging there are 2 grab unloaders, rail mounted rope trolley type, each with a capacity of 1,800 t.p.h. These unloaders are adjacent to each other and are located on the Southwesterly side (i.e. after the shiploader).

For loading, there is one shiploader, rail-mounted luffing shuttling type, with a capacity of 6,000 t.p.h. However, in practice, average loading rate was found to be 4,500 t.p.h.

Air draft at berth is 40 ft. No shifting required while loading for Panamax size vessels. Iron ore sinter cargo stowage factor is 23 to 24 cu.ft. per ton. The cargo which was loaded was found to be very dusty, containing white-grey coloured powder (presumably limestone). Upon sailing, this powder was found to be sticking to hatch covers, main deck, pipelines, etc. and at some places use of scrapers was required as it could not be removed by hose washing. The dry powder remains could be swept more easily than removing when wet as it became sticky and hardened with water.

Fuel: HFO and DO can be supplied by trucks only, in any quantity. There is no pipeline facility for bunker supply at Villanueva.

Medical: Cagayan Medical Centre at Cagayan De Oro City is equipped with full medical and hospital facilities.

Stores and Provisions: A limited variety of deck, engine and catering stores are supplied from Cagayan, small quantities only can be supplied. Fresh provisions are also available at Cagayan De Oro. Prices of most items are normal, however certain items are expensive.

Surveyors: A.B.S. are stationed at Cebu. Surveyors of other Classification Societies are available from Manila with sufficient notice. Cargo surveyors at P.S.C. plant at Villanueva are from PNKKK, for carrying out draft surveys, etc.

Watchman and Safety: At anchorage, very efficient deck patrolling is necessary as pirates board unguarded vessels in dark hours. Loss of private property, ship's stores, ropes, paints, etc. are often reported. In addition to crew on deck, 3 armed guards, supplied by the Agents, patrol at night whilst at the anchorage.

Holidays: Government Offices, including Immigration and Customs, work 5 days a week. Agents and other commercial offices work half days on Saturdays.

Mail Service: Delays of up to 10 days to 15 days are normal as all mail is routed through Manila.

Telephones: Telephones are not provided on ship at berth. However, P.S.C. office located near the main berth has telephone for making domestic and International calls. Long delays for any International telephone calls from Villanueva, as well as Cagayan De Oro are normal.

Telex: Telex services to and from Villanueva were found to be normal.

Shore Leave: Immigration Authorities issue shore passes for crew to go ashore and crew can go to Cagayan De Oro. Agents arrange minibus for transportation to and from ship to Cagayan. Private taxis are also available. Travelling alone at night is not very safe.

Airport: Cagayan Airport is located 10 km. from Cagayan De Oro City and about 40 km. from Villanueva. Regular domestic flights are operated to and from Manila and Cebu.

Repatriation: Crew joining and leaving is possible, via Manila.

Time: GMT plus 8 hours throughout the year.

Consuls: Consulates of most countries are located in Manila and a few are located at Cebu.

Radio and TV Stations: AM/FM radio stations. Two TV channels from 1100 hrs. – 0000 hrs., programmes are in English and Tagalog.

Languages: English is widely understood and spoken. Visayas is the main language spoken on Mindanao Island. Tagalog, Spanish and English are taught in schools. Tagalog is the main language of Luzon (Manila).

Currency: The peso is the currency of Philippines. Exchange rate is linked to the U.S. Dollar. During ship's call, the exchange rate was U.S.$ 1.00=21.20 Pesos. However, in shops and stores, exchange was available at 20 pesos to U.S.$ 1.00

Republic of Sao Tome and Principe

SAO TOME: (Also see page 1342)

SHIPMASTER'S REPORT: January 1989.

PILOTAGE: Not available.

ANCHORAGE: The anchorage is on the leading line shown on the chart, about 5 cables from the breakwater. The minimum depth of water is 10.0 m. and the holding ground is good. The vessel swings with the tide but generally heads in a South-Southeasterly or North-Northwesterly direction.

RADIO: Sao Tome Naval Radio Station is the local station, but is not regularly attended. None of the operators understands English. They will only reply if the vessel calls in the Portuguese language.

There is a manual telex connection with Europe, however ETA should be sent via a major coast station.

BERTHING: The length of the jetty is 200 m. and the maximum depth alongside at LW is said to be approximately 2.50 m.

CARGO HANDLING FACILITIES: Ocean-going vessels load and unload at anchor. There is a long Southeasterly swell and this makes operations dangerous. Vessel must have sufficient fenders for carrying out cargo operations.

The local stevedores are able to handle conventional derricks, but it is not recommended that they be allowed to handle sophisticated container cranes or other modern cargo handling gear.

There are approximately 10 lighters available for handling cargo of vessels at anchor and if only one vessel is discharging, a rate of up to 300 tonnes per day for breakbulk cargo can be achieved.

There are 4 lighters which are capable of carrying 1×20 ft. container at any one time and 1 lighter capable of carrying 1×40 ft. container.

The jetty is equipped with a fixed crane with 23 tonnes capacity and a mobile crane of 5 tonnes capacity.

There is only one lorry capable of carrying 40 ft. containers, therefore the discharge rate for 40 ft. containers is a maximum of 5×40 ft. containers per day. The discharge rate for 20 ft. containers is a maximum of 20×20 ft. containers per day.

As there is a lack of lorries to handle containers the harbour can become congested.

SHORE LEAVE: Crew members are allowed ashore, but must return aboard the vessel before 2300 hrs. Whilst on shore, crew must carry their Seaman's Books.

GENERAL: Sao Tome is a suitable place for conventional vessels, but is not recommended for pure container vessels, especially if they are not equipped with a powerful bow thruster, in order to work against the swell while unloading containers by own cranes.

Saudi Arabia

RABIGH: (Also see page 1361)

Saudi Arabia's newest refinery, the Petromin/Petrola joint venture refinery at Rabigh, will begin start-up procedures in late February or early March 1989.

Rabigh Refinery officials said that the refinery will begin start-up at that time. Actual production will begin only after the process of testing the refinery equipment is finished. At that time, test production runs will be performed. Then, commercial production will commence.

The Rabigh Refinery will be Petromin's largest refinery, with a 335,000 barrels per day capacity. The two other joint venture refineries, the Petromin-Shell Refinery in Jubail, and the Petromin-Mobil Refinery in Yanbu, both process approximately 275,000 barrels per day of crude oil. Both are fed by pipeline. The Rabigh Refinery, on the other hand, has to ship in its oil.

The Rabigh Refinery, which is 50% owned by Petrola of Greece, is a relatively simple topping refinery, using the atmospheric pipe distillation process. Experts say its design favours production of fuel oil, but this can be altered.

Rabigh has its own port facilities for shipping in its crude oil, and exporting its finished products.

Singapore

SINGAPORE: (Also see page 1395)

DOCUMENTS: *Add:*
Shipmaster's Report: November 1988.
2 copies Passenger List.
2 copies Crew List.
2 copies Stores List.
1 copy Stowaways List.
1 copy Arms/Ammunition List.
1 copy Vaccinations List.
1 copy Maritime Declaration of Health.

NOTICES:
Toxic Waste: We quote below text of circular received from the Port of Singapore Authority:

"We would like to remind port users that importation of toxic waste into Singapore is not allowed by the Ministry of the Environment. Vessels carrying toxic waste may not be permitted entry into Singapore port waters. Shipping lines should exercise care in accepting chemicals for shipment to Singapore that can come under the classification of toxic waste."

Piracy Attack: The following is text of a letter received from Singapore National Shipping Association:

"We have received a report from a shipowner that one of their feeder container vessels, trading Singapore, Jakarta and Bangkok, was attacked by pirates on November 4, 1988, between 0000 hrs. and 0300 hrs. in the vicinity of Horsburgh Lighthouse. The ship's Master was reported being kidnapped and there is still no news of his whereabouts.

Members are kindly requested to alert their Masters to take additional precautions when passing through the area."

Sweden

STENUNGSUND: (Also see page 1499)

SHIPMASTER'S REPORT: January 1989.
Pilotage: On approaching the port, call 'Marstrand Pilot' on VHF Channel 11. The pilot usually boards between Hatteberget Light Tower and Astol Island to the N.W., from a fast launch painted orange. The water in the approaches is deep. The Racon on Hatteberget Light is usually visible when passing the Skaw. It takes approximately 1.0 hours – 1.5 hours to reach the Statoil berths.

Anchorage: There are no safe anchorages outside the fjord. If vessel is awaiting a berth it is usual to anchor to the West of the berths. An alternative anchorage is in the area 6 miles North of Algon Island, which is within the pilotage waters.

Max. Size: Powerboard Terminal: On the North side of the jetty the maximum draft is 12.6 m. and on the South side 10.6 m.

Statoil Terminal: Max. size 36,000 d.w.t. Max. LOA 210 m. Max. draft 10.4 m. This berth is to be dredged to 14.0 m.

Tugs: There are no tugs stationed at Stenungsund. If tugs are required they have to be ordered from Gothenburg, which is 2.5 hours away by sea. 5 hours notice is required. Tugs normally join vessel at the 'S' bend at Tjornbron Bridge. Vessels of 32,000 cu.m. capacity require 2 tugs for berthing and one for unberthing.

Berths: Powerboard Terminal: Lat. 58° 05.3′ N., Long. 11° 49.2′ E.

The finger pier is located on the East side of Askero Fjord and is aligned in an East/West direction. The pier is 1 mile North of Stenungsund.

The jetty is used for the import of oil for the power station and for import of LPG and ethylene for oil companies.

Approach to the berth is difficult in strong S./S.W. winds.

Vessels berth head-in, starboard side alongside, on the North side of the jetty and port side alongside on the South side. The offshore anchor is often used when berthing.

On the North Berth, vessels should be well secured at the stern when S./S.W. winds are blowing and well secured at the South Berth when N.W./N. winds are blowing.

Statoil Terminal: The berth is located on the North side of Havden Peninsula, to the West of Stenungsund. Vessels are swung to starboard and then pushed slowly into the berth. The stern overhangs when alongside, so good moorings are required aft when S./S.W. winds are blowing. The leads for the after moorings are poor and the leads for the headlines are long.

Cargo: Powerboard Terminal: Ethylene is handled on both sides of the jetty, dependent on the receiver. Neste use the North side and Statoil use the South side. The North side berth is equipped with an 8 in. hydraulic arm (150 ASA) with clamps and automatic disconnect mechanism. The South side berth is also equipped with an 8 in. (150 ASA) hydraulic arm, but without clamps. Shore supply the necessary reducers. No VRL connected.

Initially small amounts of cargo are pumped ashore from each tank in turn, so that samples can be taken on the jetty. Analysis takes about 2 hours. The cargo temperature is to be at least −100°C. and usually colder temperatures required. If the temperatures are correct, the shore facility can usually handle rates up to 500 cu.m.p.h. on the North side and 200 cu.m.p.h. on the South side. Hot gas required on completion. It usually takes about 20 minutes to clear line, so about 40 mb. is required in the tanks. The jetty has a steam/hot water line for de-icing. Local surveyor used.

Statoil Terminal: LPG handled at this berth. Discharge is by 10 in. (150 ASA) non-hydraulic arm. Shore supply the necessary reducer, no VRL. Samples are taken prior to arm being connected. Analysis takes 3 hours. Once lines are cool, the rate can be increased to maximum. Cargo goes into cavern storage so any rate can be accepted without difficulty. There was very little contact with the shore once discharge had commenced.

A surveyor from the terminal and SGS are available for figures. Terminal surveyor will use density from sample for calculations.

General: Powerboard Terminal: There is an electric crane with 4 ton SWL on the North side. No trucks allowed on jetty. Trolleys available for the 300 m. haul from the roadway.

Statoil Terminal: Stores can be manhandled from the barrier which is approximately 300 m. from the ship. A hand driven shore crane can be used for loading stores. There is a telephone in the cabin on the jetty. Fresh water is available. All medical facilities are available locally. Stores are expensive.

Thailand

KRABI: (Also see page 1531). (See Late Plans)

SHIPMASTER'S REPORT: December 1988.

DOCUMENTS: See "Bangkok".

A large party of Customs and Immigration Officials, etc. will board by launch when moored at the berth. Formalities quite straightforward.

PILOTAGE: No licensed Pilot as such, but a local "Berthing Master" may assist in berthing. This is recommended because the vessel has to pass between the mooring buoys, a number of which are below the sea surface. The ship's Master will have to manoeuvre himself. Depths are in excess of 14.0 m. during the approach manoeuvres.

ANCHORAGE: About 1 mile from the berth in position Lat. 08° 04.4′N., Long. 98° 43.7′E. Depth of water 11 fathoms – 15 fathoms. The holding ground is good.

BERTHING: *Berth Position:* Lat. 08° 04.5′ N., Long. 98° 44.6′ E., about 1.55 nautical miles from Ko Kwang. Name of berth: Leamplong Jetty. Depth at berth: 12 m. minimum at LLWS. The berth consists of 7 mooring buoys.

Mooring Arrangment: Port anchor to be used. The vessel will have to prepare 5 light floating hawsers of 220 m. forward and 6 similar lines aft.

Two launches are used to assist with the mooring operation, which may be quite lengthy, because of the poor condition of some mooring buoys. On our visit 3 of the buoys were half submerged, necessitating the assistance of good swimmers/divers. Therefore, no attempt should be made to moor during a squall or when a strong tidal stream is running, it may reach 2 knots at times. No mooring during night time.

LOADING: *Air Draft:* Strict maximum of 11.0 m., to the top of the hatch coamings.

Loading Facility: The only commodity handled at this port is natural gypsum in bulk. A long flight of conveyor belts terminates on a wooden platform on steel piles. These piles are quite dilapidated and on no account may the ship's side rest against them. The final piece of conveyor belt, about 15 m. long is held aloft by the ship's cranes. Therefore only geared bulk carriers are suitable to load here. Minimum SWL of ship's gear to be 12 tons.

The vessel will have to shift with her mooring lines in order to present each hold in front of the conveyor system. Trimming is done with a small bulldozer.

Loading rate: 350 tonnes per hour (conveyor capacity). The daily loading rate is about 7,000 tonnes, depending on stoppages for shifting the vessel. Regular and careful check of the draft is necessary as there are no weighing facilities ashore.

Working hours: 24 hours per day, Saturday and Sunday included.

Cargo: This natural gypsum has a stowage factor of about 0.82 cu.m./ton and has a water content as it is stowed in the open. Within 24 hours to 48 hours of completion of a hold, the bilges will already be full.

GENERAL:

Facilities/Shore Leave: Small quantities of fresh fish may be purchased locally, but very little else.

All access to and from the vessel is by launch and the starboard gangway.

The small town of Krabi is said to be 35 km. from the Leamplong Jetty, all by dirt road. Access is reportedly difficult during monsoonal rain.

Shore leave is permitted but should be restricted in view of road conditions.

The local agent, charterer's representative and one draft surveyor have to be accommodated on board during the whole stay.

Airport: The nearest airport is on the island resort of Phuket, which is connected by a regular boat service to the small town of Krabi. Phuket has several daily flights to and from Bangkok and several International flights.

Charts: BA. 3941. No large scale chart available.

Turkey

GOLOVASI: (Also see page 1563)

SECTION (C) (See page 1566). **(See Late Plans)**

DELTA TERMINAL: (Dortyol/Yesil).

LOCATION: Lat. 36° 51.05′ N., Long. 36° 09.18′ E.

PORT LIMITS: The Delta Terminal is operated under the authority of Iskenderun Harbour Master's Office, where the mooring/unmooring operations are under the monopoly of Golovasi Botas (Ceyhan) Terminal.

DOCUMENTS:

7 copies Crew List.
2 copies Stores List.
2 copies Crew Declaration.
1 copy Free Pratique.
Last Port Clearance.
Load Line, Safety Construction, Safety Radio, Safety Equipment and Class Certificates.

Agent has to take the last five certificates to the Harbour Master.

Clearance: For clearance on arrival, the vessel has to call at Iskenderun first. However, depending on the weather conditions and availability of clearance team, the Agent may arrange berthing at Delta Terminal and then arrange clearance. This is why Masters are advised to contact the agent 3 – 4 hours prior to arrival in order to get the final instructions for mooring.

Free Pratique is not granted by radio as it might be in some countries, but after boarding of the Sanitary Officer.

PILOTAGE: Pilotage is compulsory for mooring and unmooring. Pilot will be taken from Botas Terminal (see "Golovasi"). It is requested that the pilot ladder be of an approved pattern and securely rigged.

ANCHORAGE: In the event of berth not being available on arrival, and after the clearance, the vessel is to anchor in the anchorage zone of Botas Terminal (1 mile off Botas Terminal).

RESTRICTIONS: Mooring is carried out during daylight only. Unmooring is carried out around the clock.

Terminal does not accept any vessel not consigned for agency to

Ets. A. Boutros and Fils,
Ataturk Blvd., Unsal Bldg., 1st Floor,
31200 Iskenderun.
Telex: 68123 sail tr/68131 sail tr/68214 imoc tr/68202 eeb tr/
68203 bson tr.
Telephone: (90) (881) 15170.
Telefax: (90) (881) 12036.
Cables: Boutros – Iskenderun.

MAX. SIZE: The Terminal accepts vessels up to 40,000 d.w.t. or 220 m. LOA. For vessels over these sizes, special acceptance can be granted depending on the cargo, season, etc.

Depth is 12.6 m. at low tide.

RADIO: It is essential that tankers bound for Delta Terminal communicate with the agent at least 72 hours, 48 hours and 24 hours before arrival and state:

ETA.
Quantity of cargo required.
Max. loading rate.
Number and diameter of manifolds.
S.W.L. of derricks.
Quantity of ballast on board and time required for deballasting.
Whether the vessel is gas free or not.
Max. draft after loading.

VHF: Delta Terminal and the agent monitor Channel 16. Masters should contact the agent 3 – 4 hours prior to arrival in order to get final instructions for mooring. Once the vessel is moored, operations channel is agreed between the vessel and terminal.

RADAR: There is a Gulf Control Radar at the entrance of the Gulf of Iskenderun, however it is not always on watch. From time to time Control may call a vessel entering or leaving the Gulf, on Channel 16, to ask some questions. The approach to or leaving the Gulf can be made without difficulty as the coast line provides very good fixes.

TUGS: Tugs are supplied by Botas Terminal at the discretion of the Master and Pilot. Generally one tug is used for mooring and unmooring. Botas Terminal has 3 tugs of 2,600 h.p. and 1 tug of 1,200 h.p.

BERTHING: There are 3 berths. Each berth consists of 3 buoys (one portside ahead and 2 aft):

Outer Berth: For clean products only.

Inner Berth: For dirty and clean products. (See "Operator's Report" dated April 1988 on page 1566).

Bunker Berth: For vessels up to 5,000 d.w.t., for dirty products and LPG.

LOADING:

Clean products: 2×8 in. hoses, 1,200 t.p.h.
Dirty products: 2×10 in. hoses, 2,000 t.p.h.

All ship's valves should be closed or blanked, except those required for loading and water circulation purposes.

Ship's crew with an officer in charge will assist in all operations, as advised by the terminal representative. This includes lifting, connecting, disconnecting, lowering of hoses and tending moorings.

Max. loading rate is requested by Master.

Cranes: No cranes available, vessels are required to use their own equipment.

Lighting: Manifolds should be lit to enable night loading operations to be carried out with safety. Sea area around the ship is to be illuminated.

Notice of Readiness: Notice of Readiness should be tendered at the time of arrival, it will be received by the terminal representative after mooring.

Deck Watch: A responsible ship's officer shall be on watch at the point near the ship's tanks which are receiving cargo during the process of loading, with a Loading Master from the terminal.

Capable members of the ship's crew shall be stationed by the ship's tank valves which are receiving oil, during process of loading.

BALLAST: There are no dirty ballast facilities. The vessel must arrive with clean ballast.

MEDICAL: Master to inform agent by cable or telex if urgent medical assistance is required upon arrival, indicating if possible, seriousness of case in order that adequate steps may be taken.

Hospital and doctor are available at Dortyol 10 km., Iskenderun 40 km. and Adana 100 km. distance from the terminal.

DENSITY: Salinity about 39 p.p.m.

FRESH WATER: Fresh water is not available. Tankers to be supplied with fresh water are to call at Iskenderun before or after loading. Fresh water is supplied by the state-owned port company at Iskenderun, by means of a 200 ton capacity barge. The price is U.S.$4.00 per 1,000 kg., including 'petties'. Fresh water is supplied on a round the clock basis. There is an additional charge of U.S.$50.00/100.00 for fresh water supplied between midnight and daybreak. A minimum charge is made for 20 tons.

Arrangements to be made through Agent.

CONSULS: Consuls for Norway, Spain, Germany F.R., U.K., France, Netherlands, Greece and Italy are located in Iskenderun.

REPAIRS: Most radar/radio and engine repairs can be carried out.

SURVEYORS:

SGS. Tel: (90) (881) 11072.
Marine Survey Bureau. Tel: (90) (881) 18729 – 19751.
Atlantic. Tel: (90) (881) 21479.

GANGWAY/DECK WATCHMEN: There is no watchmen service.

CUSTOMS ALLOWANCES: 40 cigarettes for each crew member going ashore. On board the vessel each crew member may hold 200 cigarettes and 1 open bottle wine/spirits out of bond.

AIRPORT: Adana Airport, served only by domestic lines, with routes to Istanbul and Ankara. Airport is situated 100 km. from Delta Terminal. Twice daily services to Istanbul and Ankara for international connections.

TIME: LMT is GMT plus 2 hours in Winter time and GMT plus 3 hours in Summer time.

HOLIDAYS: New Year's Day, 31st December (noon) and 1st January; Commemoration of Ataturk & Children's Holiday, 23rd April; Youth and Sports Day, 19th May; Seker Bayrami (3.5 days), changeable – after Ramadan feast; Kurban Bayrami (4.5 days), changeable – Festival of Sacrifice; Victory Day, 30th August; Independence Day, 28th October (noon) and 29th October.

POLICE/AMBULANCE: Can be contacted through the local agent (Boutros).

TELEPHONES: Cannot be connected on board.

SHORE LEAVE: Crew permitted to go ashore with shore passes which can be arranged through the local agent.

IDENTIFICATION CARDS: Seaman's Book is sufficient for shore leave. Embarking or disembarking crew members must hold a valid passport (and depending on citizenship, a visa).

GENERAL: The main engines of all vessels while tied up to the buoys shall be ready for immediate use. Deck power (steam) is to be maintained on deck at all times and water pressure shall be maintained on the fire fighting system.

The Master shall at all times retain on board sufficient crew to work the vessel.

No craft, other than one having on board the pilot or Port Health Officer, may approach any vessel entering the port and no other person until Free Pratique has been granted.

Whistle or siren to be available at all times.

Stores/Provisions: Vessels may store at the anchorage or while they are at berth with permission of the terminal and the Customs authorities.

SAFETY: *Tanker Safety:* Masters are at all times responsible for the application of all safety precautions. One boat of the terminal is at all times alongside the vessel for safety.

Safety Check List: The tanker Safety Check List must be completed after inspection of each item, prior to commencement of loading. The berth operator is authorised to stop all loading operations should he consider safety and property to be endangered.

Signals: The following signals must be shown when vessel is in port.

By day: Flag "B" of the International Code of Signals. At night: 1 clear red light visible all around.

Fire Fighting Equipment: Vessels must be adequately manned for fire fighting and vacating the berth in case of emergency.

The following fire-fighting precautions must be taken.

(a) Fire hoses must be run out fore and aft or monitors be ready.
(b) Fire mains must be under pressure.
(c) 1 dry chemical extinguisher must be stationed on either side of the ship's manifold.

Fire Fighting Equipment at Buoys: One boat available alongside the vessel for fire-fighting when vessel is loading.

Action in Case of Emergency: In the event of a fire, oil spillage or other emergency on the vessel.

The emergency and fire signal is: 1 or more blasts of the ship's whistle, each blast of not less than 10 seconds duration, supplemented by a continuous sounding of the general alarm system.

United Kingdom

NEW HOLLAND: 53.12 N. 00.21 W.

PILOTAGE, DOCUMENTS, ANCHORAGES, ETC.: See "Hull".

RESTRICTIONS: Vessels arrive and depart on high water. Vessel always aground (N.A.A.B.S.A.).

MAX. SIZE: Max. size 5,000 d.w.t. Max. LOA 110 m. No restriction on beam or air draft. Max. draft at Spring tide 7.0 m. – 7.5 m.

TUGS: Not necessary.

BERTHING:

Imports: The Terminal specialises in the import of feeding stuffs, fertilisers, coals, cokes, etc. The import route has been designed to off-load cargo, from ship to storage or direct to carrier, efficiently and fast and offers via drop-scale and weighbridge, full documentary control and management.

Terminal: With two berths, an inner berth for vessels of 2,500 d.w.t. and an outer berth with a maximum capacity of 5,000 d.w.t., the Terminal reaches into deep water channels of the River Humber and enjoys the advantage of only requiring one Pilot from Spurn Point. Unloading by grab discharge direct to covered conveyor belts, the import route is rated at a capacity of between 200 – 250 tonnes per hour and incorporates full bypass facilities.

Weighing: Grains and derivatives can be passed through a drop-scale with a capacity of 250 tonnes per hour; coals, cokes and other bulk commodities moving from the site are weighed by means of 2×60 tonne road and/or 100 tonne rail weighbridges.

Storage: Grains and derivatives can be passed by the conveyor systems direct to 2 flatstores with an approximate capacity of 25,000 tonnes, both with movable inner partitions. Coals, etc., are directed to open storage for ease of distribution.

Distribution: Direct ship to road haulage is made possible by 2 overhead lorry hoppers. Recovery from the flatstore is by means of Front End Loaders, and if required, import commodities can be loaded via the export system, weighed or unweighed.

Exports: The Terminal has a dual capability for simultaneous import and export and has been designed for the export of grains and other bulk commodities.

The export route has many features unique to Humberside, and with full weight control and documentation offers the ideal export venue for any product.

Terminal: With two export berths, an outer berth of 5,000 d.w.t. capacity and an inner berth with a maximum capacity of about 1,500 d.w.t., loading is rated at 400 tonnes per hour via the covered conveyor belt which feeds 4 loading spouts, direct to the ship's cargo holds. Vessels approaching New Holland from the North Sea need only one pilot in and outward, thereby reducing costs.

Reception: The Terminal is the only specially designed export terminal in Humberside that can receive grain direct from railcars. With extensive private sidings and shunting locomotive, full train loads can be handled in intake pits. Road haulage delivery is either by intake pit or direct to open compound. Reception of grains also includes a grain testing station for quality control.

Direct or Indirect Loading: Grain intake can either be pre-assembled into 5 silos with an approximate overall capacity of 3,500 tonnes and then loaded directly to ship. Coals, coke, etc., are fed directly to the main export belt from their pre-collected storage areas.

Weighing: All commodities entering the site are weighed by fully computerised weighbridges, 2×60 tonne road and 1×100 tonne rail weighbridges. Export of grain related products is also monitored by 2 dropscales weighbridges prior to being loaded onto export vessels.

CRANES: 2×8 ton electric rail mounted cranes.

STEVEDORES: Work around the clock, from Monday 0600 hrs. – Saturday 0600 hrs.

Sunday work by arrangement.

FRESH WATER: Available at 5 t.p.h. No charge, included in jetty dues.

FUEL: Available by barge from Hull.

REPAIRS: Local shipyard can undertake minor repairs.

HATCHES: Opening and closing by ship's crew.

AIRPORT: Humberside Airport is 15 minutes away by road. Flights to London, Amsterdam and Bergen.

TELEPHONES: No shore connections. Public telephone available on pier.

GENERAL: The New Holland Bulk Terminal is situated on the South bank of the River Humber, about 4 miles East of the Humber Bridge, and about 20 miles inland from Spurn Point. Close proximity to the U.K.'s motorway and dual carriageway network gives the terminal a competitive and strategic position for the import and export of bulk commodities. Close connections to the M1, A1, M18 and A15 Humber Bridge link road ensure optimal North/South connections with the M180, M62 and A6 offering good East/West connections. The terminal has its own railway sidings, connected directly to the British Rail network.

AUTHORITY: New Holland Bulk Services Ltd., Old Ferry Terminal, New Holland, P.O. Box 1, Barrow upon Humber, South Humberside, DN19 7SD. *Tel:* Barrow upon Humber (0469) 31102. *Telex:* 527466 NH Bulk G. *FAX:* (0469) 31966. *Contact:* H. van Velzen, General Manager. J. Lyne, Operations Manager.

United States of America

BATON ROUGE: (Also see page 1777).

The following information was received fom Exxon Shipping Company in February 1989.

ANCHORAGES: *Add:*

Report:

Anchorages within the river are limited; therefore, whenever possible, vessels should utilise the large anchorage area located East of the entrance of Southwest Pass.

MISSISSIPPI RIVER DESIGNATED PERMANENT ANCHORAGES:

Pilottown Anchorage: An area extending from Mile 1.5 to Mile 6.7 AHP along the right descending bank and having a width of 1,600 ft. at its upper and lower limits.

Boothville Anchorage: An area extending from Mile 12.2 to Mile 18.5 AHP along the right descending bank and having a width of 1,000 ft. at its upper and lower limits.

Ostrica Anchorage: An area extending from Mile 23.5 to Mile 24.4 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Port Sulphur Anchorage: An area extending from Mile 37.5 to Mile 39.7 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Magnolia Anchorage: An area extending from Mile 45.5 to Mile 46.9 AHP on the right descending bank, having a width of 1,100 ft. measured from the Low Water Reference Plane from Mile 45.5 to 46.3, and 600 ft. measured from 500 ft. riverward of the Low Water Reference Plane from Mile 46.3 to 46.9.

Davant Anchorage: An area extending from Mile 53.5 to Mile 54.5 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Alliance Anchorage: An area extending from Mile 63.6 to Mile 65.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Wills Point Anchorage: An area extending from Mile 66.5 to Mile 67.6 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Cedar Grove Anchorage: An area extending from Mile 69.9 to Mile 70.6 AHP on the right descending bank, 700 ft. wide with a Western limit 400 ft. from the Low Water Reference Plane on the right descending bank.

Belle Chase Anchorage: An area extending from Mile 73.1 to Mile 75.2 AHP along the right descending bank and having a width of 1,000 ft. at its upper and lower limits.

Lower 12 Mile Point Anchorage: An area extending from Mile 78.5 to Mile 80.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower 9 Mile Point Anchorage: An area extending from Mile 82.7 to Mile 85.0 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

New Orleans General Anchorage: An area extending from Mile 89.3 to Mile 90.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits. (See Appendix, paragraph 8).

Quarantine Anchorage: An area extending from Mile 90.9 to Mile 91.6 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits (See Appendix, paragraphs 6, 8 and 9).

Kenner Band Anchorage: An area extending from Mile 115.1 to Mile 115.6 AHP along the right descending bank and having a width of 700 ft. at its upper and lower limits.

Ama Anchorage: An area extending from Mile 115.7 to Mile 117.2 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Bonnet Carre Anchorage: An area extending from Mile 127.3 to Mile 128.8 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits. (See Appendix, paragraph 10).

La Place Anchorage: An area extending from Mile 134.7 to Mile 135 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits.

Reserve Anchorage: An area extending from Mile 137.0 to Mile 137.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower Grandview Reach Anchorage: An area extending from Mile 146.5 to Mile 147.1 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Upper Grandview Reach Anchorage: An area extending from Mile 147.7 to Mile 148.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Lower Sunshine Anchorage: An area extending from Mile 165.0 to Mile 165.9 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Upper Sunshine Anchorage: An area extending from Mile 166.3 to Mile 167.0 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Baton Rouge General Anchorage: An area extending from Mile 225.8 to Mile 227.3 AHP along the right descending bank and having a width of 1,400 ft. at its upper and lower limits. Less than 27 ft. draft.

Lower Baton Rouge Anchorage: An area extending from Mile 228.5 to Mile 229.0 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Middle Baton Rouge Anchorage: An area extending from Mile 229.6 to Mile 229.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Upper Baton Rouge Anchorage: An area extending from Mile 230.6 to Mile 231.0 AHP along the left descending bank and having a width of 1,075 ft. at its upper limit and 1,200 ft. at its lower limit. Light draft.

Note 1: Loaded vessels are not allowed to use Middle and Upper Baton Rouge Anchorages.

Note 2: An explosives anchorage, approximately 1,000 ft. wide, is located on the West side of the river 1.4 miles upstream of Oak Point Light (63.0 miles AHP) and cannot be used by any vessel without previous approval from the Commander, Eighth Coast Guard District.

All anchorages have mud bottoms and are protected by the Mississippi River banks on each side. Vessel's position should be monitored continuously for dragging while anchored. No specific distances are required between anchored vessels. Caution is advised if required to anchor off Baton Rouge Docks, due to proximity of submerged pipeline crossing just South of docks.

The Coast Guard advises that during high water conditions, Mariners should give anchored vessels a particularly wide berth. Fast river currents may cause anchored vessels to swing in wide arcs. Under these conditions, it is important that the Mariner beware of anchor chains.

APPENDIX:

Regulations Concerning Designated Anchorages have been extracted from 33 CFR 110.195.

(1) Anchoring is prohibited outside of established anchorages except in cases of emergency. In an emergency, if it becomes necessary to anchor a vessel outside an established anchorage, the vessel shall be anchored so that it does not interfere with or endanger any facility or other vessel. The Master or person-in-charge of the vessel shall notify the Captain of the Port of the location of the emergency anchoring by the most expeditious means and shall move the vessel as soon as the emergency is over.

(2) In an emergency, if it becomes necessary to anchor a vessel in Southwest Pass, the vessel shall be positioned as close to the left descending bank as possible.

(3) No vessel may be anchored unless it maintains a bridge watch, guard and answer VHF Channel 16, maintains an accurate position plot and can take appropriate action to ensure the safety of the vessel, structure, and other vessels.

(4) When anchoring individually or in fleets, vessels shall be anchored with sufficient anchors or secured with sufficient lines, to ensure their remaining in place and withstanding the action of winds, currents and the suction of passing vessels.

(5) No vessels may be anchored over revetted banks of the river or within any cable or pipeline area. The locations of revetted areas and cable and pipeline areas may be obtained from the District Engineer, Corps of Engineers, New Orleans.

(6) The intentions to transfer any cargo while in an anchorage shall be reported to the Captain of the Port, giving particulars as to name of ships involved, quantity and type of cargo, and expected duration of the operation. The Captain of the Port shall be notified upon completion of operations. Cargo transfer operations are not permitted in the New Orleans General or Quarantine Anchorages. Bunkering and similar operations related to ship's stores are exempt from reporting requirements.

Note: Activities conducted within a designated anchorage (e.g. cargo transfer, tank cleaning, stack blowing, etc.), may be restricted by other Federal, State or local Regulations. Owners, or persons in charge of any vessel should consider all safety and/or environmental regulations prior to engaging in any activity within designated anchorges.

(7) Nothing in this section relieves the owner or person-in-charge of any vessel from the penalties for obstructing or interfering with navigation or navigational aids or for failing to comply with the navigation laws for lights, day shapes, or fog signals and any other applicable laws and regulations.

(8) Vessels carrying cargoes of particular hazard as defined in 33 CFR 126.10 or cargoes of petroleum products in bulk may not be anchored in the New Orleans General Anchorage or Quarantine Anchorage without permission from the Captain of the Port.

(9) Except when required by the United States Public Health Service for quarantine inspection, the Quarantine Anchorage may be used as a general anchorage.

(10) When the Bonnet Carre Spillway is open, no vessel may be anchored in the Bonnet Carre Anchorage.

RESTRICTIONS: *Add:*

Caution should be exercised when anchoring in the vicinity of pipelines.

MAX. SIZE: Federal Project Depth of 45 ft., from the entrance to the jetties to Head of the Passes and up to Mile 180, is obtained through continuous maintenance dredging.

Exxon Terminal: LOA 810 ft. (246.8 m.); Beam, no restriction; Displacement, 90,000 ton; Draft, normally 45 ft. alongside.

RADIO: *Add:*

If destined for Exxon Terminal, send ETA messages to "Stanship Baton Rouge"; 72 hours, 48 hours and 24 hours in advance of arrival at Southwest Pass. Telex: 510-993-3575, Answerback: HOBRM. Also, contact Exxon Docks (KZA 891) on VHF Channel 16, 3 hours prior to berthing. Berthing instructions will be provided on Channels 9 or 18.

TUGS: *Add:*

At Exxon, 2 tugs are required for all vessels in excess of 12,000 d.w.t., for docking and undocking.

TANKERS: *Delete 1st paragraph and substitute:*

Exxon Refinery Terminal: 4 tanker berths available with 2,260 ft. of berthing space. Normally handles 3 tanker simultaneously. See "Max. size".

Oil slop facilities available, but 48 hours advance notice required to be given to terminal.

Baton Rouge Port Authority: 2 berths; 238 m. and 410 m.; Apex Oil – heavy fuel oil; and Westway – Molasses.

Placid Oil Company: Crude and products, 330 m. berthing space.

Formosa Plastics: Caustic soda, ethylene dichloride, 240 m. berthing space.

FRESH WATER: *Delete 2nd sentence and substitute:*

At Exxon, water available for flat fee, presently $300.

FUEL: *Add:*

No fuel available at Exxon.

FIRE PRECAUTIONS: *Add:*

Ship's fire plan should be available at gangway.

REPAIRS: *Add:*

At Exxon, no repairs allowed without permission from terminal. Vessels shall be able to get underway as soon as possible.

DELAYS: *Add:*

Vessels loading Isopropanol Alchohol must have tanks approved before berthing.

NEW HAVEN: (Also see page 1848)

BERTHING: Delete: *T.A.D. Jones:* and text.

Insert:

Gateway Terminal: Gateway Terminal is an independent deep-water marine terminal owner and operator, handling various types of dry and liquid bulk cargoes. It features its own petroleum transfer and oil storage tank farm (4 tanks), with an aggregate capacity of approximately 500,000 barrels. The fuel transfer facility is connected to the Buckeye-Jet line Pipeline System servicing central Massachusetts, and has a working arrangement with Gulf Oil to utilise a number of their immediately adjacent facility components, including their T – dock.

Gateway Terminal has a newly constructed concrete pier, 750 ft. length by 60 ft. width, which is at a 90° angle to the main channel. The pier provides up to 3 berths and can accommodate on the South side 40,000 d.w.t. tankers and dry cargo vessels up to 700 ft. LOA, 120 ft. beam and 35 ft. draft at MLW. Smaller vessels and barges with up to 30 ft. draft at MLW use the North side. Also available are 3×9,000 ton elevators for cement storage. The pier provides a timber/rubber cushion 50 ft. on centre fendering system. Two high speed gantry cranes with capacity 40 tons are on the pier and additional mobile cranes with capacity 25 tons are available. Advanced truck loading and weigh stations are immediately adjacent to the pier. Ships can berth port or starboard side to.

Bunkers, petroleum products and fresh water are available at all times.

Venezuela

ORINOCO RIVER: (Also see page 1968)

SHIPMASTER'S REPORT: January 1989.

Vessel proceeding to Matanzas.

Apparently the entrance to the River Orinoco at Boca Grande had been upgraded.

All the buoys now have solar energy cells as well as photo-cells to activate them at dusk.

The North entrance no longer exists, only the South Dredged Channel is used. A Racon had been installed on Mile 0.1 (Sea Buoy). Current entrance information is given by Puerto Ordaz Radio Station (YVM), with which vessels should make contact as soon as possible. As usual, pilots board the vessel between Miles 27-28. It is advisable to reduce speed beforehand, to be able to embark the pilot before Mile 28, as pilot boat is not fast and there is a considerable bend at Mile 28. Also it is advisable to familiarise yourself with the buoys and ranges up to Mile 30 while entering, as the down-bound pilot usually disembarks between Mile 30-31 and there are 3 short distance bends before Mile 28. On our passage as many as 4 buoys were out of position, one buoy was unlit at the first range, and Sea Buoy (0.1) Racon was inoperative.

Socialist Republic of Vietnam

HO CHI MIN CITY (Saigon Port): (Also see page 1984)

SHIPMASTER'S REPORT: January 1989.

Approaching from South, Mui Vung Tau (ex-Cap St. Jacques) observed on radar from about 15 miles with all details.

Anchorage extends from Lat. 10° 19′ N., Northward to Buoy No. 2. If anchoring South of Lat. 10° 19′ N., vessel will be requested to come closer in order to be boarded and cleared by Authorities.

Anchorage well protected during N.E. monsoon, no swell.

Pilot boarding ground at position Lat. 10° 20.4′ N., Long. 107° 03.2′ E. However, vessels are requested to enter and anchor at Vung Tau without the pilot. Pilot station can be contacted on VHF Channel 16.

Watch on VHF Channel 16 should be maintained from 1000 hrs. – 1200 hrs. and 1400 hrs. – 1600 hrs., usually notice is given when vessel is to leave Vung Tau.

Buoys generally not reliable, and missing buoys apparently will not be replaced in near future.

No. 1 Buoy (previously in position Lat. 10° 18.7′ N., Long. 107° 03.8′ E.) no longer exists.

No. 3 Buoy is now in position Lat. 10° 19.5′ N., Long. 107° 04.1′ E., but is liable to drift (Pilot's information).

No. 7 Buoy in position Lat. 10° 20.25′ N., Long. 107° 03.8′ E., is wrecked and marked by a float. Very difficult to observe.

No. 8 Buoy, formerly in position Lat. 10° 21.55′ N., Long. 107° 02.05′ E., no longer exists.

No. 2 Buoy now in position Lat. 10° 22.4′ N., Long. 107° 02.7′ E.

No other buoys observed in this area.

All existing buoys unlighted, rusty and it is practically impossible to determine original colour or marks.

Buoy No. 2 is the Northern limit of the area where pilot not required.

Lighthouses on shore reliable and working.

Distances and bearings, taken by radar, reliable.

There are numerous fishing traps, extending from, or in the vicinity of the shore, but not obstructing navigation.

Previous information concerning the maximum size and draft is still valid.

From Vung Tau Anchorage to Saigon Port, most of the river is without any marks. Inbound or outbound ships transit the river during the day time only.

Authorities from Vung Tau board the vessel on anchoring, but only North of Lat. 10° 19′ N.

There are about 10 – 12 officials, representing Immigration, Customs, Port Authorities, Port Health and Agents. Vessels bound for Saigon (Ho Chi Min City), if waiting at anchorage, are also cleared by Authorities and one set of documents remains on board to be handed to Authorities in Saigon.

Usually 2 Police Officers remain on board for security reasons, but this is not sufficient to prevent problems with thieves boarding the vessel during the night and crew must keep sharp lookout. The same problem is encountered in the Port of Saigon.

In addition to the numerous forms given on arrival by Authorities to be filled in, following documents are required:

Clearance from Last Port.
12 copies Crew List (minimum).
2 copies Crew Personal Effects Declaration.
2 copies Ship's Stores Declaration.
2 copies Arms and Ammunition Declaration.
2 copies Medical Narcotics Declaration.
2 copies Crew Vaccination List (if expired, crew will be revaccinated).
2 copies Foreign Currency Declaration (crew and vessel's).
6 copies Cargo Manifest.
6 copies Cargo Plan.

Additional copies of Crew List, Cargo Plan and Cargo Manifest are requested on arrival at Saigon Port.

All ship's certificates checked by Port Authorities.

Crew Passports/Seaman's Books usually taken ashore at Vung Tau to obtain shore passes and brought on board in Saigon.

Radio room sealed, if necessary to operate, permission must be obtained from Police Officer on board.

Fresh water available by barge (100 tons) in Port of Saigon, but 2 days notice required through Agents.

Fresh fruit and vegetables can be obtained, prices low and negotiable, medium quality.

VUNG TAU: (Also see page 1985)

See "Report" above.

Yemen Arab Republic

RAS ISA MARINE TERMINAL: 15.08 N. 42.36 E. (See Plan on P1371)

LOCATION:

a. The Floating Storage and Offloading Terminal (FSO) "Safer" (400,000 d.w.t.) is located approximately 4.8 nautical miles offshore from Ras Isa in position: Lat. 15° 07′ N., Long. 42° 36′ E.

b. An area designated as the Holding Anchorage for vessels waiting to load at the Ras Isa Marine Terminal is located to the Southwest of the Terminal and is a circle of 1 mile radius centered on position: Lat. 15° 05.5′ N., Long. 42° 34.5′ E.

Yemen Hunt Oil Company (YHOC) is the only operator of the Ras Isa Marine Terminal.

Also see "Notice".

NOTICE: B.A. Notice – Week No. 8/88

Issued by Port and Marine Affairs Corporation, Yemen Arab Republic.

Ras Isa Storage and Offloading Terminal is situated 3.5 miles SSE of Rashshah (11.53). The terminal consists of the 400,000 d.w.t. tanker "Safer" moored permanently to a tanker mooring buoy. A *restricted area*, 2 miles in radius, is centred on the tanker.

A waiting anchorage, whose limits can be seen on the chart, is situated 6.5 miles South of Rashshah.

Before proceeding to the anchorage or terminal, vessels must contact the terminal and Al Hudaydah Port Authority on VHF for anchoring and Pilot boarding instructions.

PILOTAGE: Vessels proceeding to and leaving the Ras Isa Marine Terminal (except for small launches and other craft regularly plying within the Marine Terminal Area) must utilise the service of a licensed Pilot provided by the General Corporation for Ports and Marine Affairs in Hodeidah, Y.A.R., which the Terminal will arrange.

Masters of ships coming from sea may anchor or if proceeding to sea may leave from the Holding Anchorage without the assistance of a Pilot.

Masters must sign the Pilot's Indemnity Certificate before the vessel gets underway or manoeuvring commences. Ships using Ras Isa Marine Terminal will be liable for any damage caused by the ship to the Terminal or to any of YEPC's property or to any other vessel lying therein, whether or not a Pilot was assisting at the time.

Pilot Embarking/Disembarking: For ships not located alongside the Terminal the Pilot shall embark or disembark by means of a pilot ladder when the freeboard does not exceed 9 m. (30 ft.), when the freeboard exceeds such measurement, by a combination of accommodation ladder and pilot ladder. It is the responsibility of the ship to ensure that ladder arrangements shall conform to the requirements of SOLAS 1974 Chapter V, Regulation 17. A Pilot may refuse to board a ship if the means of access does not conform to the above.

If the Pilot agrees, a pilot hoist may be used in lieu of an accommodation ladder and pilot ladder but a standard pilot ladder shall be immediately available in the event of a failure of the pilot hoist. Ship's engines must be stopped while the Pilot is transferring from the tug or launch to the ship or vice versa. As a general rule, the Pilot will board the vessel about 2 miles off the Ras Isa Marine Terminal.

Emergency Pilot Ladder: As soon as vessel is berthed, a pilot ladder should be rigged over her starboard side just forward of the poop and end must be kept just above water level throughout the stay alongside, so that in an emergency which makes boarding from the Terminal impossible, the Berthing Master could board the ship.

NOTICE OF READINESS: The ship's Notice of Readiness (N.O.R.) will be signed by the Loading Master upon mooring of the export tanker, for acceptance if the time tendered is consistent with the time the Pilot embarked, and for receipt only if an earlier time is tendered.

If it is subsequently found that the export tanker was not, in all respects, ready to load due to, for example, high O_2 readings in inert gas in cargo tanks or due to excessive deballasting time or other preparation for the nominated cargo a Note of Protest will be delivered to the export tanker which will automaticaly cancel operator's initial acceptance of the Notice of Readiness. In such cases, the export tanker must prepare a revised N.O.R., cancelling the first one and stating a time tendered in accordance with its actual readiness.

APPROACHES: *Permission to Enter Ras Isa Marine Terminal Area:* No ship, tug, barge, launch or other craft shall enter the Ras Isa Marine Terminal Area, including the Holding Anchorage, without first obtaining the permission of the Oil Movements Control Centre aboard the Terminal (call "YHOC Marine" on VHF Channel 16).

ANCHORAGE: A water depth of about 20 fathoms (37 m.) is available at the Holding Anchorage. Should "YHOC Marine Sana'a" by cable/telex or "YHOC Marine" by VHF advise the export tanker or any other vessel to anchor on arrival, the ship shall anchor only in the Holding Anchorage. The Holding Anchorage may, with the prior agreement of YHOC, be used to carry out repairs requiring shore labour or the attendance of shore representatives or surveyors and for ships storing.

RADIO: *ETA Requirements:* Export tankers shall advise their ETA upon departure from their last load or discharge port or other port or if at sea as soon as orders are received to proceed to Ras Isa and repeat at 72 hours, 48 hours and 24 hours in advance of arrival via Hodeidah Radio Station to the Cable Address "YHOC Marine Sana'a" or Telex No. 4013. Vessels equipped with INMARSAT Satellite Communications may address their telex(es) to "YHOC Marine" INMARSAT Telex No. 873-1104125 and shall call the Terminal on VHF Channel 16 when within range.

See "Pre-Arrival Information Required" on cargo and ballast operations below.

If a ship seeking to enter the Terminal has received damage and/or is leaking oil, this must be advised in the ETA advice so that the ship can be inspected by YHOC before entering the Terminal Area.

Pre-Arrival Information Required: All export tankers scheduled to load at the Ras Isa Marine Terminal will receive the following telex:

Telex to Master

Master____________________
We hold your nomination for approximate____________________
bbls. at 60° ALIF Crude for discharge____________________
Approximate API__________
Following information needed:

AAA	Cargo quantity you able to load.
BBB	Last cargo carried and if crude, source of origin.
CCC	Quantity and grade of any transit cargo on board.
DDD	Quantity of dirty ballast to pump to terminal and estimated time to deballast via 1×16 in. hose (max. pressure at rail 70 p.s.i.)
EEE	Quantity and type of slop onboard to lot, segregate on board or pump to terminal.
FFF	Maximum acceptable loading rate.
GGG	Arrival draft (trim not to exceed 10 ft. or 3 m. by stern).
HHH	Deepest sailing draft.

III Advise ability to simultaneously load and deballast with double valve separation throughout.

JJJ Confirm latest edition of I.S.G.O.T.T. Safety Guide and OCIMF Ship to Ship Transfer Guide are onboard.

Repeat your ETA 72, 48 and 24 hours in advance of arrival via Hodeidah Radio to "YHOC Sana'a" or to "YHOC Marine" via INMARSAT.

Satellite to Telex No. 873-1473102. When within range contact YHOC Marine on VHF Channel 16.

On arrival have your pilot ladder ready on starboard side for Berthing Master boarding and your port boom (SWL rating of minimum 10 tons) rigged for 16 in. hoses handling purposes.

Confirm your Inert Gas System is in good working condition, maintaining O_2 content less than 8% by volume in cargo tanks.

Operational/Safety Check Lists as per OCIMF Ship to Ship Transfer Guide will be followed when VHF contact is established.

Terminal requires readiness of 4×16 in. ASA manifold connections.

Signed
Ras Isa Terminal

Ship's Master should radio the requested information as promptly as possible and comply with Terminal's instructions accordingly.

TUGS: Tugs are provided by the Terminal and their use, when required by the Pilot, is compulsory. Towlines are provided by the tugs. Before the tugs are made fast, Masters must sign the Tug Services Report and Agreement presented by the Pilot on boarding.

Communications Between Ships and Tugs: Communications between ships and tugs during manoeuvring are normally carried out on VHF Channel 12, the English language being used.

In case of a loss of VHF contact the following signals can be made on the ship's whistle or siren:

Forward Tugs (alongside or on hook):
1 short blast –
Tug alongside the starboard side – push against the hull
Tug on hook – pull bow to port.

2 short blasts –
Tug alongside starboard side – pull on beam (backing)
Tug on hook – pull to starboard.

3 or more short blasts – stop tug engines.

Aft Tugs (alongside, or on hook):
1 prolonged blast followed by 1 short blast –
Tug alongside starboard quarter – push against the hull
Tug on hook – pull stern to port.

1 prolonged blast followed by 2 short blasts –
Tug alongside starboard side – pull on beam (backing)

1 prolonged blast followed by 3 or more short blasts –
Stop tug engines.

It is emphasised that whistle signal form of communication between ship and tugs is for emergency use only and that, if possible, manoeuvres should be aborted or suspended until VHF contact is again possible.

BERTHING: *Use of Anchors:* The anchors will not normally be used in the berthing/unberthing manoeuvring operation. The anchors should be ready to the extent that the "at sea lashings" are removed but riding pawls remain engaged on the anchor chains and the windlass/wildcat brakes are hardened up tight.

Berthing Operations: The export tanker will moor with its port side alongside the starboard side of the Terminal. For this purpose the Terminal has been fitted with 5 large heavy duty pneumatic fenders and may also use smaller secondary fenders positioned forward and aft of the large size fender string. The mooring method is of conventional design with the ship passing its own lines to the Terminal. See "Plan" for a typical mooring diagram.

Prior to berthing, the Terminal Loading Master will inspect the export tanker's mooring equipment and jointly with the Pilot discuss the berthing and mooring operations with the Master and ascertain that the export tanker is fully manoeuverable. Mooring wires fitted with 10 m. length synthetic tails connected to the wires by means of a Mandal or Toensberg type shackle are preferred. An all synthetic mooring line arrangement may be accepted subject to an assessment of rope elasticity, strength characteristics and wear and tear. The vessel shall have heaving lines ready, including at least 1×4 in. circumference messenger line on the portside foredeck and on the poop.

After ensuring that the manoeuvring area is clear of other traffic and that weather and sea conditions are suitable, the export tanker will be manoeuvred for approach to the Terminal. The heading of the export tanker will normally be such that she will have the wind ahead but tidal current effects may have to be taken into account. 2 tugs of about 60 tons and 40 tons bollard pull will normally assist in the berthing/unberthing manoeuvres.

Safety of Moorings: The export tanker must be securely moored to the satisfaction of the Terminal. No cargo/ballast hoses will be connected until the export tanker is securely moored. Moorings on winch drums shall be securely braked off; self-tensioning devices are not allowed. Export tankers which use self-stowing mooring winches must ensure that the wires are correctly reeled to assist the brake. On split drum winches the number of layers or wire on the working drum shall not exceed 2, when the wire is taut and the export tanker in a fully loaded condition. Moorings of a different type (e.g. one wire line and one synthetic line) shall not be sent out to the same set of bollards because of the different elasticity. Moorings shall be monitored and kept taut by the export tanker crew and the export tanker maintained in her correct position and in contact with the berth fendering throughout deballasting/loading operations. The Terminal Loading Master is fully authorised to stop operations and disconnect cargo hoses if moorings are seen to require attention or if the export tanker is not kept in position and in contact with the fendering or if the export tanker violates any other safe mooring practices.

Emergency Towing Off Wires: On completion of mooring alongside the Terminal, the export tanker shall provide 2 towing wires of adequate strength and condition.

The towing wires will be secured to the offside bow and quarter bollards respectively, with eyes run out and maintained at or near the waterline.

Synthetic ropes are not acceptable as replacement for emergency towing-off wires.

Gangway and Accommodation Ladder: The Terminal may supply a gangway of approximately 18 m. length and a safety net which will be rigged to provide safe access between the Terminal and the export tanker.

The export tanker should have its starboard side accommodation ladder ready for lowering out and use for both the embarkation of the Pilot on arrival in conjunction with a pilot ladder where the freeboard exceeds 9 m. and for contingency use while alongside the Terminal.

The Operator will not be liable for accidents to ship's personnel and visitors while using the Terminal gangway. If, for any reason, the Terminal gangway is not available, the ship may be required to use her gangway or accommodation ladder. This requires close consultation between the export tanker and Terminal Loading Master.

State of Readiness of Export Tanker and Any Other Ship Alongside: No repairs or work which will make the export tanker and or other ship unable to move under its own power may be commenced without the written consent of the Terminal Loading Master or his authorised deputy. In general, such consent will be refused as, for the safety of the terminal, it is essential that the export tanker and any other ship maintain their propulsion, steering and other equipment required for unmooring and manoeuvring fully operational throughout their stay alongside. In cases where, through Force Majeure, a ship becomes immobilised while alongside, the Master must immediately advise the Terminal Loading Master and "YHOC Marine" by VHF or UHF of the facts so that a decision may be made on the advisability of continuing with cargo operations and so that special precautions can be taken.

Ship/Terminal Communications While Alongside: The Pilot or the Loading Master on boarding before berthing, will bring with him a portable UHF radio set (walkie talkie) which he will use during the mooring operation and, before leaving the ship, will place it under the care of the export tanker Master. This set will remain on board throughout the export tanker's stay alongside and must then be handed back to the Pilot who sails the ship.

The UHF set is to remain open so that the export tanker and the Terminal can make radio contact on a dedicated radio frequency at all times. The set can also be used to advise time ballast is discharged, tank inspection is required, standby or stopping loading pumps, etc. The set must not be used for communicating with other parties and must be used responsibly. Should the set be damaged or lost while under the care of the ship, the cost of a replacement will be billed to the ship's owner. The export tanker should call the Terminal Loading Master if there is evidence that the battery is getting low or the set is operating unsatisfactorily.

LOADING: *Manifold Requirements:* Ships whose cargo manifolds conform to the OCIMF "Standards for Tanker Manifolds and Associated Equipment" should have no difficulty at the Marine Terminal. Basic requirements for manifolds at the Marine Terminal are 4×16 in. ASA steel cargo manifolds.

Note: All bolted flange connections shall be fully bolted. Skip bolting is not permitted.

Connecting Hoses/Cargo Boom Readiness: The port side cargo boom (derrick or crane) with a SWL rating of at least 10 tonnes shall be rigged and centered over the manifold prior to berthing alongside. The ship's crew shall connect the hoses assisted by Terminal hose handling personnel. The FSO "Safer" has a 25 tonne SWL rating crane which will lift up to 3×16 in. hoses.

Cargo Meeting: Upon the export tanker's arrival alongside the Terminal, a cargo meeting will be held between Terminal representative and ship's Master (or his appointed representative) and the Chief Officer on deballasting/cargo operations procedures, tanks inspection before/after deballasting, cargo calculations and preparation of documentation involved.

No deballasting/cargo loading should start until both parties agree on items discussed in this meeting.

Tank Inspection Before Loading: Before loading or before deballasting overboard, tanks will be inspected by a Marine Terminal representative, who, with the assistance of ship's personnel, will dip the tanks, check for water content and calculate the ROB (Remaining on Board).

The Marine Terminal representative will fill in the appropriate forms, which will be submitted to the ship's Master for acceptance and signature. Copy of such documents will be left onboard the vessel.

No Dry Certificate will be issued by the Terminal representative.

OBO Ships – Precautions in Cargo and Ballast Handling: Because of the frequently encountered large free surfaces of cargo tanks (holds) onboard combination carriers, particular care should be exercised when loading cargo or discharging ballast, in order to ensure that total free surface effect of cargo/ballast tanks is kept within safety limits.

Stability data on loading and deballasting instructions should be available onboard and discussed upon vessel's arrival between ship's Master and Terminal Loading Master.

In addition to the above, a pre-arrival plan of trim and transverse stability during cargo and ballast operations should be prepared by the Master and cabled to "YHOC Marine" upon request by the Terminal.

Plan of operations should include data on loading rate limitations, manifolds size and characteristics, deballasting rates and IGS operability.

It will be ship's Master's responsibility to maintain the vessel with no list while loading cargo/discharging ballast.

Safety conventional measures for combination carriers are applicable and Ship's Master should refer to the I.C.S./O.C.I.M.F. "International Safety Guide for Oil Tankers and Terminals", Chapter Eleven.

Loading Operations: All loading operations are conducted using pumps, therefore ship's Masters are warned of the serious consequences of closing or partially closing valves against the incoming oil flow.

At all times during loading operations, a responsible officer shall be in charge of operations onboard the export tankers, either on deck or in the cargo control room. On export tankers with a cargo control room, the deck must be continuously patrolled by a watchman in contact with the cargo control room.

When the export tanker is in all respects ready to receive cargo, the Terminal should be notified. Cargo loading will start at low rate until ship's officer will confirm that cargo is flowing into the appropriate tanks. At this time the flow will be increased until the agreed rate is reached.

Cargo oil transfer will not be started unless the export tanker and the terminal manifold stations are manned.

Maximum Loading Rate that may be Reached: FSO "Safer" pumping via 3×16 in. hoses – 100,000 bbls./hour.

The actual loading rate will depend on the agreed maximum rate, the quantity of cargo to be loaded and other operational factors such as the export tanker cargo tank venting capacity.

The loading rate can be reduced at any time (i.e. during topping-off of tanks or any other circumstance). At least a 10 minute "stand-by" notice should be given by the export tanker when loading nears completion.

Emergency Stopping of Pumps: During loading operations, upon request from export tanker personnel, if an emergency arises, Loading Master will stop pumping. Terminal pumps, in emergency, can be stopped almost immediately.

During deballasting operations, the export tanker should be able at any time to immediately stop her pump(s) in emergency, upon request by the Terminal or when situation warrants.

As communications between the parties involved are extremely important, UHF radio contact should be frequently checked.

If contact between Terminal and export tanker is lost, all operations should be stopped until corrective action is taken and communications restored.

Cargo Measurement:

a) The Terminal uses the measurement standards published in the:
   Manual of Petroleum
   Measurement Standards
   Chapter 17 – Marine Measurement
   Section 1 – Guidelines for Marine Cargo Inspection
   Second Edition, January 1986
   American Petroleum Institute
   The guidelines presented in the above publication are intended to encourage the use of uniform petroleum cargo measurements for crude export cargoes through the Ras Isa Marine Terminal.

b) The Terminal will use Table 6A – API Standard 2540 (equivalents: IP200, ASTM D1250 and ANSI/ASTM D1250) for calculations of measured quantities of crude pumped into the export tanker. Export tankers should have the following publication available onboard:
   Manual of Petroleum
   Measurement Standards
   Chapter 11.1 Volume Correction Factors
   Volume 1
   Table 5A
   Table 6A
   API Standard 2540
   First Edition, August 1980
   American Petroleum Institute

c) Immediately after completion of loading, the export tanker's cargo figures should be calculated by the ship's officer-in-charge.

d) A Marine Terminal representative will witness such operations (i.e. ullaging, temperature control, etc.) and he will fill in all documents involved. Copy of such documents will be left onboard.

Logging Times of Operations: All operations will be logged and a "time log" sheet will be filled in before the export tanker's departure and signed by the Master and the Terminal representative. Both parties will keep a copy of such "time log".

Early Departure Procedures: At present Early Departure Procedure will not be carried out. It is however the Terminal's intention to use this service, which provides a quick departure and permits a faster turnaround, in the near future.

BALLAST: *Ballast and Loaded Draft Requirements:* Export tankers in ballast or in partly laden condition shall arrive, for safe handling in all normal weather conditions, with sufficient draft for full immersion of the propeller(s) and a trim not exceeding 10 ft. (3.0 m.) by the stern. Any angle of list will not be accepted. Export tankers sailing with a part cargo are also recommended to conform to the above draft and trim condition.

In special circumstances and in very good weather conditions it may be possible to safely handle export tankers with less draft and/or a different trim than those recommended above. In these cases Masters should consult with the Ras Isa Marine Terminal Oil Movement Control Centre by VHF call to "YHOC Marine".

Deballasting Facilities: After February 29th, 1988, all dirty ballast must be discharged into the Terminal dirty ballast reception tanks or retained aboard; however the capacity of the reception facilities is limited to about 50,000 metric tons maximum. All clean, oil-free ballast should be discharged overboard; the responsibility for avoiding oil pollution rests with the export tanker. The ballast in cargo tanks and segregated ballast tanks for overboard discharge will be inspected and sampled by the Terminal representative before permission is granted for deballasting to commence. The ballast samples will be checked for oil in water content and the findings advised to the ship's Master. An oil in water content exceeding 15 p.p.m. will result in a "Dirty Ballast" Declaration with no overboard discharge permitted. YHOC will not entertain any claims for deadfreight so caused. Export tankers may be required by their operators/charterers to arrive with clean ballast and consolidated slops.

Inert Gas Systems: All export tankers loading crude oil at the Marine Terminal must have an effectively working Inert Gas System in compliance with SOLAS 1974 Convention, Chapter II, Part D and the Master shall confirm before berthing that the Inert Gas System is working correctly, i.e. maintaining positive pressure on all tanks with the oxygen content of the inert gas less than 8% by volume. On arrival alongside export tankers will be asked to depressurise tanks sufficiently to allow up to 3 ullage ports to be open at any one time for the purpose of gauging, sampling, waterfinding, temperature taking, tank inspection, etc., but ullage ports must be re-secured before cargo or ballast handling is commenced.

Export tankers equipped with Vapour Lock tank dipping/sounding devices are not required to depressurise the tanks when gauging, temperature taking and water finding. During deballasting, the IGS must be capable of producing sufficient inert gas of 8% or less oxygen quality to prevent air from entering the tanks.

If the IGS is not operable, deballasting from cargo oil tanks will not be allowed to commence. If during deballasting, the IGS fails, the deballasting must be stopped until the plant is again operational; if this repair is likely to take more than 24 hours, the ships' owners and/or charterers must be contacted and a safe deballasting/loading plan should be agreed by both parties, before operations are resumed.

When loading or deballasting into an inerted tank, the inert gas displaced must be vented through the ship's vent system and not the ullage ports.

Maximum Allowable Pressure: The export tanker must never exceed the maximum allowable pressure on its cargo piping system and make sure the loading rate is fully agreed. While discharging ballast to the Terminal, the export tanker should not exceed 70 p.s.i. at its manifold.

MEDICAL: No doctor or clinic, however, in emergencies, Terminal will attempt to assist.

Also see "Helicopter".

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: None locally.

REPAIRS: No facilities available.

REPATRIATION: No facilities available.

SHORE LEAVE: Not permitted.

HELICOPTER: *Helicopter Operations/Precautions:* Helicopter service for embarking/disembarking a Pilot or any other personnel from the export tanker and any other vessel is not available.

Transfer of personnel by helicopter from ships located within the Terminal area may be carried out only in emergency (i.e. evacuation of injured crew member) and subject to availability of a helicopter. The helicopter service will be for account of the export tanker.

The ship's Master requesting helicopter service for emergency evacuation of injured crew member should:

1. Contact the Terminal Oil Movement Control Room by UHF/VHF and ask for emergency medical evacuation.
2. Give to Terminal the information listed under "Addendum A" hereto. The Terminal will pass this to the doctor located ashore.
3. Provide continuous radio watch on VHF Channel 16, VHF-FM (156.8 MHz) or 2182 kHz. Voice contact with helicopter should be established as soon as helicopter approaches the area.
4. Ensure the selected hoist area onboard the vessel is clear, advise the helicopter of the pick-up area before it arrives.
5. If alongside the terminal, stop all deballasting/loading operations upon previous agreement with the terminal, before the helicopter approaches.
6. If the hoist is at night, light the pick-up area as well as possible. Do not shine any lights on the helicopter because they will blind the Pilot.
7. Ensure all operational requirements on deck are as per guidelines issued by the "International Chamber of Shipping – Guide to Helicopter/Ship Operations".

"Addendum A"
Information on patient needed for medical evacuation.

1. What are the symptoms of the illness? (Or give a description of injury).
2. When did they start (or occur)?
3. Can the patient walk?
4. Temperature or pulse readings?
5. Any vomiting or diarrhoea?
6. Any swelling or pain? (Give location).
7. What medication have you given?
8. What is the general condition of the patient?
9. What have you done for the patient and what first aid equipment/medicine do you have onboard?
10. Age, name and nationality of the patient.

SECURITY: *General:* The Terminal will take prudent and reasonable security measures consistent with security threats and risk inherent in each particular situation.

Security Area: The security area covered is indicated by the encircled area on the map, (see "Plan").

Access Control: Access to the Terminal, the export tanker(s) or any other vessel will be controlled by:

1. Employee and visitor pass system.
2. Property pass system (spare parts, stores, provisions and other material).
3. Random search of personnel and vessels if necessary.

Communications: In addition to the use of the ship-to-shore radio telephone system, the Terminal will utilise walkie talkies for communications with the YHOC shore staff and local law enforcement authorities.

Responsibilities of the Export Tanker: The responsibilities of the export tanker or any other ship should at a minimum be along the following lines:

The Master of the export tanker is responsible for gangway access control to the vessel, surveillance onboard the vessel and surveillance of the water surrounding the vessel. It is his responsibility to provide the Terminal Manager with a manifest of crew members and list of authorised visitors to the vessel. The Master should also institute a system of package control to include the issuance of appropriate property passes for items authorised to leave his vessel.

Throughout the vessel's stay alongside, a gangway watch should be maintained. The gangway security watchmen should ensure:

(a) Unauthorised persons are excluded from the vessel.
(b) Authorised persons are logged on and off the vessel.
(c) If necessary, conduct checks of baggage and packages being brought on to or taken off the vessel.

Responsibilities of the Terminal: The Manager of the Terminal is responsible for all Security activities in the Terminal area. The Terminal will advise the Master of the vessel of his responsibilities.

It is important that the Terminal advise the Master as soon as possible of any special circumstances which might necessitate special Security precautions. Conversely, the Master of the vessel should also inform the Terminal of the Security status procedures onboard in accordance with the Vessel Security Guidelines.

GENERAL: *Services:* The Terminal is located offshore, and the only means of transportation available to the shore is by Terminal Support Craft to the Port of Hodeidah situated about 30 nautical miles to the South. Therefore, the Terminal can offer no logistical support. At present there are no facilities for providing provisions, stores or spare parts.

Only authorised personnel are permitted to board export tankers and any other ship while berthed.

Export tankers requiring urgent services (Owner's items) should establish contact with local Port Agents at the Port of Hodeidah for delivery offshore and at the Holding Anchorage, which if the latter is utilised should be reported to "YHOC Marine" via VHF radio telephone for clearance to use this anchorage.

Charts: Charts covering the approach to and from the area of the Ras Isa Marine Terminal are: British Admiralty Nos. 141, 542, 548 and U.S. Hydrographic Office Nos. 62285, 62290, 62292.

Tides and Current: It is suggested that vessels consult the British Admiralty Pilot Book N.P. 64, Twelfth Edition 1980, with supplements.

Weather and Sea Conditions: It is suggested that vessels consult the British Admiralty Pilot Book N.P. 64, Twelfth Edition 1980, with supplements.

Strong Winds: When mean speeds exceed 30 knots on the Marine Terminal anemometer, ships will, depending on the wind direction and general weather synopsis, be alerted that cargo/deballasting operations may have to be suspended and hoses disconnected. The Terminal has the responsibility of determining when wind conditions are reaching the limit of the design criteria for continued operations.

Inspection: Any authorised representative of YHOC shall have the right to board any vessel within the Marine Terminal Area at any time, for the purpose of ensuring that Regulations are being observed.

Ship to Vacate Berth on Request by YHOC: As a condition of entry into Ras Isa Marine Terminal Area, the export tanker and any other ship must agree to vacate the berth promptly on being requested by YHOC.

SHIPMASTER'S REPORT: May 1988.

Ras Isa Terminal is an offshore loading port located in the Yemen Arab Republic at the Southern end of the Red Sea, East of the Zubair Islands and a little North of Hodeidah (See B.A. Chart No. 143).

The Terminal consists of a purpose-converted Floating Storage and Offloading (FSO) vessel, FSO 'Safer'. This vessel is 400,000 tonnes d.w.t. (ex-'Esso Japan'), and permanently moored in position Lat. 15° 07′ N., Long. 42° 36′ E. The 'Safer' is under the Yemen flag, and permanently connected by pipeline to the production field via a turret-mooring (6 anchors), and submarine line to shore at Ras Isa, 4.4 miles to the N.E. Production Field is some 420 km. inland, in the Marrib area of Yemen, and production is understood to be some 150,000 barrels per day. 'Safer' takes production on a continuous basis and supplies export vessels as required.

Product is Yemen Alif Crude; typical API, 39.0 to 41.0, typical temperature at loading, 30°C to 38°C, dependent on local sea temperature. The 'Safer' is on a swivel mooring system and will normally lie head to wind, with some influence from tide. Terminal is operated by a Yemeni/American combine, the Yemen Hunt Oil Corp. (YHOC), and vessel is operated (at time of writing) with Italian officers, Yemeni crew, together with American supervisors and Yemen Government representatives. Product suppliers are Yemen Oil and Mineral Resources Corporation. (YOMINCO).

Communications/ETA: (See Appendix "A").

On receipt of instructions to proceed to Ras Isa, then 72 hours, 48 hours and 24 hours prior, advise ETA and other details as listed. Hodeidah Ports and Marine Affairs Corporation (Hodeidah Port Authority) *must* be advised via Hodeidah Radio (4WD), in addition to any telex contact, as they advise the Yemen military authorities, who maintain a radar watch on all vessels entering or leaving Yemen waters. Likewise on departure, vessel must advise Hodeidah Port Authority (per format supplied by Pilot) to be marked-up on military radar screen – otherwise vessel may be intercepted; also via 4WD on 500 kHz.

'Safer' Sat. Telex 1473120 Safa-X (IOR); after initial and 72 hour messages, only requires updated ETA. On approach use VHF Channels 16 and 74.

On receipt of ship's message, 'Safer' will respond with nomination and request ship's details (See Appendix "B").

YHOC Marine: Telex 4013 or via 4WD to YHOC Marine Sanaa.

Port Authority: Telex 5565 and via 4WD.

YHOC Marine, Port Authority and Agents require message per Appendix "A" to be repeated in each ETA notice.

Approaches and Anchorage: See B.A. Charts No. 143, 548, 542 and Appendix "C" and "Plan".

Approach to Ras Isa Terminal is straightforward and clear of dangers. However, due to lack of soundings and age of survey, it would be prudent to approach from seawards rather than coasting.

From North: Follow usual courses down Red Sea, to position 15° 30′ N., 41° 45′ E., 4.5 miles S.W. of Jabal at Tair. Thence course 120° T., distance 52 miles gives a clear run to the Holding Anchorage, passing 7 miles N.E. of Quoin and Haycock Islands in the Zubair group. Once into soundings, least depths are 40 m. – 49 m. Clematis Shoal will lie approximately 11 miles to the North of track when some 17 miles N.W. of Terminal.

Rashshah Island, 4 miles North of Terminal, is low and sandy and has a light (3M) Fl. 10s. 8 miles; both island and light are very poor, both visually and as a radar echo and will not be sighted until within 6 miles of terminal, if at all. Terminal ('Safer'), is well lit and a good radar target, and was located at 14 miles. There is a disused SPM to the East of 'Safer', which may have a tug lying close-by, these echoes tend to confuse the actual terminal position.

From South: Leaving Abu Ail Channel, course should be made to position 14° 25′ N., 42° 30′ E. (avoiding Avocet Rock), before turning North towards Holding Anchorage. Least depths on this approach appear to be 31 m., but survey soundings are old. On approach good fixed positions are necessary, due to Penguin Shoal to West, and S.E. Patches to East, the latter being actually in vicinity of anchorage.

Holding anchorage is established approximately 3.2 miles to S.W. of 'Safer'; vessels may enter and leave from/to sea without pilot, but the total area from shore, out to anchorage is restricted, and vessel must be under pilotage within this area. Depths in anchorage average 38 m. to 44 m., mud/sand bottom, holding-ground good.

Berthing and Operations: See "Plan".

Pilots (2) are British. There are 2 Smit tugs (1×40 ton and 1×60 ton bollard-pull), and tugs lines are used. Tugs are not ideal as they are primarily salvage tugs. Berthing daylight only, unberthing any time, dependent on weather conditions; if wind speed above 20 knots terminal is usually closed for berthing. Any size of vessel up to 400,000 tonnes d.w.t. can be accommodated. Depth at terminal is 33 m.

Berthing is vessel's port side to 'Safer' starboard side. Terminal prefer all wire moorings, but accept rope headlines and sternlines. Tails must be removed from wires. Moorings are 4 headlines/wires, 2 breast wires, 2 spring wires, 4 sternlines/wires, 2 aft breast wires, 2 aft spring wires, – usual firewires required. Usually springs first, followed by breasts, followed by head/stern lines. 'Safer' then supplies 2 'shore' wires to fo'cstle, and one 'shore' wire to poop. Messengers are required. Tugs make fast in 'push-pull' position on starboard forward main deck and aft main deck for berthing, and on long lines starboard bow and starboard quarter on sailing. Tugs lines are very heavy.

While alongside, vessel must maintain starboard accommodation ladder in lowered position. Current international safety rules, check lists, regulations and procedures are in use, and practised. IGS must be positive and always less than 8%. Vessel must arrive with clean ballast, and ballast samples are laboratory tested before deballasting allowed. Portable radio is supplied by Terminal for inter-ship communications.

'Safer' will normally supply 2×16 in. hoses, using combination of ship's lifting gear and her own crane. Her max. rate is 70,000 barrels per hour. 'Safer' provides inter-ship gangway and connects/disconnects hoses.

'Safer' has cargo metering equipment, but this is still at proving stage, and vessel will 'ship-stop'. She will also in future be able to accept up to 50,000 cu.m. of dirty ballast, but this system is still to be commissioned.

Documentation usually takes 3 to 4 hours after completion. Pilot and any surveyors will stay aboard vessel loading. Tugs stand-by while operations are in progress.

Ras Isa commenced operations in December 1987 and 'Safer' came on stream in March 1988. There are currently an average of 6 export liftings per month from the terminal. As at present time, there are no port or customs or health formalities; ship's Agent requires 2 copies Crew List, and pilot asks of state of health. It is understood that the usual formalities will be instated in the near future, in which case the usual rules for entry into Muslim Arab countries are expected to apply.

The Yemen flag must be flown. It consists of red-white-black horizontal stripes with green central star, flown with red stripe uppermost.

There are no facilities or services available. No bunkers or water or repairs. It is apparently possible in urgent cases to obtain services via ship's Agent from Hodeidah, to the holding anchorage, with terminal permission. This would be very expensive as Hodeidah is some 30 km. away down the coast. Transport to/from 'Safer' is by launch or helicopter, Agent boards vessel on arrival. Pilot issues Port Clearance and takes off any timesheets and arrival/sailing figures for Agent if requested. Terminal will do their best to assist if urgent medical attention required, but in general vessel must be totally self-sufficient in this port.

'Safer' has 5 large Yokohama fenders and sundry smaller fenders and protection is good. Vessel's berthing (ballasted) trim must not exceed 3.0 m., with propeller immersed.

A comprehensive port-information book is issued to each arriving vessel. On boarding, Pilot will require Master to sign an indemnity absolving Pilot/Terminal from almost everything, and also pilotage timesheets, port log and tugs time of hire.

APPENDIX A:

Export tankers shall advise their ETA upon departure from its last load or discharge or other port or if at sea as soon as orders received to proceed to Ras Isa and repeat at 72, 48 and 24 hours in advance of arrival via Hodeidah Radio Station to the cable address "YHOC Marine Sanaa Telex No. 4013". Vessels equipped with Inmarsat satellite communications may address their telex(s) to "YHOC Marine" Inmarsat Telex No. 1473120 (IOR) and shall call the terminal on VHF Channel 16 when within range (then VHF Channel 74 for working).

For your information Ports and Marine Affairs Corporation, Hodeidah requires the following information from vessels stemed for Ras Isa Terminal to be sent to them either by telex (5565 Mawani YE) or via Hodeidah Radio (4WD) 72/48/24 hours prior to vessel's arrival:-

AA ETA Ras Isa Terminal.
BB Nationality of ship.
CC Summer deadweight.
DD Length overall.
EE Number of crew and state of health.
FF Cargo required.
GG Arrival draft – fore and aft.
HH Name of Agents.

Master tanker to adhere to these requirements, under copy to Agent to avoid imposition of fines.

APPENDIX B:

We hold your nomination for approximate ..... bbls at 60° F. Yemen Alif Crude approximate API 40.5.

Following information needed:

AAA Cargo quantity you able to load.
BBB Last cargo carried and if crude, source of origin.
CCC Quantity and grade of any transit cargo on board.
DDD Quantity of ballast and estimated deballast time.
EEE Quantity and type of slop onboard to lot of segregate on board.
FFF Maximum acceptable loading rate.
GGG Arrival draft (trim not to exceed 10 ft. or 3 m. by stern).
HHH Deepest sailing draft.
III Advised ability to simultaneously load and deballast with double valve segregation throughout.
JJJ Confirm latest edition of I.S.G.T.T. Safety Guide and OCIMF Ship-to-Ship Transfer Guide are onboard.

Repeat your ETA 72, 48 and 24 hours in advance of arrival to:

YHOC Terminal (via Inmarsat Indian Ocean Telex No. 1473120 Safa X).

Port Authority (Telex 5565 Mawani YE).

When within range contact YHOC Marine on VHF Channel 16 working Channel will be 74.

On arrival have your pilot ladder ready on starboard side for Berthing Master boarding and your port boom (SWL rating of minimum 10 tons) rigged for 16 in. hoses handling purposes.

Confirm your inert gas system is in good working condition. Maintaining oxygen content less than 8% by volume in cargo tanks.

Operational/Safety Check List as per OCIMF Ship-to-Ship Transfer Guide will be followed when VHF contact will be established. Please report also full name of Master.

Signed. . . . . /Cargo Custody Transfer Coordinator
Ras Isa Marine Terminal

APPENDIX C:

On arrival vessel has to anchor at the holding anchorage. The area designated as the holding anchorage for vessels waiting for loading at Ras Isa Marine Terminal is located to the Southwest of the terminal in following position: (N.B. Vessels may only enter this area from sea, or sail to sea, without Pilot. Any other movement must be under pilotage.)

15° 05′ N. 42° 32′ E.	15° 03′ N. 42° 32′ E.
